*It is generally agreed by scholars that Plato is not the author of this work.

†It is not generally agreed by scholars whether Plato is the author of this work.

‡As to Plato's authorship of the individual Letters and Epigrams, consult the respective introductory notes.

# INTRODUCTION

Since they were written nearly twenty-four hundred years ago, Plato's dialogues have found readers in every generation. Indeed, in the major centers of Greek intellectual culture, beginning in the first and second centuries of our era, Plato's works gradually became the central texts for the study and practice of philosophy altogether: in later antiquity, a time when Greek philosophy was struggling to maintain itself against Christianity and other eastern 'wisdoms', Platonist philosophy *was* philosophy itself. Even after Christianity triumphed in the Roman Empire, Platonism continued as the dominant philosophy in the Greek-speaking eastern Mediterranean. As late as the fifteenth century, in the last years of the Byzantine empire, the example of George Gemistos Plethon shows how strong this traditional concentration on Plato could be among philosophically educated Greeks.[1] When Plethon, the leading Byzantine scholar and philosopher of the time, accompanied the Byzantine Emperor to Ferrara and Florence in 1438–39 for the unsuccessful Council of Union between the Catholic and Orthodox churches, he created a sensation among Italian humanists with his elevation of Plato as the first of philosophers—above the Latin scholastics' hero, Aristotle. Plato's works had been unavailable for study in the Latin west for close to a millennium, except for an incomplete Latin translation of *Timaeus*,[2] but from the fifteenth century onwards, through the revived knowledge of Greek and from translations into Latin and then into the major modern European languages, Plato's dialogues resumed their central place in European culture as a whole. They have held it without interruption ever since.

In presenting this new edition of Plato's dialogues in English translation, we hope to help readers of the twenty-first century carry this tradition forward. In this introduction I explain our presentation of these works (Section I), discuss questions concerning the chronology of their composition (II), comment on the dialogue form in which Plato wrote (III), offer some advice on how to approach the reading and study of his works (IV),

1. 'Plethon' is a pseudonym George Gemistos adopted toward the end of his life—in Greek it has essentially the same meaning as 'Gemistos' itself does—apparently to mark, by its resemblance to Plato's own name, his authoritative sponsorship of Platonist doctrines. See *George Gemistos Plethon: The Last of the Hellenes*, by C. M. Woodhouse (Oxford: Clarendon Press, 1986); for the change of name, see pp. 186–88.

2. Translations of *Phaedo* and *Meno*, made in Sicily, were also available from about 1160.

and describe the principles on which the translations in the volume have been prepared (V). But first, a few basic facts about Plato's life and career.

Plato, a native Athenian, was born in 427 B.C. and died at the age of eighty-one in 347.[3] He belonged, on both his mother's and father's side, to old and distinguished aristocratic families. At some point in his late teens or early twenties (we do not know when or under what circumstances), he began to frequent the circle around Socrates, the Athenian philosopher who appears as the central character in so many of his dialogues and whose trial and death he was to present so eloquently in his *Apology* and his *Phaedo.* In the dozen years or so following Socrates' death in 399, Plato, then nearly thirty years old, may have spent considerable time away from Athens, for example, in Greek-inhabited southern Italy, where he seems to have met philosophers and scientists belonging to the indigenous "Pythagorean" philosophical school, some of whose ideas were taken up in several of his own dialogues, most notably, perhaps, in the *Phaedo.* In about 388 he visited Syracuse, in Sicily—the first of three visits to the court of the "tyrants" Dionysius I and II during his thirty-odd-year-long engagement in Syracusan politics. This involvement is reported on at length in the Platonic *Letters,* included in this edition. At some point, presumably in the 'eighties, Plato opened a school of higher education in the sacred grove of Academus, in the Attic countryside near Athens, apparently offering formal instruction in mathematical, philosophical, and political studies. He seems to have spent the rest of his life (except for the visits to Syracuse) teaching, researching, and writing there. Under his leadership, the Academy became a major center of research and intellectual exchange, gathering to itself philosophers and mathematicians from all over the Greek world. Among its members was Aristotle, who came as a student in about 367 at the age of eighteen and remained there as teacher, researcher, and writer himself, right up to the time of Plato's death twenty years later.

## I. The 'Canon' of Thrasyllus

These *Complete Works* make available a single collection of all the works that have come down to us from antiquity under Plato's name. We include all the texts published in the early first century A.D. in what became the definitive edition of Plato's works, that by Thrasyllus, an astrologer and Platonist philosopher from the Greek city of Alexandria, in Egypt.[4] From Thrasyllus' edition derive all our medieval manuscripts of Plato—and so almost all our own knowledge of his texts. Apparently following earlier

3. Several 'lives' of Plato have survived from antiquity, of which the earliest, that by Diogenes Laertius (translated by R. D. Hicks, Cambridge, Mass.: Loeb Classical Library, 1925), dates perhaps from the third century A.D.

4. For the sake of completeness, we also print translations of the short poems ('Epigrams') that have come down to us from antiquity with Plato's name attached.

precedent, Thrasyllus arranged the works of Plato (thirty-five dialogues, plus a set of thirteen 'Letters' as a thirty-sixth entry) in nine 'tetralogies'—groups of four works each—reminiscent of the ancient tragedies, which were presented in trilogies (such as the well-known *Oresteia* of Aeschylus) followed by a fourth, so-called satyr play, preserving a link to the origins of tragedy in rituals honoring the god Dionysus. In addition to these, he included in an appendix a group of 'spurious' works, presumably ones that had been circulating under Plato's name, but that he judged were later accretions. We follow Thrasyllus in our own presentation: first the nine tetralogies, then the remaining works that he designated as spurious.[5] With one exception, earlier translations into English of Plato's collected works have actually been only selections from this traditional material:[6] usually they have omitted all the Thrasyllan 'spurious' works, plus a certain number of others that were included in his tetralogies, since the editors of the collections judged them not in fact Plato's work. In their widely used collection,[7] Edith Hamilton and Huntington Cairns include none of the 'spuria' and only twenty-nine of the thirty-six other works.[8] From Thrasyllus' tetralogies they omit *Alcibiades, Second Alcibiades, Hipparchus, Rival Lovers, Theages, Clitophon,* and *Minos.* Even if these dialogues are not by Plato himself (and at least *Clitophon* and *Alcibiades* could very well be), they are all valuable works, casting interesting light on Socrates and the Socratic legacy. They also deserve attention as important documents in the history of Platonism: it is worthy of note that teachers of Platonist philosophy in later antiquity standardly organized their instruction through lectures on ten 'major' dialogues, beginning with *Alcibiades*—omitted by Hamilton and Cairns, presumably as not by Plato. The dialogues classified by Thrasyllus as spurious also deserve attention, even though in their case there are strong reasons for denying Plato's authorship; and the *Definitions* are a valuable record of work being done in Plato's Academy

5. Since our manuscripts standardly present the thirty-six 'tetralogical' works in the order that ancient evidence indicates was Thrasyllus', it is reasonable to think that their order for the spuria goes back to Thrasyllus' edition too. We present these in the order of our oldest manuscript that contains them, the famous ninth- or tenth-century Paris manuscript of the complete works. (In some other manuscripts *Axiochus* is placed at the front of the list, instead of the back.)

6. The only previous comparably complete translation (it does however omit one small work of disputed authorship, the *Halcyon,* included here, and the Epigrams as well) is *The Works of Plato,* edited by George Burges, in six volumes, for the Bohn Classical Library, London: G. Bell and Sons, 1861–70. This is a 'literal' translation, not easy to read or otherwise use.

7. *The Collected Dialogues of Plato including the Letters,* Bollingen Foundation (Princeton University Press, 1961).

8. In its ten Plato volumes, the Loeb Classical Library (Cambridge: Harvard University Press, various dates) does include translations (with facing Greek text) of all thirty-six works in Thrasyllus' tetralogies, but none of the 'spuria'.

in his lifetime and the immediately following decades.[9] (For further details see the respective introductory notes to each of the translations.)

Especially given the often inevitably subjective character of judgments about authenticity, it is inappropriate to allow a modern editor's judgment to determine what is included in a comprehensive collection of Plato's work. The only viable policy is the one followed here, to include the whole corpus of materials handed down from antiquity. At the same time, it should be frankly emphasized that this corpus—both the works it includes as genuine and the text itself of the works—derives from the judgment of one ancient scholar, Thrasyllus. His edition of Plato's work, prepared nearly four hundred years after Plato's death, was derived from no doubt differing texts of the dialogues (and *Letters*) in libraries and perhaps in private hands, not at all from anything like a modern author's 'autograph'. No doubt also, both in its arrangement and in decisions taken as to the genuineness of items and the text to be inscribed, it may have reflected the editor's own understanding of Plato's philosophy (perhaps a tendentious one) and his views on how it ought to be organized for teaching purposes.[10] So, since the present editor has exercised his own judgment only to the extent of deciding to follow the edition of Thrasyllus, we are thrown back on Thrasyllus' judgment in the works included and in their order and arrangement. Since Thrasyllus included all the genuine works of Plato that any surviving ancient author refers to, plus some disputed ones, we apparently have the good fortune to possess intact all of Plato's published writings.

Thrasyllus' order appears to be determined by no single criterion but by several sometimes conflicting ones, though his arrangement may represent some more or less unified idea about the order in which the dialogues should be read and taught. For example, the first four works (*Euthyphro, Apology, Crito, Phaedo*) manifestly follow internal evidence establishing a chronological order for the events related in them—the 'Last Days of Socrates'. The conversation in *Euthyphro* is marked as taking place shortly before Socrates' trial; his speech at his trial is then given in the *Apology,* while *Crito* presents a visit to Socrates in prison, three days before his execution, which is the culminating event of the *Phaedo.* Somewhat similar internal linkages explain the groups *Republic-Timaeus-Critias* and *Theaetetus-Sophist-Statesman* (although the conversation in *Theaetetus* seems to present itself as taking place earlier on the same day as that of *Euthyphro*—a key to grouping that Thrasyllus quite reasonably opted to ignore). But topical and other, more superficial connections play a role as well. *Clitophon* is placed before *Republic,* and *Minos* before *Laws* to serve as brief introduc-

9. In the table of contents works whose Platonic authorship has plausibly been questioned in antiquity or modern times are marked, either as ones which no one reasonably thinks are by Plato or as ones as to which there is no consensus that they are by him.

10. For a somewhat speculative, rather alarmist, view of the extent of Thrasyllus' editorial work, see H. Tarrant, *Thrasyllan Platonism* (Ithaca, N.Y.: Cornell University Press, 1993).

tions to the central themes of these two major works, justice and legislation respectively, and the two *Alcibiades* dialogues are grouped together, as are the *Greater* and *Lesser Hippias*. Even the presumed order of composition seems responsible for the last tetralogy's bringing the series to a conclusion with *Laws* and its appendix *Epinomis* (followed by *Letters*): we have evidence that *Laws* was left unpublished at Plato's death, presumably because he had not finished working on it.

Most readers will have little need to attend to such details of Thrasyllus' arrangement, but one point is important. Except for *Laws,* as just noted, Thrasyllus' tetralogies do not claim to present the dialogues in any supposed order of their composition by Plato. Indeed, given the enormous bulk of *Laws,* different parts of it could well have been written before or contemporaneously with other dialogues—so Thrasyllus' order need not indicate even there that *Laws* was *the* last work Plato composed. Thrasyllus' lack of bias as regards the order of composition is one great advantage that accrues to us in following his presentation of the dialogues. Previous editors (for example, both Hamilton and Cairns and Benjamin Jowett[11]) imposed their own view of the likely order of composition upon their arrangement of the dialogues. But judgments about the order of composition are often as subjective as judgments about Platonic authorship itself. In modern times, moreover, the chronology of composition has been a perennial subject of scholarly debate, and sometimes violent disagreement, in connection with efforts to establish the outline of Plato's philosophical 'development', or the lack of any. We have solid scholarly arguments and a consensus about some aspects of the chronology of Plato's writings (I return to this below), but this is much too slight a basis on which conscientiously to fix even an approximate ordering of all the dialogues. Speaking

11. *The Dialogues of Plato* (London: Macmillan, 1st ed. 1871, 3rd 1892; 4th ed., revised, by D. J. Allan and H. E. Dale, Oxford: Clarendon Press, 1953, four vols.). Allan and Dale claim explicitly that theirs is the approximate order of composition; Jowett left his own order unexplained, but it is not very different from Allan and Dale's. Of Thrasyllus' thirty-six 'genuine' works Jowett[1] prints twenty-seven dialogues (no *Letters*); Jowett[3] adds a twenty-eighth (*Second Alcibiades*), plus one of Thrasyllus' eight 'spurious' works (*Eryxias*), both translated by his secretary Matthew Knight; Jowett[4] shrinks back to twenty-eight (adding *Greater Hippias,* translated by Allan and Dale themselves, but omitting *Second Alcibiades* as nongenuine). The earliest comprehensive English translation, that of Thomas Taylor (except that F. Sydenham is credited with the translation of nine dialogues) (London, 1804, five vols.) is organized on a fanciful 'systematic' basis, in which the dialogues judged by him to establish the 'comprehensive' Platonic views respectively in ethics and politics and in natural philosophy and metaphysics come first, followed by the various more 'partial' treatments of specific questions. The title page to each of Taylor's five volumes claims to present '[Plato's] Fifty-five Dialogues and Twelve Epistles', a surprising way of referring to the thirty-five Thrasyllan 'genuine' dialogues that the collection actually contains (he omits the thirteenth *Letter* as obviously spurious): presumably he counts each book of *Republic* and *Laws* as a separate 'dialogue', in which case the total is indeed fifty-five.

generally, issues of chronology should be left to readers to pursue or not, as they see fit, and it would be wrong to bias the presentation of Plato's works in a translation intended for general use by imposing on it one's own favorite chronological hypotheses. Thrasyllus' order does not do that, and it has the additional advantage of being for us the traditional one, common ground for all contemporary interpreters.[12] Such interpretative biases as it may contain do not concern any writer nowadays, so it can reasonably be considered a neutral basis on which to present these works to contemporary readers.

## II. Chronological vs. Thematic Groupings of the Platonic Dialogues

In teaching and writing about Plato, it is almost customary nowadays (in my view unfortunately so: see below) to divide the dialogues into groups on the basis of a presumed rough order of their composition: People constantly speak of Plato's 'early', 'middle' (or 'middle-period'), and 'late' dialogues—though there is no perfect unanimity as to the membership of the three groups, and finer distinctions are sometimes marked, of 'early-middle' dialogues or 'transitional' ones at either end of the intermediate group.[13] Although this terminology announces itself as marking chronologically distinct groups, it is in reality based only in small part on anything like hard facts about when Plato composed given dialogues. (For these facts, see the next paragraph.) For the most part, the terminology encapsulates a certain interpretative thesis about the evolving character of Plato's authorship, linked to the development of his philosophical thought. This authorship began, it is assumed, sometime after 399 B.C., the year of Socrates' death, and continued until his own death some fifty years later. According to this thesis, Plato began as the author of dialogues setting forth his 'teacher' conversing much as we presume he typically actually did when discussing his favorite philosophical topics—morality, virtue, the best human life—with the young men who congregated round him and other intellectuals in Athens, where he spent his entire life. These, then, would constitute the 'early' dialogues, sometimes also thematically described as the 'Socratic' dialogues; they are all relatively short works. Only gradually, on this view, did Plato grow into a fully independent philosopher, with new ideas and interests of his own, as outgrowths from and supplements to his 'Socratic heritage'. In his writings presumed to postdate the founding of the Academy, we see new ideas and interests first and primarily in the

12. Modern editions of Plato in Greek (for example, that of J. Burnet in the Oxford Classical Texts series of Clarendon Press, Oxford, 1900–1907, in five volumes: a revised edition is underway) regularly present the Thrasyllan corpus in Thrasyllus' order.

13. For one influential version of this division, see G. Vlastos, *Socrates: Ironist and Moral Philosopher* (Ithaca, N.Y.: Cornell University Press, 1991), pp. 46–47.

introduction of his celebrated theory of 'Forms'—eternal, nonphysical, quintessentially unitary entities, knowledge of which is attainable by abstract and theoretical thought, standing immutably in the nature of things as standards on which the physical world and the world of moral relationships among human beings are themselves grounded. This happens in the 'middle' dialogues: *Symposium, Phaedo,* and *Republic,* most notably—much longer and philosophically more challenging works. The 'middle' dialogues are usually construed to include also *Parmenides,* with its critical reflections on the theory of Forms, and *Theaetetus.* Finally—still according to this interpretative thesis—the 'late' period comprises a new series of investigations into logic, metaphysics, the philosophy of physics, and ethics and political theory, from which these 'Forms' either are absent altogether or else at least the principal theoretical work is accomplished without direct and simple appeal to their authoritative status. These include *Timaeus, Sophist, Statesman, Philebus,* and *Laws.* Along with these philosophical developments, Plato's manner of writing dialogues was evolving, too. In the 'middle' dialogues, where Socrates continues to be the principal speaker, he is no longer limited to questioning and commenting upon the views of his fellow discussants, as in the 'early' dialogues, but branches out into the development of elaborate, positive philosophical theses of his own. In the 'late' dialogues, however (with the understandable exception of *Philebus*—see the introductory note to that work), Socrates ceases altogether to be an active participant in the discussion. Moreover, the conversation takes on the character of a dogmatic exposition of doctrine by the main speaker to an audience. One of these may play virtually the sole role of nodding assent from time to time or requesting further explanations, so as to register acceptance and provide an easy means of noting and dividing—and highlighting the importance of—the principal topics as they successively arise.

Now, in its broad outlines, such a division of Plato's works into three chronological periods could be correct—the interpretative thesis, or rather theses, on which it rests do have some plausibility, though they are obviously not compelling. But in fact we have really only two bits of reliable, hard information about the chronology of Plato's writings. One of these I have already mentioned: *Laws* was left unpublished at Plato's death. The other derives from the fact that *Theaetetus* seems to present itself as a memorial honoring its namesake, a famous mathematician and longtime associate of Plato's in his Academy, who died an untimely death in 369 B.C.: that seems to date the dialogue to about 369–365 or so. Since internal evidence links *Theaetetus* to *Sophist* and *Statesman* as its two successors, that would suggest (though of course it does not prove) that those three dialogues were written in that order, after about 367—therefore in the last two decades of Plato's life, his sixties and seventies. Useful as that information may be, it is obviously not sufficient basis for fixing any complete chronological guide to the reading and teaching of the dialogues. As for *Laws,* however, it began to be noticed already in the nineteenth

century that its sentences are characterized by the frequency and constancy of a number of stylistic features that it shares with only a few other dialogues: the four that I listed above as 'late'—*Timaeus, Sophist, Statesman, Philebus*—plus *Critias.* On the obviously not perfectly secure assumption that, at least cumulatively, such stylistic affiliation, setting these works off strongly from all the others, must fix a chronological grouping, exhaustive 'stylometric' investigations have led to a consensus in favor of adding these five works to *Laws*—independently known to be a late composition—as constituting Plato's last period.[14] Thus one might claim substantial hard evidence in favor at least of recognizing these six works (plus *Epinomis,* if it is by Plato) as constituting a separate, late group. But stylometry does not strongly support any particular order among the six, nor can it establish any particular ordering of the remaining dialogues among themselves—though some do claim that it establishes a second group of four dialogues as the latest of the nonlate group: *Republic, Parmenides, Theaetetus,* and *Phaedrus* in some undetermined order. So, even if we accept the somewhat insecure assumption noted just above, no hard data support the customary division of the dialogues into chronological groups, except with respect to the last of the three—the 'late' dialogues *Timaeus, Critias, Sophist, Statesman, Philebus,* and *Laws.* The classifications of 'early' and 'middle-period' dialogues rest squarely on the interpretative theses concerning the progress of Plato's work, philosophically and literarily, outlined above. As such, they are an unsuitable basis for bringing anyone to the reading of these works. To use them in that way is to announce in advance the results of a certain interpretation of the dialogues and to canonize that interpretation under the guise of a presumably objective order of composition—when in fact no such order *is* objectively known. And it thereby risks prejudicing an unwary reader against the fresh, individual reading that these works demand.

For these reasons, I urge readers not to undertake the study of Plato's works holding in mind the customary chronological groupings of 'early', 'middle', and 'late' dialogues. It is safe to recognize only the group of six late dialogues. Even for these, it is better to relegate thoughts about chronology to the secondary position they deserve and to concentrate on the literary and philosophical content of the works, taken on their own and in relation to the others. In some cases it may indeed seem desirable to begin with a preliminary idea about the place of a given dialogue in the series (*Gorgias* and *Protagoras* earlier than *Republic,* say, or *Theaetetus* before *Sophist,* or *Symposium* before *Phaedo*). Certainly, a study of such sets of dialogues might lead one to argue that the philosophical ideas they contain show an evolution in some particular direction. But chronological hypotheses must not preclude the independent interpretation and evalua-

14. For a survey of these investigations and references to recent and older stylometric studies of Plato, see Charles M. Young, 'Plato and Computer Dating' in *Oxford Studies in Ancient Philosophy,* XII, ed. C. C. W. Taylor (Oxford: Clarendon Press, 1994), pp. 227–50.

tion of the philosophical arguments the dialogues contain; so far as possible, the individual texts must be allowed to speak for themselves. However, in reading the dialogues, it may help to be aware from the outset of certain thematic groupings among them. In our introductory notes to the individual works, we inform readers about such links from the work in question to others and provide other information that may help in placing the work in the proper context within Plato's writings and in the Athens of the fifth and fourth centuries B.C. One very large group of dialogues can usefully be identified here. These are what we may call the Socratic dialogues—provided that the term is understood to make no chronological claims, but rather simply to indicate certain broad thematic affinities. In these works, not only is Socrates the principal speaker, but also the topics and manner of the conversation conform to what we have reason to think, both from Plato's own representations in the *Apology* and from other contemporary literary evidence, principally that of the writer Xenophon,[15] was characteristic of the historical Socrates' own philosophical conversations. Included here are fully twenty of the thirty-six works in Thrasyllus' tetralogies and (allowance made for their post-Platonic authorship) all seven of the dialogues that he classified as spurious: from the tetralogies, *Euthyphro, Apology, Crito, Alcibiades, Second Alcibiades, Hipparchus, Rival Lovers, Theages, Charmides, Laches, Lysis, Euthydemus, Protagoras, Gorgias, Greater* and *Lesser Hippias, Ion, Menexenus, Clitophon,* and *Minos.*

One can think of these works, in part, as presenting a portrait of Socrates—Socrates teaching young men by challenging them to examine critically their own ideas, Socrates as moral exemplar and supreme philosophical dialectician, Socrates seeking after moral knowledge, while always disclaiming the final possession of any, through subjecting his own and others' ideas to searching rational scrutiny. But just as there is no reason to think that these dialogues are or derive in any way from records of actual conversations of the historical Socrates, so there is also no reason to suppose that in writing them[16] Plato intended simply to reconstruct from memory actual arguments, philosophical distinctions, etc., that Socrates had used, or views that he had become persuaded of through his lifelong practice of philosophical dialectic. To be sure, one evident feature of these dialogues is that in them Socrates does philosophize in the way the historical Socrates, according to the rest of our evidence, did. He seeks the opinions of his interlocutors on moral, political, and social questions

15. Xenophon's Socratic writings include his own *Apology*, a *Symposium*, and four books of *Memoirs of Socrates* (often referred to by its Latin title, *Memorabilia*); these are translated by H. Tredennick and R. Waterfield (Penguin Books, 1990), and are available in Greek and English in the Loeb Classical Library series (Cambridge, Mass.: Harvard University Press, various dates).

16. That is, the ones he did write: there are reasonable doubts as to the Platonic origins of several of the dialogues included in the tetralogies, and a few are generally held not to be his work.

and subjects them to searching critical examination. It is true that, in some of them, such as *Gorgias,* he also comes forward with distinctive moral and political ideas of his own, to which he attempts to show his interlocutors, despite their overt denials, are logically committed since these ideas follow from propositions that the other speakers have themselves granted. But, by contrast with dialogues such as *Phaedo* and *Republic,* he does not engage here in elaborate positive philosophical construction, putting forward ambitious philosophical theses of his own and offering independent philosophical argument and other considerations in their favor. In particular, Socrates says nothing about the theory of Forms. That is a sign that in these dialogues Plato intends not to depart, as he does elsewhere, from Socratic methods of reasoning or from the topics to which Socrates devoted his attention, and no doubt he carries over into these portraits much of the substance of Socrates' own philosophizing, as Plato himself understood it.

But Plato was not the only or even the first of Socrates' companions to write Socratic dialogues. Though, with the exception of Xenophon's, no other such dialogues have survived complete, we know enough about the contents of some of them to be sure that no convention of the genre forbade the author to write freely and from his own head about philosophical and other matters that interested him. Indeed, quite to the contrary, as we can see from Xenophon's dialogue *Oeconomicus,* in which Socrates discourses knowledgeably and at great length about estate management, a subject we have good reason to think he never knew or cared anything about—though Xenophon himself certainly did. So we have good reason to expect that at least some of what Plato makes Socrates say in his Socratic dialogues expresses new ideas developed in his own philosophical reflections, not mere elaborations of historically Socratic thoughts. This is perhaps particularly clearly the case, though in different ways, in *Charmides, Lysis, Euthydemus,* and *Gorgias,* but it is an open possibility in them all, to be decided in the light of a full interpretation of their contents, in relation to that of other dialogues. It is worth saying again that classifying these along with the rest as Socratic dialogues carries no implication whatsoever of an early date of composition or an early stage of the author's philosophical development. As I am using the term, it is a thematic classification only. We know no reason to conclude that Plato wrote dialogues of this genre during only one phase of his career as an author, whether early or late. Though it is reasonable to suppose that Plato's earliest writings were in fact Socratic dialogues, there is no reason to suppose that, just because a dialogue is a Socratic one, it must have been written before all the dialogues of other types—except, of course, that if we were right to accept a special group of late dialogues, the Socratic dialogues must predate all of these. The decision about the relative chronology of any of these dialogues, if one wishes to reach a decision on that secondary question at all, must be reached only after a careful and complete study of their philosophical content, in comparison with the contents of Plato's other works.

There are eight dialogues other than the Socratic and the late dialogues: *Phaedo, Cratylus, Theaetetus, Parmenides, Symposium, Phaedrus, Meno,* and *Republic.* It is not easy to identify a common theme unifying this whole group. As it happens, however, they correspond closely to the putative classification of 'middle-period' dialogues. In these Socrates remains a principal speaker, although in *Parmenides* not Socrates but Parmenides sets and directs the philosophical agenda. As noted above, these stand apart from the Socratic dialogues in that here Socrates takes and argues directly for ambitious, positive philosophical positions of his own. However, those considerations do not set them cleanly apart from the late dialogues as a whole, since Socrates is the main speaker again in *Philebus,* and he appears in the introductory conversations of *Timaeus* and *Critias,* more briefly in those of *Sophist* and *Statesman,* and those dialogues are just as philosophically ambitious, even if in somewhat different ways. In all but two of the dialogues of this group (*Theaetetus* and *Meno*), the Platonic theory of Forms plays a prominent and crucial role: Indeed, it is these dialogues that establish and define the 'classical' theory of Forms, as that has been understood by later generations of philosophers. Were it not for *Theaetetus* and *Meno,* one might be tempted to classify this group simply as the 'Classical Theory of Forms' dialogues. On the other hand, *Phaedrus,* despite Socrates' use of the classical theory in his second speech on *erōs*, foreshadows the revised conception of a Form as some sort of divided whole—no longer a simple unity—known about by the method of 'collection and division' that the late dialogues *Sophist, Statesman,* and *Philebus* set out and employ at length. And it seems that one important lesson Parmenides wishes to teach Socrates in the *Parmenides* also goes in the same direction. Moreover, *Theaetetus* is marked by Plato as some sort of successor to *Parmenides* and predecessor of *Sophist* and *Statesman.* (See the introductory notes to these dialogues.) Thus *Phaedrus, Parmenides,* and *Theaetetus* all have clear forward connections to the late dialogues.

For all these reasons, it would be a mistake to claim any unifying single common theme for this group. At the most, one could say that this group develops the positive philosophical theories in ethics and politics and in metaphysics and theory of knowledge that we normally associate with Plato, centering on the classical theory of Forms, while including several dialogues which point forward to the innovations worked out in the late group. Accordingly, no thematic name for the group seems available, and we must make do simply by referring to a 'second' group of Plato's dialogues, alongside the Socratic works, both groups to be placed chronologically before the late dialogues. As before, this classification must be understood as having no chronological implications whatsoever of its own, as regards their relationship to the Socratic dialogues. Any decision as to relative dates of composition, either within the second group itself or with respect to the various members of the Socratic group, must be reached only after comparative study of the philosophical contents of the individual

dialogues themselves. While one might reasonably suppose that, in general, the dialogues of the second group were written later than the Socratic group, it is not safe to rule out some chronological overlapping in composition.

## III. Plato and the Dialogue Form

Why did Plato write dialogues? What does it mean for the reader of his works that they take this form? Philosophers of earlier generations expounded their views and developed their arguments either in the meters of epic poetry (Xenophanes, Parmenides, Empedocles, for example), or in short prose writings or collections of remarks (Anaximander, Heraclitus, Anaxagoras, Philolaus, Democritus), or in rhetorical display pieces (the Sophists Gorgias, Protagoras, and Prodicus). Socrates himself, of course, was not a writer at all but engaged in philosophy only orally, in face-to-face question-and-answer discussions. It is clear that the dialogue form for philosophical writing began within the circle of those for whom philosophy meant in the first instance the sort of inquiry Socrates was engaged in. I mentioned above that Plato was not the first or only Socratic to write philosophical dialogues, but he certainly elaborated and expanded the genre far beyond what anyone else ever attempted. He not only wrote Socratic dialogues, as we have seen, but he developed the genre also to the point where, eventually, Socrates dropped out of the cast of characters altogether—in the magnum opus of his old age, the *Laws.* Plato's younger associate Aristotle also wrote dialogues (all of which have perished), as well as the lectures and treatises that we know him for, but, significantly, they seem not to have had Socrates among their characters:[17] Socrates had been dead for fifteen years at Aristotle's birth, and he could not have had the personal attachment to him as a philosophical model that Plato and the others in the first generation of dialogue writers obviously did.[18] But, as already with Aristotle, the medium of choice for later philosophers—Theophrastus and other Peripatetics, Epicurus and his followers, the Stoic philosophers, Sextus Empiricus, late Platonists—was the prose discourse or treatise (sometimes a commentary on a work of Plato's or Aristotle's or some other 'ancient' philosopher).[19] There, the author spoke directly to his readers in his own voice. The close association of the dialogue form with the Socratic conception of philosophy as face-to-face discussion is

17. According to Cicero (*Letters to Atticus* XIII xix 4), Aristotle appeared as the main speaker in his own dialogues.

18. At least one other Academic of Aristotle's generation, Plato's nephew and successor as head of the school, Speusippus, also wrote dialogues, along with philosophical works of other genres. We know nothing substantial about them.

19. Epicurus also seems to have written at least one dialogue, and there is evidence of dialogues written by some Peripatetics.

borne out in the principal exception to this rule, the Latin philosophical works of Cicero (first century B.C.): the plurality of voices and the author's capacity to stand back from and question what these voices say made the dialogue format suit perfectly a nondogmatic or 'skeptical' Platonist like Cicero. (On 'skeptical' Platonism, see further below.)

It was characteristic of philosophy before Socrates and Plato that philosophers usually put themselves forward as possessors of special insight and wisdom: *they* had the truth, and everyone else should just listen to them and learn. Thus Parmenides' poem tells how he was brought in a chariot to a goddess at the borders of night and day—the very center of the truth—and then sets out that truth and the arguments on which it rests, while also revealing the errors of everyone else's ways. Similarly Heraclitus, in his prose book, claims to have discovered in one big thought—essentially, the unity of opposites—the key to all reality, and he excoriates other thinkers—several by name—as having missed it by wasting their time learning up all sorts of arcane details. These philosophers hoped and expected to win fame for themselves personally, as the authors (among humans) of their own 'truth'. The genres in which they wrote suited this intellectual stance and these authorial ambitions perfectly: they could speak directly to their readers, as the authors of the poetry or prose in which they were handing down the truth.

Socrates was a totally new kind of Greek philosopher. He denied that he had discovered some new wisdom, indeed that he possessed any wisdom at all, and he refused to hand anything down to anyone as his personal 'truth', his claim to fame. All that he knew, humbly, was how to reason and reflect, how to improve himself and (if they would follow him in behaving the same way) help others to improve themselves, by doing his best to make his own moral, practical opinions, and his life itself, rest on appropriately tested and examined reasons—not on social authority or the say-so of esteemed poets (or philosophers) or custom or any other kind of intellectual laziness. At the same time, he made this self-improvement and the search for truth in which it consisted a common, joint effort, undertaken in discussion together with similarly committed other persons—even if it sometimes took on a rather combative aspect. The truth, if achieved, would be a truth attained by and for all who would take the trouble to think through on their own the steps leading to it: it could never be a personal 'revelation' for which any individual could claim special credit.

In writing Socratic dialogues and, eventually, dialogues of other types, Plato was following Socrates in rejecting the earlier idea of the philosopher as wise man who hands down the truth to other mortals for their grateful acceptance and resulting fame for himself. It is important to realize that whatever is stated in his works is stated by one or another of his characters, *not* directly by Plato the author; in his writings he is not presenting his 'truth' and himself as its possessor, and he is not seeking glory for having it. If there is new wisdom and ultimate truth in his works, this is not

served up on a plate. Plato does not formulate his own special 'truth' for his readers, for them to learn and accept. You must work hard even to find out what the author of a Platonic dialogue is saying to the reader—it is in the writing as a whole that the author speaks, not in the words of any single speaker—and the dialogue form demands that you think for yourself in deciding what, if anything, in it or suggested by it is really the truth. So you have to read and think about what each speaker says to the others (and also, sometimes, what he does not say), notice what may need further defense than is actually given it, and attend to the author's manner in presenting each character, and the separate speeches, for indications of points on which the author thinks some further thought is required. And, beyond that, you must think for yourself, reasoning on the basis of the text, to see whether or not there really are adequate grounds in support of what it may appear to you the text as a whole *is* saying. In all this, Plato is being faithful to Socrates' example: the truth must be arrived at by each of us for ourselves, in a cooperative search, and Plato is only inviting others to do their own intellectual work, in cooperation with him, in thinking through the issues that he is addressing.

One might attend here to what Plato has Socrates say at the end of *Phaedrus* about written discourses. Socrates is speaking in the first instance of speeches written for oral delivery, but he applies his remarks to all writing on political or other serious philosophical subjects. Actual knowledge of the truth on any of these matters requires a constant capacity to express and re-express it in relation to varying circumstances and needs and in response to new questions or challenges that may arise. Knowledge is a limitless ability to interpret and reinterpret itself—it cannot be set down exhaustively in any single set of formulas, for universal, once-for-all use. Accordingly, no book can actually embody the knowledge of anything of philosophical importance; only a mind can do that, since only a mind can have this capacity to interpret and reinterpret its own understandings. A book must keep on saying the same words to whoever picks it up. Most books—perhaps those of Parmenides and some other early philosophers among them—attempt the impossible task of telling the reader the truth, with the vain idea that, through putting their words into their heads, they will come to possess knowledge of it.[20] Plato's dialogues are writings—books—too; like all books, once written, their words are

20. *Letter VII* (341c–d, 344c–e) speaks rather similarly about philosophical writings, emphasizing the impossibility of *writing down* the content of any state of mind that might constitute true knowledge of philosophical truth. *Letter II* (314b–c) limits itself to a very different, much less interesting, complaint about such writing—and recommends a remedy that actually contradicts the main idea here: it will inevitably fall into the wrong hands, so that any sensible philosopher will have his pupils commit his oral teaching to memory instead of writing down on paper the words to be memorized! In both *Letters* the author (whether Plato or someone impersonating him) gives these considerations as Plato's reasons for never having written a philosophical treatise.

fixed for all time and all readers. But because they demand that the reader interpret and reinterpret the meaning of what is said, going ever deeper in their own questioning and their own understanding both of the writings themselves and of the truth about the subjects addressed in them, these writings speak in a unique new way to the reader. It may remain true that only a mind, and no book, can contain the knowledge of anything important. But a Platonic dialogue makes a unique claim to do what a book *can* do to engage a person effectively in the right sort of search for truth.

## IV. Reading Plato

Despite this inherent open-endedness and the fact that Plato speaks only through the writing as a whole, all Plato's dialogues do have a principal speaker, one who establishes the topic of discussion and presides over it. In the Socratic works and the second group of dialogues, with the exception of *Parmenides,* this is Socrates. In the late dialogues, except *Philebus,* where Socrates reappears to discuss the nature of the human good, it is the anonymous visitor from Elea, in *Sophist* and *Statesman,* or the equally anonymous Athenian of *Laws* and *Epinomis,* or else Timaeus or Critias, in the dialogues named after them. In each dialogue Plato focuses the reader's attention on what the principal speaker says. Indeed, in the late dialogues, though again *Philebus* is something of an exception, the other speakers put up so little opposition and their comments introduce into the proceedings so little of the sort of fertile nuance that one finds in the other dialogues, that for long stretches there is little else that could claim the reader's attention at all. In fact, the substance of *Timaeus* and *Critias* is contained in uninterrupted discourses that the main speaker delivers to the others present, with no indication even at the end of how they received it: there is no return to the conversational context in which it was originally introduced. Can one not take these principal speakers as Plato's mouthpieces, handing straight out as their own opinions what Plato himself believed at the time he wrote and what he wished his readers to understand as such—both as the truth and as what Plato *thought* was the truth?

If what I have said about the dialogue form and Plato's commitment to it—right to the end of his writer's career—is correct, the *strict* answer to this question must be in the negative, in all cases. However much his principal speakers really do, in some way, speak on his behalf, he must also, in some way, be holding back from arguing and asserting personally the things that he has any of them say. What, then, are we to make of Plato's relation to what they do say? Each dialogue has to be read individually, but the three different groups—the Socratic dialogues, the second group, and the late dialogues—plainly do place the author in different sorts of relationship to his main speaker. Without going into the individual differences, here is some general orientation on the author's relationships to the leading speakers in each of the three groups.

First, there is a matter of literary form that applies to all the dialogues. As I have emphasized, Plato never speaks in his own author's voice but puts all his words into a particular speaker's mouth. This means that, although everything any speaker says is Plato's creation, he also stands before it all as the reader does: he puts before us, the readers, and before himself as well, ideas, arguments, theories, claims, etc. for all of us to examine carefully, reflect on, follow out the implications of—in sum, to use as a springboard for our own further philosophical thought. Authors writing in their own voices can, of course, do the same: they do not always have to be straightforwardly advocating the positions they develop and argue for, though that is what Greek authors usually did, and with passionate self-promotion. But they must take special steps to make the reader aware that that is what they are doing, for example by saying it in so many words. In his dialogues, Plato adopts that stance automatically.[21] However much he may himself believe everything that, say, the Athenian visitor puts forward in *Laws* X about the existence of the gods and the importance for human life of accepting their providential relationship to us and the physical world, he stands to it, even though he is its author, as his readers also stand. To finally understand all this *as* the truth requires further work—one must sift and develop and elevate the thoughts expressed there into the kind of self-sufficient, self-interpreting total grasp that I referred to above in drawing on what *Phaedrus* says about writing. Certainly, we should not think that Plato had already attained that Elysian condition and was writing from its perspective through the Athenian's mouth. Much less should we think that he was pretending to himself or to his readers that he had attained it. That would be a malicious and unprincipled abuse of the very dialogue form that Plato was so obviously determined to uphold. So even in the late dialogues, where, as noted, there is often little else before us but the arguments of the principal speaker, Plato stands back—everything needs further thought; what we have before us is partial and provisional at best, however decisive it might be about particular points under discussion.

In the dialogues of the second group, the role of the interlocutors is much more substantial, and the main speaker himself, usually Socrates, expresses more reservations, more caution and tentativeness, about what he is putting forward. Accordingly, even though readers always and understandably speak of the theories adumbrated by Socrates here as 'Plato's theories', one ought not to speak of them so without some compunction—the writing itself, and also Plato the author, present these always in a spirit of open-ended exploration, and sometimes there are contextual clues

21. I should emphasize that I am speaking here simply of Plato's handling of the dialogue form. Another author (perhaps Berkeley in his *Three Dialogues between Hylas and Philonous* is one of these) might use the form simply for expository convenience, making it clear that he is using one of the speakers to present his own ideas and arguments and using the others as a means of countering certain sorts of resistance to them.

indicating that Socrates exaggerates or goes beyond what the argument truly justifies, and so on. Finally, in the Socratic dialogues, all these cautionary points hold good, and others too. To the extent that Plato is providing a portrait of his friend Socrates, it is only common sense not to assume that Plato accepts as valid everything philosophical that he makes Socrates say. Even beyond that, and however much one knows Plato admired Socrates and, indeed, regarded him as the very model of how a philosopher should live, one should remain open to the possibility that a Socratic dialogue, when read fully and properly, may actually indicate some criticisms and point to some shortcomings of positions or methods of argument that it attributes to Socrates. Here one might especially mention *Gorgias* and *Protagoras* as dialogues that may demand interpretation along those lines, but the same applies in principle to all the Socratic dialogues.

Reading a Platonic dialogue in the spirit in which it was written is therefore a dauntingly complex task. It is in the entire writing that the author speaks to us, not in the remarks made by the individual speakers. To find out what the writing itself is saying—equivalently, what Plato is saying *as its author*—one must work constantly to question everything that any speaker says, to ask what reasons he may have or what reasons might be provided to support it and what might tend to speak against it; one must never simply take, as if on Plato's authority, a claim made by any speaker as one that, from the perspective of the dialogue as a whole, constitutes an established philosophical truth—certainly not in the form in which it is stated and not without qualification, expansion, taking into account wider perspectives, and so on. Especially in the Socratic dialogues and those of the second group, one must be alert to contextual indicators of all sorts—the particular way in which an interlocutor agrees to or dissents from something, the more or less explicit characterization provided and other indicators about the personal qualities and commitments of the speakers, as well as hesitations and reservations and qualifications expressed by one or another of them.

Those, then, are my own suggestions about the significance of the dialogue form in Plato's writings. The dialogues have not always been read in the way I have suggested, and not all scholars today share this approach to them: many would not hesitate simply to identify the positions and arguments stated or suggested by Socrates, or whoever the principal speaker is in any given dialogue, as those of the author at the time of composition. Already in antiquity Aristotle usually treats them in that 'dogmatic' way, except for the Socratic dialogues, which he seems to have taken as depicting (equally 'dogmatically') the historical Socrates' philosophy. However, in Plato's own Academy, beginning only a couple of generations after Aristotle's death, the dialogues were read differently. They were taken to express a skeptical philosophy, one that raises questions about everything, examining the reasons pro and con on each issue, but always holds back from asserting anything as definitely established, as known to be the case. This reading works best, of course, for the Socratic dialogues,

in which Socrates makes much of the fact that he does not actually know anything himself and can only examine and criticize the well-groundedness of other people's opinions who think that they do. But Arcesilaus (third century B.C.), one of Plato's successors as head of the Academy, who first adopted such a skeptical mode of philosophizing and defended it as genuinely Platonic, is reported to have owned a complete set of Plato's writings—apparently that was an unusual thing in those days—so apparently he studied them all. And indeed, even the last of Plato's works can sustain the skeptical reading if one takes account of the fact that, formally at least, as I have emphasized myself, Plato never speaks in his own person when any of his characters does: even a main character like the Athenian in *Laws* or the visitor from Elea, who does not hesitate to speak dogmatically himself, as if he had full possession of the truth on the matters he discourses upon, can still be read as putting something forward that Plato the author is presenting merely for examination and criticism. This 'skeptical' Platonism held the field in the Academy for the best part of two centuries, until Antiochus of Ascalon early in the first century B.C. refused any longer to accept the skeptical interpretation of Plato's own dialogues.

After Antiochus, Plato was interpreted again, in the way Aristotle and his contemporaries had understood him, as a systematic philosopher with a whole system of doctrine, both about human life and about metaphysical and scientific principles for interpreting and relating to one another all the facts of experience. This system could be found expounded and argued for especially in the dialogues of the second and the late groups—one just had to take each dialogue's main character as Plato's mouthpiece. In Roman imperial times, this dogmatic interpretation was expanded and consolidated, as Platonist philosophers came to regard Plato's writings as the repository of the ultimate and permanent highest truths about the universe—the equivalent for rationalist pagans of the Jews' Books of Moses or the Christians' Gospels. For them, Plato himself had gained a complete and totally adequate insight into the nature and structure of the world and of the divine principles upon which it is organized. All that anyone need do is to read the dialogues correctly in order to discover the truth about every important question of philosophy. It is as if, for Plotinus and the other Platonists of late antiquity (the ones we usually refer to as 'Neoplatonists'), Plato was speaking to us in his writings in the same way that Parmenides or Heraclitus had done, as possessor of his own 'truth'—the *real* truth—handing that down to other mortals in his own somewhat cryptic way, in dialogues. It is quite an irony that, in treating Plato thus as a superwise authority on all philosophical subjects, himself in direct intellectual touch with the highest and most divine principles on which the universe depends, these late Platonists set Plato upon the pedestal of wisdom, traditional among earlier philosophers, the very pedestal that, if I am right, his own commitment to the dialogue form for his writings was intended to renounce.

My suggested approach to the reading of Plato pays full respect to this renunciation. But—with the reservations already noted about Plato's openness and experimental spirit—it also accepts the overwhelming impression, not just of Antiochus, but of every modern reader of at least many of his dialogues, that Platonism nonetheless constitutes a systematic body of 'philosophical doctrine'—about the soul and its immortality; the nature of human happiness and its dependence on the perfection of mind and character that comes through the virtues of wisdom, justice, temperance, and courage; the eternal and unaltering Forms whose natures structure our physical world and the world of decent human relations within it; the nature of love and the subservience of love in its genuine form to a vision of that eternal realm. These and many other substantive philosophical ideas to be explored in Plato's dialogues are his permanent contribution to our Western philosophical culture. But we would fail to heed his own warnings if we did not explore these in a spirit of open-ended inquiry, seeking to expand and deepen our own understandings as we interrogate his texts, and ourselves through them.

## V. The Translations

Hackett Publishing Company began bringing out the works of Plato in modern, readable English translations in 1974, with G.M.A. Grube's *Republic.* By 1980 I was advising first William Hackett and then James Hullett, his successor, in the commissioning of, and providing editorial oversight over, the new translations that the company published during the next decade and a half, looking toward an eventual *Complete Works.* In 1991 D. S. Hutchinson joined the project. In completing the process we now add to the twenty dialogues already published twenty new works commissioned specially for this volume, taking over five additional translations from other sources (two of them extensively revised by the translators for publication here).

In overseeing the preparation of the translations, I have had constantly in mind two principal objectives, not often combined, that I was convinced could be achieved simultaneously. First, I wanted them to be as correct as was humanly possible. Taking Plato's to be first and foremost works of philosophy, for me that meant not just that the meaning of the Greek sentences should be correctly grasped and rendered, with any significant, genuine alternative renderings indicated, but, equally important, that everything establishing the flow and connection of philosophical ideas in the Greek be somehow preserved in the English. Variances and continuities in philosophically significant terminology within a single work should so far as possible be preserved or otherwise indicated in the translation. Where logical relationships are precisely defined in the Greek, they have to be rendered equally precisely in the English. And so on. Many older

translations, smooth-reading though they sometimes are, fail signally in these crucial respects. On the other hand, I saw no need, in the name of 'philosophical accuracy', to introduce indiscriminately neologisms and technical language and to resort to other odd and unnatural terminology or turns of phrase or to torture normal English syntax and patterns of prose composition. Plato's Greek is straightforward and elegant, most of the time, though in order to express novel and complex theoretical ideas, it must sometimes strain the powers of ordinary language.

The aim should be to find a way, while adhering to normal English word order and sentence construction, to say as precisely as possible, in ordinary English—where necessary, ordinary philosophical English—just what an educated contemporary of Plato's would have taken the Greek being translated to be saying. It is neither necessary nor appropriate to produce 'English' encrusted with esoteric code-formations that no one could make good use of except by consulting the Greek text. Hence, we have to reject the ideal some recent translators of Greek philosophy into English have held aloft, to produce a version as 'close' to the Greek text in syntax, word order, and terminology as were the medieval Latin Aristotle translations of William of Moerbeke. For one thing, Latin grammar and normal sentence construction are vastly closer to the Greek than our contemporary English has any chance of being. And, in any case, the scholastic study of Aristotle that Moerbeke's translations were intended to facilitate is nothing we should wish ourselves or our students to emulate in reading Plato (or, for that matter, Aristotle, either). When we English-speaking readers turn to Plato's texts, we want to find a Plato who speaks in English—our English—and communicates to us as accurately as possible all the details of his thought and artistry. I know that these translations achieve this aim in varying degrees and no doubt none of them as fully as one might realistically wish. But I hope they will be found a durable basis on which both general readers and students can rely in carrying forward into the new millennium the twenty-four-hundred-year tradition of reading and studying these classics of Western philosophy.

John M. Cooper
July 1996

# EDITORIAL NOTES

**Marginal references** In order to facilitate comparison between this edition and others, in Greek or in translation, we print in the margins of the translations the 'Stephanus numbers' that are commonly used in scholarly references to the works of Plato. These numbers and letters indicate the corresponding page and section on that page of the relevant volume of the Greek text of Plato as edited (Paris, 1578) by the French scholar Henri Estienne (in Latin, Stephanus). (These are omitted in the case of *Halcyon* and *Epigrams* because Stephanus did not include those works in his edition.)

**Footnotes** It has been our intention to provide in footnotes all the basic information the general reader might need in order to follow the discussion in the texts. This includes the identification of persons, places, events, etc., in Greek history and culture, insofar as these are not explained sufficiently in the context where the references to them occur. We have also identified the sources of all Plato's quotations from other authors, so far as those are known; any that are not identified should be presumed to be from now unidentifiable authors or works. In general, we have not attempted to provide any guidance or commentary as regards issues of philosophical interpretation, apart from that contained in the introductory notes to the individual works. But we have sometimes given alternative translations, where some point of philosophical significance may be at issue and the Greek is ambiguous or otherwise subject to differing construals. In all cases the editor bears ultimate responsibility for the footnotes to the translations: usually these incorporate material that was in the footnotes in the original place of publication or was provided by those responsible for translations here published for the first time, but the editor has decided when a footnote is needed, and when not, and he has borne the responsibility of editing and otherwise preparing the footnotes as they appear here, including providing most of the alternative translations himself. Responsibility for any errors or omissions in the footnotes rests with the editor.

**Greek text** In general the Greek text translated is that of John Burnet, in *Platonis Opera*, Oxford Classical Texts, five volumes (Oxford: Clarendon Press, 1900–1907). Where the translation of a given work is based on a different text from Burnet's, this is recorded in a note at the beginning of the work in question. For each work, every effort has been made to register

in footnotes all variances in the translation from the basic Greek text, Burnet's or another. Such departures, as indicated in the notes, often select alternative readings contained in the manuscripts, or else follow emendations proposed by other editors or in scholarly articles: we do not record the details, beyond saying that a given reading is found in "some manuscripts," or else that a given emendation "is accepted," or the like. Those who wish to know the details may usually find them in the *apparatus criticus* of a critical edition of the dialogue in question. In a few places the translator has opted for a new conjectural treatment in the text translated; there we simply record the conjectured reading without further elaboration.

**Translations** Many of the translations in this book have been published before, either by Hackett Publishing Company or by another publisher (details are given in the Acknowledgments). In all cases the version appearing here reflects revisions, of varying quantity and significance, made by the translators on the advice of the editor. While no general effort has been made to ensure consistency in the translation of recurrent words or phrases across the vast extent of Plato's works (that would intrude too greatly on the prerogatives and the individual judgment of the translators to whose scholarly expertise we are indebted for these *Complete Works*), we have adopted a policy of keeping to a single spelling for each of the proper nouns and adjectives that occur in the book.

**Editorial responsibilities** As editor, John M. Cooper has had editorial oversight over the preparation for publication of all the translations in this volume, as well as for the introductions and notes. He is the author of all the introductory notes except those noted just below, signing them *J.M.C.* In addition to advising the editor generally, D. S. Hutchinson's special responsibilities as associate editor concerned a set of fifteen works—the ones marked as spurious by the first-century-A.D. editor Thrasyllus, plus eight further dialogues whose Platonic authorship has been at least doubted in modern times: *Definitions, On Justice, On Virtue, Demodocus, Sisyphus, Eryxias, Axiochus, Halcyon, Alcibiades, Second Alcibiades, Hipparchus, Rival Lovers, Theages, Clitophon*, and *Minos*. He recruited the translators (translating two of the works, *Definitions* and *Alcibiades*, himself) and worked closely with them in the preparation and revision of their versions. He wrote the introductory notes to these fifteen works, signing them *D.S.H.*

# ACKNOWLEDGMENTS

The editor would like to acknowledge the assistance of Sean Kelsey, who as research assistant read through all the translations at the penultimate stage, offering many excellent suggestions for improvement, identifying the sources of Plato's quotations, and indicating where footnotes were needed, as well as preparing the texts for submission to the publisher. For advice and help on the introduction and introductory notes he would like to thank Rachel Barney, Christopher Bobonich, Panos Dimas, D. S. Hutchinson, George Kateb, Alexander Nehamas, C.D.C. Reeve, J. B. Schneewind, and David Sedley. Discussion with Øyvind Rabbås was helpful in preparing the introductory notes for the Socratic dialogues, especially *Laches*. Paul Woodruff gave good advice on the revision of the *Epigrams* translation. For Hackett Publishing Company Deborah Wilkes and Dan Kirklin gave steady, reliable, and invariably intelligent advice and assistance on all aspects of the production of the book.

The associate editor would like to thank Nicholas Denyer, Rudolf Kassel, and Carl Werner Müller (whose book *Die Kurzdialoge der Appendix Platonica* sheds invaluable light on the spurious works in the Platonic corpus), as well as John Cooper, whose critical eye improved every introductory note.

The index was prepared by Paul Coppock. The editors would also like to thank him for his work at earlier stages of the project in overseeing the preparation of the translations on behalf of the publisher. Thanks also go to Jonathan Beere for verifying typographical errors and other corrections for the second printing, and to Adam Kissel for invaluable help in bringing some of these to the editors' attention. Further corrections in the third printing were suggested by Rachel Barney, Alfonso Gomez-Lobo, Charles Kahn, Henry R. Mendell, and Donald Morrison. The editors are grateful for these, as well as for the continued interest of the translators in the improvement of their earlier work.

Many of the translations appearing (in revised form) in this book have previously been published separately by Hackett Publishing Company: *Euthyphro, Apology, Crito, Phaedo, Theaetetus, Sophist, Parmenides, Philebus, Symposium, Phaedrus, Charmides, Laches, Lysis, Euthydemus, Protagoras, Gorgias, Meno, Greater Hippias, Ion,* and *Republic*.

Published here for the first time are the translations of *Cratylus, Alcibiades, Second Alcibiades, Hipparchus, Rival Lovers, Theages, Lesser Hippias, Menexenus, Clitophon, Timaeus, Critias, Minos, Epinomis, Definitions, On Justice, On Virtue, Demodocus, Sisyphus, Halcyon,* and *Eryxias*.

Translations previously published by other publishers are

*Statesman*, translated by C. J. Rowe, Warminster: 1995, reprinted by permission of Aris and Phillips Ltd., UK. The translation that appears here is an extensive revision of the Aris & Phillips translation. It is, however, the text that appears in the Hackett edition of *Statesman*.

*Laws*, translated by Trevor J. Saunders, reprinted here by permission of Penguin Books Ltd. First published in Great Britain by Penguin Books Ltd., 1970. Reprinted with minor revisions, 1975.

*Letters*, translated by Glenn R. Morrow, from Plato, *Epistles*, 1962, Library of Liberal Arts, Bobbs-Merrill Co., Inc.

*Axiochus*, translated by Jackson P. Hershbell, 1981, The Society of Biblical Literature. Reprinted here by permission of Jackson P. Hershbell.

# EUTHYPHRO

*The scene is the* agora *or central marketplace of Athens, before the offices of the magistrate who registers and makes preliminary inquiries into charges brought under the laws protecting the city from the gods' displeasure. There Socrates meets Euthyphro—Socrates is on his way in to answer the charges of 'impiety' brought against him by three younger fellow citizens, on which he is going to be condemned to death, as we learn in the* Apology. *Euthyphro has just deposed murder charges against his own father for the death of a servant. Murder was a religious offense, since it entailed 'pollution' which if not ritually purified was displeasing to the gods; but equally, a son's taking such action against his father might well itself be regarded as 'impious'. Euthyphro professes to be acting on esoteric knowledge about the gods and their wishes, and so about the general topic of 'piety'. Socrates seizes the opportunity to acquire from Euthyphro this knowledge of piety so that he can rebut the accusations against himself. However, like all his other interlocutors in Plato's 'Socratic' dialogues, Euthyphro cannot answer Socrates' questions to Socrates' satisfaction, or ultimately to his own. So he cannot make it clear what piety is—though he continues to think that he does know it. Thus, predictably, Socrates' hopes are disappointed; just when he is ready to press further to help Euthyphro express his knowledge, if indeed he does possess it, Euthyphro begs off on the excuse of business elsewhere.*

*Though Socrates does not succeed in his quest, we readers learn a good deal about the sort of thing Socrates is looking for in asking his question 'What is piety?' and the other 'What is . . . ?' questions he pursues in other dialogues. He wants a single 'model' or 'standard' he can look to in order to determine which acts and persons are pious, one that gives clear, unconflicting, and unambiguous answers. He wants something that can provide such a standard all on its own—as one of Euthyphro's proposals, that being pious is simply being loved by the gods, cannot do, since one needs to know first what the gods do love. Pious acts and people may indeed be loved by the gods, but that is a secondary quality, not the 'essence' of piety—it is not that which serves as the standard being sought.*

*There seems no reason to doubt the character Socrates' sincerity in probing Euthyphro's statements so as to work out an adequate answer—he has in advance no answer of his own to test out or to advocate. But does the dialogue itself suggest to the attentive reader an answer of its own? Euthyphro frustrates Socrates by his inability to develop adequately his final suggestion, that piety is justice in relation to the gods, in serving and assisting them in some purpose*

*or enterprise of their own. Socrates seems to find that an enticing idea. Does Plato mean to suggest that piety may be shown simply in doing one's best to become as morally good as possible—something Socrates claims in the* Apology *the gods want more than anything else? If so, can piety remain an independent virtue at all, with its own separate standard for action? These are among the questions this dialogue leaves us to ponder.*

*J.M.C.*

2 Euthyphro: What's new, Socrates, to make you leave your usual haunts in the Lyceum and spend your time here by the king-archon's court? Surely you are not prosecuting anyone before the king-archon as I am?

Socrates: The Athenians do not call this a prosecution but an indictment, Euthyphro.

b Euthyphro: What is this you say? Someone must have indicted you, for you are not going to tell me that you have indicted someone else.

Socrates: No indeed.

Euthyphro: But someone else has indicted you?

Socrates: Quite so.

Euthyphro: Who is he?

Socrates: I do not really know him myself, Euthyphro. He is apparently young and unknown. They call him Meletus, I believe. He belongs to the Pitthean deme, if you know anyone from that deme called Meletus, with long hair, not much of a beard, and a rather aquiline nose.

Euthyphro: I don't know him, Socrates. What charge does he bring against you?

c Socrates: What charge? A not ignoble one I think, for it is no small thing for a young man to have knowledge of such an important subject. He says he knows how our young men are corrupted and who corrupts them. He is likely to be wise, and when he sees my ignorance corrupting
d his contemporaries, he proceeds to accuse me to the city as to their mother. I think he is the only one of our public men to start out the right way, for it is right to care first that the young should be as good as possible, just as a good farmer is likely to take care of the young plants first, and of the
3 others later. So, too, Meletus first gets rid of us who corrupt the young shoots, as he says, and then afterwards he will obviously take care of the older ones and become a source of great blessings for the city, as seems likely to happen to one who started out this way.

Euthyphro: I could wish this were true, Socrates, but I fear the opposite may happen. He seems to me to start out by harming the very heart of

Translated by G.M.A. Grube.

the city by attempting to wrong you. Tell me, what does he say you do to corrupt the young?

Socrates: Strange things, to hear him tell it, for he says that I am a b
maker of gods, and on the ground that I create new gods while not believing in the old gods, he has indicted me for their sake, as he puts it.

Euthyphro: I understand, Socrates. This is because you say that the divine sign keeps coming to you.[1] So he has written this indictment against you as one who makes innovations in religious matters, and he comes to court to slander you, knowing that such things are easily misrepresented
to the crowd. The same is true in my case. Whenever I speak of divine c
matters in the assembly and foretell the future, they laugh me down as if I were crazy; and yet I have foretold nothing that did not happen. Nevertheless, they envy all of us who do this. One need not worry about them, but meet them head-on.

Socrates: My dear Euthyphro, to be laughed at does not matter perhaps, for the Athenians do not mind anyone they think clever, as long as he does not teach his own wisdom, but if they think that he makes others to
be like himself they get angry, whether through envy, as you say, or for d
some other reason.

Euthyphro: I have certainly no desire to test their feelings towards me in this matter.

Socrates: Perhaps you seem to make yourself but rarely available, and not be willing to teach your own wisdom, but I'm afraid that my liking for people makes them think that I pour out to anybody anything I have to say, not only without charging a fee but even glad to reward anyone
who is willing to listen. If then they were intending to laugh at me, as e
you say they laugh at you, there would be nothing unpleasant in their spending their time in court laughing and jesting, but if they are going to be serious, the outcome is not clear except to you prophets.

Euthyphro: Perhaps it will come to nothing, Socrates, and you will fight your case as you think best, as I think I will mine.

Socrates: What is your case, Euthyphro? Are you the defendant or the prosecutor?

Euthyphro: The prosecutor.

Socrates: Whom do you prosecute?

Euthyphro: One whom I am thought crazy to prosecute. 4

Socrates: Are you pursuing someone who will easily escape you?

Euthyphro: Far from it, for he is quite old.

Socrates: Who is it?

Euthyphro: My father.

Socrates: My dear sir! Your own father?

Euthyphro: Certainly.

1. See *Apology* 31d.

Socrates: What is the charge? What is the case about?

Euthyphro: Murder, Socrates.

Socrates: Good heavens! Certainly, Euthyphro, most men would not
b know how they could do this and be right. It is not the part of anyone to do this, but of one who is far advanced in wisdom.

Euthyphro: Yes, by Zeus, Socrates, that is so.

Socrates: Is then the man your father killed one of your relatives? Or is that obvious, for you would not prosecute your father for the murder of a stranger.

Euthyphro: It is ridiculous, Socrates, for you to think that it makes any difference whether the victim is a stranger or a relative. One should only watch whether the killer acted justly or not; if he acted justly, let him go,
c but if not, one should prosecute, if, that is to say, the killer shares your hearth and table. The pollution is the same if you knowingly keep company with such a man and do not cleanse yourself and him by bringing him to justice. The victim was a dependent of mine, and when we were farming in Naxos he was a servant of ours. He killed one of our household slaves in drunken anger, so my father bound him hand and foot and threw him
d in a ditch, then sent a man here to inquire from the priest what should be done. During that time he gave no thought or care to the bound man, as being a killer, and it was no matter if he died, which he did. Hunger and cold and his bonds caused his death before the messenger came back from the seer. Both my father and my other relatives are angry that I am prosecuting my father for murder on behalf of a murderer when he hadn't even killed him, they say, and even if he had, the dead man does not
e deserve a thought, since he was a killer. For, they say, it is impious for a son to prosecute his father for murder. But their ideas of the divine attitude to piety and impiety are wrong, Socrates.

Socrates: Whereas, by Zeus, Euthyphro, you think that your knowledge of the divine, and of piety and impiety, is so accurate that, when those things happened as you say, you have no fear of having acted impiously in bringing your father to trial?

Euthyphro: I should be of no use, Socrates, and Euthyphro would not
5 be superior to the majority of men, if I did not have accurate knowledge of all such things.

Socrates: It is indeed most important, my admirable Euthyphro, that I should become your pupil, and as regards this indictment, challenge Meletus about these very things and say to him: that in the past too I considered knowledge about the divine to be most important, and that now that he
b says that I am guilty of improvising and innovating about the gods I have become your pupil. I would say to him: "If, Meletus, you agree that Euthyphro is wise in these matters, consider me, too, to have the right beliefs and do not bring me to trial. If you do not think so, then prosecute that teacher of mine, not me, for corrupting the older men, me and his own father, by teaching me and by exhorting and punishing him." If he

is not convinced, and does not discharge me or indict you instead of me, I shall repeat the same challenge in court.

EUTHYPHRO: Yes, by Zeus, Socrates, and, if he should try to indict me, I think I would find his weak spots and the talk in court would be about c
him rather than about me.

SOCRATES: It is because I realize this that I am eager to become your pupil, my dear friend. I know that other people as well as this Meletus do not even seem to notice you, whereas he sees me so sharply and clearly that he indicts me for ungodliness. So tell me now, by Zeus, what you just now maintained you clearly knew: what kind of thing do you say that godliness and ungodliness are, both as regards murder and other things; d
or is the pious not the same and alike in every action, and the impious the opposite of all that is pious and like itself, and everything that is to be impious presents us with one form or appearance in so far as it is impious?

EUTHYPHRO: Most certainly, Socrates.

SOCRATES: Tell me then, what is the pious, and what the impious, do you say?

EUTHYPHRO: I say that the pious is to do what I am doing now, to prosecute the wrongdoer, be it about murder or temple robbery or anything else, whether the wrongdoer is your father or your mother or anyone else; e
not to prosecute is impious. And observe, Socrates, that I can cite powerful evidence that the law is so. I have already said to others that such actions are right, not to favor the ungodly, whoever they are. These people themselves believe that Zeus is the best and most just of the gods, yet they agree that 6
he bound his father because he unjustly swallowed his sons, and that he in turn castrated his father for similar reasons. But they are angry with me because I am prosecuting my father for his wrongdoing. They contradict themselves in what they say about the gods and about me.

SOCRATES: Indeed, Euthyphro, this is the reason why I am a defendant in the case, because I find it hard to accept things like that being said about the gods, and it is likely to be the reason why I shall be told I do wrong. Now, however, if you, who have full knowledge of such things, share b
their opinions, then we must agree with them, too, it would seem. For what are we to say, we who agree that we ourselves have no knowledge of them? Tell me, by the god of friendship, do you really believe these things are true?

EUTHYPHRO: Yes, Socrates, and so are even more surprising things, of which the majority has no knowledge.

SOCRATES: And do you believe that there really is war among the gods, and terrible enmities and battles, and other such things as are told by the c
poets, and other sacred stories such as are embroidered by good writers and by representations of which the robe of the goddess is adorned when it is carried up to the Acropolis? Are we to say these things are true, Euthyphro?

EUTHYPHRO: Not only these, Socrates, but, as I was saying just now, I will, if you wish, relate many other things about the gods which I know will amaze you.

SOCRATES: I should not be surprised, but you will tell me these at leisure some other time. For now, try to tell me more clearly what I was asking
d just now, for, my friend, you did not teach me adequately when I asked you what the pious was, but you told me that what you are doing now, in prosecuting your father for murder, is pious.

EUTHYPHRO: And I told the truth, Socrates.

SOCRATES: Perhaps. You agree, however, that there are many other pious actions.

EUTHYPHRO: There are.

SOCRATES: Bear in mind then that I did not bid you tell me one or two of the many pious actions but that form itself that makes all pious actions pious, for you agreed that all impious actions are impious and all pious
e actions pious through one form, or don't you remember?

EUTHYPHRO: I do.

SOCRATES: Tell me then what this form itself is, so that I may look upon it and, using it as a model, say that any action of yours or another's that is of that kind is pious, and if it is not that it is not.

EUTHYPHRO: If that is how you want it, Socrates, that is how I will tell you.

SOCRATES: That is what I want.

7 EUTHYPHRO: Well then, what is dear to the gods is pious, what is not is impious.

SOCRATES: Splendid, Euthyphro! You have now answered in the way I wanted. Whether your answer is true I do not know yet, but you will obviously show me that what you say is true.

EUTHYPHRO: Certainly.

SOCRATES: Come then, let us examine what we mean. An action or a man dear to the gods is pious, but an action or a man hated by the gods is impious. They are not the same, but quite opposite, the pious and the impious. Is that not so?

EUTHYPHRO: It is indeed.

SOCRATES: And that seems to be a good statement?

b EUTHYPHRO: I think so, Socrates.

SOCRATES: We have also stated that the gods are in a state of discord, that they are at odds with each other, Euthyphro, and that they are at enmity with each other. Has that, too, been said?

EUTHYPHRO: It has.

SOCRATES: What are the subjects of difference that cause hatred and anger? Let us look at it this way. If you and I were to differ about numbers as to which is the greater, would this difference make us enemies and
c angry with each other, or would we proceed to count and soon resolve our difference about this?

EUTHYPHRO: We would certainly do so.

SOCRATES: Again, if we differed about the larger and the smaller, we would turn to measurement and soon cease to differ.

EUTHYPHRO: That is so.

SOCRATES: And about the heavier and the lighter, we would resort to weighing and be reconciled.

EUTHYPHRO: Of course.

SOCRATES: What subject of difference would make us angry and hostile to each other if we were unable to come to a decision? Perhaps you do not have an answer ready, but examine as I tell you whether these subjects d
are the just and the unjust, the beautiful and the ugly, the good and the bad. Are these not the subjects of difference about which, when we are unable to come to a satisfactory decision, you and I and other men become hostile to each other whenever we do?

EUTHYPHRO: That is the difference, Socrates, about those subjects.

SOCRATES: What about the gods, Euthyphro? If indeed they have differences, will it not be about these same subjects?

EUTHYPHRO: It certainly must be so.

SOCRATES: Then according to your argument, my good Euthyphro, differ- e
ent gods consider different things to be just, beautiful, ugly, good, and bad, for they would not be at odds with one another unless they differed about these subjects, would they?

EUTHYPHRO: You are right.

SOCRATES: And they like what each of them considers beautiful, good, and just, and hate the opposites of these?

EUTHYPHRO: Certainly.

SOCRATES: But you say that the same things are considered just by some
gods and unjust by others, and as they dispute about these things they 8
are at odds and at war with each other. Is that not so?

EUTHYPHRO: It is.

SOCRATES: The same things then are loved by the gods and hated by the gods, and would be both god-loved and god-hated.

EUTHYPHRO: It seems likely.

SOCRATES: And the same things would be both pious and impious, according to this argument?

EUTHYPHRO: I'm afraid so.

SOCRATES: So you did not answer my question, you surprising man. I did not ask you what same thing is both pious and impious, and it appears
that what is loved by the gods is also hated by them. So it is in no way b
surprising if your present action, namely punishing your father, may be pleasing to Zeus but displeasing to Cronus and Uranus, pleasing to Hephaestus but displeasing to Hera, and so with any other gods who differ from each other on this subject.

EUTHYPHRO: I think, Socrates, that on this subject no gods would differ from one another, that whoever has killed anyone unjustly should pay the penalty.

c Socrates: Well now, Euthyphro, have you ever heard any man maintaining that one who has killed or done anything else unjustly should not pay the penalty?

Euthyphro: They never cease to dispute on this subject, both elsewhere and in the courts, for when they have committed many wrongs they do and say anything to avoid the penalty.

Socrates: Do they agree they have done wrong, Euthyphro, and in spite of so agreeing do they nevertheless say they should not be punished?

Euthyphro: No, they do not agree on that point.

Socrates: So they do not say or do just anything. For they do not venture to say this, or dispute that they must not pay the penalty if they have
d done wrong, but I think they deny doing wrong. Is that not so?

Euthyphro: That is true.

Socrates: Then they do not dispute that the wrongdoer must be punished, but they may disagree as to who the wrongdoer is, what he did, and when.

Euthyphro: You are right.

Socrates: Do not the gods have the same experience, if indeed they are at odds with each other about the just and the unjust, as your argument maintains? Some assert that they wrong one another, while others deny
e it, but no one among gods or men ventures to say that the wrongdoer must not be punished.

Euthyphro: Yes, that is true, Socrates, as to the main point.

Socrates: And those who disagree, whether men or gods, dispute about each action, if indeed the gods disagree. Some say it is done justly, others unjustly. Is that not so?

Euthyphro: Yes, indeed.

9 Socrates: Come now, my dear Euthyphro, tell me, too, that I may become wiser, what proof you have that all the gods consider that man to have been killed unjustly who became a murderer while in your service, was bound by the master of his victim, and died in his bonds before the one who bound him found out from the seers what was to be done with him, and that it is right for a son to denounce and to prosecute his father on
b behalf of such a man. Come, try to show me a clear sign that all the gods definitely believe this action to be right. If you can give me adequate proof of this, I shall never cease to extol your wisdom.

Euthyphro: This is perhaps no light task, Socrates, though I could show you very clearly.

Socrates: I understand that you think me more dull-witted than the jury, as you will obviously show them that these actions were unjust and that all the gods hate such actions.

Euthyphro: I will show it to them clearly, Socrates, if only they will listen to me.

c Socrates: They will listen if they think you show them well. But this thought came to me as you were speaking, and I am examining it, saying to myself: "If Euthyphro shows me conclusively that all the gods consider

such a death unjust, to what greater extent have I learned from him the nature of piety and impiety? This action would then, it seems, be hated by the gods, but the pious and the impious were not thereby now defined, for what is hated by the gods has also been shown to be loved by them." So I will not insist on this point; let us assume, if you wish, that all the
gods consider this unjust and that they all hate it. However, is this the d
correction we are making in our discussion, that what all the gods hate is impious, and what they all love is pious, and that what some gods love and others hate is neither or both? Is that how you now wish us to define piety and impiety?

EUTHYPHRO: What prevents us from doing so, Socrates?

SOCRATES: For my part nothing, Euthyphro, but you look whether on your part this proposal will enable you to teach me most easily what you promised.

EUTHYPHRO: I would certainly say that the pious is what all the gods e
love, and the opposite, what all the gods hate, is the impious.

SOCRATES: Then let us again examine whether that is a sound statement, or do we let it pass, and if one of us, or someone else, merely says that something is so, do we accept that it is so? Or should we examine what the speaker means?

EUTHYPHRO: We must examine it, but I certainly think that this is now a fine statement.

SOCRATES: We shall soon know better whether it is. Consider this: Is the 10
pious being loved by the gods because it is pious, or is it pious because it is being loved by the gods?

EUTHYPHRO: I don't know what you mean, Socrates.

SOCRATES: I shall try to explain more clearly: we speak of something carried and something carrying, of something led and something leading, of something seen and something seeing, and you understand that these things are all different from one another and how they differ?

EUTHYPHRO: I think I do.

SOCRATES: So there is also something loved and—a different thing—something loving.

EUTHYPHRO: Of course.

SOCRATES: Tell me then whether the thing carried is a carried thing b
because it is being carried, or for some other reason?

EUTHYPHRO: No, that is the reason.

SOCRATES: And the thing led is so because it is being led, and the thing seen because it is being seen?

EUTHYPHRO: Certainly.

SOCRATES: It is not being seen because it is a thing seen but on the contrary it is a thing seen because it is being seen; nor is it because it is something led that it is being led but because it is being led that it is something led; nor is something being carried because it is something carried, but it is
something carried because it is being carried. Is what I want to say clear, c
Euthyphro? I want to say this, namely, that if anything is being changed

or is being affected in any way, it is not being changed because it is something changed, but rather it is something changed because it is being changed; nor is it being affected because it is something affected, but it is something affected because it is being affected.[2] Or do you not agree?

EUTHYPHRO: I do.

SOCRATES: Is something loved either something changed or something affected by something?

EUTHYPHRO: Certainly.

SOCRATES: So it is in the same case as the things just mentioned; it is not being loved by those who love it because it is something loved, but it is something loved because it is being loved by them?

EUTHYPHRO: Necessarily.

d SOCRATES: What then do we say about the pious, Euthyphro? Surely that it is being loved by all the gods, according to what you say?

EUTHYPHRO: Yes.

SOCRATES: Is it being loved because it is pious, or for some other reason?

EUTHYPHRO: For no other reason.

SOCRATES: It is being loved then because it is pious, but it is not pious because it is being loved?

EUTHYPHRO: Apparently.

SOCRATES: And yet it is something loved and god-loved because it is being loved by the gods?

EUTHYPHRO: Of course.

SOCRATES: Then the god-loved is not the same as the pious, Euthyphro, nor the pious the same as the god-loved, as you say it is, but one differs from the other.

e EUTHYPHRO: How so, Socrates?

SOCRATES: Because we agree that the pious is being loved for this reason, that it is pious, but it is not pious because it is being loved. Is that not so?

EUTHYPHRO: Yes.

SOCRATES: And that the god-loved, on the other hand, is so because it is being loved by the gods, by the very fact of being loved, but it is not being loved because it is god-loved.

EUTHYPHRO: True.

SOCRATES: But if the god-loved and the pious were the same, my dear Euthyphro, then if the pious was being loved because it was pious, the
11 god-loved would also be being loved because it was god-loved; and if the god-loved was god-loved because it was being loved by the gods, then

2. Here Socrates gives the general principle under which, he says, the specific cases already examined—those of leading, carrying, and seeing—all fall. It is by being changed by something that changes *it* (e.g. by carrying it somewhere) that anything is a changed thing—not vice versa: it is not by something's being a changed thing that something *else* then changes it so that it comes to be being changed (e.g. by carrying it somewhere). Likewise for "affections" such as being seen by someone: it is by being "affected" by something that "affects" it that anything is an "affected" thing, not vice versa. It is not by being an "affected" thing (e.g., a thing seen) that something else then "affects" it.

the pious would also be pious because it was being loved by the gods.
But now you see that they are in opposite cases as being altogether different
from each other: the one is such as to be loved because it is being loved,
the other is being loved because it is such as to be loved. I'm afraid,
Euthyphro, that when you were asked what piety is, you did not wish to
make its nature clear to me, but you told me an affect or quality of it, that
the pious has the quality of being loved by all the gods, but you have not b
yet told me what the pious is. Now, if you will, do not hide things from
me but tell me again from the beginning what piety is, whether being
loved by the gods or having some other quality—we shall not quarrel
about that—but be keen to tell me what the pious and the impious are.

EUTHYPHRO: But Socrates, I have no way of telling you what I have in mind, for whatever proposition we put forward goes around and refuses to stay put where we establish it.

SOCRATES: Your statements, Euthyphro, seem to belong to my ancestor,
Daedalus. If I were stating them and putting them forward, you would c
perhaps be making fun of me and say that because of my kinship with
him my conclusions in discussion run away and will not stay where one
puts them. As these propositions are yours, however, we need some other
jest, for they will not stay put for you, as you say yourself.

EUTHYPHRO: I think the same jest will do for our discussion, Socrates,
for I am not the one who makes them go round and not remain in the
same place; it is you who are the Daedalus; for as far as I am concerned d
they would remain as they were.

SOCRATES: It looks as if I was cleverer than Daedalus in using my skill,
my friend, in so far as he could only cause to move the things he made
himself, but I can make other people's move as well as my own. And the
smartest part of my skill is that I am clever without wanting to be, for I
would rather have your statements to me remain unmoved than possess
the wealth of Tantalus as well as the cleverness of Daedalus. But enough e
of this. Since I think you are making unnecessary difficulties, I am as eager
as you are to find a way to teach me about piety, and do not give up
before you do. See whether you think all that is pious is of necessity just.

EUTHYPHRO: I think so.

SOCRATES: And is then all that is just pious? Or is all that is pious just,
but not all that is just pious, but some of it is and some is not? 12

EUTHYPHRO: I do not follow what you are saying, Socrates.

SOCRATES: Yet you are younger than I by as much as you are wiser. As I say, you are making difficulties because of your wealth of wisdom. Pull yourself together, my dear sir, what I am saying is not difficult to grasp. I am saying the opposite of what the poet said who wrote:

> *You do not wish to name Zeus, who had done it, and who made*
> *all things grow, for where there is fear there is also shame.*[3] b

3. Author unknown.

I disagree with the poet. Shall I tell you why?

Euthyphro: Please do.

Socrates: I do not think that "where there is fear there is also shame," for I think that many people who fear disease and poverty and many other such things feel fear, but are not ashamed of the things they fear. Do you not think so?

Euthyphro: I do indeed.

Socrates: But where there is shame there is also fear. For is there anyone
c who, in feeling shame and embarrassment at anything, does not also at the same time fear and dread a reputation for wickedness?

Euthyphro: He is certainly afraid.

Socrates: It is then not right to say "where there is fear there is also shame," but that where there is shame there is also fear, for fear covers a larger area than shame. Shame is a part of fear just as odd is a part of number, with the result that it is not true that where there is number there is also oddness, but that where there is oddness there is also number. Do you follow me now?

Euthyphro: Surely.

Socrates: This is the kind of thing I was asking before, whether where
d there is piety there is also justice, but where there is justice there is not always piety, for the pious is a part of justice. Shall we say that, or do you think otherwise?

Euthyphro: No, but like that, for what you say appears to be right.

Socrates: See what comes next: if the pious is a part of the just, we must, it seems, find out what part of the just it is. Now if you asked me something of what we mentioned just now, such as what part of number is the even, and what number that is, I would say it is the number that is divisible into two equal, not unequal, parts. Or do you not think so?

Euthyphro: I do.

e Socrates: Try in this way to tell me what part of the just the pious is, in order to tell Meletus not to wrong us any more and not to indict me for ungodliness, since I have learned from you sufficiently what is godly and pious and what is not.

Euthyphro: I think, Socrates, that the godly and pious is the part of the just that is concerned with the care of the gods, while that concerned with the care of men is the remaining part of justice.

Socrates: You seem to me to put that very well, but I still need a bit of
13 information. I do not know yet what you mean by care, for you do not mean the care of the gods in the same sense as the care of other things, as, for example, we say, don't we, that not everyone knows how to care for horses, but the horse breeder does.

Euthyphro: Yes, I do mean it that way.

Socrates: So horse breeding is the care of horses.

Euthyphro: Yes.

Socrates: Nor does everyone know how to care for dogs, but the hunter does.

EUTHYPHRO: That is so.

SOCRATES: So hunting is the care of dogs.

EUTHYPHRO: Yes. b

SOCRATES: And cattle raising is the care of cattle.

EUTHYPHRO: Quite so.

SOCRATES: While piety and godliness is the care of the gods, Euthyphro. Is that what you mean?

EUTHYPHRO: It is.

SOCRATES: Now care in each case has the same effect; it aims at the good and the benefit of the object cared for, as you can see that horses cared for by horse breeders are benefited and become better. Or do you not think so?

EUTHYPHRO: I do.

SOCRATES: So dogs are benefited by dog breeding, cattle by cattle raising, and so with all the others. Or do you think that care aims to harm the c
object of its care?

EUTHYPHRO: By Zeus, no.

SOCRATES: It aims to benefit the object of its care?

EUTHYPHRO: Of course.

SOCRATES: Is piety then, which is the care of the gods, also to benefit the gods and make them better? Would you agree that when you do something pious you make some one of the gods better?

EUTHYPHRO: By Zeus, no.

SOCRATES: Nor do I think that this is what you mean—far from it—but that is why I asked you what you meant by the care of gods, because I did not believe you meant this kind of care. d

EUTHYPHRO: Quite right, Socrates, that is not the kind of care I mean.

SOCRATES: Very well, but what kind of care of the gods would piety be?

EUTHYPHRO: The kind of care, Socrates, that slaves take of their masters.

SOCRATES: I understand. It is likely to be a kind of service of the gods.

EUTHYPHRO: Quite so.

SOCRATES: Could you tell me to the achievement of what goal service to doctors tends? Is it not, do you think, to achieving health?

EUTHYPHRO: I think so.

SOCRATES: What about service to shipbuilders? To what achievement is e
it directed?

EUTHYPHRO: Clearly, Socrates, to the building of a ship.

SOCRATES: And service to housebuilders to the building of a house?

EUTHYPHRO: Yes.

SOCRATES: Tell me then, my good sir, to the achievement of what aim does service to the gods tend? You obviously know since you say that you, of all men, have the best knowledge of the divine.

EUTHYPHRO: And I am telling the truth, Socrates.

SOCRATES: Tell me then, by Zeus, what is that excellent aim that the gods achieve, using us as their servants?

EUTHYPHRO: Many fine things, Socrates.

14 Socrates: So do generals, my friend. Nevertheless you could easily tell me their main concern, which is to achieve victory in war, is it not?

Euthyphro: Of course.

Socrates: The farmers too, I think, achieve many fine things, but the main point of their efforts is to produce food from the earth.

Euthyphro: Quite so.

Socrates: Well then, how would you sum up the many fine things that the gods achieve?

Euthyphro: I told you a short while ago, Socrates, that it is a considerable
b task to acquire any precise knowledge of these things, but, to put it simply, I say that if a man knows how to say and do what is pleasing to the gods at prayer and sacrifice, those are pious actions such as preserve both private houses and public affairs of state. The opposite of these pleasing actions are impious and overturn and destroy everything.

Socrates: You could tell me in far fewer words, if you were willing, the
c sum of what I asked, Euthyphro, but you are not keen to teach me, that is clear. You were on the point of doing so, but you turned away. If you had given that answer, I should now have acquired from you sufficient knowledge of the nature of piety. As it is, the lover of inquiry must follow his beloved wherever it may lead him. Once more then, what do you say that piety and the pious are? Are they a knowledge of how to sacrifice and pray?

Euthyphro: They are.

Socrates: To sacrifice is to make a gift to the gods, whereas to pray is to beg from the gods?

Euthyphro: Definitely, Socrates.

d Socrates: It would follow from this statement that piety would be a knowledge of how to give to, and beg from, the gods.

Euthyphro: You understood what I said very well, Socrates.

Socrates: That is because I am so desirous of your wisdom, and I concentrate my mind on it, so that no word of yours may fall to the ground. But tell me, what is this service to the gods? You say it is to beg from them and to give to them?

Euthyphro: I do.

Socrates: And to beg correctly would be to ask from them things that we need?

Euthyphro: What else?

e Socrates: And to give correctly is to give them what they need from us, for it would not be skillful to bring gifts to anyone that are in no way needed.

Euthyphro: True, Socrates.

Socrates: Piety would then be a sort of trading skill between gods and men?

Euthyphro: Trading yes, if you prefer to call it that.

Socrates: I prefer nothing, unless it is true. But tell me, what benefit do the gods derive from the gifts they receive from us? What they give us is

obvious to all. There is for us no good that we do not receive from them, 15
but how are they benefited by what they receive from us? Or do we have such an advantage over them in the trade that we receive all our blessings from them and they receive nothing from us?

Euthyphro: Do you suppose, Socrates, that the gods are benefited by what they receive from us?

Socrates: What could those gifts from us to the gods be, Euthyphro?

Euthyphro: What else, do you think, than honor, reverence, and what I mentioned just now, to please them?

Socrates: The pious is then, Euthyphro, pleasing to the gods, but not b
beneficial or dear to them?

Euthyphro: I think it is of all things most dear to them.

Socrates: So the pious is once again what is dear to the gods.

Euthyphro: Most certainly.

Socrates: When you say this, will you be surprised if your arguments seem to move about instead of staying put? And will you accuse me of being Daedalus who makes them move, though you are yourself much more skillful than Daedalus and make them go round in a circle? Or do
you not realize that our argument has moved around and come again to c
the same place? You surely remember that earlier the pious and the god-loved were shown not to be the same but different from each other. Or do you not remember?

Euthyphro: I do.

Socrates: Do you then not realize now that you are saying that what is dear to the gods is the pious? Is this not the same as the god-loved? Or is it not?

Euthyphro: It certainly is.

Socrates: Either we were wrong when we agreed before, or, if we were right then, we are wrong now.

Euthyphro: That seems to be so.

Socrates: So we must investigate again from the beginning what piety is, as I shall not willingly give up before I learn this. Do not think me
unworthy, but concentrate your attention and tell the truth. For you know d
it, if any man does, and I must not let you go, like Proteus,[4] before you tell me. If you had no clear knowledge of piety and impiety you would never have ventured to prosecute your old father for murder on behalf of a servant. For fear of the gods you would have been afraid to take the risk lest you should not be acting rightly, and would have been ashamed
before men, but now I know well that you believe you have clear knowledge e
of piety and impiety. So tell me, my good Euthyphro, and do not hide what you think it is.

Euthyphro: Some other time, Socrates, for I am in a hurry now, and it is time for me to go.

4. See *Odyssey* iv.382 ff.

Socrates: What a thing to do, my friend! By going you have cast me
16 down from a great hope I had, that I would learn from you the nature of the pious and the impious and so escape Meletus' indictment by showing him that I had acquired wisdom in divine matters from Euthyphro, and my ignorance would no longer cause me to be careless and inventive about such things, and that I would be better for the rest of my life.

# APOLOGY

*This work is universally known as Plato's* 'Apology' *of Socrates, in deference to the word* apologia *that stands in its Greek title. Actually, the word means not an apology but a defense speech in a legal proceeding, and that is what we get—certainly, Socrates does not* apologize *for anything! This is not really a dialogue. Except for an interlude when he engages one of his accusers in the sort of question-and-answer discussion characteristic of Plato's 'Socratic' dialogues, we see Socrates delivering a speech before his jury of 501 fellow male Athenians. At the age of seventy he had been indicted for breaking the law against 'impiety'—for offending the Olympian gods (Zeus, Apollo, and the rest) recognized in the city's festivals and other official activities. The basis of the charge, such as it was, lay in the way that, for many years, Socrates had been carrying on his philosophical work in Athens. It has often been thought that the real basis for it lay in 'guilt by association': several of Socrates' known associates had been prominent malfeasants in Athens' defeat in the Peloponnesian War only a few years earlier and the oligarchic reign of terror that followed; but an amnesty had forbidden suits based on political offenses during that time. However much those associations may have been in the minds of his accusers—and his jurors, too—Plato makes him respond sincerely to the charges as lodged. After all, these would be the ultimate basis on which he should or should not be found guilty of anything. So he takes the occasion to explain and defend his devotion to philosophy, and the particular ways he has pursued that in discussions with select young men and with people prominent in the city—discussions like those we see in Plato's other 'Socratic' works. He argues that, so far from offending the gods through his philosophizing, or showing disbelief in them, he has piously followed their lead (particularly that of Apollo, through his oracle at Delphi) in making himself as good a person as he can and encouraging (even goading) others to do the same. The gods want, more than anything else, that we shall be good, and goodness depends principally upon the quality of our understanding of what to care about and how to behave in our lives: philosophy, through Socratic discussion, is the pursuit of that understanding.*

*This is, of course, no record of the actual defense Socrates mounted at his trial in 399* B.C.*, but a composition of Plato's own—we have no way of knowing how closely, if at all, it conforms to Socrates' real speech. In it Plato gives us the best, most serious, response to the charges that, on his own knowledge of Socrates, Socrates was entitled to give. Was Socrates nonetheless guilty as charged? In deciding this, readers should notice that, however sincere Plato's*

*Socrates may be in claiming a pious motivation for his philosophical work, he does set up human reason in his own person as the final arbiter of what is right and wrong, and so of what the gods want us to do: he interprets Apollo, through his oracle at Delphi, to have told him to do that! As we see also from* Euthyphro*, he has no truck with the authority of myths or ancient poets or religious tradition and 'divination' to tell us what to think about the gods and their commands or wishes as regards ourselves.*

*In democratic Athens, juries were randomly selected subsets—representatives—of the whole people. Hence, as Socrates makes clear, he is addressing the democratic people of Athens, and when the jury find him guilty and condemn him to death, they act as and for the Athenian people. Did Socrates bring on his own condemnation, whether wittingly or not, by refusing to say the sorts of things and to comport himself in the sort of way that would have won his acquittal? Perhaps. True to his philosophical calling, he requires that the Athenians* think*, honestly and dispassionately, and decide the truth of the charges by reasoning from the facts as they actually were. This was his final challenge to them to care more for their souls—their minds, their power of reason—than for their peace and comfort, undisturbed by the likes of him. Seen in that light, as Plato wants us to see it, the failure was theirs.*

*J.M.C.*

17 I do not know, men of Athens, how my accusers affected you; as for
me, I was almost carried away in spite of myself, so persuasively did they
speak. And yet, hardly anything of what they said is true. Of the many
lies they told, one in particular surprised me, namely that you should be
b careful not to be deceived by an accomplished speaker like me. That they
were not ashamed to be immediately proved wrong by the facts, when I
show myself not to be an accomplished speaker at all, that I thought was
most shameless on their part—unless indeed they call an accomplished
speaker the man who speaks the truth. If they mean that, I would agree
that I am an orator, but not after their manner, for indeed, as I say,
c practically nothing they said was true. From me you will hear the whole
truth, though not, by Zeus, gentlemen, expressed in embroidered and
stylized phrases like theirs, but things spoken at random and expressed
in the first words that come to mind, for I put my trust in the justice of
what I say, and let none of you expect anything else. It would not be fitting
at my age, as it might be for a young man, to toy with words when I
appear before you.

One thing I do ask and beg of you, gentlemen: if you hear me making
my defense in the same kind of language as I am accustomed to use in
the marketplace by the bankers' tables, where many of you have heard
d me, and elsewhere, do not be surprised or create a disturbance on that

Translated by G.M.A. Grube.

account. The position is this: this is my first appearance in a lawcourt, at
the age of seventy; I am therefore simply a stranger to the manner of
speaking here. Just as if I were really a stranger, you would certainly
excuse me if I spoke in that dialect and manner in which I had been 18
brought up, so too my present request seems a just one, for you to pay no
attention to my manner of speech—be it better or worse—but to concentrate
your attention on whether what I say is just or not, for the excellence of
a judge lies in this, as that of a speaker lies in telling the truth.

It is right for me, gentlemen, to defend myself first against the first lying
accusations made against me and my first accusers, and then against the
later accusations and the later accusers. There have been many who have b
accused me to you for many years now, and none of their accusations are
true. These I fear much more than I fear Anytus and his friends, though
they too are formidable. These earlier ones, however, are more so, gentle-
men; they got hold of most of you from childhood, persuaded you and
accused me quite falsely, saying that there is a man called Socrates, a wise
man, a student of all things in the sky and below the earth, who makes c
the worse argument the stronger. Those who spread that rumor, gentlemen,
are my dangerous accusers, for their hearers believe that those who study
these things do not even believe in the gods. Moreover, these accusers are
numerous, and have been at it a long time; also, they spoke to you at an
age when you would most readily believe them, some of you being children
and adolescents, and they won their case by default, as there was no de-
fense.

What is most absurd in all this is that one cannot even know or mention
their names unless one of them is a writer of comedies.[1] Those who mali- d
ciously and slanderously persuaded you—who also, when persuaded
themselves then persuaded others—all those are most difficult to deal
with: one cannot bring one of them into court or refute him; one must
simply fight with shadows, as it were, in making one's defense, and cross-
examine when no one answers. I want you to realize too that my accusers
are of two kinds: those who have accused me recently, and the old ones
I mention; and to think that I must first defend myself against the latter,
for you have also heard their accusations first, and to a much greater extent e
than the more recent.

Very well then, men of Athens. I must surely defend myself and attempt
to uproot from your minds in so short a time the slander that has resided 19
there so long. I wish this may happen, if it is in any way better for you
and me, and that my defense may be successful, but I think this is very
difficult and I am fully aware of how difficult it is. Even so, let the matter
proceed as the god may wish, but I must obey the law and make my defense.

Let us then take up the case from its beginning. What is the accusation
from which arose the slander in which Meletus trusted when he wrote b

1. This is Aristophanes. Socrates refers below (19c) to the character Socrates in his *Clouds* (225 ff.), first produced in 423 B.C.

out the charge against me? What did they say when they slandered me? I must, as if they were my actual prosecutors, read the affidavit they would have sworn. It goes something like this: Socrates is guilty of wrongdoing in that he busies himself studying things in the sky and below the earth; he makes the worse into the stronger argument, and he teaches these same
c things to others. You have seen this yourself in the comedy of Aristophanes, a Socrates swinging about there, saying he was walking on air and talking a lot of other nonsense about things of which I know nothing at all. I do not speak in contempt of such knowledge, if someone is wise in these things—lest Meletus bring more cases against me—but, gentlemen, I have no part in it, and on this point I call upon the majority of you as witnesses. I think it right that all those of you who have heard me conversing, and
d many of you have, should tell each other if anyone of you has ever heard me discussing such subjects to any extent at all. From this you will learn that the other things said about me by the majority are of the same kind.

Not one of them is true. And if you have heard from anyone that I undertake to teach people and charge a fee for it, that is not true either.
e Yet I think it a fine thing to be able to teach people as Gorgias of Leontini does, and Prodicus of Ceos, and Hippias of Elis.[2] Each of these men can go to any city and persuade the young, who can keep company with
20 anyone of their own fellow citizens they want without paying, to leave the company of these, to join with themselves, pay them a fee, and be grateful to them besides. Indeed, I learned that there is another wise man from Paros who is visiting us, for I met a man who has spent more money on Sophists than everybody else put together, Callias, the son of Hipponicus. So I asked him—he has two sons—"Callias," I said, "if your sons were colts or calves, we could find and engage a supervisor for them
b who would make them excel in their proper qualities, some horse breeder or farmer. Now since they are men, whom do you have in mind to supervise them? Who is an expert in this kind of excellence, the human and social kind? I think you must have given thought to this since you have sons. Is there such a person," I asked, "or is there not?" "Certainly there is," he said. "Who is he?" I asked, "What is his name, where is he from? and what is his fee?" "His name, Socrates, is Evenus, he comes from Paros,
c and his fee is five minas." I thought Evenus a happy man, if he really possesses this art, and teaches for so moderate a fee. Certainly I would pride and preen myself if I had this knowledge, but I do not have it, gentlemen.

One of you might perhaps interrupt me and say: "But Socrates, what is your occupation? From where have these slanders come? For surely if you did not busy yourself with something out of the common, all these rumors and talk would not have arisen unless you did something other than most
d people. Tell us what it is, that we may not speak inadvisedly about you." Anyone who says that seems to be right, and I will try to show you what

2. These were all well-known Sophists. For Gorgias and Hippias see Plato's dialogues named after them; both Hippias and Prodicus appear in *Protagoras.*

has caused this reputation and slander. Listen then. Perhaps some of you
will think I am jesting, but be sure that all that I shall say is true. What
has caused my reputation is none other than a certain kind of wisdom.
What kind of wisdom? Human wisdom, perhaps. It may be that I really
possess this, while those whom I mentioned just now are wise with a e
wisdom more than human; else I cannot explain it, for I certainly do not
possess it, and whoever says I do is lying and speaks to slander me. Do
not create a disturbance, gentlemen, even if you think I am boasting, for
the story I shall tell does not originate with me, but I will refer you to a
trustworthy source. I shall call upon the god at Delphi as witness to the
existence and nature of my wisdom, if it be such. You know Chaerephon. 21
He was my friend from youth, and the friend of most of you, as he shared
your exile and your return. You surely know the kind of man he was,
how impulsive in any course of action. He went to Delphi at one time
and ventured to ask the oracle—as I say, gentlemen, do not create a
disturbance—he asked if any man was wiser than I, and the Pythian replied
that no one was wiser. Chaerephon is dead, but his brother will testify to
you about this.

Consider that I tell you this because I would inform you about the origin b
of the slander. When I heard of this reply I asked myself: "Whatever does
the god mean? What is his riddle? I am very conscious that I am not wise
at all; what then does he mean by saying that I am the wisest? For surely
he does not lie; it is not legitimate for him to do so." For a long time I
was at a loss as to his meaning; then I very reluctantly turned to some
such investigation as this; I went to one of those reputed wise, thinking c
that there, if anywhere, I could refute the oracle and say to it: "This man
is wiser than I, but you said I was." Then, when I examined this man—
there is no need for me to tell you his name, he was one of our public
men—my experience was something like this: I thought that he appeared
wise to many people and especially to himself, but he was not. I then tried
to show him that he thought himself wise, but that he was not. As a result d
he came to dislike me, and so did many of the bystanders. So I withdrew
and thought to myself: "I am wiser than this man; it is likely that neither
of us knows anything worthwhile, but he thinks he knows something
when he does not, whereas when I do not know, neither do I think I know;
so I am likely to be wiser than he to this small extent, that I do not think
I know what I do not know." After this I approached another man, one
of those thought to be wiser than he, and I thought the same thing, and e
so I came to be disliked both by him and by many others.

After that I proceeded systematically. I realized, to my sorrow and alarm,
that I was getting unpopular, but I thought that I must attach the greatest
importance to the god's oracle, so I must go to all those who had any
reputation for knowledge to examine its meaning. And by the dog, men 22
of Athens—for I must tell you the truth—I experienced something like
this: in my investigation in the service of the god I found that those who
had the highest reputation were nearly the most deficient, while those

who were thought to be inferior were more knowledgeable. I must give
you an account of my journeyings as if they were labors I had undertaken
to prove the oracle irrefutable. After the politicians, I went to the poets,
b the writers of tragedies and dithyrambs and the others, intending in their
case to catch myself being more ignorant than they. So I took up those
poems with which they seemed to have taken most trouble and asked
them what they meant, in order that I might at the same time learn some-
thing from them. I am ashamed to tell you the truth, gentlemen, but I
must. Almost all the bystanders might have explained the poems better
c than their authors could. I soon realized that poets do not compose their
poems with knowledge, but by some inborn talent and by inspiration, like
seers and prophets who also say many fine things without any understand-
ing of what they say. The poets seemed to me to have had a similar
experience. At the same time I saw that, because of their poetry, they
thought themselves very wise men in other respects, which they were not.
So there again I withdrew, thinking that I had the same advantage over
them as I had over the politicians.

d Finally I went to the craftsmen, for I was conscious of knowing practically
nothing, and I knew that I would find that they had knowledge of many
fine things. In this I was not mistaken; they knew things I did not know,
and to that extent they were wiser than I. But, men of Athens, the good
craftsmen seemed to me to have the same fault as the poets: each of them,
because of his success at his craft, thought himself very wise in other most
e important pursuits, and this error of theirs overshadowed the wisdom
they had, so that I asked myself, on behalf of the oracle, whether I should
prefer to be as I am, with neither their wisdom nor their ignorance, or to
have both. The answer I gave myself and the oracle was that it was to my
advantage to be as I am.

As a result of this investigation, men of Athens, I acquired much unpopu-
23 larity, of a kind that is hard to deal with and is a heavy burden; many
slanders came from these people and a reputation for wisdom, for in each
case the bystanders thought that I myself possessed the wisdom that I
proved that my interlocutor did not have. What is probable, gentlemen,
is that in fact the god is wise and that his oracular response meant that
b human wisdom is worth little or nothing, and that when he says this man,
Socrates, he is using my name as an example, as if he said: "This man
among you, mortals, is wisest who, like Socrates, understands that his
wisdom is worthless." So even now I continue this investigation as the
god bade me—and I go around seeking out anyone, citizen or stranger,
whom I think wise. Then if I do not think he is, I come to the assistance
of the god and show him that he is not wise. Because of this occupation,
I do not have the leisure to engage in public affairs to any extent, nor
indeed to look after my own, but I live in great poverty because of my
service to the god.

c Furthermore, the young men who follow me around of their own free
will, those who have most leisure, the sons of the very rich, take pleasure

in hearing people questioned; they themselves often imitate me and try
to question others. I think they find an abundance of men who believe
they have some knowledge but know little or nothing. The result is that
those whom they question are angry, not with themselves but with me. d
They say: "That man Socrates is a pestilential fellow who corrupts the
young." If one asks them what he does and what he teaches to corrupt
them, they are silent, as they do not know, but, so as not to appear at a loss,
they mention those accusations that are available against all philosophers,
about "things in the sky and things below the earth," about "not believing
in the gods" and "making the worse the stronger argument"; they would
not want to tell the truth, I'm sure, that they have been proved to lay claim
to knowledge when they know nothing. These people are ambitious, violent
and numerous; they are continually and convincingly talking about me; e
they have been filling your ears for a long time with vehement slanders
against me. From them Meletus attacked me, and Anytus and Lycon,
Meletus being vexed on behalf of the poets, Anytus on behalf of the
craftsmen and the politicians, Lycon on behalf of the orators, so that, as I
started out by saying, I should be surprised if I could rid you of so much 24
slander in so short a time. That, men of Athens, is the truth for you. I have
hidden or disguised nothing. I know well enough that this very conduct
makes me unpopular, and this is proof that what I say is true, that such
is the slander against me, and that such are its causes. If you look into b
this either now or later, this is what you will find.

Let this suffice as a defense against the charges of my earlier accusers.
After this I shall try to defend myself against Meletus, that good and
patriotic man, as he says he is, and my later accusers. As these are a
different lot of accusers, let us again take up their sworn deposition. It
goes something like this: Socrates is guilty of corrupting the young and
of not believing in the gods in whom the city believes, but in other new
spiritual things. Such is their charge. Let us examine it point by point. c

He says that I am guilty of corrupting the young, but I say that Meletus is
guilty of dealing frivolously with serious matters, of irresponsibly bringing
people into court, and of professing to be seriously concerned with things
about none of which he has ever cared, and I shall try to prove that this
is so. Come here and tell me, Meletus. Surely you consider it of the greatest d
importance that our young men be as good as possible?—Indeed I do.

Come then, tell these men who improves them. You obviously know,
in view of your concern. You say you have discovered the one who corrupts
them, namely me, and you bring me here and accuse me to these men.
Come, inform them and tell them who it is. You see, Meletus, that you
are silent and know not what to say. Does this not seem shameful to you
and a sufficient proof of what I say, that you have not been concerned
with any of this? Tell me, my good sir, who improves our young men?— e
The laws.

That is not what I am asking, but what person who has knowledge of
the laws to begin with?—These jurymen, Socrates.

How do you mean, Meletus? Are these able to educate the young and improve them?—Certainly.

All of them, or some but not others?—All of them.

25 Very good, by Hera. You mention a great abundance of benefactors. But what about the audience? Do they improve the young or not?—They do, too.

What about the members of Council?—The Councillors, also.

But, Meletus, what about the assembly? Do members of the assembly corrupt the young, or do they all improve them?—They improve them.

All the Athenians, it seems, make the young into fine good men, except me, and I alone corrupt them. Is that what you mean?—That is most definitely what I mean.

b You condemn me to a great misfortune. Tell me: does this also apply to horses do you think? That all men improve them and one individual corrupts them? Or is quite the contrary true, one individual is able to improve them, or very few, namely, the horse breeders, whereas the majority, if they have horses and use them, corrupt them? Is that not the case, Meletus, both with horses and all other animals? Of course it is, whether you and Anytus say so or not. It would be a very happy state of affairs if only one person corrupted our youth, while the others improved them.

c You have made it sufficiently obvious, Meletus, that you have never had any concern for our youth; you show your indifference clearly; that you have given no thought to the subjects about which you bring me to trial.

And by Zeus, Meletus, tell us also whether it is better for a man to live among good or wicked fellow citizens. Answer, my good man, for I am not asking a difficult question. Do not the wicked do some harm to those who are ever closest to them, whereas good people benefit them?—Certainly.

d And does the man exist who would rather be harmed than benefited by his associates? Answer, my good sir, for the law orders you to answer. Is there any man who wants to be harmed?—Of course not.

Come now, do you accuse me here of corrupting the young and making them worse deliberately or unwillingly?—Deliberately.

What follows, Meletus? Are you so much wiser at your age than I am
e at mine that you understand that wicked people always do some harm to
their closest neighbors while good people do them good, but I have reached
such a pitch of ignorance that I do not realize this, namely that if I make
one of my associates wicked I run the risk of being harmed by him so that
I do such a great evil deliberately, as you say? I do not believe you, Meletus,
26 and I do not think anyone else will. Either I do not corrupt the young or,
if I do, it is unwillingly, and you are lying in either case. Now if I corrupt
them unwillingly, the law does not require you to bring people to court
for such unwilling wrongdoings, but to get hold of them privately, to
instruct them and exhort them; for clearly, if I learn better, I shall cease
to do what I am doing unwillingly. You, however, have avoided my
company and were unwilling to instruct me, but you bring me here, where

the law requires one to bring those who are in need of punishment, not
of instruction.

And so, men of Athens, what I said is clearly true: Meletus has never b
been at all concerned with these matters. Nonetheless tell us, Meletus, how
you say that I corrupt the young; or is it obvious from your deposition
that it is by teaching them not to believe in the gods in whom the city
believes but in other new spiritual things? Is this not what you say I teach
and so corrupt them?—That is most certainly what I do say.

Then by those very gods about whom we are talking, Meletus, make this c
clearer to me and to these men: I cannot be sure whether you mean that I
teach the belief that there are some gods—and therefore I myself believe that
there are gods and am not altogether an atheist, nor am I guilty of that—not,
however, the gods in whom the city believes, but others, and that this is the
charge against me, that they are others. Or whether you mean that I do not
believe in gods at all, and that this is what I teach to others.—This is what I
mean, that you do not believe in gods at all.

You are a strange fellow, Meletus. Why do you say this? Do I not believe, d
as other men do, that the sun and the moon are gods?—No, by Zeus,
gentlemen of the jury, for he says that the sun is stone, and the moon earth.

My dear Meletus, do you think you are prosecuting Anaxagoras? Are
you so contemptuous of these men and think them so ignorant of letters
as not to know that the books of Anaxagoras of Clazomenae are full of
those theories, and further, that the young men learn from me what they e
can buy from time to time for a drachma, at most, in the bookshops, and
ridicule Socrates if he pretends that these theories are his own, especially
as they are so absurd? Is that, by Zeus, what you think of me, Meletus,
that I do not believe that there are any gods?—That is what I say, that
you do not believe in the gods at all.

You cannot be believed, Meletus, even, I think, by yourself. The man
appears to me, men of Athens, highly insolent and uncontrolled. He seems
to have made this deposition out of insolence, violence and youthful zeal. 27
He is like one who composed a riddle and is trying it out: "Will the wise
Socrates realize that I am jesting and contradicting myself, or shall I deceive
him and others?" I think he contradicts himself in the affidavit, as if he
said: "Socrates is guilty of not believing in gods but believing in gods,"
and surely that is the part of a jester!

Examine with me, gentlemen, how he appears to contradict himself, and b
you, Meletus, answer us. Remember, gentlemen, what I asked you when
I began, not to create a disturbance if I proceed in my usual manner.

Does any man, Meletus, believe in human activities who does not believe
in humans? Make him answer, and not again and again create a disturbance.
Does any man who does not believe in horses believe in horsemen's
activities? Or in flute-playing activities but not in flute-players? No, my
good sir, no man could. If you are not willing to answer, I will tell you c
and these men. Answer the next question, however. Does any man believe
in spiritual activities who does not believe in spirits?—No one.

Thank you for answering, if reluctantly, when these gentlemen made you.
Now you say that I believe in spiritual things and teach about them, whether
new or old, but at any rate spiritual things according to what you say, and
to this you have sworn in your deposition. But if I believe in spiritual things
I must quite inevitably believe in spirits. Is that not so? It is indeed. I shall
d assume that you agree, as you do not answer. Do we not believe spirits to be
either gods or the children of gods? Yes or no?—Of course.

Then since I do believe in spirits, as you admit, if spirits are gods, this
is what I mean when I say you speak in riddles and in jest, as you state
that I do not believe in gods and then again that I do, since I do believe
in spirits. If on the other hand the spirits are children of the gods, bastard
children of the gods by nymphs or some other mothers, as they are said
to be, what man would believe children of the gods to exist, but not gods?
e That would be just as absurd as to believe the young of horses and asses,
namely mules, to exist, but not to believe in the existence of horses and
asses. You must have made this deposition, Meletus, either to test us or
because you were at a loss to find any true wrongdoing of which to accuse
me. There is no way in which you could persuade anyone of even small
intelligence that it is possible for one and the same man to believe in
28 spiritual but not also in divine things, and then again for that same man
to believe neither in spirits nor in gods nor in heroes.

I do not think, men of Athens, that it requires a prolonged defense to
prove that I am not guilty of the charges in Meletus' deposition, but this
is sufficient. On the other hand, you know that what I said earlier is true,
that I am very unpopular with many people. This will be my undoing, if
I am undone, not Meletus or Anytus but the slanders and envy of many
b people. This has destroyed many other good men and will, I think, continue
to do so. There is no danger that it will stop at me.

Someone might say: "Are you not ashamed, Socrates, to have followed
the kind of occupation that has led to your being now in danger of death?"
However, I should be right to reply to him: "You are wrong, sir, if you
think that a man who is any good at all should take into account the risk
of life or death; he should look to this only in his actions, whether what
c he does is right or wrong, whether he is acting like a good or a bad man."
According to your view, all the heroes who died at Troy were inferior
people, especially the son of Thetis who was so contemptuous of danger
compared with disgrace.[3] When he was eager to kill Hector, his goddess
mother warned him, as I believe, in some such words as these: "My child,
if you avenge the death of your comrade, Patroclus, and you kill Hector, you
will die yourself, for your death is to follow immediately after Hector's."
Hearing this, he despised death and danger and was much more afraid
d to live a coward who did not avenge his friends. "Let me die at once," he
said, "when once I have given the wrongdoer his deserts, rather than

3. See *Iliad* xviii.94 ff.

remain here, a laughingstock by the curved ships, a burden upon the earth." Do you think he gave thought to death and danger?

This is the truth of the matter, men of Athens: wherever a man has taken
a position that he believes to be best, or has been placed by his commander,
there he must I think remain and face danger, without a thought for death
or anything else, rather than disgrace. It would have been a dreadful way e
to behave, men of Athens, if, at Potidaea, Amphipolis and Delium, I had,
at the risk of death, like anyone else, remained at my post where those
you had elected to command had ordered me, and then, when the god
ordered me, as I thought and believed, to live the life of a philosopher, to
examine myself and others, I had abandoned my post for fear of death or 29
anything else. That would have been a dreadful thing, and then I might
truly have justly been brought here for not believing that there are gods,
disobeying the oracle, fearing death, and thinking I was wise when I was
not. To fear death, gentlemen, is no other than to think oneself wise when
one is not, to think one knows what one does not know. No one knows
whether death may not be the greatest of all blessings for a man, yet men
fear it as if they knew that it is the greatest of evils. And surely it is the b
most blameworthy ignorance to believe that one knows what one does
not know. It is perhaps on this point and in this respect, gentlemen, that
I differ from the majority of men, and if I were to claim that I am wiser
than anyone in anything, it would be in this, that, as I have no adequate
knowledge of things in the underworld, so I do not think I have. I do
know, however, that it is wicked and shameful to do wrong, to disobey
one's superior, be he god or man. I shall never fear or avoid things of
which I do not know, whether they may not be good rather than things c
that I know to be bad. Even if you acquitted me now and did not believe
Anytus, who said to you that either I should not have been brought here
in the first place, or that now I am here, you cannot avoid executing me,
for if I should be acquitted, your sons would practice the teachings of
Socrates and all be thoroughly corrupted; if you said to me in this regard:
"Socrates, we do not believe Anytus now; we acquit you, but only on
condition that you spend no more time on this investigation and do not
practice philosophy, and if you are caught doing so you will die;" if, as I d
say, you were to acquit me on those terms, I would say to you: "Men of
Athens, I am grateful and I am your friend, but I will obey the god rather
than you, and as long as I draw breath and am able, I shall not cease to
practice philosophy, to exhort you and in my usual way to point out to
any one of you whom I happen to meet: 'Good Sir, you are an Athenian,
a citizen of the greatest city with the greatest reputation for both wisdom
and power; are you not ashamed of your eagerness to possess as much e
wealth, reputation and honors as possible, while you do not care for nor
give thought to wisdom or truth, or the best possible state of your soul?'
Then, if one of you disputes this and says he does care, I shall not let him
go at once or leave him, but I shall question him, examine him and test
him, and if I do not think he has attained the goodness that he says he

30 has, I shall reproach him because he attaches little importance to the most important things and greater importance to inferior things. I shall treat in this way anyone I happen to meet, young and old, citizen and stranger, and more so the citizens because you are more kindred to me. Be sure that this is what the god orders me to do, and I think there is no greater blessing for the city than my service to the god. For I go around doing nothing but persuading both young and old among you not to care for
b your body or your wealth in preference to or as strongly as for the best possible state of your soul, as I say to you: Wealth does not bring about excellence, but excellence makes wealth and everything else good for men, both individually and collectively."[4]

Now if by saying this I corrupt the young, this advice must be harmful, but if anyone says that I give different advice, he is talking nonsense. On this point I would say to you, men of Athens: "Whether you believe Anytus
c or not, whether you acquit me or not, do so on the understanding that this is my course of action, even if I am to face death many times." Do not create a disturbance, gentlemen, but abide by my request not to cry out at what I say but to listen, for I think it will be to your advantage to listen, and I am about to say other things at which you will perhaps cry out. By no means do this. Be sure that if you kill the sort of man I say I am, you will not harm me more than yourselves. Neither Meletus nor
d Anytus can harm me in any way; he could not harm me, for I do not think it is permitted that a better man be harmed by a worse; certainly he might kill me, or perhaps banish or disfranchise me, which he and maybe others think to be great harm, but I do not think so. I think he is doing himself much greater harm doing what he is doing now, attempting to have a man executed unjustly. Indeed, men of Athens, I am far from making a defense now on my own behalf, as might be thought, but on yours, to
e prevent you from wrongdoing by mistreating the god's gift to you by condemning me; for if you kill me you will not easily find another like me. I was attached to this city by the god—though it seems a ridiculous thing to say—as upon a great and noble horse which was somewhat sluggish because of its size and needed to be stirred up by a kind of gadfly. It is to fulfill some such function that I believe the god has placed me in the city. I never cease to rouse each and every one of you, to persuade and
31 reproach you all day long and everywhere I find myself in your company.

Another such man will not easily come to be among you, gentlemen, and if you believe me you will spare me. You might easily be annoyed with me as people are when they are aroused from a doze, and strike out at me; if convinced by Anytus you could easily kill me, and then you could sleep on for the rest of your days, unless the god, in his care for you, sent you someone else. That I am the kind of person to be a gift of
b the god to the city you might realize from the fact that it does not seem

4. Alternatively, this sentence could be translated: "Wealth does not bring about excellence, but excellence brings about wealth and all other public and private blessings for men."

like human nature for me to have neglected all my own affairs and to have tolerated this neglect now for so many years while I was always concerned with you, approaching each one of you like a father or an elder brother to persuade you to care for virtue. Now if I profited from this by charging a fee for my advice, there would be some sense to it, but you can see for yourselves that, for all their shameless accusations, my accusers
have not been able in their impudence to bring forward a witness to say c
that I have ever received a fee or ever asked for one. I, on the other hand, have a convincing witness that I speak the truth, my poverty.

It may seem strange that while I go around and give this advice privately and interfere in private affairs, I do not venture to go to the assembly and there advise the city. You have heard me give the reason for this in many
places. I have a divine or spiritual sign which Meletus has ridiculed in his d
deposition. This began when I was a child. It is a voice, and whenever it speaks it turns me away from something I am about to do, but it never encourages me to do anything. This is what has prevented me from taking part in public affairs, and I think it was quite right to prevent me. Be sure, men of Athens, that if I had long ago attempted to take part in politics, I
should have died long ago, and benefited neither you nor myself. Do not e
be angry with me for speaking the truth; no man will survive who genuinely opposes you or any other crowd and prevents the occurrence of many
unjust and illegal happenings in the city. A man who really fights for 32
justice must lead a private, not a public, life if he is to survive for even a short time.

I shall give you great proofs of this, not words but what you esteem, deeds. Listen to what happened to me, that you may know that I will not yield to any man contrary to what is right, for fear of death, even if I should die at once for not yielding. The things I shall tell you are commonplace and
smack of the lawcourts, but they are true. I have never held any other b
office in the city, but I served as a member of the Council, and our tribe Antiochis was presiding at the time when you wanted to try as a body the ten generals who had failed to pick up the survivors of the naval battle.[5] This was illegal, as you all recognized later. I was the only member of the presiding committee to oppose your doing something contrary to the laws, and I voted against it. The orators were ready to prosecute me and take me away, and your shouts were egging them on, but I thought
I should run any risk on the side of law and justice rather than join you, c
for fear of prison or death, when you were engaged in an unjust course.

This happened when the city was still a democracy. When the oligarchy was established, the Thirty[6] summoned me to the Hall, along with four others, and ordered us to bring Leon from Salamis, that he might be

5. This was the battle of Arginusae (south of Lesbos) in 406 B.C., the last Athenian victory of the Peloponnesian war. A violent storm prevented the Athenian generals from rescuing their survivors.

6. This was the harsh oligarchy that was set up after the final defeat of Athens in 404 B.C. and ruled Athens for some nine months in 404–3 before the democracy was restored.

d executed. They gave many such orders to many people, in order to impli-
cate as many as possible in their guilt. Then I showed again, not in words
but in action, that, if it were not rather vulgar to say so, death is something
I couldn't care less about, but that my whole concern is not to do anything
unjust or impious. That government, powerful as it was, did not frighten
me into any wrongdoing. When we left the Hall, the other four went to
Salamis and brought in Leon, but I went home. I might have been put to
e death for this, had not the government fallen shortly afterwards. There
are many who will witness to these events.

Do you think I would have survived all these years if I were engaged
in public affairs and, acting as a good man must, came to the help of justice
and considered this the most important thing? Far from it, men of Athens,
33 nor would any other man. Throughout my life, in any public activity I
may have engaged in, I am the same man as I am in private life. I have
never come to an agreement with anyone to act unjustly, neither with
anyone else nor with any one of those who they slanderously say are my
pupils. I have never been anyone's teacher. If anyone, young or old, desires
to listen to me when I am talking and dealing with my own concerns, I
have never begrudged this to anyone, but I do not converse when I receive
b a fee and not when I do not. I am equally ready to question the rich and
the poor if anyone is willing to answer my questions and listen to what
I say. And I cannot justly be held responsible for the good or bad conduct
of these people, as I never promised to teach them anything and have not
done so. If anyone says that he has learned anything from me, or that he
heard anything privately that the others did not hear, be assured that he
is not telling the truth.

c Why then do some people enjoy spending considerable time in my
company? You have heard why, men of Athens; I have told you the whole
truth. They enjoy hearing those being questioned who think they are wise,
but are not. And this is not unpleasant. To do this has, as I say, been
enjoined upon me by the god, by means of oracles and dreams, and in
every other way that a divine manifestation has ever ordered a man to
do anything. This is true, gentlemen, and can easily be established.

d If I corrupt some young men and have corrupted others, then surely
some of them who have grown older and realized that I gave them bad
advice when they were young should now themselves come up here to
accuse me and avenge themselves. If they were unwilling to do so them-
selves, then some of their kindred, their fathers or brothers or other relations
should recall it now if their family had been harmed by me. I see many
e of these present here, first Crito, my contemporary and fellow demesman,
the father of Critobulus here; next Lysanias of Sphettus, the father of
Aeschines here; also Antiphon the Cephisian, the father of Epigenes; and
others whose brothers spent their time in this way; Nicostratus, the son
of Theozotides, brother of Theodotus, and Theodotus has died so he could
34 not influence him; Paralius here, son of Demodocus, whose brother was
Theages; there is Adeimantus, son of Ariston, brother of Plato here; Aeanto-
dorus, brother of Apollodorus here.

I could mention many others, some one of whom surely Meletus should
have brought in as witness in his own speech. If he forgot to do so, then
let him do it now; I will yield time if he has anything of the kind to say.
You will find quite the contrary, gentlemen. These men are all ready to
come to the help of the corruptor, the man who has harmed their kindred, b
as Meletus and Anytus say. Now those who were corrupted might well
have reason to help me, but the uncorrupted, their kindred who are older
men, have no reason to help me except the right and proper one, that they
know that Meletus is lying and that I am telling the truth.

Very well, gentlemen. This, and maybe other similar things, is what I
have to say in my defense. Perhaps one of you might be angry as he recalls c
that when he himself stood trial on a less dangerous charge, he begged
and implored the jurymen with many tears, that he brought his children
and many of his friends and family into court to arouse as much pity as
he could, but that I do none of these things, even though I may seem to
be running the ultimate risk. Thinking of this, he might feel resentful d
toward me and, angry about this, cast his vote in anger. If there is such
a one among you—I do not deem there is, but if there is—I think it would
be right to say in reply: My good sir, I too have a household and, in
Homer's phrase, I am not born "from oak or rock" but from men, so that
I have a family, indeed three sons, men of Athens, of whom one is an
adolescent while two are children. Nevertheless, I will not beg you to
acquit me by bringing them here. Why do I do none of these things? Not
through arrogance, gentlemen, nor through lack of respect for you. Whether e
I am brave in the face of death is another matter, but with regard to my
reputation and yours and that of the whole city, it does not seem right to
me to do these things, especially at my age and with my reputation. For
it is generally believed, whether it be true or false, that in certain respects
Socrates is superior to the majority of men. Now if those of you who are 35
considered superior, be it in wisdom or courage or whatever other virtue
makes them so, are seen behaving like that, it would be a disgrace. Yet I
have often seen them do this sort of thing when standing trial, men who
are thought to be somebody, doing amazing things as if they thought it
a terrible thing to die, and as if they were to be immortal if you did not
execute them. I think these men bring shame upon the city so that a b
stranger, too, would assume that those who are outstanding in virtue
among the Athenians, whom they themselves select from themselves to
fill offices of state and receive other honors, are in no way better than
women. You should not act like that, men of Athens, those of you who
have any reputation at all, and if we do, you should not allow it. You
should make it very clear that you will more readily convict a man who
performs these pitiful dramatics in court and so makes the city a laughing-
stock, than a man who keeps quiet.

Quite apart from the question of reputation, gentlemen, I do not think c
it right to supplicate the jury and to be acquitted because of this, but to
teach and persuade them. It is not the purpose of a juryman's office to
give justice as a favor to whoever seems good to him, but to judge according

to law, and this he has sworn to do. We should not accustom you to perjure yourselves, nor should you make a habit of it. This is irreverent conduct for either of us.

d Do not deem it right for me, men of Athens, that I should act towards you in a way that I do not consider to be good or just or pious, especially, by Zeus, as I am being prosecuted by Meletus here for impiety; clearly, if I convinced you by my supplication to do violence to your oath of office, I would be teaching you not to believe that there are gods, and my defense would convict me of not believing in them. This is far from being the case, gentlemen, for I do believe in them as none of my accusers do. I leave it to you and the god to judge me in the way that will be best for me and for you.

*[The jury now gives its verdict of guilty, and Meletus asks for the penalty of death.]*

e There are many other reasons for my not being angry with you for
36 convicting me, men of Athens, and what happened was not unexpected. I am much more surprised at the number of votes cast on each side for I did not think the decision would be by so few votes but by a great many. As it is, a switch of only thirty votes would have acquitted me. I think
b myself that I have been cleared of Meletus' charges, and not only this, but it is clear to all that, if Anytus and Lycon had not joined him in accusing me, he would have been fined a thousand drachmas for not receiving a fifth of the votes.

He assesses the penalty at death. So be it. What counter-assessment should I propose to you, men of Athens? Clearly it should be a penalty I deserve, and what do I deserve to suffer or to pay because I have deliberately not led a quiet life but have neglected what occupies most people: wealth, household affairs, the position of general or public orator or the other offices, the political clubs and factions that exist in the city? I thought
c myself too honest to survive if I occupied myself with those things. I did not follow that path that would have made me of no use either to you or to myself, but I went to each of you privately and conferred upon him what I say is the greatest benefit, by trying to persuade him not to care for any of his belongings before caring that he himself should be as good and as wise as possible, not to care for the city's possessions more than
d for the city itself, and to care for other things in the same way. What do I deserve for being such a man? Some good, men of Athens, if I must truly make an assessment according to my deserts, and something suitable. What is suitable for a poor benefactor who needs leisure to exhort you? Nothing is more suitable, gentlemen, than for such a man to be fed in the Prytaneum,[7] much more suitable for him than for any one of you who has won a victory at Olympia with a pair or a team of horses. The Olympian

7. The Prytaneum was the magistrates' hall or town hall of Athens in which public entertainments were given, particularly to Olympian victors on their return home.

victor makes you think yourself happy; I make you be happy. Besides, he e
does not need food, but I do. So if I must make a just assessment of what
I deserve, I assess it as this: free meals in the Prytaneum. 37

When I say this you may think, as when I spoke of appeals to pity and
entreaties, that I speak arrogantly, but that is not the case, men of Athens;
rather it is like this: I am convinced that I never willingly wrong anyone,
but I am not convincing you of this, for we have talked together but a
short time. If it were the law with us, as it is elsewhere, that a trial for life b
should not last one but many days, you would be convinced, but now it
is not easy to dispel great slanders in a short time. Since I am convinced
that I wrong no one, I am not likely to wrong myself, to say that I deserve
some evil and to make some such assessment against myself. What should
I fear? That I should suffer the penalty Meletus has assessed against me,
of which I say I do not know whether it is good or bad? Am I then to
choose in preference to this something that I know very well to be an evil
and assess the penalty at that? Imprisonment? Why should I live in prison, c
always subjected to the ruling magistrates, the Eleven? A fine, and impris-
onment until I pay it? That would be the same thing for me, as I have no
money. Exile? for perhaps you might accept that assessment.

I should have to be inordinately fond of life, men of Athens, to be so
unreasonable as to suppose that other men will easily tolerate my company
and conversation when you, my fellow citizens, have been unable to endure d
them, but found them a burden and resented them so that you are now
seeking to get rid of them. Far from it, gentlemen. It would be a fine life
at my age to be driven out of one city after another, for I know very well
that wherever I go the young men will listen to my talk as they do here. e
If I drive them away, they will themselves persuade their elders to drive
me out; if I do not drive them away, their fathers and relations will drive
me out on their behalf.

Perhaps someone might say: But Socrates, if you leave us will you not
be able to live quietly, without talking? Now this is the most difficult point
on which to convince some of you. If I say that it is impossible for me to 38
keep quiet because that means disobeying the god, you will not believe
me and will think I am being ironical. On the other hand, if I say that it
is the greatest good for a man to discuss virtue every day and those other
things about which you hear me conversing and testing myself and others,
for the unexamined life is not worth living for men, you will believe me
even less.

What I say is true, gentlemen, but it is not easy to convince you. At the b
same time, I am not accustomed to think that I deserve any penalty. If I
had money, I would assess the penalty at the amount I could pay, for that
would not hurt me, but I have none, unless you are willing to set the
penalty at the amount I can pay, and perhaps I could pay you one mina
of silver.[8] So that is my assessment.

8. One mina was the equivalent of 100 drachmas. In the late fifth century one drachma was the standard daily wage of a laborer. A mina, then, was a considerable sum.

Plato here, men of Athens, and Crito and Critobulus and Apollodorus bid me put the penalty at thirty minas, and they will stand surety for the money. Well then, that is my assessment, and they will be sufficient guarantee of payment.

*[The jury now votes again and sentences Socrates to death.]*

c It is for the sake of a short time, men of Athens, that you will acquire
the reputation and the guilt, in the eyes of those who want to denigrate
the city, of having killed Socrates, a wise man, for they who want to revile
you will say that I am wise even if I am not. If you had waited but a little
while, this would have happened of its own accord. You see my age, that
d I am already advanced in years and close to death. I am saying this not
to all of you but to those who condemned me to death, and to these same
ones I say: Perhaps you think that I was convicted for lack of such words
as might have convinced you, if I thought I should say or do all I could
to avoid my sentence. Far from it. I was convicted because I lacked not
words but boldness and shamelessness and the willingness to say to you
what you would most gladly have heard from me, lamentations and tears
e and my saying and doing many things that I say are unworthy of me but
that you are accustomed to hear from others. I did not think then that the
danger I ran should make me do anything mean, nor do I now regret the
nature of my defense. I would much rather die after this kind of defense
than live after making the other kind. Neither I nor any other man should,
39 on trial or in war, contrive to avoid death at any cost. Indeed it is often
obvious in battle that one could escape death by throwing away one's
weapons and by turning to supplicate one's pursuers, and there are many
ways to avoid death in every kind of danger if one will venture to do or
b say anything to avoid it. It is not difficult to avoid death, gentlemen; it is
much more difficult to avoid wickedness, for it runs faster than death.
Slow and elderly as I am, I have been caught by the slower pursuer,
whereas my accusers, being clever and sharp, have been caught by the
quicker, wickedness. I leave you now, condemned to death by you, but
they are condemned by truth to wickedness and injustice. So I maintain
my assessment, and they maintain theirs. This perhaps had to happen,
and I think it is as it should be.

c Now I want to prophesy to those who convicted me, for I am at the point
when men prophesy most, when they are about to die. I say gentlemen, to
those who voted to kill me, that vengeance will come upon you immedi-
ately after my death, a vengeance much harder to bear than that which
you took in killing me. You did this in the belief that you would avoid
giving an account of your life, but I maintain that quite the opposite will
d happen to you. There will be more people to test you, whom I now held
back, but you did not notice it. They will be more difficult to deal with
as they will be younger and you will resent them more. You are wrong
if you believe that by killing people you will prevent anyone from reproach-

ing you for not living in the right way. To escape such tests is neither
possible nor good, but it is best and easiest not to discredit others but to
prepare oneself to be as good as possible. With this prophecy to you who
convicted me, I part from you.

I should be glad to discuss what has happened with those who voted e
for my acquittal during the time that the officers of the court are busy and
I do not yet have to depart to my death. So, gentlemen, stay with me
awhile, for nothing prevents us from talking to each other while it is
allowed. To you, as being my friends, I want to show the meaning of what 40
has occurred. A surprising thing has happened to me, jurymen—you I
would rightly call jurymen. At all previous times my familiar prophetic
power, my spiritual manifestation, frequently opposed me, even in small
matters, when I was about to do something wrong, but now that, as you
can see for yourselves, I was faced with what one might think, and what
is generally thought to be, the worst of evils, my divine sign has not
opposed me, either when I left home at dawn, or when I came into court, b
or at any time that I was about to say something during my speech. Yet
in other talks it often held me back in the middle of my speaking, but
now it has opposed no word or deed of mine. What do I think is the
reason for this? I will tell you. What has happened to me may well be a
good thing, and those of us who believe death to be an evil are certainly
mistaken. I have convincing proof of this, for it is impossible that my c
familiar sign did not oppose me if I was not about to do what was right.

Let us reflect in this way, too, that there is good hope that death is a
blessing, for it is one of two things: either the dead are nothing and have
no perception of anything, or it is, as we are told, a change and a relocating
for the soul from here to another place. If it is complete lack of perception, d
like a dreamless sleep, then death would be a great advantage. For I think
that if one had to pick out that night during which a man slept soundly
and did not dream, put beside it the other nights and days of his life, and
then see how many days and nights had been better and more pleasant
than that night, not only a private person but the great king would find
them easy to count compared with the other days and nights. If death is e
like this I say it is an advantage, for all eternity would then seem to be
no more than a single night. If, on the other hand, death is a change from
here to another place, and what we are told is true and all who have died
are there, what greater blessing could there be, gentlemen of the jury? If 41
anyone arriving in Hades will have escaped from those who call themselves
jurymen here, and will find those true jurymen who are said to sit in
judgment there, Minos and Rhadamanthus and Aeacus and Triptolemus
and the other demi-gods who have been upright in their own life, would
that be a poor kind of change? Again, what would one of you give to keep
company with Orpheus and Musaeus, Hesiod and Homer? I am willing
to die many times if that is true. It would be a wonderful way for me to
spend my time whenever I met Palamedes and Ajax, the son of Telamon, b
and any other of the men of old who died through an unjust conviction,

to compare my experience with theirs. I think it would be pleasant. Most important, I could spend my time testing and examining people there, as I do here, as to who among them is wise, and who thinks he is, but is not.

What would one not give, gentlemen of the jury, for the opportunity to
c examine the man who led the great expedition against Troy, or Odysseus, or Sisyphus, and innumerable other men and women one could mention? It would be an extraordinary happiness to talk with them, to keep company with them and examine them. In any case, they would certainly not put one to death for doing so. They are happier there than we are here in other respects, and for the rest of time they are deathless, if indeed what we are told is true.

You too must be of good hope as regards death, gentlemen of the jury,
d and keep this one truth in mind, that a good man cannot be harmed either in life or in death, and that his affairs are not neglected by the gods. What has happened to me now has not happened of itself, but it is clear to me that it was better for me to die now and to escape from trouble. That is why my divine sign did not oppose me at any point. So I am certainly not angry with those who convicted me, or with my accusers. Of course that was not their purpose when they accused and convicted me, but they
e thought they were hurting me, and for this they deserve blame. This much I ask from them: when my sons grow up, avenge yourselves by causing them the same kind of grief that I caused you, if you think they care for money or anything else more than they care for virtue, or if they think they are somebody when they are nobody. Reproach them as I reproach you, that they do not care for the right things and think they are worthy
42 when they are not worthy of anything. If you do this, I shall have been justly treated by you, and my sons also.

Now the hour to part has come. I go to die, you go to live. Which of us goes to the better lot is known to no one, except the god.

# CRITO

*As the beginning of the* Phaedo *relates, Socrates did not die until a month after his trial, which followed by a day the sailing of the Athenian state galley on an annual religious mission to the island of Delos; no executions were permitted during its absence. Crito comes to tell Socrates of its anticipated arrival later that day and to make one last effort to persuade him to allow his friends to save him by bribing his jailers and bundling him off somewhere beyond the reach of Athenian law. Crito indicates that most people expect his friends to do this—unless (dishonorably) they value their money more than their friend. Socrates, however, refuses. Even if people do expect it, to do that would be grossly unjust.*

*Both Crito's arguments in favor of his plan and Socrates' in rejecting it are rather jumbled—as perhaps befits the pressure and excitement of the moment. Crito cites the damage to his and Socrates' other friends' reputations and delicately minimizes any financial loss he might suffer, in case Socrates might be unwilling to accept any great sacrifice from a friend. Socrates witheringly dismisses the first consideration and ignores the second. But Crito also claims that it would actually be unjust of Socrates to stay. That would allow his enemies to triumph over him and his friends, including his young sons, whom he will abandon by going docilely to his death: a person ought not to take lying down an attack on the things he holds most dear, including philosophy itself and the philosophical life to which he and (presumably) his friends are devoted. Here we hear strains of the time-honored Greek idea that justice is helping one's friends and harming one's enemies, cited by Polemarchus in* Republic *I. (But Crito does not propose harming their enemies—only preventing them from having their way.) As to his children, Socrates responds that they will be as well or better cared for after his death than if he resisted it and went into exile. But ironically, considering his own subsequent arguments for accepting his death, he seems not to hear the larger claim of injustice that Crito lodges. Crito's jumbled presentation of his case facilitates this.*

*Unmoved by the claims of justice grounded in his private relationships to friends and family, Socrates appeals to the standards of civic justice imbedded in his relations as a citizen to the Athenian people and to the Athenian system of law. He claims that a citizen is necessarily, given the benefits he has enjoyed under the laws of the city, their slave, justly required to do whatever they ask, and more forbidden to attack them than to violate his own parents. That would be retaliation—rendering a wrong for the wrong received in his unjust condemnation—and retaliation is never just. But what if he chose to depart not in an*

*unjust spirit of retaliation, but only in order to evade the ill consequences of the unjust condemnation for himself and his friends and family? As if recognizing that loophole, Socrates also develops a celebrated early version of the social contract—a 'contract' between the laws or the city and each citizen, not among the citizens themselves—with the argument that now, after he is condemned by an Athenian court and has exhausted all legal appeals, he must, in justice to his implicit promise, abide by the laws' final judgment and accept his death sentence.*

*It is clear where Socrates stands; he is committed, as a public figure known for pleading the preeminent value of the civic virtues, to honoring them in his personal life—and death. But the dialogue itself, through Crito's ignored appeal to justice in the private sphere, invites the reader to reflect on a wider range of issues about justice than Socrates himself addresses. Did justice really require that Socrates stay to accept his death?*

*J.M.C.*

43 SOCRATES: Why have you come so early, Crito? Or is it not still early?

CRITO: It certainly is.

SOCRATES: How early?

CRITO: Early dawn.

SOCRATES: I am surprised that the warder was willing to listen to you.

CRITO: He is quite friendly to me by now, Socrates. I have been here often and I have given him something.

SOCRATES: Have you just come, or have you been here for some time?

CRITO: A fair time.

b SOCRATES: Then why did you not wake me right away but sit there in silence?

CRITO: By Zeus no, Socrates. I would not myself want to be in distress and awake so long. I have been surprised to see you so peacefully asleep. It was on purpose that I did not wake you, so that you should spend your time most agreeably. Often in the past throughout my life, I have considered the way you live happy, and especially so now that you bear your present misfortune so easily and lightly.

SOCRATES: It would not be fitting at my age to resent the fact that I must die now.

c CRITO: Other men of your age are caught in such misfortunes, but their age does not prevent them resenting their fate.

SOCRATES: That is so. Why have you come so early?

CRITO: I bring bad news, Socrates, not for you, apparently, but for me and all your friends the news is bad and hard to bear. Indeed, I would count it among the hardest.

Translated by G.M.A. Grube.

Socrates: What is it? Or has the ship arrived from Delos, at the arrival d
of which I must die?

Crito: It has not arrived yet, but it will, I believe, arrive today, according to a message some men brought from Sunium, where they left it. This makes it obvious that it will come today, and that your life must end tomorrow.

Socrates: May it be for the best. If it so please the gods, so be it. However, I do not think it will arrive today.

Crito: What indication have you of this? 44

Socrates: I will tell you. I must die the day after the ship arrives.

Crito: That is what those in authority say.

Socrates: Then I do not think it will arrive on this coming day, but on the next. I take to witness of this a dream I had a little earlier during this night. It looks as if it was the right time for you not to wake me.

Crito: What was your dream?

Socrates: I thought that a beautiful and comely woman dressed in white
approached me. She called me and said: "Socrates, may you arrive at fertile b
Phthia[1] on the third day."

Crito: A strange dream, Socrates.

Socrates: But it seems clear enough to me, Crito.

Crito: Too clear it seems, my dear Socrates, but listen to me even now and be saved. If you die, it will not be a single misfortune for me. Not only will I be deprived of a friend, the like of whom I shall never find
again, but many people who do not know you or me very well will think c
that I could have saved you if I were willing to spend money, but that I did not care to do so. Surely there can be no worse reputation than to be thought to value money more highly than one's friends, for the majority will not believe that you yourself were not willing to leave prison while we were eager for you to do so.

Socrates: My good Crito, why should we care so much for what the majority think? The most reasonable people, to whom one should pay more attention, will believe that things were done as they were done.

Crito: You see, Socrates, that one must also pay attention to the opinion d
of the majority. Your present situation makes clear that the majority can inflict not the least but pretty well the greatest evils if one is slandered among them.

Socrates: Would that the majority could inflict the greatest evils, for they would then be capable of the greatest good, and that would be fine, but now they cannot do either. They cannot make a man either wise or foolish, but they inflict things haphazardly.

1. A quotation from *Iliad* ix.363. Achilles has rejected all the presents Agamemnon offered him to get him to return to the battle, and threatens to go home. He says his ships will sail in the morning, and with good weather he might arrive on the third day "in fertile Phthia" (which is his home). The dream means that Socrates' soul, after death, will find its home on the third day (counting, as usual among the Greeks, both the first and the last member of the series).

e CRITO: That may be so. But tell me this, Socrates, are you anticipating
that I and your other friends would have trouble with the informers if
you escape from here, as having stolen you away, and that we should be
compelled to lose all our property or pay heavy fines and suffer other
45 punishment besides? If you have any such fear, forget it. We would be
justified in running this risk to save you, and worse, if necessary. Do follow
my advice, and do not act differently.

SOCRATES: I do have these things in mind, Crito, and also many others.

CRITO: Have no such fear. It is not much money that some people require
to save you and get you out of here. Further, do you not see that those
informers are cheap, and that not much money would be needed to deal
b with them? My money is available and is, I think, sufficient. If, because
of your affection for me, you feel you should not spend any of mine, there
are those strangers here ready to spend money. One of them, Simmias the
Theban, has brought enough for this very purpose. Cebes, too, and a good
many others. So, as I say, do not let this fear make you hesitate to save
yourself, nor let what you said in court trouble you, that you would not
c know what to do with yourself if you left Athens, for you would be
welcomed in many places to which you might go. If you want to go to
Thessaly, I have friends there who will greatly appreciate you and keep
you safe, so that no one in Thessaly will harm you.

Besides, Socrates, I do not think that what you are doing is just, to give
up your life when you can save it, and to hasten your fate as your enemies
would hasten it, and indeed have hastened it in their wish to destroy you.
d Moreover, I think you are betraying your sons by going away and leaving
them, when you could bring them up and educate them. You thus show
no concern for what their fate may be. They will probably have the usual
fate of orphans. Either one should not have children, or one should share
with them to the end the toil of upbringing and education. You seem to
me to choose the easiest path, whereas one should choose the path a
good and courageous man would choose, particularly when one claims
throughout one's life to care for virtue.

e I feel ashamed on your behalf and on behalf of us, your friends, lest all
that has happened to you be thought due to cowardice on our part: the
fact that your trial came to court when it need not have done so, the
handling of the trial itself, and now this absurd ending which will be
thought to have got beyond our control through some cowardice and
46 unmanliness on our part, since we did not save you, or you save yourself,
when it was possible and could be done if we had been of the slightest
use. Consider, Socrates, whether this is not only evil, but shameful, both
for you and for us. Take counsel with yourself, or rather the time for
counsel is past and the decision should have been taken, and there is no
further opportunity, for this whole business must be ended tonight. If we
delay now, then it will no longer be possible; it will be too late. Let me
persuade you on every count, Socrates, and do not act otherwise.

SOCRATES: My dear Crito, your eagerness is worth much if it should have b
some right aim; if not, then the greater your keenness the more difficult
it is to deal with. We must therefore examine whether we should act in
this way or not, as not only now but at all times I am the kind of man
who listens to nothing within me but the argument that on reflection seems
best to me. I cannot, now that this fate has come upon me, discard the
arguments I used; they seem to me much the same. I value and respect c
the same principles as before, and if we have no better arguments to bring
up at this moment, be sure that I shall not agree with you, not even if the
power of the majority were to frighten us with more bogeys, as if we were
children, with threats of incarcerations and executions and confiscation of
property. How should we examine this matter most reasonably? Would
it be by taking up first your argument about the opinions of men, whether d
it is sound in every case that one should pay attention to some opinions,
but not to others? Or was that well-spoken before the necessity to die came
upon me, but now it is clear that this was said in vain for the sake of
argument, that it was in truth play and nonsense? I am eager to examine
together with you, Crito, whether this argument will appear in any way
different to me in my present circumstances, or whether it remains the
same, whether we are to abandon it or believe it. It was said on every
occasion by those who thought they were speaking sensibly, as I have just e
now been speaking, that one should greatly value some people's opinions,
but not others. Does that seem to you a sound statement?

You, as far as a human being can tell, are exempt from the likelihood
of dying tomorrow, so the present misfortune is not likely to lead you 47
astray. Consider then, do you not think it a sound statement that one must
not value all the opinions of men, but some and not others, nor the opinions
of all men, but those of some and not of others? What do you say? Is this
not well said?

CRITO: It is.

SOCRATES: One should value the good opinions, and not the bad ones?

CRITO: Yes.

SOCRATES: The good opinions are those of wise men, the bad ones those of foolish men?

CRITO: Of course.

SOCRATES: Come then, what of statements such as this: Should a man
professionally engaged in physical training pay attention to the praise and b
blame and opinion of any man, or to those of one man only, namely a
doctor or trainer?

CRITO: To those of one only.

SOCRATES: He should therefore fear the blame and welcome the praise of that one man, and not those of the many?

CRITO: Obviously.

SOCRATES: He must then act and exercise, eat and drink in the way the one, the trainer and the one who knows, thinks right, not all the others?

Crito: That is so.

c Socrates: Very well. And if he disobeys the one, disregards his opinion and his praises while valuing those of the many who have no knowledge, will he not suffer harm?

Crito: Of course.

Socrates: What is that harm, where does it tend, and what part of the man who disobeys does it affect?

Crito: Obviously the harm is to his body, which it ruins.

Socrates: Well said. So with other matters, not to enumerate them all, and certainly with actions just and unjust, shameful and beautiful, good
d and bad, about which we are now deliberating, should we follow the opinion of the many and fear it, or that of the one, if there is one who has knowledge of these things and before whom we feel fear and shame more than before all the others. If we do not follow his directions, we shall harm and corrupt that part of ourselves that is improved by just actions and destroyed by unjust actions. Or is there nothing in this?

Crito: I think there certainly is, Socrates.

Socrates: Come now, if we ruin that which is improved by health and corrupted by disease by not following the opinions of those who know,
e is life worth living for us when that is ruined? And that is the body, is it not?

Crito: Yes.

Socrates: And is life worth living with a body that is corrupted and in bad condition?

Crito: In no way.

Socrates: And is life worth living for us with that part of us corrupted that unjust action harms and just action benefits? Or do we think that part
48 of us, whatever it is, that is concerned with justice and injustice, is inferior to the body?

Crito: Not at all.

Socrates: It is more valuable?

Crito: Much more.

Socrates: We should not then think so much of what the majority will say about us, but what he will say who understands justice and injustice, the one, that is, and the truth itself. So that, in the first place, you were wrong to believe that we should care for the opinion of the many about what is just, beautiful, good, and their opposites. "But," someone might say, "the many are able to put us to death."

b Crito: That too is obvious, Socrates, and someone might well say so.

Socrates: And, my admirable friend, that argument that we have gone through remains, I think, as before. Examine the following statement in turn as to whether it stays the same or not, that the most important thing is not life, but the good life.

Crito: It stays the same.

Socrates: And that the good life, the beautiful life, and the just life are the same; does that still hold, or not?

Crito: It does hold.

Socrates: As we have agreed so far, we must examine next whether it
is just for me to try to get out of here when the Athenians have not acquitted c
me. If it is seen to be just, we will try to do so; if it is not, we will abandon the idea. As for those questions you raise about money, reputation, the upbringing of children, Crito, those considerations in truth belong to those people who easily put men to death and would bring them to life again if they could, without thinking; I mean the majority of men. For us, however, since our argument leads to this, the only valid consideration, as we were saying just now, is whether we should be acting rightly in giving
money and gratitude to those who will lead me out of here, and ourselves d
helping with the escape, or whether in truth we shall do wrong in doing all this. If it appears that we shall be acting unjustly, then we have no need at all to take into account whether we shall have to die if we stay here and keep quiet, or suffer in another way, rather than do wrong.

Crito: I think you put that beautifully, Socrates, but see what we should do.

Socrates: Let us examine the question together, my dear friend, and if e
you can make any objection while I am speaking, make it and I will listen to you, but if you have no objection to make, my dear Crito, then stop now from saying the same thing so often, that I must leave here against the will of the Athenians. I think it important to persuade you before I
act, and not to act against your wishes. See whether the start of our inquiry 49
is adequately stated, and try to answer what I ask you in the way you think best.

Crito: I shall try.

Socrates: Do we say that one must never in any way do wrong willingly, or must one do wrong in one way and not in another? Is to do wrong never good or admirable, as we have agreed in the past, or have all these
former agreements been washed out during the last few days? Have we b
at our age failed to notice for some time that in our serious discussions we were no different from children? Above all, is the truth such as we used to say it was, whether the majority agree or not, and whether we must still suffer worse things than we do now, or will be treated more gently, that nonetheless, wrongdoing or injustice is in every way harmful and shameful to the wrongdoer? Do we say so or not?

Crito: We do.

Socrates: So one must never do wrong.

Crito: Certainly not.

Socrates: Nor must one, when wronged, inflict wrong in return, as the majority believe, since one must never do wrong.

Crito: That seems to be the case. c

Socrates: Come now, should one do harm to anyone or not, Crito?

Crito: One must never do so.

Socrates: Well then, if one is done harm, is it right, as the majority say, to do harm in return, or is it not?

Crito: It is never right.

Socrates: Doing harm to people is no different from wrongdoing.

Crito: That is true.

Socrates: One should never do wrong in return, nor do any man harm,
d no matter what he may have done to you. And Crito, see that you do not agree to this, contrary to your belief. For I know that only a few people hold this view or will hold it, and there is no common ground between those who hold this view and those who do not, but they inevitably despise each other's views. So then consider very carefully whether we have this view in common, and whether you agree, and let this be the basis of our deliberation, that neither to do wrong nor to return a wrong is ever correct, nor is doing harm in return for harm done. Or do you disagree and do not share this view as a
e basis for discussion? I have held it for a long time and still hold it now, but if you think otherwise, tell me now. If, however, you stick to our former opinion, then listen to the next point.

Crito: I stick to it and agree with you. So say on.

Socrates: Then I state the next point, or rather I ask you: when one has come to an agreement that is just with someone, should one fulfill it or cheat on it?

Crito: One should fulfill it.

Socrates: See what follows from this: if we leave here without the city's
50 permission, are we harming people whom we should least do harm to? And are we sticking to a just agreement, or not?

Crito: I cannot answer your question, Socrates. I do not know.

Socrates: Look at it this way. If, as we were planning to run away from here, or whatever one should call it, the laws and the state came and confronted us and asked: "Tell me, Socrates, what are you intending to do? Do you not by this action you are attempting intend to destroy us,
b the laws, and indeed the whole city, as far as you are concerned? Or do you think it possible for a city not to be destroyed if the verdicts of its courts have no force but are nullified and set at naught by private individuals?" What shall we answer to this and other such arguments? For many things could be said, especially by an orator on behalf of this law we are destroying, which orders that the judgments of the courts shall
c be carried out. Shall we say in answer, "The city wronged me, and its decision was not right." Shall we say that, or what?

Crito: Yes, by Zeus, Socrates, that is our answer.

Socrates: Then what if the laws said: "Was that the agreement between us, Socrates, or was it to respect the judgments that the city came to?" And if we wondered at their words, they would perhaps add: "Socrates, do not wonder at what we say but answer, since you are accustomed to
d proceed by question and answer. Come now, what accusation do you bring against us and the city, that you should try to destroy us? Did we not, first, bring you to birth, and was it not through us that your father married your mother and begat you? Tell you, do you find anything to criticize in those of us who are concerned with marriage?" And I would say that I do not criticize them. "Or in those of us concerned with the

nurture of babies and the education that you too received? Were those
assigned to that subject not right to instruct your father to educate you in e
the arts and in physical culture?" And I would say that they were right.
"Very well," they would continue, "and after you were born and nurtured
and educated, could you, in the first place, deny that you are our offspring
and servant, both you and your forefathers? If that is so, do you think
that we are on an equal footing as regards the right, and that whatever
we do to you it is right for you to do to us? You were not on an equal
footing with your father as regards the right, nor with your master if you 51
had one, so as to retaliate for anything they did to you, to revile them if
they reviled you, to beat them if they beat you, and so with many other
things. Do you think you have this right to retaliation against your country
and its laws? That if we undertake to destroy you and think it right to do
so, you can undertake to destroy us, as far as you can, in return? And will
you say that you are right to do so, you who truly care for virtue? Is your
wisdom such as not to realize that your country is to be honored more
than your mother, your father, and all your ancestors, that it is more to
be revered and more sacred, and that it counts for more among the gods b
and sensible men, that you must worship it, yield to it and placate its
anger more than your father's? You must either persuade it or obey its
orders, and endure in silence whatever it instructs you to endure, whether
blows or bonds, and if it leads you into war to be wounded or killed, you
must obey. To do so is right, and one must not give way or retreat or
leave one's post, but both in war and in courts and everywhere else, one
must obey the commands of one's city and country, or persuade it as to c
the nature of justice. It is impious to bring violence to bear against your
mother or father; it is much more so to use it against your country." What
shall we say in reply, Crito, that the laws speak the truth, or not?

CRITO: I think they do.

SOCRATES: "Reflect now, Socrates," the laws might say, "that if what we
say is true, you are not treating us rightly by planning to do what you
are planning. We have given you birth, nurtured you, educated you; we
have given you and all other citizens a share of all the good things we d
could. Even so, by giving every Athenian the opportunity, once arrived
at voting age and having observed the affairs of the city and us the laws,
we proclaim that if we do not please him, he can take his possessions and
go wherever he pleases. Not one of our laws raises any obstacle or forbids
him, if he is not satisfied with us or the city, if one of you wants to go
and live in a colony or wants to go anywhere else, and keep his property. e
We say, however, that whoever of you remains, when he sees how we
conduct our trials and manage the city in other ways, has in fact come to
an agreement with us to obey our instructions. We say that the one who
disobeys does wrong in three ways, first because in us he disobeys his
parents, also those who brought him up, and because, in spite of his
agreement, he neither obeys us nor, if we do something wrong, does he 52
try to persuade us to do better. Yet we only propose things, we do not

issue savage commands to do whatever we order; we give two alternatives, either to persuade us or to do what we say. He does neither. We do say that you too, Socrates, are open to those charges if you do what you have in mind; you would be among, not the least, but the most guilty of the Athenians." And if I should say "Why so?" they might well be right to upbraid me and say that I am among the Athenians who most definitely
b came to that agreement with them. They might well say: "Socrates, we have convincing proofs that we and the city were congenial to you. You would not have dwelt here most consistently of all the Athenians if the city had not been exceedingly pleasing to you. You have never left the city, even to see a festival, nor for any other reason except military service; you have never gone to stay in any other city, as people do; you have had
c no desire to know another city or other laws; we and our city satisfied you.

"So decisively did you choose us and agree to be a citizen under us. Also, you have had children in this city, thus showing that it was congenial to you. Then at your trial you could have assessed your penalty at exile if you wished, and you are now attempting to do against the city's wishes what you could then have done with her consent. Then you prided yourself that you did not resent death, but you chose, as you said, death in preference to exile. Now, however, those words do not make you ashamed, and
d you pay no heed to us, the laws, as you plan to destroy us, and you act like the meanest type of slave by trying to run away, contrary to your commitments and your agreement to live as a citizen under us. First then, answer us on this very point, whether we speak the truth when we say that you agreed, not only in words but by your deeds, to live in accordance with us." What are we to say to that, Crito? Must we not agree?

Crito: We must, Socrates.

Socrates: "Surely," they might say, "you are breaking the commitments
e and agreements that you made with us without compulsion or deceit, and under no pressure of time for deliberation. You have had seventy years during which you could have gone away if you did not like us, and if
53 you thought our agreements unjust. You did not choose to go to Sparta or to Crete, which you are always saying are well governed, nor to any other city, Greek or foreign. You have been away from Athens less than the lame or the blind or other handicapped people. It is clear that the city has been outstandingly more congenial to you than to other Athenians, and so have we, the laws, for what city can please without laws? Will you then not now stick to our agreements? You will, Socrates, if we can persuade you, and not make yourself a laughingstock by leaving the city.

"For consider what good you will do yourself or your friends by breaking our agreements and committing such a wrong. It is pretty obvious that
b your friends will themselves be in danger of exile, disfranchisement, and loss of property. As for yourself, if you go to one of the nearby cities—Thebes or Megara, both are well governed—you will arrive as an enemy to their government; all who care for their city will look on you with suspicion, as a destroyer of the laws. You will also strengthen the conviction

of the jury that they passed the right sentence on you, for anyone who c
destroys the laws could easily be thought to corrupt the young and the
ignorant. Or will you avoid cities that are well governed and men who
are civilized? If you do this, will your life be worth living? Will you have
social intercourse with them and not be ashamed to talk to them? And
what will you say? The same as you did here, that virtue and justice are
man's most precious possession, along with lawful behavior and the laws? d
Do you not think that Socrates would appear to be an unseemly kind of
person? One must think so. Or will you leave those places and go to Crito's
friends in Thessaly? There you will find the greatest license and disorder,
and they may enjoy hearing from you how absurdly you escaped from
prison in some disguise, in a leather jerkin or some other things in which
escapees wrap themselves, thus altering your appearance. Will there be
no one to say that you, likely to live but a short time more, were so greedy
for life that you transgressed the most important laws? Possibly, Socrates, e
if you do not annoy anyone, but if you do, many disgraceful things will
be said about you.

"You will spend your time ingratiating yourself with all men, and be
at their beck and call. What will you do in Thessaly but feast, as if you
had gone to a banquet in Thessaly? As for those conversations of yours
about justice and the rest of virtue, where will they be? You say you want 54
to live for the sake of your children, that you may bring them up and
educate them. How so? Will you bring them up and educate them by
taking them to Thessaly and making strangers of them, that they may
enjoy that too? Or not so, but they will be better brought up and educated
here, while you are alive, though absent? Yes, your friends will look after
them. Will they look after them if you go and live in Thessaly, but not if
you go away to the underworld? If those who profess themselves your
friends are any good at all, one must assume that they will. b

"Be persuaded by us who have brought you up, Socrates. Do not value
either your children or your life or anything else more than goodness, in
order that when you arrive in Hades you may have all this as your defense
before the rulers there. If you do this deed, you will not think it better or
more just or more pious here, nor will any one of your friends, nor will
it be better for you when you arrive yonder. As it is, you depart, if you
depart, after being wronged not by us, the laws, but by men; but if you c
depart after shamefully returning wrong for wrong and mistreatment for
mistreatment, after breaking your agreements and commitments with us,
after mistreating those you should mistreat least—yourself, your friends,
your country and us—we shall be angry with you while you are still alive,
and our brothers, the laws of the underworld, will not receive you kindly,
knowing that you tried to destroy us as far as you could. Do not let Crito
persuade you, rather than us, to do what he says." d

Crito, my dear friend, be assured that these are the words I seem to
hear, as the Corybants seem to hear the music of their flutes, and the echo
of these words resounds in me, and makes it impossible for me to hear

anything else. As far as my present beliefs go, if you speak in opposition to them, you will speak in vain. However, if you think you can accomplish anything, speak.

CRITO: I have nothing to say, Socrates.

SOCRATES: Let it be then, Crito, and let us act in this way, since this is
54e the way the god is leading us.

# PHAEDO

Phaedo, *known to the ancients also by the descriptive title* On the Soul, *is a drama about Socrates' last hours and his death in the jail at Athens. On the way back home to Elis, one of his intimates, Phaedo, who was with him then, stops off at Phlius, in the Peloponnese. There he reports it all to a group of Pythagoreans settled there since their expulsion from Southern Italy. The Pythagorean connection is carried further in the dialogue itself, since Socrates' two fellow discussants, Simmias and Cebes—from Thebes, the other city where expelled members of the brotherhood settled—are associates of Philolaus, the leading Pythagorean there. Pythagoreans were noted for their belief in the immortality of the soul and its reincarnation in human or animal form and for the consequent concern to keep one's soul pure by avoiding contamination with the body, so as to win the best possible next life. Socrates weaves all these themes into his own discussion of the immortality of the soul.*

*It is noteworthy that these Pythagorean elements are lacking from the* Apology, *where Socrates expresses himself noncommittally and unconcernedly about the possibility of immortality—and from* Crito, *as well as the varied discussions of the soul's virtues in such dialogues as* Euthyphro, Laches, *and* Protagoras. *Those dialogues are of course not records of discussions the historical Socrates actually held, but Plato seems to take particular pains to indicate that* Phaedo *does not give us Socrates' actual last conversation or even one that fits at all closely his actual views. He takes care to tell us that he was not present on the last day: Phaedo says he was ill. Socrates makes much of the human intellect's affinity to eternal Forms of Beauty, Justice, and other normative notions, and of mathematical properties and objects, such as Oddness and Evenness and the integers Two, Three, and the rest, as well as physical forces such as Hot and Cold, all existing in a nonphysical realm accessible only to abstract thought. None of this comports well with Socrates' description of his philosophical interests in the* Apology *or with the way he conducts his inquiries in Plato's 'Socratic' dialogues. It is generally agreed that both the Pythagorean motifs of immortality and purification and the theory of eternal Forms that is linked with them in this dialogue are Plato's own contribution. Indeed, the* Phaedo's *affinities in philosophical theory go not toward the Socratic dialogues, but to* Symposium *and* Republic. *There is an unmistakable reference to* Meno's *theory of theoretical knowledge (of geometry, and also of the nature of human virtue) as coming by recollection of objects known before birth. But now the claim is made that this recollection is of Forms.*

Phaedo *concludes with a myth, describing the fate of the soul after death. Concluding myths in other dialogues, with which this one should be compared, are those in* Gorgias *and* Republic*. It should also be compared with the myth in Socrates' second speech in the* Phaedrus.

*Despite the Platonic innovations in philosophical theory, the* Phaedo *presents a famously moving picture of Socrates' deep commitment to philosophy and the philosophical life even, or especially, in the face of an unjustly imposed death.*

*J.M.C.*

57 ECHECRATES: Were you with Socrates yourself, Phaedo, on the day when
he drank the poison in prison, or did someone else tell you about it?

PHAEDO: I was there myself, Echecrates.

ECHECRATES: What are the things he said before he died? And how did
he die? I should be glad to hear this. Hardly anyone from Phlius visits
b Athens nowadays, nor has any stranger come from Athens for some time
who could give us a clear account of what happened, except that he drank
the poison and died, but nothing more.

58 PHAEDO: Did you not even hear how the trial went?

ECHECRATES: Yes, someone did tell us about that, and we wondered that he seems to have died a long time after the trial took place. Why was that, Phaedo?

PHAEDO: That was by chance, Echecrates. The day before the trial, as it happened, the prow of the ship that the Athenians send to Delos had been crowned with garlands.

ECHECRATES: What ship is that?

PHAEDO: It is the ship in which, the Athenians say, Theseus once sailed
to Crete, taking with him the two lots of seven victims.[1] He saved them
b and was himself saved. The Athenians vowed then to Apollo, so the story
goes, that if they were saved they would send a mission to Delos every
year. And from that time to this they send such an annual mission to the
god. They have a law to keep the city pure while it lasts, and no execution
may take place once the mission has begun until the ship has made its
journey to Delos and returned to Athens, and this can sometimes take a
c long time if the winds delay it. The mission begins when the priest of
Apollo crowns the prow of the ship, and this happened, as I say, the day
before Socrates' trial. That is why Socrates was in prison a long time
between his trial and his execution.

Translated by G.M.A. Grube.

1. Legend says that Minos, king of Crete, compelled the Athenians to send seven youths and seven maidens every year to be sacrificed to the Minotaur until Theseus saved them and killed the monster.

Echecrates: What about his actual death, Phaedo? What did he say? What did he do? Who of his friends were with him? Or did the authorities not allow them to be present and he died with no friends present?

Phaedo: By no means. Some were present, in fact, a good many. d

Echecrates: Please be good enough to tell us all that occurred as fully as possible, unless you have some pressing business.

Phaedo: I have the time and I will try to tell you the whole story, for nothing gives me more pleasure than to call Socrates to mind, whether talking about him myself, or listening to someone else do so.

Echecrates: Your hearers will surely be like you in this, Phaedo. So do try to tell us every detail as exactly as you can.

Phaedo: I certainly found being there an astonishing experience. Although I was witnessing the death of one who was my friend, I had no e
feeling of pity, for the man appeared happy in both manner and words as he died nobly and without fear, Echecrates, so that it struck me that even in going down to the underworld he was going with the gods' blessing 59
and that he would fare well when he got there, if anyone ever does. That is why I had no feeling of pity, such as would seem natural in my sorrow, nor indeed of pleasure, as we engaged in philosophical discussion as we were accustomed to do—for our arguments were of that sort—but I had a strange feeling, an unaccustomed mixture of pleasure and pain at the same time as I reflected that he was just about to die. All of us present were affected in much the same way, sometimes laughing, then weeping; especially one of us, Apollodorus—you know the man and his ways.

Echecrates: Of course I do. b

Phaedo: He was quite overcome; but I was myself disturbed, and so were the others.

Echecrates: Who, Phaedo, were those present?

Phaedo: Among the local people there was Apollodorus, whom I mentioned, Critobulus and his father,[2] also Hermogenes, Epigenes, Aeschines and Antisthenes. Ctesippus of Paeania was there, Menexenus and some others. Plato, I believe, was ill.

Echecrates: Were there some foreigners present?

Phaedo: Yes, Simmias from Thebes with Cebes and Phaedondes, and c
from Megara, Euclides and Terpsion.

Echecrates: What about Aristippus and Cleombrotus? Were they there?

Phaedo: No. They were said to be in Aegina.

2. The father of Critobulus is Crito, after whom the dialogue *Crito* is named. Several of the other friends of Socrates mentioned here also appear in other dialogues. Hermogenes is one of the speakers in *Cratylus*. Epigenes is mentioned in *Apology* 33e, as is Aeschines, who was a writer of Socratic dialogues. Menexenus has a part in *Lysis* and has a dialogue named after him; Ctesippus appears in both *Lysis* and *Euthydemus*. Euclides and Terpsion are speakers in the introductory conversation of *Theaetetus*, and Euclides too wrote Socratic dialogues. Simmias and Cebes are mentioned in *Crito*, 45b, as having come to Athens with enough money to secure Socrates' escape.

Echecrates: Was there anyone else?

Phaedo: I think these were about all.

Echecrates: Well then, what do you say the conversation was about?

Phaedo: I will try to tell you everything from the beginning. On the
d previous days also both the others and I used to visit Socrates. We foregath-
ered at daybreak at the court where the trial took place, for it was close
to the prison, and each day we used to wait around talking until the prison
should open, for it did not open early. When it opened we used to go in
to Socrates and spend most of the day with him. On this day we gathered
e rather early, because when we left the prison on the previous evening we
were informed that the ship from Delos had arrived, and so we told each
other to come to the usual place as early as possible. When we arrived
the gatekeeper who used to answer our knock came out and told us to
wait and not go in until he told us to. "The Eleven,"[3] he said, "are freeing
Socrates from his bonds and telling him how his death will take place
60 today." After a short time he came and told us to go in. We found Socrates
recently released from his chains, and Xanthippe—you know her—sitting
by him, holding their baby. When she saw us, she cried out and said the
sort of thing that women usually say: "Socrates, this is the last time your
friends will talk to you and you to them." Socrates looked at Crito. "Crito,"
he said, "let someone take her home." And some of Crito's people led her
b away lamenting and beating her breast.

Socrates sat up on the bed, bent his leg and rubbed it with his hand,
and as he rubbed he said: "What a strange thing that which men call
pleasure seems to be, and how astonishing the relation it has with what
is thought to be its opposite, namely pain! A man cannot have both at the
same time. Yet if he pursues and catches the one, he is almost always
bound to catch the other also, like two creatures with one head. I think
c that if Aesop had noted this he would have composed a fable that a god
wished to reconcile their opposition but could not do so, so he joined their
two heads together, and therefore when a man has the one, the other
follows later. This seems to be happening to me. My bonds caused pain
in my leg, and now pleasure seems to be following."

Cebes intervened and said: "By Zeus, yes, Socrates, you did well to
remind me. Evenus[4] asked me the day before yesterday, as others had
d done before, what induced you to write poetry after you came to prison,
you who had never composed any poetry before, putting the fables of
Aesop into verse and composing the hymn to Apollo. If it is of any concern
to you that I should have an answer to give to Evenus when he repeats
his question, as I know he will, tell me what to say to him."

Tell him the truth, Cebes, he said, that I did not do this with the idea of rivaling him or his poems, for I knew that would not be easy, but I

3. The Eleven were the police commissioners of Athens.

4. Socrates refers to Evenus as a Sophist and teacher of the young in *Apology* 20a, c.

tried to find out the meaning of certain dreams and to satisfy my conscience e
in case it was this kind of art they were frequently bidding me to practice. The dreams were something like this: the same dream often came to me in the past, now in one shape now in another, but saying the same thing: "Socrates," it said, "practice and cultivate the arts." In the past I imagined that it was instructing and advising me to do what I was doing, such as those who encourage runners in a race, that the dream was thus bidding 61
me do the very thing I was doing, namely, to practice the art of philosophy, this being the highest kind of art, and I was doing that.

But now, after my trial took place, and the festival of the god was preventing my execution, I thought that, in case my dream was bidding me to practice this popular art, I should not disobey it but compose poetry. I thought it safer not to leave here until I had satisfied my conscience by b
writing poems in obedience to the dream. So I first wrote in honor of the god of the present festival. After that I realized that a poet, if he is to be a poet, must compose fables, not arguments. Being no teller of fables myself, I took the stories I knew and had at hand, the fables of Aesop, and I versified the first ones I came across. Tell this to Evenus, Cebes, wish him well and bid him farewell, and tell him, if he is wise, to follow me as soon as possible. I am leaving today, it seems, as the Athenians so order it. c

Said Simmias: "What kind of advice is this you are giving to Evenus, Socrates? I have met him many times, and from my observation he is not at all likely to follow it willingly."

How so, said he, is Evenus not a philosopher?

I think so, Simmias said.

Then Evenus will be willing, like every man who partakes worthily of philosophy. Yet perhaps he will not take his own life, for that, they say, is not right. As he said this, Socrates put his feet on the ground and d
remained in this position during the rest of the conversation.

Then Cebes asked: "How do you mean Socrates, that it is not right to do oneself violence, and yet that the philosopher will be willing to follow one who is dying?"

Come now, Cebes, have you and Simmias, who keep company with Philolaus,[5] not heard about such things?

Nothing definite, Socrates.

Indeed, I too speak about this from hearsay, but I do not mind telling you what I have heard, for it is perhaps most appropriate for one who is about to depart yonder to tell and examine tales about what we believe e
that journey to be like. What else could one do in the time we have until sunset?

But whatever is the reason, Socrates, for people to say that it is not right to kill oneself? As to your question just now, I have heard Philolaus say this when staying in Thebes and I have also heard it from others, but I have never heard anyone give a clear account of the matter.

5. See Introductory Note.

62 Well, he said, we must do our best, and you may yet hear one. And it may well astonish you if this subject, alone of all things, is simple, and it is never, as with everything else, better at certain times and for certain people to die than to live. And if this is so, you may well find it astonishing that those for whom it is better to die are wrong to help themselves, and that they must wait for someone else to benefit them.

And Cebes, lapsing into his own dialect, laughed quietly and said: "Zeus knows it is."

b Indeed, said Socrates, it does seem unreasonable when put like that, but perhaps there is reason to it. There is the explanation that is put in the language of the mysteries, that we men are in a kind of prison, and that one must not free oneself or run away. That seems to me an impressive doctrine and one not easy to understand fully. However, Cebes, this seems to me well expressed, that the gods are our guardians and that men are one of their possessions. Or do you not think so?

I do, said Cebes.

And would you not be angry if one of your possessions killed itself
c when you had not given any sign that you wished it to die, and if you had any punishment you could inflict, you would inflict it?

Certainly, he said.

Perhaps then, put in this way, it is not unreasonable that one should not kill oneself before a god had indicated some necessity to do so, like the necessity now put upon us.

d That seems likely, said Cebes. As for what you were saying, that philosophers should be willing and ready to die, that seems strange, Socrates, if what we said just now is reasonable, namely, that a god is our protector and that we are his possessions. It is not logical that the wisest of men should not resent leaving this service in which they are governed by the best of masters, the gods, for a wise man cannot believe that he will look after himself better when he is free. A foolish man might easily think so,
e that he must escape from his master; he would not reflect that one must not escape from a good master but stay with him as long as possible, because it would be foolish to escape. But the sensible man would want always to remain with one better than himself. So, Socrates, the opposite of what was said before is likely to be true; the wise would resent dying, whereas the foolish would rejoice at it.

I thought that when Socrates heard this he was pleased by Cebes' argu-
63 mentation. Glancing at us, he said: "Cebes is always on the track of some arguments; he is certainly not willing to be at once convinced by what one says."

Said Simmias: "But actually, Socrates, I think myself that Cebes has a point now. Why should truly wise men want to avoid the service of masters better than themselves, and leave them easily? And I think Cebes is aiming his argument at you, because you are bearing leaving us so lightly, and leaving those good masters, as you say yourself, the gods."

You are both justified in what you say, and I think you mean that I b
must make a defense against this, as if I were in court.

You certainly must, said Simmias.

Come then, he said, let me try to make my defense to you more convinc-
ing than it was to the jury. For, Simmias and Cebes, I should be wrong
not to resent dying if I did not believe that I should go first to other wise
and good gods, and then to men who have died and are better than men
are here. Be assured that, as it is, I expect to join the company of good c
men. This last I would not altogether insist on, but if I insist on anything
at all in these matters, it is that I shall come to gods who are very good
masters. That is why I am not so resentful, because I have good hope that
some future awaits men after death, as we have been told for years, a
much better future for the good than for the wicked.

Well now, Socrates, said Simmias, do you intend to keep this belief to
yourself as you leave us, or would you share it with us? I certainly think d
it would be a blessing for us too, and at the same time it would be your
defense if you convince us of what you say.

I will try, he said, but first let us see what it is that Crito here has, I
think, been wanting to say for quite a while.

What else, Socrates, said Crito, but what the man who is to give you
the poison has been telling me for some time, that I should warn you to
talk as little as possible. People get heated when they talk, he says, and
one should not be heated when taking the poison, as those who do must e
sometimes drink it two or three times.

Socrates replied: "Take no notice of him; only let him be prepared to
administer it twice or, if necessary, three times."

I was rather sure you would say that, Crito said, but he has been bother-
ing me for some time.

Let him be, he said. I want to make my argument before you, my judges,
as to why I think that a man who has truly spent his life in philosophy is
probably right to be of good cheer in the face of death and to be very
hopeful that after death he will attain the greatest blessings yonder. I will 64
try to tell you, Simmias and Cebes, how this may be so. I am afraid that other
people do not realize that the one aim of those who practice philosophy in
the proper manner is to practice for dying and death. Now if this is true,
it would be strange indeed if they were eager for this all their lives and
then resent it when what they have wanted and practiced for a long time
comes upon them.

Simmias laughed and said: "By Zeus, Socrates, you made me laugh,
though I was in no laughing mood just now. I think that the majority, on b
hearing this, will think that it describes the philosophers very well, and
our people in Thebes would thoroughly agree that philosophers are nearly
dead and that the majority of men is well aware that they deserve to be.

And they would be telling the truth, Simmias, except for their being
aware. They are not aware of the way true philosophers are nearly dead,

c nor of the way they deserve to be, nor of the sort of death they deserve. But never mind them, he said, let us talk among ourselves. Do we believe that there is such a thing as death?

Certainly, said Simmias.

Is it anything else than the separation of the soul from the body? Do we believe that death is this, namely, that the body comes to be separated by itself apart from the soul, and the soul comes to be separated by itself apart from the body? Is death anything else than that?

No, that is what it is, he said.

Consider then, my good sir, whether you share my opinion, for this will
d lead us to a better knowledge of what we are investigating. Do you think it is the part of a philosopher to be concerned with such so-called pleasures as those of food and drink?

By no means.

What about the pleasures of sex?

Not at all.

What of the other pleasures concerned with the service of the body? Do you think such a man prizes them greatly, the acquisition of distinguished clothes and shoes and the other bodily ornaments? Do you think he values
e these or despises them, except in so far as one cannot do without them?

I think the true philosopher despises them.

Do you not think, he said, that in general such a man's concern is not with the body but that, as far as he can, he turns away from the body towards the soul?

I do.

65 So in the first place, such things show clearly that the philosopher more than other men frees the soul from association with the body as much as possible?

Apparently.

A man who finds no pleasure in such things and has no part in them is thought by the majority not to deserve to live and to be close to death; the man, that is, who does not care for the pleasures of the body.

What you say is certainly true.

Then what about the actual acquiring of knowledge? Is the body an obstacle when one associates with it in the search for knowledge? I mean,
b for example, do men find any truth in sight or hearing, or are not even the poets forever telling us that we do not see or hear anything accurately, and surely if those two physical senses are not clear or precise, our other senses can hardly be accurate, as they are all inferior to these. Do you not think so?

I certainly do, he said.

When then, he asked, does the soul grasp the truth? For whenever it attempts to examine anything with the body, it is clearly deceived by it.

c True.

Is it not in reasoning if anywhere that any reality becomes clear to the soul?

Yes.

And indeed the soul reasons best when none of these senses troubles it, neither hearing nor sight, nor pain nor pleasure, but when it is most by itself, taking leave of the body and as far as possible having no contact or association with it in its search for reality.

That is so.

And it is then that the soul of the philosopher most disdains the body, d
flees from it and seeks to be by itself?

It appears so.

What about the following, Simmias? Do we say that there is such a thing as the Just itself, or not?

We do say so, by Zeus.

And the Beautiful, and the Good?

Of course.

And have you ever seen any of these things with your eyes?

In no way, he said.

Or have you ever grasped them with any of your bodily senses? I am speaking of all things such as Bigness, Health, Strength and, in a word, the reality of all other things, that which each of them essentially is. Is
what is most true in them contemplated through the body, or is this the e
position: whoever of us prepares himself best and most accurately to grasp that thing itself which he is investigating will come closest to the knowledge of it?

Obviously.

Then he will do this most perfectly who approaches the object with
thought alone, without associating any sight with his thought, or dragging 66
in any sense perception with his reasoning, but who, using pure thought alone, tries to track down each reality pure and by itself, freeing himself as far as possible from eyes and ears and, in a word, from the whole body, because the body confuses the soul and does not allow it to acquire truth and wisdom whenever it is associated with it. Will not that man reach reality, Simmias, if anyone does?

What you say, said Simmias, is indeed true.

All these things will necessarily make the true philosophers believe and b
say to each other something like this: "There is likely to be something such as a path to guide us out of our confusion, because as long as we have a body and our soul is fused with such an evil we shall never adequately attain what we desire, which we affirm to be the truth. The body keeps us busy in a thousand ways because of its need for nurture. Moreover, if
certain diseases befall it, they impede our search for the truth. It fills us c
with wants, desires, fears, all sorts of illusions and much nonsense, so that, as it is said, in truth and in fact no thought of any kind ever comes to us from the body. Only the body and its desires cause war, civil discord and battles, for all wars are due to the desire to acquire wealth, and it is the
body and the care of it, to which we are enslaved, which compel us to d
acquire wealth, and all this makes us too busy to practice philosophy.

Worst of all, if we do get some respite from it and turn to some investigation,
everywhere in our investigations the body is present and makes for confu-
sion and fear, so that it prevents us from seeing the truth.

"It really has been shown to us that, if we are ever to have pure knowl-
e edge, we must escape from the body and observe things in themselves
with the soul by itself. It seems likely that we shall, only then, when we
are dead, attain that which we desire and of which we claim to be lovers,
namely, wisdom, as our argument shows, not while we live; for if it is
impossible to attain any pure knowledge with the body, then one of two
things is true: either we can never attain knowledge or we can do so after
67 death. Then and not before, the soul is by itself apart from the body. While
we live, we shall be closest to knowledge if we refrain as much as possible
from association with the body and do not join with it more than we must,
if we are not infected with its nature but purify ourselves from it until the
god himself frees us. In this way we shall escape the contamination of the
body's folly; we shall be likely to be in the company of people of the same
kind, and by our own efforts we shall know all that is pure, which is
b presumably the truth, for it is not permitted to the impure to attain the
pure."

Such are the things, Simmias, that all those who love learning in the
proper manner must say to one another and believe. Or do you not think so?

I certainly do, Socrates.

And if this is true, my friend, said Socrates, there is good hope that on
arriving where I am going, if anywhere, I shall acquire what has been our
c chief preoccupation in our past life, so that the journey that is now ordered
for me is full of good hope, as it is also for any other man who believes
that his mind has been prepared and, as it were, purified.

It certainly is, said Simmias.

And does purification not turn out to be what we mentioned in our
argument some time ago, namely, to separate the soul as far as possible
from the body and accustom it to gather itself and collect itself out of
d every part of the body and to dwell by itself as far as it can both now and
in the future, freed, as it were, from the bonds of the body?

Certainly, he said.

And that freedom and separation of the soul from the body is called
death?

That is altogether so.

It is only those who practice philosophy in the right way, we say, who
always most want to free the soul; and this release and separation of the
soul from the body is the preoccupation of the philosophers?

So it appears.

Therefore, as I said at the beginning, it would be ridiculous for a man
to train himself in life to live in a state as close to death as possible, and
e then to resent it when it comes?

Ridiculous, of course.

In fact, Simmias, he said, those who practice philosophy in the right way are in training for dying and they fear death least of all men. Consider it from this point of view: if they are altogether estranged from the body and desire to have their soul by itself, would it not be quite absurd for them to be afraid and resentful when this happens? If they did not gladly set out for a place, where, on arrival, they may hope to attain that for which they had yearned during their lifetime, that is, wisdom, and where 68
they would be rid of the presence of that from which they are estranged?

Many men, at the death of their lovers, wives or sons, were willing to go to the underworld, driven by the hope of seeing there those for whose company they longed, and being with them. Will then a true lover of wisdom, who has a similar hope and knows that he will never find it to any extent except in Hades, be resentful of dying and not gladly undertake the journey thither? One must surely think so, my friend, if he is a true philosopher, for he is firmly convinced that he will not find pure knowledge b
anywhere except there. And if this is so, then, as I said just now, would it not be highly unreasonable for such a man to fear death?

It certainly would, by Zeus, he said.

Then you have sufficient indication, he said, that any man whom you see resenting death was not a lover of wisdom but a lover of the body, c
and also a lover of wealth or of honors, either or both.

It is certainly as you say.

And, Simmias, he said, does not what is called courage belong especially to men of this disposition?

Most certainly.

And the quality of moderation which even the majority call by that name, that is, not to get swept off one's feet by one's passions, but to treat them with disdain and orderliness, is this not suited only to those who d
most of all despise the body and live the life of philosophy?

Necessarily so, he said.

If you are willing to reflect on the courage and moderation of other people, you will find them strange.

In what way, Socrates?

You know that they all consider death a great evil?

Definitely, he said.

And the brave among them face death, when they do, for fear of greater evils?

That is so.

Therefore, it is fear and terror that make all men brave, except the philosophers. Yet it is illogical to be brave through fear and cowardice.

It certainly is. e

What of the moderate among them? Is their experience not similar? Is it licentiousness of a kind that makes them moderate? We say this is impossible, yet their experience of this simple-minded moderation turns out to be similar: they fear to be deprived of other pleasures which they

desire, so they keep away from some pleasures because they are overcome
by others. Now to be mastered by pleasure is what they call licentiousness,
69 but what happens to them is that they master certain pleasures because
they are mastered by others. This is like what we mentioned just now,
that in some way it is a kind of licentiousness that has made them moderate.

That seems likely.

My good Simmias, I fear this is not the right exchange to attain virtue,
to exchange pleasures for pleasures, pains for pains and fears for fears,
b the greater for the less like coins, but that the only valid currency for which
all these things should be exchanged is wisdom. With this we have real
courage and moderation and justice and, in a word, true virtue, with
wisdom, whether pleasures and fears and all such things be present or
absent. When these are exchanged for one another in separation from
wisdom, such virtue is only an illusory appearance of virtue; it is in fact
fit for slaves, without soundness or truth, whereas, in truth, moderation
and courage and justice are a purging away of all such things, and wisdom
c itself is a kind of cleansing or purification. It is likely that those who
established the mystic rites for us were not inferior persons but were
speaking in riddles long ago when they said that whoever arrives in the
underworld uninitiated and unsanctified will wallow in the mire, whereas
he who arrives there purified and initiated will dwell with the gods. There
d are indeed, as those concerned with the mysteries say, many who carry
the thyrsus but the Bacchants are few.[6] These latter are, in my opinion, no
other than those who have practiced philosophy in the right way. I have
in my life left nothing undone in order to be counted among these as far
as possible, as I have been eager to be in every way. Whether my eagerness
was right and we accomplished anything we shall, I think, know for certain
in a short time, god willing, on arriving yonder.

This is my defense, Simmias and Cebes, that I am likely to be right to
e leave you and my masters here without resentment or complaint, believing
that there, as here, I shall find good masters and good friends. If my
defense is more convincing to you than to the Athenian jury, it will be well.

When Socrates finished, Cebes intervened: Socrates, he said, everything
70 else you said is excellent, I think, but men find it very hard to believe
what you said about the soul. They think that after it has left the body it
no longer exists anywhere, but that it is destroyed and dissolved on the
day the man dies, as soon as it leaves the body; and that, on leaving it, it
is dispersed like breath or smoke, has flown away and gone and is no
longer anything anywhere. If indeed it gathered itself together and existed
by itself and escaped those evils you were recently enumerating, there
b would then be much good hope, Socrates, that what you say is true; but
to believe this requires a good deal of faith and persuasive argument, to

6. That is, the true worshippers of Dionysus, as opposed to those who only carry the external symbols of his worship.

believe that the soul still exists after a man has died and that it still possesses some capability and intelligence.

What you say is true, Cebes, Socrates said, but what shall we do? Do you want to discuss whether this is likely to be true or not?

Personally, said Cebes, I should like to hear your opinion on the subject.

I do not think, said Socrates, that anyone who heard me now, not even a comic poet, could say that I am babbling and discussing things that do c
not concern me, so we must examine the question thoroughly, if you think we should do so. Let us examine it in some such a manner as this: whether the souls of men who have died exist in the underworld or not. We recall an ancient theory that souls arriving there come from here, and then again that they arrive here and are born here from the dead. If that is true, that the living come back from the dead, then surely our souls must exist there, for they could not come back if they did not exist, and this is a sufficient d
proof that these things are so if it truly appears that the living never come from any other source than from the dead. If this is not the case we should need another argument.

Quite so, said Cebes.

Do not, he said, confine yourself to humanity if you want to understand this more readily, but take all animals and all plants into account, and, in short, for all things which come to be, let us see whether they come to be e
in this way, that is, from their opposites if they have such, as the beautiful is the opposite of the ugly and the just of the unjust, and a thousand other things of the kind. Let us examine whether those that have an opposite must necessarily come to be from their opposite and from nowhere else, as for example when something comes to be larger it must necessarily become larger from having been smaller before.

Yes.

Then if something smaller comes to be, it will come from something larger before, which became smaller? 71

That is so, he said.

And the weaker comes to be from the stronger, and the swifter from the slower?

Certainly.

Further, if something worse comes to be, does it not come from the better, and the juster from the more unjust?

Of course.

So we have sufficiently established that all things come to be in this way, opposites from opposites?

Certainly.

There is a further point, something such as this, about these opposites: between each of those pairs of opposites there are two processes: from the b
one to the other and then again from the other to the first; between the larger and the smaller there is increase and decrease, and we call the one increasing and the other decreasing?

Yes, he said.

And so too there is separation and combination, cooling and heating, and all such things, even if sometimes we do not have a name for the process, but in fact it must be everywhere that they come to be from one another, and that there is a process of becoming from each into the other?

Assuredly, he said.

c Well then, is there an opposite to living, as sleeping is the opposite of being awake?

Quite so, he said.

What is it?

Being dead, he said.

Therefore, if these are opposites, they come to be from one another, and there are two processes of generation between the two?

Of course.

I will tell you, said Socrates, one of the two pairs I was just talking about, the pair itself and the two processes, and you will tell me the other.
d I mean, to sleep and to be awake; to be awake comes from sleeping, and to sleep comes from being awake. Of the two processes one is going to sleep, the other is waking up. Do you accept that, or not?

Certainly.

You tell me in the same way about life and death. Do you not say that to be dead is the opposite of being alive?

I do.

And they come to be from one another?

Yes.

What comes to be from being alive?

Being dead.

And what comes to be from being dead?

One must agree that it is being alive.

Then, Cebes, living creatures and things come to be from the dead?

e So it appears, he said.

Then our souls exist in the underworld.

That seems likely.

Then in this case one of the two processes of becoming is clear, for dying is clear enough, is it not?

It certainly is.

What shall we do then? Shall we not supply the opposite process of becoming? Is nature to be lame in this case? Or must we provide a process of becoming opposite to dying?

We surely must.

And what is that?

Coming to life again.

72 Therefore, he said, if there is such a thing as coming to life again, it would be a process of coming from the dead to the living?

Quite so.

It is agreed between us then that the living come from the dead in this way no less than the dead from the living, and, if that is so, it seems to

be a sufficient proof that the souls of the dead must be somewhere whence they can come back again.

I think, Socrates, he said, that this follows from what we have agreed on.

Consider in this way, Cebes, he said, that, as I think, we were not wrong
to agree. If the two processes of becoming did not always balance each b
other as if they were going round in a circle, but generation proceeded from one point to its opposite in a straight line and it did not turn back again to the other opposite or take any turning, do you realize that all things would ultimately be in the same state, be affected in the same way, and cease to become?

How do you mean? he said.

It is not hard to understand what I mean. If, for example, there was such a process as going to sleep, but no corresponding process of waking up, you realize that in the end everything would show the story of Endym-
ion[7] to have no meaning. There would be no point to it because everything c
would have the same experience as he and be asleep. And if everything were combined and nothing separated, the saying of Anaxagoras[8] would soon be true, "that all things were mixed together." In the same way, my dear Cebes, if everything that partakes of life were to die and remain in
that state and not come to life again, would not everything ultimately have d
to be dead and nothing alive? Even if the living came from some other source, and all that lived died, how could all things avoid being absorbed in death?

It could not be, Socrates, said Cebes, and I think what you say is altogether true.

I think, Cebes, said he, that this is very definitely the case and that we were not deceived when we agreed on this: coming to life again in truth
exists, the living come to be from the dead, and the souls of the dead exist. e

Furthermore, Socrates, Cebes rejoined, such is also the case if that theory is true that you are accustomed to mention frequently, that for us learning is no other than recollection. According to this, we must at some previous
time have learned what we now recollect. This is possible only if our soul 73
existed somewhere before it took on this human shape. So according to this theory too, the soul is likely to be something immortal.

Cebes, Simmias interrupted, what are the proofs of this? Remind me, for I do not quite recall them at the moment.

There is one excellent argument, said Cebes, namely that when men are interrogated in the right manner, they always give the right answer of their own accord, and they could not do this if they did not possess the

7. Endymion was granted eternal sleep by Zeus.

8. Anaxagoras of Clazomenae was born at the beginning of the fifth century B.C. He came to Athens as a young man and spent most of his life there in the study of natural philosophy. He is quoted later in the dialogue (97c ff.) as claiming that the universe is directed by Mind (*Nous*). The reference here is to his statement that in the original state of the world all its elements were thoroughly commingled.

b knowledge and the right explanation inside them. Then if one shows them a diagram or something else of that kind, this will show most clearly that such is the case.[9]

If this does not convince you, Simmias, said Socrates, see whether you agree if we examine it in some such way as this, for do you doubt that what we call learning is recollection?

It is not that I doubt, said Simmias, but I want to experience the very thing we are discussing, recollection, and from what Cebes undertook to say, I am now remembering and am pretty nearly convinced. Nevertheless, I should like to hear now the way you were intending to explain it.

c This way, he said. We surely agree that if anyone recollects anything, he must have known it before.

Quite so, he said.

Do we not also agree that when knowledge comes to mind in this way, it is recollection? What way do I mean? Like this: when a man sees or hears or in some other way perceives one thing and not only knows that thing but also thinks of another thing of which the knowledge is not the same but different, are we not right to say that he recollects the second thing that comes into his mind?

d How do you mean?

Things such as this: to know a man is surely a different knowledge from knowing a lyre.

Of course.

Well, you know what happens to lovers: whenever they see a lyre, a garment or anything else that their beloved is accustomed to use, they know the lyre, and the image of the boy to whom it belongs comes into their mind. This is recollection, just as someone, on seeing Simmias, often recollects Cebes, and there are thousands of other such occurrences.

Thousands indeed, said Simmias.

Is this kind of thing not recollection of a kind, he said, especially so
e when one experiences it about things that one had forgotten, because one had not seen them for some time?—Quite so.

Further, he said, can a man seeing the picture of a horse or a lyre recollect a man, or seeing a picture of Simmias recollect Cebes?—Certainly.

Or seeing a picture of Simmias, recollect Simmias himself?—He certainly can.

74 In all these cases the recollection can be occasioned by things that are similar, but it can also be occasioned by things that are dissimilar?—It can.

When the recollection is caused by similar things, must one not of necessity also experience this: to consider whether the similarity to that which one recollects is deficient in any respect or complete?—One must.

Consider, he said, whether this is the case: we say that there is something that is equal. I do not mean a stick equal to a stick or a stone to a stone,

9. Cf. *Meno* 81e ff., where Socrates does precisely that.

or anything of that kind, but something else beyond all these, the Equal itself. Shall we say that this exists or not?

Indeed we shall, by Zeus, said Simmias, most definitely. b

And do we know what this is?—Certainly.

Whence have we acquired the knowledge of it? Is it not from the things we mentioned just now, from seeing sticks or stones or some other things that are equal we come to think of that other which is different from them? Or doesn't it seem to you to be different? Look at it also this way: do not equal stones and sticks sometimes, while remaining the same, appear to one to be equal and to another to be unequal?—Certainly they do.

But what of the equals themselves? Have they ever appeared unequal c
to you, or Equality to be Inequality?

Never, Socrates.

These equal things and the Equal itself are therefore not the same?

I do not think they are the same at all, Socrates.

But it is definitely from the equal things, though they are different from that Equal, that you have derived and grasped the knowledge of equality?

Very true, Socrates.

Whether it be like them or unlike them?

Certainly.

It makes no difference. As long as the sight of one thing makes you think of another, whether it be similar or dissimilar, this must of necessity
be recollection? d

Quite so.

Well then, he said, do we experience something like this in the case of equal sticks and the other equal objects we just mentioned? Do they seem to us to be equal in the same sense as what is Equal itself? Is there some deficiency in their being such as the Equal, or is there not?

A considerable deficiency, he said.

Whenever someone, on seeing something, realizes that that which he
now sees wants to be like some other reality but falls short and cannot be e
like that other since it is inferior, do we agree that the one who thinks this must have prior knowledge of that to which he says it is like, but deficiently so?

Necessarily.

Well, do we also experience this about the equal objects and the Equal itself, or do we not?

Very definitely.

We must then possess knowledge of the Equal before that time when
we first saw the equal objects and realized that all these objects strive to 75
be like the Equal but are deficient in this.

That is so.

Then surely we also agree that this conception of ours derives from seeing or touching or some other sense perception, and cannot come into our mind in any other way, for all these senses, I say, are the same.

They are the same, Socrates, at any rate in respect to that which our argument wishes to make plain.

b Our sense perceptions must surely make us realize that all that we perceive through them is striving to reach that which is Equal but falls short of it; or how do we express it?

Like that.

Then before we began to see or hear or otherwise perceive, we must have possessed knowledge of the Equal itself if we were about to refer our sense perceptions of equal objects to it, and realized that all of them were eager to be like it, but were inferior.

That follows from what has been said, Socrates.

But we began to see and hear and otherwise perceive right after birth?

Certainly.

c We must then have acquired the knowledge of the Equal before this.

Yes.

It seems then that we must have possessed it before birth.

It seems so.

Therefore, if we had this knowledge, we knew before birth and immediately after not only the Equal, but the Greater and the Smaller and all such things, for our present argument is no more about the Equal than about
d the Beautiful itself, the Good itself, the Just, the Pious and, as I say, about all those things which we mark with the seal of "what it is," both when we are putting questions and answering them. So we must have acquired knowledge of them all before we were born.

That is so.

If, having acquired this knowledge in each case, we have not forgotten it, we remain knowing and have knowledge throughout our life, for to know is to acquire knowledge, keep it and not lose it. Do we not call the losing of knowledge forgetting?

e Most certainly, Socrates, he said.

But, I think, if we acquired this knowledge before birth, then lost it at birth, and then later by the use of our senses in connection with those objects we mentioned, we recovered the knowledge we had before, would not what we call learning be the recovery of our own knowledge, and we are right to call this recollection?

Certainly.

76 It was seen to be possible for someone to see or hear or otherwise perceive something, and by this to be put in mind of something else which he had forgotten and which is related to it by similarity or difference. One of two things follows, as I say: either we were born with the knowledge of it, and all of us know it throughout life, or those who later, we say, are learning, are only recollecting, and learning would be recollection.

That is certainly the case, Socrates.

Which alternative do you choose, Simmias? That we are born with
b this knowledge or that we recollect later the things of which we had knowledge previously?

I have no means of choosing at the moment, Socrates.

Well, can you make this choice? What is your opinion about it? A man who has knowledge would be able to give an account of what he knows, or would he not?

He must certainly be able to do so, Socrates, he said.

And do you think everybody can give an account of the things we were mentioning just now?

I wish they could, said Simmias, but I'm afraid it is much more likely that by this time tomorrow there will be no one left who can do so adequately.

So you do not think that everybody has knowledge of those things? c

No indeed.

So they recollect what they once learned?

They must.

When did our souls acquire the knowledge of them? Certainly not since we were born as men.

Indeed no.

Before that then?

Yes.

So then, Simmias, our souls also existed apart from the body before they took on human form, and they had intelligence.

Unless we acquire the knowledge at the moment of birth, Socrates, for that time is still left to us.

Quite so, my friend, but at what other time do we lose it? We just now d
agreed that we are not born with that knowledge. Do we then lose it at the very time we acquire it, or can you mention any other time?

I cannot, Socrates. I did not realize that I was talking nonsense.

So this is our position, Simmias? he said. If those realities we are always talking about exist, the Beautiful and the Good and all that kind of reality, and we refer all the things we perceive to that reality, discovering that it
existed before and is ours, and we compare these things with it, then, just e
as they exist, so our soul must exist before we are born. If these realities do not exist, then this argument is altogether futile. Is this the position, that there is an equal necessity for those realities to exist, and for our souls to exist before we were born? If the former do not exist, neither do the latter?

I do not think, Socrates, said Simmias, that there is any possible doubt that it is equally necessary for both to exist, and it is opportune that our
argument comes to the conclusion that our soul exists before we are born, 77
and equally so that reality of which you are now speaking. Nothing is so evident to me personally as that all such things must certainly exist, the Beautiful, the Good, and all those you mentioned just now. I also think that sufficient proof of this has been given.

Then what about Cebes? said Socrates, for we must persuade Cebes also.

He is sufficiently convinced I think, said Simmias, though he is the most difficult of men to persuade by argument, but I believe him to be fully
convinced that our soul existed before we were born. I do not think myself, b
however, that it has been proved that the soul continues to exist after

death; the opinion of the majority which Cebes mentioned still stands, that
when a man dies his soul is dispersed and this is the end of its existence.
What is to prevent the soul coming to be and being constituted from some
other source, existing before it enters a human body and then, having
done so and departed from it, itself dying and being destroyed?

c You are right, Simmias, said Cebes. Half of what needed proof has been
proved, namely, that our soul existed before we were born, but further
proof is needed that it exists no less after we have died, if the proof is to
be complete.

It has been proved even now, Simmias and Cebes, said Socrates, if you
are ready to combine this argument with the one we agreed on before,
that every living thing must come from the dead. If the soul exists before,
d it must, as it comes to life and birth, come from nowhere else than death
and being dead, so how could it avoid existing after death since it must be
born again? What you speak of has then even now been proved. However, I
think you and Simmias would like to discuss the argument more fully.
You seem to have this childish fear that the wind would really dissolve
e and scatter the soul, as it leaves the body, especially if one happens to die
in a high wind and not in calm weather.

Cebes laughed and said: Assuming that we were afraid, Socrates, try to
change our minds, or rather do not assume that we are afraid, but perhaps
there is a child in us who has these fears; try to persuade him not to fear
death like a bogey.

You should, said Socrates, sing a charm over him every day until you
have charmed away his fears.

78 Where shall we find a good charmer for these fears, Socrates, he said,
now that you are leaving us?

Greece is a large country, Cebes, he said, and there are good men in it;
the tribes of foreigners are also numerous. You should search for such a
charmer among them all, sparing neither trouble nor expense, for there is
nothing on which you could spend your money to greater advantage. You
must also search among yourselves, for you might not easily find people
who could do this better than yourselves.

b That shall be done, said Cebes, but let us, if it pleases you, go back to
the argument where we left it.

Of course it pleases me.

Splendid, he said.

We must then ask ourselves something like this: what kind of thing is
likely to be scattered? On behalf of what kind of thing should one fear
this, and for what kind of thing should one not fear it? We should then
examine to which class the soul belongs, and as a result either fear for the
soul or be of good cheer.

What you say is true.

c Is not anything that is composite and a compound by nature liable to
be split up into its component parts, and only that which is noncomposite,
if anything, is not likely to be split up?

I think that is the case, said Cebes.

Are not the things that always remain the same and in the same state most likely not to be composite, whereas those that vary from one time to another and are never the same are composite?

I think that is so.

Let us then return to those same things with which we were dealing
earlier, to that reality of whose existence we are giving an account in our d
questions and answers; are they ever the same and in the same state, or do they vary from one time to another; can the Equal itself, the Beautiful itself, each thing in itself, the real, ever be affected by any change whatever? Or does each of them that really is, being uniform by itself, remain the same and never in any way tolerate any change whatever?

It must remain the same, said Cebes, and in the same state, Socrates.

What of the many beautiful particulars, be they men, horses, clothes, or e
other such things, or the many equal particulars, and all those which bear the same name as those others? Do they remain the same or, in total contrast to those other realities, one might say, never in any way remain the same as themselves or in relation to each other?

The latter is the case; they are never in the same state.

These latter you could touch and see and perceive with the other senses, 79
but those that always remain the same can be grasped only by the reasoning power of the mind? They are not seen but are invisible?

That is altogether true, he said.

Do you then want us to assume two kinds of existences, the visible and the invisible?

Let us assume this.

And the invisible always remains the same, whereas the visible never does?

Let us assume that too.

Now one part of ourselves is the body, another part is the soul? b

Quite so.

To which class of existence do we say the body is more alike and akin?

To the visible, as anyone can see.

What about the soul? Is it visible or invisible?

It is not visible to men, Socrates, he said.

Well, we meant visible and invisible to human eyes; or to any others, do you think?

To human eyes.

Then what do we say about the soul? Is it visible or not visible?

Not visible.

So it is invisible?—Yes.

So the soul is more like the invisible than the body, and the body more c
like the visible?—Without any doubt, Socrates.

Haven't we also said some time ago that when the soul makes use of the body to investigate something, be it through hearing or seeing or some other sense—for to investigate something through the body is to do it

through the senses—it is dragged by the body to the things that are never the same, and the soul itself strays and is confused and dizzy, as if it were drunk, in so far as it is in contact with that kind of thing?

Certainly.

d But when the soul investigates by itself it passes into the realm of what is pure, ever existing, immortal and unchanging, and being akin to this, it always stays with it whenever it is by itself and can do so; it ceases to stray and remains in the same state as it is in touch with things of the same kind, and its experience then is what is called wisdom?

Altogether well said and very true, Socrates, he said.

e Judging from what we have said before and what we are saying now, to which of these two kinds do you think that the soul is more alike and more akin?

I think, Socrates, he said, that on this line of argument any man, even the dullest, would agree that the soul is altogether more like that which always exists in the same state rather than like that which does not.

What of the body?

That is like the other.

80 Look at it also this way: when the soul and the body are together, nature orders the one to be subject and to be ruled, and the other to rule and be master. Then again, which do you think is like the divine and which like the mortal? Do you not think that the nature of the divine is to rule and to lead, whereas it is that of the mortal to be ruled and be subject?

I do.

Which does the soul resemble?

Obviously, Socrates, the soul resembles the divine, and the body resembles the mortal.

Consider then, Cebes, whether it follows from all that has been said that
b the soul is most like the divine, deathless, intelligible, uniform, indissoluble, always the same as itself, whereas the body is most like that which is human, mortal, multiform, unintelligible, soluble and never consistently the same. Have we anything else to say to show, my dear Cebes, that this is not the case?

We have not.

Well then, that being so, is it not natural for the body to dissolve easily, and for the soul to be altogether indissoluble, or nearly so?

c Of course.

You realize, he said, that when a man dies, the visible part, the body, which exists in the visible world, and which we call the corpse, whose natural lot it would be to dissolve, fall apart and be blown away, does not immediately suffer any of these things but remains for a fair time, in fact, quite a long time if the man dies with his body in a suitable condition and at a favorable season? If the body is emaciated or embalmed, as in Egypt, it remains almost whole for a remarkable length
d of time, and even if the body decays, some parts of it, namely bones and sinews and the like, are nevertheless, one might say, deathless. Is that not so?—Yes.

Will the soul, the invisible part which makes its way to a region of the same
kind, noble and pure and invisible, to Hades in fact, to the good and wise
god whither, god willing, my soul must soon be going—will the soul, being
of this kind and nature, be scattered and destroyed on leaving the body, as
the majority of men say? Far from it, my dear Cebes and Simmias, but what e
happens is much more like this: if it is pure when it leaves the body and drags
nothing bodily with it, as it had no willing association with the body in life,
but avoided it and gathered itself together by itself and always practiced
this, which is no other than practising philosophy in the right way, in fact, 81
training to die easily. Or is this not training for death?

It surely is.

A soul in this state makes its way to the invisible, which is like itself,
the divine and immortal and wise, and arriving there it can be happy,
having rid itself of confusion, ignorance, fear, violent desires and the other
human ills and, as is said of the initiates, truly spend the rest of time with
the gods. Shall we say this, Cebes, or something different?

This, by Zeus, said Cebes.

But I think that if the soul is polluted and impure when it leaves the b
body, having always been associated with it and served it, bewitched by
physical desires and pleasures to the point at which nothing seems to exist
for it but the physical, which one can touch and see or eat and drink or
make use of for sexual enjoyment, and if that soul is accustomed to hate
and fear and avoid that which is dim and invisible to the eyes but intelligible
and to be grasped by philosophy—do you think such a soul will escape
pure and by itself?

Impossible, he said. c

It is no doubt permeated by the physical, which constant intercourse
and association with the body, as well as considerable practice, has caused
to become ingrained in it?

Quite so.

We must believe, my friend, that this bodily element is heavy, ponderous,
earthy and visible. Through it, such a soul has become heavy and is dragged
back to the visible region in fear of the unseen and of Hades. It wanders,
as we are told, around graves and monuments, where shadowy phantoms, d
images that such souls produce, have been seen, souls that have not been
freed and purified but share in the visible, and are therefore seen.

That is likely, Socrates.

It is indeed, Cebes. Moreover, these are not the souls of good but of
inferior men, which are forced to wander there, paying the penalty for
their previous bad upbringing. They wander until their longing for that e
which accompanies them, the physical, again imprisons them in a body,
and they are then, as is likely, bound to such characters as they have
practiced in their life.

What kind of characters do you say these are, Socrates?

Those, for example, who have carelessly practiced gluttony, violence
and drunkenness are likely to join a company of donkeys or of similar
animals. Do you not think so? 82

Very likely.

Those who have esteemed injustice highly, and tyranny and plunder will join the tribes of wolves and hawks and kites, or where else shall we say that they go?

Certainly to those, said Cebes.

And clearly, the destination of the others will conform to the way in which they have behaved?

Clearly, of course.

The happiest of these, who will also have the best destination, are those
b who have practiced popular and social virtue, which they call moderation and justice and which was developed by habit and practice, without philosophy or understanding?

How are they the happiest?

Because it is likely that they will again join a social and gentle group, either of bees or wasps or ants, and then again the same kind of human group, and so be moderate men.

That is likely.

No one may join the company of the gods who has not practiced philoso-
c phy and is not completely pure when he departs from life, no one but the lover of learning. It is for this reason, my friends Simmias and Cebes, that those who practice philosophy in the right way keep away from all bodily passions, master them and do not surrender themselves to them; it is not at all for fear of wasting their substance and of poverty, which the majority and the money-lovers fear, nor for fear of dishonor and ill repute, like the ambitious and lovers of honors, that they keep away from them.

That would not be natural for them, Socrates, said Cebes.

d By Zeus, no, he said. Those who care for their own soul and do not live for the service of their body dismiss all these things. They do not travel the same road as those who do not know where they are going but, believing that nothing should be done contrary to philosophy and their deliverance and purification, they turn to this and follow wherever philosophy leads.

How so, Socrates?

I will tell you, he said. The lovers of learning know that when philosophy
e gets hold of their soul, it is imprisoned in and clinging to the body, and that it is forced to examine other things through it as through a cage and not by itself, and that it wallows in every kind of ignorance. Philosophy sees that the worst feature of this imprisonment is that it is due to desires, so that the prisoner himself is contributing to his own incarceration most
83 of all. As I say, the lovers of learning know that philosophy gets hold of their soul when it is in that state, then gently encourages it and tries to free it by showing them that investigation through the eyes is full of deceit, as is that through the ears and the other senses. Philosophy then persuades the soul to withdraw from the senses in so far as it is not compelled to use them and bids the soul to gather itself together by itself, to trust only
b itself and whatever reality, existing by itself, the soul by itself understands,

and not to consider as true whatever it examines by other means, for this is different in different circumstances and is sensible and visible, whereas what the soul itself sees is intelligible and invisible. The soul of the true philosopher thinks that this deliverance must not be opposed and so keeps away from pleasures and desires and pains as far as he can; he reflects that violent pleasure or pain or passion does not cause merely such evils as one might expect, such as one suffers when one has been sick or extravagant c
through desire, but the greatest and most extreme evil, though one does not reflect on this.

What is that, Socrates? asked Cebes.

That the soul of every man, when it feels violent pleasure or pain in connection with some object, inevitably believes at the same time that what causes such feelings must be very clear and very true, which it is not. Such objects are mostly visible, are they not?

Certainly.

And doesn't such an experience tie the soul to the body most completely? d

How so?

Because every pleasure or pain provides, as it were, another nail to rivet the soul to the body and to weld them together. It makes the soul corporeal, so that it believes that truth is what the body says it is. As it shares the beliefs and delights of the body, I think it inevitably comes to share its ways and manner of life and is unable ever to reach Hades in a pure state; it is always full of body when it departs, so that it soon falls back into another body and grows with it as if it had been sewn e
into it. Because of this, it can have no part in the company of the divine, the pure and uniform.

What you say is very true, Socrates, said Cebes.

This is why genuine lovers of learning are moderate and brave, or do you think it is for the reasons the majority says they are?

I certainly do not. 84

Indeed no. This is how the soul of a philosopher would reason: it would not think that while philosophy must free it, it should while being freed surrender itself to pleasures and pains and imprison itself again, thus laboring in vain like Penelope at her web. The soul of the philosopher achieves a calm from such emotions; it follows reason and ever stays with it contemplating the true, the divine, which is not the object of opinion. Nurtured by this, it believes that one should live in this manner as long b
as one is alive and, after death, arrive at what is akin and of the same kind, and escape from human evils. After such nurture there is no danger, Simmias and Cebes, that one should fear that, on parting from the body, the soul would be scattered and dissipated by the winds and no longer be anything anywhere.

When Socrates finished speaking there was a long silence. He appeared c
to be concentrating on what had been said, and so were most of us. But Cebes and Simmias were whispering to each other. Socrates observed them and questioned them. Come, he said, do you think there is something

lacking in my argument? There are still many doubtful points and many
objections for anyone who wants a thorough discussion of these matters.
If you are discussing some other subject, I have nothing to say, but if you
have some difficulty about this one, do not hesitate to speak for yourselves
and expound it if you think the argument could be improved, and if you
d think you will do better, take me along with you in the discussion.

I will tell you the truth, Socrates, said Simmias. Both of us have been
in difficulty for some time, and each of us has been urging the other to
question you because we wanted to hear what you would say, but we
hesitated to bother you, lest it be displeasing to you in your present misfortune.

When Socrates heard this he laughed quietly and said: "Really, Simmias,
e it would be hard for me to persuade other people that I do not consider
my present fate a misfortune if I cannot persuade even you, and you are
afraid that it is more difficult to deal with me than before. You seem to
think me inferior to the swans in prophecy. They sing before too, but when
they realize that they must die they sing most and most beautifully, as
85 they rejoice that they are about to depart to join the god whose servants
they are. But men, because of their own fear of death, tell lies about the
swans and say that they lament their death and sing in sorrow. They do
not reflect that no bird sings when it is hungry or cold or suffers in any
other way, neither the nightingale nor the swallow nor the hoopoe, though
they do say that these sing laments when in pain. Nor do the swans, but
b I believe that as they belong to Apollo, they are prophetic, have knowledge
of the future and sing of the blessings of the underworld, sing and rejoice
on that day beyond what they did before. As I believe myself to be a
fellow servant with the swans and dedicated to the same god, and have
received from my master a gift of prophecy not inferior to theirs, I am no
more despondent than they on leaving life. Therefore, you must speak
and ask whatever you want as long as the authorities allow it."

Well spoken, said Simmias. I will tell you my difficulty, and then Cebes
c will say why he does not accept what was said. I believe, as perhaps you
do, that precise knowledge on that subject is impossible or extremely
difficult in our present life, but that it surely shows a very poor spirit not
to examine thoroughly what is said about it, and to desist before one is
exhausted by an all-round investigation. One should achieve one of these
things: learn the truth about these things or find it for oneself, or, if that
d is impossible, adopt the best and most irrefutable of men's theories, and,
borne upon this, sail through the dangers of life as upon a raft, unless
someone should make that journey safer and less risky upon a firmer
vessel of some divine doctrine. So even now, since you have said what
you did, I will feel no shame at asking questions, and I will not blame
myself in the future because I did not say what I think. As I examine what
we said, both by myself and with Cebes, it does not seem to be adequate.

e Said Socrates: "You may well be right, my friend, but tell me how it
is inadequate."

In this way, as it seems to me, he said: "One might make the same
argument about harmony, lyre and strings, that a harmony is something
invisible, without body, beautiful and divine in the attuned lyre, whereas 86
the lyre itself and its strings are physical, bodily, composite, earthy and
akin to what is mortal. Then if someone breaks the lyre, cuts or breaks
the strings and then insists, using the same argument as you, that the
harmony must still exist and is not destroyed because it would be impossi-
ble for the lyre and the strings, which are mortal, still to exist when the
strings are broken, and for the harmony, which is akin and of the same
nature as the divine and immortal, to be destroyed before that which is b
mortal; he would say that the harmony itself still must exist and that the
wood and the strings must rot before the harmony can suffer. And indeed
Socrates, I think you must have this in mind, that we really do suppose
the soul to be something of this kind; as the body is stretched and held
together by the hot and the cold, the dry and the moist and other such
things, and our soul is a mixture and harmony of those things when they c
are mixed with each other rightly and in due measure. If then the soul is
a kind of harmony or attunement, clearly, when our body is relaxed or
stretched without due measure by diseases and other evils, the soul must
immediately be destroyed, even if it be most divine, as are the other
harmonies found in music and all the works of artists, and the remains
of each body last for a long time until they rot or are burned. Consider
what we shall say in answer to one who deems the soul to be a mixture d
of bodily elements and to be the first to perish in the process we call death."

Socrates looked at us keenly, as was his habit, smiled and said: "What
Simmias says is quite fair. If one of you is more resourceful than I am,
why did he not answer him, for he seems to have handled the argument
competently. However, I think that before we answer him, we should hear e
Cebes' objection, in order that we may have time to deliberate on an
answer. When we have heard him we should either agree with them, if
we think them in tune with us or, if not, defend our own argument. Come
then, Cebes. What is troubling you?"

I tell you, said Cebes, the argument seems to me to be at the same point 87
as before and open to the same objection. I do not deny that it has been
very elegantly and, if it is not offensive to say so, sufficiently proved that
our soul existed before it took on this present form, but I do not believe
the same applies to its existing somewhere after our death. Not that I agree
with Simmias' objection that the soul is not stronger and much more lasting
than the body, for I think it is superior in all these respects. "Why then,"
the argument might say, "are you still unconvinced? Since you see that
when the man dies, the weaker part continues to exist, do you not think
that the more lasting part must be preserved during that time?" On this b
point consider whether what I say makes sense.

Like Simmias, I too need an image, for I think this argument is much
as if one said at the death of an old weaver that the man had not perished
but was safe and sound somewhere, and offered as proof the fact that the

c cloak the old man had woven himself and was wearing was still sound
and had not perished. If one was not convinced, he would be asked whether
a man lasts longer than a cloak which is in use and being worn, and if
the answer was that a man lasts much longer, this would be taken as proof
that the man was definitely safe and sound, since the more temporary
thing had not perished. But, Simmias, I do not think that is so, for consider
what I say. Anybody could see that the man who said this was talking
nonsense. That weaver had woven and worn out many such cloaks. He
d perished after many of them, but before the last. That does not mean that
a man is inferior and weaker than a cloak. The image illustrates, I think,
the relationship of the soul to the body, and anyone who says the same
thing about them would appear to me to be talking sense, that the soul
lasts a long time while the body is weaker and more short-lived. He might
say that each soul wears out many bodies, especially if it lives many years.
If the body were in a state of flux and perished while the man was still
e alive, and the soul wove afresh the body that is worn out, yet it would
be inevitable that whenever the soul perished it would be wearing the last
body it wove and perish only before this last. Then when the soul perished,
the body would show the weakness of its nature by soon decaying and
disappearing. So we cannot trust this argument and be confident that our
88 soul continues to exist somewhere after our death. For, if one were to
concede, even more than you do, to a man using that argument, if one
were to grant him not only that the soul exists in the time before we are
born, but that there is no reason why the soul of some should not exist
and continue to exist after our death, and thus frequently be born and die
in turn; if one were to grant him that the soul's nature is so strong that it
can survive many bodies, but if, having granted all this, one does not
further agree that the soul is not damaged by its many births and is not,
in the end, altogether destroyed in one of those deaths, he might say that
b no one knows which death and dissolution of the body brings about the
destruction of the soul, since not one of us can be aware of this. And in
that case, any man who faces death with confidence is foolish, unless he
can prove that the soul is altogether immortal. If he cannot, a man about
to die must of necessity always fear for his soul, lest the present separation
of the soul from the body bring about the complete destruction of the soul.

c When we heard what they said we were all depressed, as we told each
other afterwards. We had been quite convinced by the previous argument,
and they seemed to confuse us again, and to drive us to doubt not only
what had already been said but also what was going to be said, lest we
be worthless as critics or the subject itself admitted of no certainty.

ECHECRATES: By the gods, Phaedo, you have my sympathy, for as I listen
d to you now I find myself saying to myself: "What argument shall we trust,
now that that of Socrates, which was extremely convincing, has fallen into
discredit?" The statement that the soul is some kind of harmony has a
remarkable hold on me, now and always, and when it was mentioned it

reminded me that I had myself previously thought so. And now I am again quite in need, as if from the beginning, of some other argument to convince me that the soul does not die along with the man. Tell me then, by Zeus, how Socrates tackled the argument. Was he obviously distressed, as you say you people were, or was he not, but quietly came to the rescue e
of his argument, and did he do so satisfactorily or inadequately? Tell us everything as precisely as you can.

PHAEDO: I have certainly often admired Socrates, Echecrates, but never more than on this occasion. That he had a reply was perhaps not strange. 89
What I wondered at most in him was the pleasant, kind and admiring way he received the young men's argument, and how sharply he was aware of the effect the discussion had on us, and then how well he healed our distress and, as it were, recalled us from our flight and defeat and turned us around to join him in the examination of their argument.

ECHECRATES: How did he do this?

PHAEDO: I will tell you. I happened to be sitting on his right by the couch on a low stool, so that he was sitting well above me. He stroked my head b
and pressed the hair on the back of my neck, for he was in the habit of playing with my hair at times. "Tomorrow, Phaedo," he said, "you will probably cut this beautiful hair."

Likely enough, Socrates, I said.

Not if you take my advice, he said.

Why not? said I.

It is today, he said, that I shall cut my hair and you yours, if our argument dies on us, and we cannot revive it. If I were you, and the argument c
escaped me, I would take an oath, as the Argives did, not to let my hair grow before I fought again and defeated the argument of Simmias and Cebes.

But, I said, they say that not even Heracles could fight two people.

Then call on me as your Iolaus, as long as the daylight lasts.

I shall call on you, but in this case as Iolaus calling on Heracles.

It makes no difference, he said, but first there is a certain experience we must be careful to avoid.

What is that? I asked.

That we should not become misologues, as people become misanthropes. d
There is no greater evil one can suffer than to hate reasonable discourse. Misology and misanthropy arise in the same way. Misanthropy comes when a man without knowledge or skill has placed great trust in someone and believes him to be altogether truthful, sound and trustworthy; then, a short time afterwards he finds him to be wicked and unreliable, and then this happens in another case; when one has frequently had that experience, especially with those whom one believed to be one's closest e
friends, then, in the end, after many such blows, one comes to hate all men and to believe that no one is sound in any way at all. Have you not seen this happen?

I surely have, I said.

This is a shameful state of affairs, he said, and obviously due to an attempt to have human relations without any skill in human affairs, for such skill would lead one to believe, what is in fact true, that the very
90 good and the very wicked are both quite rare, and that most men are between those extremes.

How do you mean? said I.

The same as with the very tall and the very short, he said. Do you think anything is rarer than to find an extremely tall man or an extremely short one? Or a dog or anything else whatever? Or again, one extremely swift or extremely slow, ugly or beautiful, white or black? Are you not aware that in all those cases the most extreme at either end are rare and few, but those in between are many and plentiful?

Certainly, I said.

b Therefore, he said, if a contest of wickedness were established, there too the winners, you think, would be very few?

That is likely, said I.

Likely indeed, he said, but arguments are not like men in this particular. I was merely following your lead just now. The similarity lies rather in this: it is as when one who lacks skill in arguments puts his trust in an argument as being true, then shortly afterwards believes it to be false—as sometimes it is and sometimes it is not—and so with another argument and then another. You know how those in particular who spend their time
c studying contradiction in the end believe themselves to have become very wise and that they alone have understood that there is no soundness or reliability in any object or in any argument, but that all that exists simply fluctuates up and down as if it were in the Euripus[10] and does not remain in the same place for any time at all.

What you say, I said, is certainly true.

It would be pitiable, Phaedo, he said, when there is a true and reliable argument and one that can be understood, if a man who has dealt with
d such arguments as appear at one time true, at another time untrue, should not blame himself or his own lack of skill but, because of his distress, in the end gladly shift the blame away from himself to the arguments, and spend the rest of his life hating and reviling reasonable discussion and so be deprived of truth and knowledge of reality.

Yes, by Zeus, I said, that would be pitiable indeed.

e This then is the first thing we should guard against, he said. We should not allow into our minds the conviction that argumentation has nothing sound about it; much rather we should believe that it is we who are not yet sound and that we must take courage and be eager to attain soundness,
91 you and the others for the sake of your whole life still to come, and I for the sake of death itself. I am in danger at this moment of not having a

10. The Euripus is the straits between the island of Euboea and Boeotia on the Greek mainland; its currents were both violent and variable.

philosophical attitude about this, but like those who are quite uneducated,
I am eager to get the better of you in argument, for the uneducated, when
they engage in argument about anything, give no thought to the truth
about the subject of discussion but are only eager that those present will
accept the position they have set forth. I differ from them only to this
extent: I shall not be eager to get the agreement of those present that what
I say is true, except incidentally, but I shall be very eager that I should
myself be thoroughly convinced that things are so. For I am thinking—
see in how contentious a spirit—that if what I say is true, it is a fine thing
to be convinced; if, on the other hand, nothing exists after death, at least b
for this time before I die I shall distress those present less with lamentations,
and my folly will not continue to exist along with me—that would be a
bad thing—but will come to an end in a short time. Thus prepared, Simmias
and Cebes, he said, I come to deal with your argument. If you will take
my advice, you will give but little thought to Socrates but much more to c
the truth. If you think that what I say is true, agree with me; if not, oppose
it with every argument and take care that in my eagerness I do not deceive
myself and you and, like a bee, leave my sting in you when I go.

We must proceed, he said, and first remind me of what you said if I do
not appear to remember it. Simmias, as I believe, is in doubt and fear
that the soul, though it is more divine and beautiful than the body, yet d
predeceases it, being a kind of harmony. Cebes, I thought, agrees with me
that the soul lasts much longer than the body, but that no one knows
whether the soul often wears out many bodies and then, on leaving its
last body, is now itself destroyed. This then is death, the destruction of
the soul, since the body is always being destroyed. Are these the questions,
Simmias and Cebes, which we must investigate?

They both agreed that they were. e

Do you then, he asked, reject all our previous statements, or some but
not others?

Some, they both said, but not others.

What, he said, about the statements we made that learning is recollection
and that, if this was so, our soul must of necessity exist elsewhere before 92
us, before it was imprisoned in the body?

For myself, said Cebes, I was wonderfully convinced by it at the time
and I stand by it now also, more than by any other statement.

That, said Simmias, is also my position, and I should be very surprised
if I ever changed my opinion about this.

But you must change your opinion, my Theban friend, said Socrates, if
you still believe that a harmony is a composite thing, and that the soul is a
kind of harmony of the elements of the body in a state of tension, for surely
you will not allow yourself to maintain that a composite harmony existed b
before those elements from which it had to be composed, or would you?

Never, Socrates, he said.

Do you realize, he said, that this is what you are in fact saying when
you state that the soul exists before it takes on the form and body of a

man and that it is composed of elements which do not yet exist? A harmony
is not like that to which you compare it; the lyre and the strings and the
c notes, though still unharmonized, exist; the harmony is composed last of
all, and is the first to be destroyed. How will you harmonize this statement
with your former one?

In no way, said Simmias.

And surely, he said, a statement about harmony should do so more than any other.

It should, said Simmias.

So your statement is inconsistent? Consider which of your statements you prefer, that learning is recollection or that the soul is a harmony.

d I much prefer the former, Socrates. I adopted the latter without proof,
because of a certain probability and plausibility, which is why it appeals
to most men. I know that arguments of which the proof is based on
probability are pretentious and, if one does not guard against them, they
certainly deceive one, in geometry and everything else. The theory of
recollection and learning, however, was based on an assumption worthy
of acceptance, for our soul was said to exist also before it came into the
body, just as the reality does that is of the kind that we qualify by the
e words "what it is," and I convinced myself that I was quite correct to
accept it. Therefore, I cannot accept the theory that the soul is a harmony
either from myself or anyone else.

What of this, Simmias? Do you think it natural for a harmony, or any
93 other composite, to be in a different state from that of the elements of
which it is composed?

Not at all, said Simmias.

Nor, as I think, can it act or be acted upon in a different way than its elements?

He agreed.

One must therefore suppose that a harmony does not direct its components, but is directed by them.

He accepted this.

A harmony is therefore far from making a movement, or uttering a sound, or doing anything else, in a manner contrary to that of its parts.

Far from it indeed, he said.

Does not the nature of each harmony depend on the way it has been harmonized?

I do not understand, he said.

b Will it not, if it is more and more fully harmonized, be more and more
fully a harmony, and if it is less and less fully harmonized, it will be less
and less fully a harmony?

Certainly.

Can this be true about the soul, that one soul is more and more fully a soul than another, or is less and less fully a soul, even to the smallest extent?

Not in any way.

Come now, by Zeus, he said. One soul is said to have intelligence and virtue and to be good, another to have folly and wickedness and to be c
bad. Are those things truly said?

They certainly are.

What will someone who holds the theory that the soul is a harmony say that those things are which reside in the soul, that is, virtue and wickedness? Are these some other harmony and disharmony? That the good soul is harmonized and, being a harmony, has within itself another harmony, whereas the evil soul is both itself a lack of harmony and has no other within itself?

I don't know what to say, said Simmias, but one who holds that assumption must obviously say something of that kind.

We have previously agreed, he said, that one soul is not more and not d
less a soul than another, and this means that one harmony is not more and more fully, or less and less fully, a harmony than another. Is that not so?

Certainly.

Now that which is no more and no less a harmony is not more or less harmonized. Is that so?

It is.

Can that which is neither more nor less harmonized partake more or less of harmony, or does it do so equally?

Equally.

Then if a soul is neither more nor less a soul than another, it has been e
harmonized to the same extent?

This is so.

If that is so, it would have no greater share of disharmony or of harmony?

It would not.

That being the case, could one soul have more wickedness or virtue than another, if wickedness is disharmony and virtue harmony?

It could not.

But rather, Simmias, according to correct reasoning, no soul, if it is a 94
harmony, will have any share of wickedness, for harmony is surely altogether this very thing, harmony, and would never share in disharmony.

It certainly would not.

Nor would a soul, being altogether this very thing, a soul, share in wickedness?

How could it, in view of what has been said?

So it follows from this argument that all the souls of all living creatures will be equally good, if souls are by nature equally this very thing, souls.

I think so, Socrates.

Does our argument seem right, he said, and does it seem that it should b
have come to this, if the hypothesis that the soul is a harmony was correct?

Not in any way, he said.

Further, of all the parts of a man, can you mention any other part that rules him than his soul, especially if it is a wise soul?

I cannot.

Does it do so by following the affections of the body or by opposing them? I mean, for example, that when the body is hot and thirsty the soul draws him to the opposite, to not drinking; when the body is hungry, to
c not eating, and we see a thousand other examples of the soul opposing the affections of the body. Is that not so?

It certainly is.

On the other hand we previously agreed that if the soul were a harmony, it would never be out of tune with the stress and relaxation and the striking of the strings or anything else done to its composing elements, but that it would follow and never direct them?

We did so agree, of course.

Well, does it now appear to do quite the opposite, ruling over all the
d elements of which one says it is composed, opposing nearly all of them throughout life, directing all their ways, inflicting harsh and painful punishment on them, at times in physical culture and medicine, at other times more gently by threats and exhortations, holding converse with desires and passions and fears as if it were one thing talking to a different one, as Homer wrote somewhere in the *Odyssey* where he says that Odysseus "struck his breast and rebuked his heart saying, 'Endure, my heart, you have endured worse than this' "?[11]

e Do you think that when he composed this the poet thought that his soul was a harmony, a thing to be directed by the affections of the body? Did he not rather regard it as ruling over them and mastering them, itself a much more divine thing than a harmony?

Yes, by Zeus, I think so, Socrates.

95 Therefore, my good friend, it is quite wrong for us to say that the soul is a harmony, and in saying so we would disagree both with the divine poet Homer and with ourselves.

That is so, he said.

Very well, said Socrates. Harmonia of Thebes seems somehow reasonably propitious to us. How and by what argument, my dear Cebes, can we propitiate Cadmus?[12]

I think, Cebes said, that you will find a way. You dealt with the argument about harmony in a manner that was quite astonishing to me. When
b Simmias was speaking of his difficulties I was very much wondering whether anyone would be able to deal with his argument, and I was quite dumbfounded when right away he could not resist your argument's first onslaught. I should not wonder therefore if that of Cadmus suffered the same fate.

11. *Odyssey* xx.17–18.

12. Harmonia was in legend the wife of Cadmus, the founder of Thebes. Socrates' punning joke is simply that, having dealt with Harmonia (harmony), we must now deal with Cadmus (i.e., Cebes, the other Theban).

My good sir, said Socrates, do not boast, lest some malign influence
upset the argument we are about to make. However, we leave that to the
care of the god, but let us come to grips with it in the Homeric fashion,
to see if there is anything in what you say. The sum of your problem
is this: you consider that the soul must be proved to be immortal and c
indestructible before a philosopher on the point of death, who is confident
that he will fare much better in the underworld than if he had led any
other kind of life, can avoid being foolish and simple-minded in this
confidence. To prove that the soul is strong, that it is divine, that it existed
before we were born as men, all this, you say, does not show the soul to
be immortal but only long-lasting. That it existed for a very long time
before, that it knew much and acted much, makes it no more immortal d
because of that; indeed, its very entering into a human body was the
beginning of its destruction, like a disease; it would live that life in distress
and would in the end be destroyed in what we call death. You say it makes
no difference whether it enters a body once or many times as far as the
fear of each of us is concerned, for it is natural for a man who is no fool
to be afraid, if he does not know and cannot prove that the soul is immortal.
This, I think, is what you maintain, Cebes; I deliberately repeat it often,
in order that no point may escape us, and that you may add or subtract e
something if you wish.

And Cebes said: "There is nothing that I want to add or subtract at the
moment. That is what I say."

Socrates paused for a long time, deep in thought. He then said: "This
is no unimportant problem that you raise, Cebes, for it requires a thorough 96
investigation of the cause of generation and destruction. I will, if you wish,
give you an account of my experience in these matters. Then if something
I say seems useful to you, make use of it to persuade us of your position."

I surely do wish that, said Cebes.

Listen then, and I will, Cebes, he said. When I was a young man I was
wonderfully keen on that wisdom which they call natural science, for I
thought it splendid to know the causes of everything, why it comes to be,
why it perishes and why it exists. I was often changing my mind in the b
investigation, in the first instance, of questions such as these: Are living
creatures nurtured when heat and cold produce a kind of putrefaction, as
some say? Do we think with our blood, or air, or fire, or none of these,
and does the brain provide our senses of hearing and sight and smell,
from which come memory and opinion, and from memory and opinion
which has become stable, comes knowledge? Then again, as I investigated
how these things perish and what happens to things in the sky and on
the earth, finally I became convinced that I have no natural aptitude at all c
for that kind of investigation, and of this I will give you sufficient proof.
This investigation made me quite blind even to those things which I and
others thought that I clearly knew before, so that I unlearned what I thought
I knew before, about many other things and specifically about how men
grew. I thought before that it was obvious to anybody that men grew

d through eating and drinking, for food adds flesh to flesh and bones to
bones, and in the same way appropriate parts were added to all other
parts of the body, so that the man grew from an earlier small bulk to a
large bulk later, and so a small man became big. That is what I thought
then. Do you not think it was reasonable?

I do, said Cebes.

Then further consider this: I thought my opinion was satisfactory, that
e when a large man stood by a small one he was taller by a head, and so a
horse was taller than a horse. Even clearer than this, I thought that ten
was more than eight because two had been added, and that a two-cubit
length is larger than a cubit because it surpasses it by half its length.

And what do you think now about those things?

That I am far, by Zeus, from believing that I know the cause of any of
those things. I will not even allow myself to say that where one is added
to one either the one to which it is added or the one that is added becomes
97 two, or that the one added and the one to which it is added become two
because of the addition of the one to the other. I wonder that, when each
of them is separate from the other, each of them is one, nor are they then
two, but that, when they come near to one another, this is the cause of
their becoming two, the coming together and being placed closer to one
another. Nor can I any longer be persuaded that when one thing is divided,
b this division is the cause of its becoming two, for just now the cause of
becoming two was the opposite. At that time it was their coming close
together and one was added to the other, but now it is because one is
taken and separated from the other.

I do not any longer persuade myself that I know why a unit or anything
else comes to be, or perishes or exists by the old method of investigation,
and I do not accept it, but I have a confused method of my own. One day
c I heard someone reading, as he said, from a book of Anaxagoras, and
saying that it is Mind that directs and is the cause of everything. I was
delighted with this cause and it seemed to me good, in a way, that Mind
should be the cause of all. I thought that if this were so, the directing Mind
would direct everything and arrange each thing in the way that was best.
If then one wished to know the cause of each thing, why it comes to be
d or perishes or exists, one had to find what was the best way for it to be,
or to be acted upon, or to act. On these premises then it befitted a man to
investigate only, about this and other things, what is best. The same man
must inevitably also know what is worse, for that is part of the same
knowledge. As I reflected on this subject I was glad to think that I had
found in Anaxagoras a teacher about the cause of things after my own
e heart, and that he would tell me, first, whether the earth is flat or round,
and then would explain why it is so of necessity, saying which is better,
and that it was better to be so. If he said it was in the middle of the
universe, he would go on to show that it was better for it to be in the
middle, and if he showed me those things I should be prepared never to
98 desire any other kind of cause. I was ready to find out in the same way

about the sun and the moon and the other heavenly bodies, about their
relative speed, their turnings and whatever else happened to them, how
it is best that each should act or be acted upon. I never thought that
Anaxagoras, who said that those things were directed by Mind, would
bring in any other cause for them than that it was best for them to be as
they are. Once he had given the best for each as the cause for each and b
the general cause of all, I thought he would go on to explain the common
good for all, and I would not have exchanged my hopes for a fortune. I
eagerly acquired his books and read them as quickly as I could in order
to know the best and the worst as soon as possible.

This wonderful hope was dashed as I went on reading and saw that the
man made no use of Mind, nor gave it any responsibility for the manage-
ment of things, but mentioned as causes air and ether and water and many c
other strange things. That seemed to me much like saying that Socrates'
actions are all due to his mind, and then in trying to tell the causes of
everything I do, to say that the reason that I am sitting here is because
my body consists of bones and sinews, because the bones are hard and
are separated by joints, that the sinews are such as to contract and relax,
that they surround the bones along with flesh and skin which hold them d
together, then as the bones are hanging in their sockets, the relaxation and
contraction of the sinews enable me to bend my limbs, and that is the
cause of my sitting here with my limbs bent.

Again, he would mention other such causes for my talking to you:
sounds and air and hearing, and a thousand other such things, but he
would neglect to mention the true causes, that, after the Athenians decided
it was better to condemn me, for this reason it seemed best to me to sit here e
and more right to remain and to endure whatever penalty they ordered. For
by the dog, I think these sinews and bones could long ago have been in
Megara or among the Boeotians, taken there by my belief as to the best 99
course, if I had not thought it more right and honorable to endure whatever
penalty the city ordered rather than escape and run away. To call those
things causes is too absurd. If someone said that without bones and sinews
and all such things, I should not be able to do what I decided, he would
be right, but surely to say that they are the cause of what I do, and not
that I have chosen the best course, even though I act with my mind, is to
speak very lazily and carelessly. Imagine not being able to distinguish the b
real cause from that without which the cause would not be able to act as
a cause. It is what the majority appear to do, like people groping in the
dark; they call it a cause, thus giving it a name that does not belong to it.
That is why one man surrounds the earth with a vortex to make the heavens
keep it in place, another makes the air support it like a wide lid. As for c
their capacity of being in the best place they could possibly be put, this
they do not look for, nor do they believe it to have any divine force, but
they believe that they will some time discover a stronger and more immor-
tal Atlas to hold everything together more, and they do not believe that
the truly good and "binding" binds and holds them together. I would

gladly become the disciple of any man who taught the workings of that
kind of cause. However, since I was deprived and could neither discover
d it myself nor learn it from another, do you wish me to give you an explana-
tion of how, as a second best, I busied myself with the search for the
cause, Cebes?

I would wish it above all else, he said.

After this, he said, when I had wearied of investigating things, I thought
that I must be careful to avoid the experience of those who watch an
eclipse of the sun, for some of them ruin their eyes unless they watch its
e reflection in water or some such material. A similar thought crossed my
mind, and I feared that my soul would be altogether blinded if I looked
at things with my eyes and tried to grasp them with each of my senses.
So I thought I must take refuge in discussions and investigate the truth
of things by means of words. However, perhaps this analogy is inadequate,
100 for I certainly do not admit that one who investigates things by means of
words is dealing with images any more than one who looks at facts.
However, I started in this manner: taking as my hypothesis in each case
the theory that seemed to me the most compelling, I would consider as
true, about cause and everything else, whatever agreed with this, and as
untrue whatever did not so agree. But I want to put my meaning more
clearly, for I do not think that you understand me now.

No, by Zeus, said Cebes, not very well.

b This, he said, is what I mean. It is nothing new, but what I have never
stopped talking about, both elsewhere and in the earlier part of our conver-
sation. I am going to try to show you the kind of cause with which I have
concerned myself. I turn back to those oft-mentioned things and proceed
from them. I assume the existence of a Beautiful, itself by itself, of a Good
and a Great and all the rest. If you grant me these and agree that they
exist, I hope to show you the cause as a result, and to find the soul to
be immortal.

c Take it that I grant you this, said Cebes, and hasten to your conclusion.

Consider then, he said, whether you share my opinion as to what follows,
for I think that, if there is anything beautiful besides the Beautiful itself,
it is beautiful for no other reason than that it shares in that Beautiful, and
I say so with everything. Do you agree to this sort of cause?—I do.

d I no longer understand or recognize those other sophisticated causes,
and if someone tells me that a thing is beautiful because it has a bright
color or shape or any such thing, I ignore these other reasons—for all these
confuse me—but I simply, naively and perhaps foolishly cling to this, that
nothing else makes it beautiful other than the presence of, or the sharing
in, or however you may describe its relationship to that Beautiful we
mentioned, for I will not insist on the precise nature of the relationship,
but that all beautiful things are beautiful by the Beautiful. That, I think,
e is the safest answer I can give myself or anyone else. And if I stick to this
I think I shall never fall into error. This is the safe answer for me or anyone
else to give, namely, that it is through Beauty that beautiful things are
made beautiful. Or do you not think so too?—I do.

And that it is through Bigness that big things are big and the bigger are bigger, and that smaller things are made small by Smallness?—Yes.

And you would not accept the statement that one man is taller than another by a head and the shorter man shorter by the same, but you would 101
bear witness that you mean nothing else than that everything that is bigger is made bigger by nothing else than by Bigness, and that is the cause of its being bigger, and the smaller is made smaller only by Smallness, and this is why it is smaller. I think you would be afraid that some opposite argument would confront you if you said that someone is bigger or smaller by a head, first, because the bigger is bigger and the smaller smaller by the same, then because the bigger is bigger by a head which is small, and b
this would be strange, namely, that someone is made bigger by something small. Would you not be afraid of this?

I certainly would, said Cebes, laughing.

Then you would be afraid to say that ten is more than eight by two, and that this is the cause of the excess, and not magnitude and because of magnitude, or that two cubits is bigger than one cubit by half and not by Bigness, for this is the same fear.—Certainly.

Then would you not avoid saying that when one is added to one it is the addition and when it is divided it is the division that is the cause of c
two? And you would loudly exclaim that you do not know how else each thing can come to be except by sharing in the particular reality in which it shares, and in these cases you do not know of any other cause of becoming two except by sharing in Twoness, and that the things that are to be two must share in this, as that which is to be one must share in Oneness, and you would dismiss these additions and divisions and other such subtleties, and leave them to those wiser than yourself to answer. But you, afraid, as they say, of your own shadow and your inexperience, would cling to d
the safety of your own hypothesis and give that answer. If someone then attacked your hypothesis itself, you would ignore him and would not answer until you had examined whether the consequences that follow from it agree with one another or contradict one another.[13] And when you must give an account of your hypothesis itself you will proceed in the same way: you will assume another hypothesis, the one which seems to you best of the higher ones until you come to something acceptable, but e
you will not jumble the two as the debaters do by discussing the hypothesis and its consequences at the same time, if you wish to discover any truth. This they do not discuss at all nor give any thought to, but their wisdom enables them to mix everything up and yet to be pleased with themselves, 102
but if you are a philosopher I think you will do as I say.

What you say is very true, said Simmias and Cebes together.

ECHECRATES: Yes, by Zeus, Phaedo, and they were right; I think he made these things wonderfully clear to anyone of even small intelligence.

13. Alternatively: "If someone should cling to your hypothesis itself, you would dismiss him and would not answer until you had examined whether the consequences that follow from it agree with one another or contradict one another."

PHAEDO: Yes indeed, Echecrates, and all those present thought so too.

ECHECRATES: And so do we who were not present but hear of it now. What was said after that?

PHAEDO: As I recall it, when the above had been accepted, and it was
b agreed that each of the Forms existed, and that other things acquired their name by having a share in them, he followed this up by asking: If you say these things are so, when you then say that Simmias is taller than Socrates but shorter than Phaedo, do you not mean that there is in Simmias both tallness and shortness?—I do.

But, he said, do you agree that the words of the statement 'Simmias is
c taller than Socrates' do not express the truth of the matter? It is not, surely, the nature of Simmias to be taller than Socrates because he is Simmias but because of the tallness he happens to have? Nor is he taller than Socrates because Socrates is Socrates, but because Socrates has smallness compared with the tallness of the other?—True.

Nor is he shorter than Phaedo because Phaedo is Phaedo, but because Phaedo has tallness compared with the shortness of Simmias?—That is so.

d So then Simmias is called both short and tall, being between the two, presenting his shortness to be overcome by the tallness of one, and his tallness to overcome the shortness of the other. He smilingly added, I seem to be going to talk like a book, but it is as I say. The other agreed.

My purpose is that you may agree with me. Now it seems to me that not only Tallness itself is never willing to be tall and short at the same time, but also that the tallness in us will never admit the short or be
e overcome, but one of two things happens: either it flees and retreats whenever its opposite, the short, approaches, or it is destroyed by its approach. It is not willing to endure and admit shortness and be other than it was, whereas I admit and endure shortness and still remain the same person and am this short man. But Tallness, being tall, cannot venture to be small.
103 In the same way, the short in us is unwilling to become or to be tall ever, nor does any other of the opposites become or be its opposite while still being what it was; either it goes away or is destroyed when that happens.—I altogether agree, said Cebes.

When he heard this, someone of those present—I have no clear memory of who it was—said: "By the gods, did we not agree earlier in our discussion[14] to the very opposite of what is now being said, namely, that the larger came from the smaller and the smaller from the larger, and that this simply was how opposites came to be, from their opposites, but now I think we are saying that this would never happen?"

On hearing this, Socrates inclined his head towards the speaker and said: "You have bravely reminded us, but you do not understand the
b difference between what is said now and what was said then, which was that an opposite thing came from an opposite thing; now we say that the

14. The reference is to 70d–71a above.

opposite itself could never become opposite to itself, neither that in us nor that in nature. Then, my friend, we were talking of things that have opposite qualities and naming these after them, but now we say that these opposites themselves, from the presence of which in them things get their name, never can tolerate the coming to be from one another." At the same time c
he looked to Cebes and said: "Does anything of what this man says also disturb you?"

Not at the moment, said Cebes, but I do not deny that many things do disturb me.

We are altogether agreed then, he said, that an opposite will never be opposite to itself.—Entirely agreed.

Consider then whether you will agree to this further point. There is something you call hot and something you call cold.—There is.

Are they the same as what you call snow and fire?—By Zeus, no. d

So the hot is something other than fire, and the cold is something other than snow?—Yes.

You think, I believe, that being snow it will not admit the hot, as we said before, and remain what it was and be both snow and hot, but when the hot approaches it will either retreat before it or be destroyed.—Quite so.

So fire, as the cold approaches, will either go away or be destroyed; it will never venture to admit coldness and remain what it was, fire and cold.—What you say is true. e

It is true then about some of these things that not only the Form itself deserves its own name for all time, but there is something else that is not the Form but has its character whenever it exists. Perhaps I can make my meaning clearer: the Odd must always be given this name we now mention. Is that not so?—Certainly.

Is it the only one of existing things to be called odd—this is my question— 104
or is there something else than the Odd which one must nevertheless also always call odd, as well as by its own name, because it is such by nature as never to be separated from the Odd? I mean, for example, the number three and many others. Consider three: do you not think that it must always be called both by its own name and by that of the Odd, which is not the same as three? That is the nature of three, and of five, and of half of all the numbers; each of them is odd, but it is not the Odd. Then again, b
two and four and the whole other column of numbers; each of them, while not being the same as the Even, is always even. Do you not agree?—Of course.

Look now. What I want to make clear is this: not only do those opposites not admit each other, but this is also true of those things which, while not being opposite to each other yet always contain the opposites, and it seems that these do not admit that Form which is opposite to that which is in them; when it approaches them, they either perish or give way. Shall we c
not say that three will perish or undergo anything before, while remaining three, becoming even?—Certainly, said Cebes.

Yet surely two is not the opposite of three?—Indeed it is not.

It is then not only opposite Forms that do not admit each other's approach, but also some other things that do not admit the onset of opposites.—Very true.

Do you then want us, if we can, to define what these are?—I surely do.

d Would they be the things that compel whatever they occupy not only
to contain their Form but also always that of some opposite?—How do
you mean?

As we were saying just now, you surely know that what the Form of three occupies must not only be three but also odd.—Certainly.

And we say that the opposite Form to the Form that achieves this result could never come to it.—It could not.

Now it is Oddness that has done this?—Yes.

And opposite to this is the Form of the Even?—Yes.

e So then the Form of the Even will never come to three?—Never.

Then three has no share in the Even?—Never.

So three is uneven?—Yes.

As for what I said we must define, that is, what kind of things, while
not being opposites to something, yet do not admit the opposite, as, for
example, the triad, though it is not the opposite of the Even, yet does not
105 admit it because it always brings along the opposite of the Even, and so
the dyad in relation to the Odd, fire to the Cold, and very many other
things, see whether you would define it thus: Not only does the opposite
not admit its opposite, but that which brings along some opposite into
that which it occupies; that which brings this along will not admit the
opposite to that which it brings along. Refresh your memory, it is no worse
for being heard often. Five does not admit the form of the Even, nor will
ten, its double, admit the form of the Odd. The double itself is an opposite
of something else, yet it will not admit the form of the Odd. Nor do one-
b and-a-half and other such fractions admit the form of the Whole, nor will
one-third, and so on, if you follow me and agree to this.

I certainly agree, he said, and I follow you.

Tell me again from the beginning, he said, and do not answer in the
words of the question, but do as I do. I say that beyond that safe answer,
which I spoke of first, I see another safe answer. If you should ask me
c what, coming into a body, makes it hot, my reply would not be that safe
and ignorant one, that it is heat, but our present argument provides a
more sophisticated answer, namely, fire, and if you ask me what, on coming
into a body, makes it sick, I will not say sickness but fever. Nor, if asked
the presence of what in a number makes it odd, I will not say oddness
but oneness, and so with other things. See if you now sufficiently understand what I want.—Quite sufficiently.

Answer me then, he said, what is it that, present in a body, makes it living?—A soul.

d And is that always so?—Of course.

Whatever the soul occupies, it always brings life to it?—It does.

Is there, or is there not, an opposite to life?—There is.

What is it?—Death.

So the soul will never admit the opposite of that which it brings along, as we agree from what has been said?

Most certainly, said Cebes.

Well, and what do we call that which does not admit the form of the even?—The uneven.

What do we call that which will not admit the just and that which will not admit the musical?

The unmusical, and the other the unjust. e

Very well, what do we call that which does not admit death?

The deathless, he said.

Now the soul does not admit death?—No.

So the soul is deathless?—It is.

Very well, he said. Shall we say that this has been proved, do you think?

Quite adequately proved, Socrates.

Well now, Cebes, he said, if the uneven were of necessity indestructible,
surely three would be indestructible?—Of course. 106

And if the non-hot were of necessity indestructible, then whenever anyone brought heat to snow, the snow would retreat safe and unthawed, for it could not be destroyed, nor again could it stand its ground and admit the heat?—What you say is true.

In the same way, if the non-cold were indestructible, then when some cold attacked the fire, it would neither be quenched nor destroyed, but retreat safely.—Necessarily.

Must then the same not be said of the deathless? If the deathless is also b
indestructible, it is impossible for the soul to be destroyed when death comes upon it. For it follows from what has been said that it will not admit death or be dead, just as three, we said, will not be even nor will the odd; nor will fire be cold, nor the heat that is in the fire. But, someone might
say, what prevents the odd, while not becoming even as has been agreed, c
from being destroyed, and the even to come to be instead? We could not maintain against the man who said this that it is not destroyed, for the uneven is not indestructible. If we had agreed that it was indestructible we could easily have maintained that at the coming of the even, the odd and the three have gone away and the same would hold for fire and the hot and the other things.—Surely.

And so now, if we are agreed that the deathless is indestructible, the soul, d
besides being deathless, is indestructible. If not, we need another argument.

There is no need for one as far as that goes, for hardly anything could resist destruction if the deathless, which lasts forever, would admit destruction.

All would agree, said Socrates, that the god, and the Form of life itself, and anything that is deathless, are never destroyed.—All men would agree, by Zeus, to that, and the gods, I imagine, even more so.

If the deathless is indestructible, then the soul, if it is deathless, would e
also be indestructible?—Necessarily.

Then when death comes to man, the mortal part of him dies, it seems, but his deathless part goes away safe and indestructible, yielding the place to death.—So it appears.

107 Therefore the soul, Cebes, he said, is most certainly deathless and indestructible and our souls will really dwell in the underworld.

I have nothing more to say against that, Socrates, said Cebes, nor can I doubt your arguments. If Simmias here or someone else has something to say, he should not remain silent, for I do not know to what further occasion other than the present he could put it off if he wants to say or to hear anything on these subjects.

Certainly, said Simmias, I myself have no remaining grounds for doubt
after what has been said; nevertheless, in view of the importance of our
b subject and my low opinion of human weakness, I am bound still to have
some private misgivings about what we have said.

You are not only right to say this, Simmias, Socrates said, but our first hypotheses require clearer examination, even though we find them convincing. And if you analyze them adequately, you will, I think, follow the argument as far as a man can, and if the conclusion is clear, you will look no further.—That is true.

c It is right to think then, gentlemen, that if the soul is immortal, it requires
our care not only for the time we call our life, but for the sake of all time,
and that one is in terrible danger if one does not give it that care. If death
were escape from everything, it would be a great boon to the wicked to
get rid of the body and of their wickedness together with their soul. But
d now that the soul appears to be immortal, there is no escape from evil or
salvation for it except by becoming as good and wise as possible, for the
soul goes to the underworld possessing nothing but its education and
upbringing, which are said to bring the greatest benefit or harm to the
dead right at the beginning of the journey yonder.

We are told that when each person dies, the guardian spirit who was
allotted to him in life proceeds to lead him to a certain place, whence those
e who have been gathered together there must, after being judged, proceed
to the underworld with the guide who has been appointed to lead them
thither from here. Having there undergone what they must and stayed
there the appointed time, they are led back here by another guide after
108 long periods of time. The journey is not as Aeschylus' Telephus[15] describes
it. He says that only one single path leads to Hades, but I think it is neither
one nor simple, for then there would be no need of guides; one could not
make any mistake if there were but one path. As it is, it is likely to have
many forks and crossroads; and I base this judgment on the sacred rites
and customs here.

The well-ordered and wise soul follows the guide and is not without familiarity with its surroundings, but the soul that is passionately attached

15. The *Telephus* of Aeschylus is not extant.

to the body, as I said before, hovers around it and the visible world for a b
long time, struggling and suffering much until it is led away by force and with difficulty by its appointed spirit. When the impure soul which has performed some impure deed joins the others after being involved in unjust killings, or committed other crimes which are akin to these and are actions of souls of this kind, everybody shuns it and turns away, unwilling
to be its fellow traveller or its guide; such a soul wanders alone completely c
at a loss until a certain time arrives and it is forcibly led to its proper dwelling place. On the other hand, the soul that has led a pure and moderate life finds fellow travellers and gods to guide it, and each of them dwells in a place suited to it.

There are many strange places upon the earth, and the earth itself is not such as those who are used to discourse upon it believe it to be in nature or size, as someone has convinced me.

Simmias said: "What do you mean, Socrates? I have myself heard many d
things said about the earth, but certainly not the things that convince you. I should be glad to hear them."

Indeed, Simmias, I do not think it requires the skill of Glaucus[16] to tell you what they are, but to prove them true requires more than that skill, and I should perhaps not be able to do so. Also, even if I had the knowledge,
my remaining time would not be long enough to tell the tale. However, e
nothing prevents my telling you what I am convinced is the shape of the earth and what its regions are.

Even that is sufficient, said Simmias.

Well then, he said, the first thing of which I am convinced is that if the 109
earth is a sphere in the middle of the heavens, it has no need of air or any other force to prevent it from falling. The homogeneous nature of the heavens on all sides and the earth's own equipoise are sufficient to hold it, for an object balanced in the middle of something homogeneous will have no tendency to incline more in any direction than any other but will remain unmoved. This, he said, is the first point of which I am persuaded.

And rightly so, said Simmias.

Further, the earth is very large, and we live around the sea in a small
portion of it between Phasis and the pillars of Heracles, like ants or frogs b
around a swamp; many other peoples live in many such parts of it. Everywhere about the earth there are numerous hollows of many kinds and shapes and sizes into which the water and the mist and the air have gathered. The earth itself is pure and lies in the pure sky where the stars
are situated, which the majority of those who discourse on these subjects c
call the ether. The water and mist and air are the sediment of the ether and they always flow into the hollows of the earth. We, who dwell in the hollows of it, are unaware of this and we think that we live above, on the surface of the earth. It is as if someone who lived deep down in the middle

16. A proverbial expression whose origin is obscure.

of the ocean thought he was living on its surface. Seeing the sun and the
d other heavenly bodies through the water, he would think the sea to be
the sky; because he is slow and weak, he has never reached the surface
of the sea or risen with his head above the water or come out of the sea
to our region here, nor seen how much purer and more beautiful it is than
his own region, nor has he ever heard of it from anyone who has seen it.

Our experience is the same: living in a certain hollow of the earth, we
believe that we live upon its surface; the air we call the heavens, as if the
stars made their way through it; this too is the same: because of our
e weakness and slowness we are not able to make our way to the upper
limit of the air; if anyone got to this upper limit, if anyone came to it or
reached it on wings and his head rose above it, then just as fish on rising
from the sea see things in our region, he would see things there and, if
his nature could endure to contemplate them, he would know that there
110 is the true heaven, the true light and the true earth, for the earth here,
these stones and the whole region, are spoiled and eaten away, just as
things in the sea are by the salt water.

Nothing worth mentioning grows in the sea, nothing, one might say, is
fully developed; there are caves and sand and endless slime and mud
wherever there is earth—not comparable in any way with the beauties of
our region. So those things above are in their turn far superior to the things
b we know. Indeed, if this is the moment to tell a tale, Simmias, it is worth
hearing about the nature of things on the surface of the earth under the
heavens.

At any rate, Socrates, said Simmias, we should be glad to hear this story.

Well then, my friend, in the first place it is said that the earth, looked
at from above, looks like those spherical balls made up of twelve pieces
of leather; it is multi-colored, and of these colors those used by our painters
c give us an indication; up there the whole earth has these colors, but much
brighter and purer than these; one part is sea-green and of marvelous
beauty, another is golden, another is white, whiter than chalk or snow;
the earth is composed also of the other colors, more numerous and beautiful
than any we have seen. The very hollows of the earth, full of water and
d air, gleaming among the variety of other colors, present a color of their
own so that the whole is seen as a continuum of variegated colors. On the
surface of the earth the plants grow with corresponding beauty, the trees
and the flowers and the fruits, and so with the hills and the stones, more
beautiful in their smoothness and transparency and color. Our precious
e stones here are but fragments, our cornelians, jaspers, emeralds and the
rest. All stones there are of that kind, and even more beautiful. The reason
is that there they are pure, not eaten away or spoiled by decay and brine,
or corroded by the water and air which have flowed into the hollows here
and bring ugliness and disease upon earth, stones, the other animals and
111 plants. The earth itself is adorned with all these things, and also with gold
and silver and other metals. These stand out, being numerous and massive
and occurring everywhere, so that the earth is a sight for the blessed. There

are many other living creatures upon the earth, and also men, some living
inland, others at the edge of the air, as we live on the edge of the sea,
others again live on islands surrounded by air close to the mainland. In
a word, what water and the sea are to us, the air is to them and the ether b
is to them what the air is to us. The climate is such that they are without
disease, and they live much longer than people do here; their eyesight,
hearing and intelligence and all such are as superior to ours as air is
superior to water and ether to air in purity; they have groves and temples
dedicated to the gods, in which the gods really dwell, and they communi-
cate with them by speech and prophecy and by the sight of them; they c
see the sun and moon and stars as they are, and in other ways their
happiness is in accord with this.

This then is the nature of the earth as a whole and of its surroundings;
around the whole of it there are many regions in the hollows; some are
deeper and more open than that in which we live; others are deeper and
have a narrower opening than ours, and there are some that have less d
depth and more width. All these are connected with each other below the
surface of the earth in many places by narrow and broader channels, and
thus have outlets through which much water flows from one to another
as into mixing bowls; huge rivers of both hot and cold water thus flow
beneath the earth eternally, much fire and large rivers of fire, and many
of wet mud, both more pure and more muddy, such as those flowing in e
advance of the lava and the stream of lava itself in Sicily. These streams
then fill up every and all regions as the flow reaches each, and all these
places move up and down with the oscillating movement of the earth.
The natural cause of the oscillation is as follows: one of the hollows of the
earth, which is also the biggest, pierces through the whole earth; it is that 112
which Homer mentioned when he said: "Far down where is the deepest
pit below the earth . . . ,"[17] and which he elsewhere, and many other poets,
call Tartarus; into this chasm all the rivers flow together, and again flow
out of it, and each river is affected by the nature of the land through which b
it flows. The reason for their flowing into and out of Tartarus is that this
water has no bottom or solid base but it oscillates up and down in waves,
and the air and wind about it do the same, for they follow it when it flows
to this or that part of the earth. Just as when people breathe, the flow of
air goes in and out, so here the air oscillates with the water and creates
terrible winds as it goes in and out. Whenever the water retreats to what c
we call the lower part of the earth, it flows into those parts and fills them
up as if the water were pumped in; when it leaves that part for this, it
fills these parts again, and the parts filled flow through the channels and
through the earth and in each case arrive at the places to which the channels
lead and create seas and marshes and rivers and springs. From there the
waters flow under the earth again, some flowing around larger and more d

17. *Iliad* viii.14; cf. viii.481.

numerous regions, some round smaller and shallower ones, then flow back
into Tartarus, some at a point much lower than where they issued forth,
others only a little way, but all of them at a lower point, some of them at
the opposite side of the chasm, some on the same side; some flow in a
wide circle round the earth once or many times like snakes, then go as far
down as possible, then go back into the chasm of Tartarus. From each side
e it is possible to flow down as far as the center, but not beyond, for this
part that faces the river flow from either side is steep.

There are many other large rivers of all kinds, and among these there
are four of note; the biggest which flows on the outside (of the earth) in
a circle is called Oceanus; opposite it and flowing in the opposite direction
113 is the Acheron; it flows through many other deserted regions and further
underground makes its way to the Acherusian lake to which the souls of
the majority come after death and, after remaining there for a certain
appointed time, longer for some, shorter for others, they are sent back to
birth as living creatures. The third river issues between the first two, and
close to its source it falls into a region burning with much fire and makes
b a lake larger than our sea, boiling with water and mud. From there it goes
in a circle, foul and muddy, and winding on its way it comes, among other
places, to the edge of the Acherusian lake but does not mingle with its
waters; then, coiling many times underground it flows lower down into
Tartarus; this is called the Pyriphlegethon, and its lava streams throw off
c fragments of it in various parts of the earth. Opposite this the fourth river
issues forth, which is called Stygion, and it is said to flow first into a
terrible and wild region, all of it blue-gray in color, and the lake that this
river forms by flowing into it is called the Styx. As its waters fall into the
lake they acquire dread powers; then diving below and winding round it
flows in the opposite direction from the Pyriphlegethon and into the oppo-
site side of the Acherusian lake; its waters do not mingle with any other;
it too flows in a circle and into Tartarus opposite the Pyriphlegethon. The
name of that fourth river, the poets tell us, is Cocytus.[18]

d Such is the nature of these things. When the dead arrive at the place to
which each has been led by his guardian spirit, they are first judged as to
whether they have led a good and pious life. Those who have lived an
average life make their way to the Acheron and embark upon such vessels
as there are for them and proceed to the lake. There they dwell and are
e purified by penalties for any wrongdoing they may have committed; they
are also suitably rewarded for their good deeds as each deserves. Those
who are deemed incurable because of the enormity of their crimes, having
committed many great sacrileges or wicked and unlawful murders and
other such wrongs—their fitting fate is to be hurled into Tartarus never
to emerge from it. Those who are deemed to have committed great but
curable crimes, such as doing violence to their father or mother in a fit of

18. For these features of the underworld, see *Odyssey* x.511 ff, xi.157.

temper but who have felt remorse for the rest of their lives, or who have 114
killed someone in a similar manner, these must of necessity be thrown into Tartarus, but a year later the current throws them out, those who are guilty of murder by way of Cocytus, and those who have done violence to their parents by way of the Pyriphlegethon. After they have been carried along to the Acherusian lake, they cry out and shout, some for those they have killed, others for those they have maltreated, and calling them they then pray to them and beg them to allow them to step out into the lake b
and to receive them. If they persuade them, they do step out and their punishment comes to an end; if they do not, they are taken back into Tartarus and from there into the rivers, and this does not stop until they have persuaded those they have wronged, for this is the punishment which the judges imposed on them.

Those who are deemed to have lived an extremely pious life are freed c
and released from the regions of the earth as from a prison; they make their way up to a pure dwelling place and live on the surface of the earth. Those who have purified themselves sufficiently by philosophy live in the future altogether without a body; they make their way to even more beautiful dwelling places which it is hard to describe clearly, nor do we now have the time to do so. Because of the things we have enunciated, Simmias, one must make every effort to share in virtue and wisdom in one's life, for the reward is beautiful and the hope is great.

No sensible man would insist that these things are as I have described d
them, but I think it is fitting for a man to risk the belief—for the risk is a noble one—that this, or something like this, is true about our souls and their dwelling places, since the soul is evidently immortal, and a man should repeat this to himself as if it were an incantation, which is why I have been prolonging my tale. That is the reason why a man should be of good cheer about his own soul, if during life he has ignored the pleasures e
of the body and its ornamentation as of no concern to him and doing him more harm than good, but has seriously concerned himself with the pleasures of learning, and adorned his soul not with alien but with its own ornaments, namely, moderation, righteousness, courage, freedom and 115
truth, and in that state awaits his journey to the underworld.

Now you, Simmias, Cebes and the rest of you, Socrates continued, will each take that journey at some other time but my fated day calls me now, as a tragic character might say, and it is about time for me to have my bath, for I think it better to have it before I drink the poison and save the women the trouble of washing the corpse.

When Socrates had said this Crito spoke. Very well, Socrates, what are b
your instructions to me and the others about your children or anything else? What can we do that would please you most?—Nothing new, Crito, said Socrates, but what I am always saying, that you will please me and mine and yourselves by taking good care of your own selves in whatever you do, even if you do not agree with me now, but if you neglect your own selves, and are unwilling to live following the tracks, as it were, of c

what we have said now and on previous occasions, you will achieve
nothing even if you strongly agree with me at this moment.

We shall be eager to follow your advice, said Crito, but how shall we
bury you?

In any way you like, said Socrates, if you can catch me and I do not
escape you. And laughing quietly, looking at us, he said: I do not convince
d Crito that I am this Socrates talking to you here and ordering all I say,
but he thinks that I am the thing which he will soon be looking at as a
corpse, and so he asks how he shall bury me. I have been saying for some
time and at some length that after I have drunk the poison I shall no longer
be with you but will leave you to go and enjoy some good fortunes of the
blessed, but it seems that I have said all this to him in vain in an attempt
to reassure you and myself too. Give a pledge to Crito on my behalf, he
said, the opposite pledge to that he gave the jury. He pledged that I would
e stay; you must pledge that I will not stay after I die, but that I shall go
away, so that Crito will bear it more easily when he sees my body being
burned or buried and will not be angry on my behalf, as if I were suffering
terribly, and so that he should not say at the funeral that he is laying out,
or carrying out, or burying Socrates. For know you well, my dear Crito,
that to express oneself badly is not only faulty as far as the language goes,
but does some harm to the soul. You must be of good cheer, and say
116 you are burying my body, and bury it in any way you like and think
most customary.

After saying this he got up and went to another room to take his bath,
and Crito followed him and he told us to wait for him. So we stayed,
talking among ourselves, questioning what had been said, and then again
talking of the great misfortune that had befallen us. We all felt as if we
b had lost a father and would be orphaned for the rest of our lives. When
he had washed, his children were brought to him—two of his sons were
small and one was older—and the women of his household came to him.
He spoke to them before Crito and gave them what instructions he wanted.
Then he sent the women and children away, and he himself joined us. It
was now close to sunset, for he had stayed inside for some time. He came
and sat down after his bath and conversed for a short while, when the
c officer of the Eleven came and stood by him and said: "I shall not reproach
you as I do the others, Socrates. They are angry with me and curse me
when, obeying the orders of my superiors, I tell them to drink the poison.
During the time you have been here I have come to know you in other
ways as the noblest, the gentlest and the best man who has ever come
here. So now too I know that you will not make trouble for me; you know
who is responsible and you will direct your anger against them. You know
what message I bring. Fare you well, and try to endure what you must
d as easily as possible." The officer was weeping as he turned away and
went out. Socrates looked up at him and said: "Fare you well also; we
shall do as you bid us." And turning to us he said: "How pleasant the
man is! During the whole time I have been here he has come in and

conversed with me from time to time, a most agreeable man. And how genuinely he now weeps for me. Come, Crito, let us obey him. Let someone bring the poison if it is ready; if not, let the man prepare it."

But Socrates, said Crito, I think the sun still shines upon the hills and e
has not yet set. I know that others drink the poison quite a long time after they have received the order, eating and drinking quite a bit, and some of them enjoy intimacy with their loved ones. Do not hurry; there is still some time.

It is natural, Crito, for them to do so, said Socrates, for they think they
derive some benefit from doing this, but it is not fitting for me. I do not 117
expect any benefit from drinking the poison a little later, except to become ridiculous in my own eyes for clinging to life, and be sparing of it when there is none left. So do as I ask and do not refuse me.

Hearing this, Crito nodded to the slave who was standing near him; the slave went out and after a time came back with the man who was to administer the poison, carrying it made ready in a cup. When Socrates saw him he said: "Well, my good man, you are an expert in this; what
must one do?"—"Just drink it and walk around until your legs feel heavy, b
and then lie down and it will act of itself." And he offered the cup to Socrates, who took it quite cheerfully, Echecrates, without a tremor or any change of feature or color, but looking at the man from under his eyebrows as was his wont, asked: "What do you say about pouring a libation from this drink? It is allowed?"—"We only mix as much as we believe will suffice," said the man.

I understand, Socrates said, but one is allowed, indeed one must, utter c
a prayer to the gods that the journey from here to yonder may be fortunate. This is my prayer and may it be so.

And while he was saying this, he was holding the cup, and then drained it calmly and easily. Most of us had been able to hold back our tears reasonably well up till then, but when we saw him drinking it and after he drank it, we could hold them back no longer; my own tears came in floods against my will. So I covered my face. I was weeping for myself,
not for him—for my misfortune in being deprived of such a comrade. d
Even before me, Crito was unable to restrain his tears and got up. Apollodorus had not ceased from weeping before, and at this moment his noisy tears and anger made everybody present break down, except Socrates. "What is this," he said, "you strange fellows. It is mainly for this reason
that I sent the women away, to avoid such unseemliness, for I am told one e
should die in good omened silence. So keep quiet and control yourselves."

His words made us ashamed, and we checked our tears. He walked around, and when he said his legs were heavy he lay on his back as he had been told to do, and the man who had given him the poison touched his body, and after a while tested his feet and legs, pressed hard upon his
foot and asked him if he felt this, and Socrates said no. Then he pressed 118
his calves, and made his way up his body and showed us that it was cold and stiff. He felt it himself and said that when the cold reached his heart

118a he would be gone. As his belly was getting cold Socrates uncovered his head—he had covered it—and said—these were his last words—"Crito, we owe a cock to Asclepius;[19] make this offering to him and do not forget."—"It shall be done," said Crito, "tell us if there is anything else." But there was no answer. Shortly afterwards Socrates made a movement; the man uncovered him and his eyes were fixed. Seeing this Crito closed his mouth and his eyes.

Such was the end of our comrade, Echecrates, a man who, we would say, was of all those we have known the best, and also the wisest and the most upright.

19. A cock was sacrificed to Asclepius by the sick people who slept in his temples, hoping for a cure. Socrates apparently means that death is a cure for the ills of life.

# CRATYLUS

*This dialogue is on a topic of great interest to Plato's contemporaries that figures little in our own discussions in philosophy of language: the 'correctness of names'. When a name (or, for that matter, any other word or phrase) is the correct one for naming a given thing or performing another linguistic function, what is the source of this correctness? Socrates canvasses two opposed positions. The first is defended by his close friend Hermogenes (Hermogenes was in Socrates' entourage on the day of his death), the impecunious brother of Callias, the rich patron of sophists at Athens in whose house the drama of* Protagoras *is set. Hermogenes adopts the minimalist position that correctness is by convention: whatever is agreed in a community to be the name to use for a thing is the correct one in that community. The other position is defended by Cratylus, a historical person mentioned also by Aristotle, whose own information about him may however derive from what the character Cratylus says in this dialogue. Cratylus adopts the obscure 'naturalist' position that each name names only whatever it does 'by nature'—no matter what the conventions in any community may be. As a first approximation, this means that under expert etymological examination each name can be reduced to a disguised description correctly revealing the nature of the thing named by it—and that revelatory capacity is what makes it the correct name for that thing. Socrates examines the views of each disputant and attempts to resolve the conflict between them. But he concludes that the knowledge of names—the etymological art professing to reveal the true nature of things by working out the ultimate descriptive meanings of the words we use—is of no real importance. All it can ever reveal is what those who first introduced our words thought was the nature of reality, and that might well be wrong—indeed, Socrates employs etymological principles themselves to argue that the Greek language indicates, falsely, that the nature of reality is constant change and flux. To learn the truth we have to go behind words altogether, to examine with our minds, and grasp directly the permanent, unchanging natures of things as they are in themselves: Platonic Forms.*

*Readers are always puzzled at the fact that Plato has Socrates devote more than half his discussion to proposing etymological analyses of a whole series of names, beginning with the names of the gods. We should bear in mind that, when Plato was writing, expertise in etymology was highly regarded, precisely as a means of discovering the ultimate truth about things through coming to possess knowledge of names. At least part of Plato's purpose seems to be to establish Socrates' credentials as a first-rate practitioner of the art of etymology*

*as then practiced, better than the 'experts' themselves. When Socrates then also argues that knowledge of names is an unimportant thing, he can be taken to speak with the authority not just of philosophy but even of etymological science itself—as an insider, not an outsider looking in. Somewhat similarly, in* Phaedrus *and* Menexenus *philosophy is credited with the unique ability actually to do well what rhetoric, another prestigious contemporary expertise, professed to be able to do on its own.*

*J.M.C.*

383 Hermogenes: Shall we let Socrates here join our discussion?

Cratylus: If you like.

Hermogenes: Cratylus says, Socrates, that there is a correctness of name for each thing, one that belongs to it by nature. A thing's name isn't whatever people agree to call it—some bit of their native language that applies to it—but there is a natural correctness of names, which is the
b same for everyone, Greek or foreigner. So, I ask him whether his own name is truly 'Cratylus'. He agrees that it is. "What about Socrates?" I say. "His name is 'Socrates'." "Does this also hold for everyone else? Is the name we call him his name?" "It certainly doesn't hold of you. Your name isn't 'Hermogenes', not even if everyone calls you by it." Eagerly, I ask him to tell me what he means. He responds sarcastically and makes nothing
384 clear. He pretends to possess some private knowledge which would force me to agree with him and say the very things about names that he says himself, were he to express it in plain terms. So, if you can somehow interpret Cratylus' oracular utterances, I'd gladly listen. Though I'd really rather find out what you yourself have to say about the correctness of names, if that's all right with you.

Socrates: Hermogenes, son of Hipponicus, there is an ancient proverb
b that "fine things are very difficult" to know about, and it certainly isn't easy to get to know about names. To be sure, if I'd attended Prodicus' fifty-drachma lecture course, which he himself advertises as an exhaustive treatment of the topic, there'd be nothing to prevent you from learning the precise truth about the correctness of names straightaway. But as
c I've heard only the one-drachma course, I don't know the truth about it. Nonetheless, I am ready to investigate it along with you and Cratylus. As for his denying that your real name is 'Hermogenes', I suspect he's making fun of you. Perhaps he thinks you want to make money but fail every time you try.[1] In any case, as I was saying, it's certainly difficult to know

Translated by C.D.C. Reeve.

1. Hermes is the god of profit and 'Hermogenes' means 'son of Hermes.' A different account of the name is given at 407e–408b.

about these matters, so we'll have to conduct a joint investigation to see who is right, you or Cratylus.

HERMOGENES: Well, Socrates, I've often talked with Cratylus—and with lots of other people, for that matter—and no one is able to persuade me that the correctness of names is determined by anything besides convention and agreement. I believe that any name you give a thing is its correct d
name. If you change its name and give it another, the new one is as correct as the old. For example, when we give names to our domestic slaves, the new ones are as correct as the old. No name belongs to a particular thing by nature, but only because of the rules and usage of those who establish the usage and call it by that name. However, if I'm wrong about this, I'm ready to listen not just to Cratylus but to anyone, and to learn from him too. e

SOCRATES: Perhaps you're on to something, Hermogenes, let's see. Are 385
you saying that whatever anyone decides to call[2] a particular thing is its name?

HERMOGENES: I am.

SOCRATES: Whether it is a private individual or a community that does so?

HERMOGENES: Yes.

SOCRATES: What about this? Suppose I call one of the things that are—for instance, the one we now call 'man'—suppose I give *that* the name 'horse' and give the one we now call 'horse' the name 'man'. Will the same thing have the public name 'man' but the private name 'horse'? Is that what you mean?

HERMOGENES: Yes.[3] 385b1

SOCRATES: So whatever each person says is the name of something, for d
him, that is its name?

HERMOGENES: Yes.

SOCRATES: And however many names someone says there are for each thing, it will really have that number at whatever time he says it?

HERMOGENES: Yes, Socrates, for I can't conceive of any other way in which names could be correct. I call a thing by the name I gave it; you call it by the different name you gave it. In the same way, I see that different communities have different names for the same things—Greeks differing e
from other Greeks, and Greeks from foreigners.

SOCRATES: Let's see, Hermogenes, whether the same also seems to you to hold of the things that are. Is the being or essence of each of them something private for each person, as Protagoras tells us? He says that man is "the measure of all things," and that things are to me as they appear to me, and are to you as they appear to you. Do you agree, or do you 386
believe that things have some fixed being or essence of their own?

2. Reading *ho ean thēi kalein* in a2.

3. Following Schofield, *Classical Quarterly* 22 (1972), we transfer 385b2–d1 to follow 387c5.

Hermogenes: There have been times, Socrates, when I have been so puzzled that I've been driven to take refuge in Protagoras' doctrine, even though I don't believe it at all.

Socrates: What's that? Have you actually been driven to believe that
b there is no such thing as a bad man?

Hermogenes: No, by god, I haven't. Indeed, I've often found myself believing that there are *very* bad ones, and plenty of them.

Socrates: What? Have you never believed that there are any who are very good?

Hermogenes: Not many.

Socrates: But you did believe that there were *some* good ones?

Hermogenes: I did.

Socrates: And what do you hold about such people? Or is it this: the very good are very wise, while the very bad are very foolish?

c Hermogenes: Yes, that's what I believe.

Socrates: But if Protagoras is telling the truth—if it *is* the *Truth*[4] that things are for each person as he believes them to be, how is it possible for one person to be wise and another foolish?

Hermogenes: It isn't possible.

Socrates: You strongly believe, it seems to me, that if wisdom exists, and foolishness likewise, then Protagoras cannot be telling the truth. After all, if what each person believes to be true *is* true for him, no one can truly
d be wiser than anyone else.

Hermogenes: That's right.

Socrates: But you also reject Euthydemus' doctrine that everything always has every attribute simultaneously. For if virtue and vice always belong to everything simultaneously, it follows once again that it is impossible for some people to be good and others to be bad.

Hermogenes: That's true.

Socrates: But if neither is right, if it isn't the case that everything always has every attribute simultaneously or that each thing has a being or essence privately for each person, then it is clear that things have some fixed being
e or essence of their own. They are not in relation to us and are not made to fluctuate by how they appear to us. They are by themselves, in relation to their own being or essence, which is theirs by nature.

Hermogenes: I agree, Socrates.

Socrates: And if things are of such a nature, doesn't the same hold of actions performed in relation to them? Or aren't actions included in some one class of the things that are?

Hermogenes: Of course they are.

Socrates: So an action's performance accords with the action's own
387 nature, and not with what we believe. Suppose, for example, that we undertake to cut something. If we make the cut in whatever way *we* choose and with whatever tool *we* choose, we will not succeed in cutting. But if

4. Plato is making a pun on the title of Protagoras' book.

in each case we choose to cut in accord with the nature of cutting and being cut and with the natural tool for cutting, we'll succeed and cut correctly. If we try to cut contrary to nature, however, we'll be in error and accomplish nothing.

Hermogenes: That's my view, at least. b

Socrates: So, again, if we undertake to burn something, our burning mustn't accord with every belief but with the correct one—that is to say, with the one that tells us how that thing burns and is burned naturally, and what the natural tool for burning it is?

Hermogenes: That's right.

Socrates: And the same holds of all other actions?

Hermogenes: Certainly.

Socrates: Now isn't speaking or saying one sort of action?

Hermogenes: Yes.

Socrates: Then will someone speak correctly if he speaks in whatever way he believes he should speak? Or isn't it rather the case that he will accomplish something and succeed in speaking if he says things in the natural way to say them, in the natural way for them to be said, and with c
the natural tool for saying them? But if he speaks in any other way he will be in error and accomplish nothing?

Hermogenes: I believe so.[5] 387c5

Socrates: Tell me this. Is there something you call speaking the truth 385b2
and something you call speaking a falsehood?

Hermogenes: Indeed, there is.

Socrates: Then some statements are true, while others are false?

Hermogenes: Certainly.

Socrates: And those that say of the things that are that they are, are true, while those that say of the things that are that they are not, are false?

Hermogenes: Yes.

Socrates: So it is possible to say both things that are and things that are not in a statement?

Hermogenes: Certainly.

Socrates: Is a whole true statement true but not its parts? c

Hermogenes: No, the parts are also true.

Socrates: Are the large parts true but not the small ones, or are all of them true?

Hermogenes: In my view, they are all true.

Socrates: Is there a part of a statement that's smaller than a name?

Hermogenes: No, it is the smallest.

Socrates: In a true statement, is this smallest part something that's said?

Hermogenes: Yes.

Socrates: And, on your view, this part is then true.

Hermogenes: Yes.

Socrates: And a part of a false statement is false?

5. Here we insert 385b2–d1; see note to 385b above.

Hermogenes: That's right.

Socrates: So isn't it possible to say a true or a false name, since true or false statements are possible?

d Hermogenes: Certainly.

387c6 Socrates: Now using names is a part of saying; since it is by using names that people say things.

Hermogenes: Certainly.

Socrates: And if speaking or saying is a sort of action, one that is about things, isn't using names also a sort of action?

Hermogenes: Yes.

d Socrates: And didn't we see that actions aren't in relation to us but have a special nature of their own?

Hermogenes: We did.

Socrates: So if we are to be consistent with what we said previously, we cannot name things as we choose; rather, we must name them in the natural way for them to be named and with the natural tool for naming them. In that way we'll accomplish something and succeed in naming, otherwise we won't.

Hermogenes: So it seems.

Socrates: Again, what one has to cut, one must cut with something?

Hermogenes: Yes.

Socrates: And what one has to weave, one must weave with something?
e And what one has to drill, one must drill with something?

Hermogenes: Certainly.

Socrates: And what one has to name, one must name with something?

388 Hermogenes: That's right.

Socrates: What must drilling be done with?

Hermogenes: A drill.

Socrates: Weaving?

Hermogenes: A shuttle.

Socrates: And naming?

Hermogenes: A name.

Socrates: Well done! So a name is also a sort of tool?

Hermogenes: That's right.

Socrates: And suppose I ask, "What sort of tool is a shuttle?" Isn't the answer, "One we weave with"?

b Hermogenes: Yes.

Socrates: What do we do when we weave? Don't we divide the warp and woof that are mixed together?

Hermogenes: Yes.

Socrates: Would you answer in the same way about drills and other tools?

Hermogenes: Certainly.

Socrates: And you'd also answer in the same way about names, since they are tools. What do we do when we name?

Hermogenes: I don't know what to answer.

Socrates: Don't we instruct each other, that is to say, divide things according to their natures?

Hermogenes: Certainly.

Socrates: So just as a shuttle is a tool for dividing warp and woof, a name is a tool for giving instruction, that is to say, for dividing being. c

Hermogenes: Yes.

Socrates: Isn't a shuttle a weaver's tool?

Hermogenes: Of course.

Socrates: So a weaver will use shuttles well; and to use a shuttle well is to use it as a weaver does. By the same token, an instructor will use names well; and to use a name well is to use it as an instructor does.

Hermogenes: Yes.

Socrates: When a weaver uses a shuttle well, whose product is he using?

Hermogenes: A carpenter's.

Socrates: Is everyone a carpenter or only those who possess the craft of carpentry?

Hermogenes: Only those who possess the craft.

Socrates: And whose product does a driller use well when he uses a drill? d

Hermogenes: A blacksmith's.

Socrates: And is everyone a blacksmith or only those who possess the craft?

Hermogenes: Only those who possess the craft.

Socrates: Good. So whose product does an instructor use when he uses a name?

Hermogenes: I don't know.

Socrates: Can you at least tell me this? Who or what provides us with the names we use?

Hermogenes: I don't know that either.

Socrates: Don't you think that rules[6] provide us with them?

Hermogenes: I suppose they do.

Socrates: So, when an instructor uses a name, he's using the product of a rule-setter. e

Hermogenes: I believe he is.

Socrates: Do you think that every man is a rule-setter or only the one who possesses the craft?

Hermogenes: Only the one who possesses the craft.

Socrates: It follows that it isn't every man who can give names, Hermogenes, but only a namemaker, and he, it seems, is a rule-setter—the kind 389
of craftsman most rarely found among human beings.

Hermogenes: I suppose so.

6. The Greek here is *ho nomos:* law or customary usage—itself established, as Socrates immediately goes on to say, by a *nomothetēs,* usually a legislator or law-giver, but here someone who establishes the rules of usage that give significance to names, a 'rule-setter.'

Socrates: Come now, consider where a rule-setter looks in giving names. Use the previous discussion as your guide. Where does a carpenter look in making a shuttle? Isn't it to that sort of thing whose nature is to weave?

Hermogenes: Certainly.

b Socrates: Suppose the shuttle breaks while he's making it. Will he make
another looking to the broken one? Or will he look to the very form to which he looked in making the one he broke?

Hermogenes: In my view, he will look to the form.

Socrates: Then it would be absolutely right to call that what a shuttle itself is.

Hermogenes: I suppose so.

Socrates: Hence whenever he has to make a shuttle for weaving garments of any sort, whether light or heavy, linen or woolen, mustn't it
possess the form of a shuttle? And mustn't he put into it the nature that
c naturally best suits it to perform its own work?

Hermogenes: Yes.

Socrates: And the same holds of all other tools. When a craftsman discovers the type of tool that is naturally suited for a given type of work, he must embody it in the material out of which he is making the tool. He mustn't make the tool in whatever way he happens to choose, but in the natural way. So it seems that a blacksmith must know how to embody in iron the type of drill naturally suited for each type of work.

Hermogenes: Certainly.

Socrates: And a carpenter must embody in wood the type of shuttle naturally suited for each type of weaving.

Hermogenes: That's right.

Socrates: Because it seems that there's a type of shuttle that's naturally
d suited to each type of weaving. And the same holds of tools in general.

Hermogenes: Yes.

Socrates: So mustn't a rule-setter also know how to embody in sounds and syllables the name naturally suited to each thing? And if he is to be an authentic giver of names, mustn't he, in making and giving each name,
look to what a name itself is? And if different rule-setters do not make
e each name out of the same syllables, we mustn't forget[7] that different
blacksmiths, who are making the same tool for the same type of work, don't all make it out of the same iron. But as long as they give it the same
form—even if that form is embodied in different iron—the tool will be
390 correct, whether it is made in Greece or abroad. Isn't that so?

Hermogenes: Certainly.

Socrates: Don't you evaluate Greek and foreign rule-setters in the same way? Provided they give each thing the form of name suited to it, no matter what syllables it is embodied in, they are equally good rule-setters, whether they are in Greece or abroad.

7. Reading *agnoein* in e1.

Hermogenes: Certainly.

Socrates: Now, who is likely to know whether the appropriate form of
shuttle is present in any given bit of wood? A carpenter who makes it or b
a weaver who uses it?

Hermogenes: In all likelihood, Socrates, it is the one who uses it.

Socrates: So who uses what a lyre-maker produces? Isn't he the one who would know best how to supervise the manufacture of lyres and would also know whether what has been made has been well made or not?

Hermogenes: Certainly.

Socrates: Who is that?

Hermogenes: A lyre-player.

Socrates: And who will supervise a ship-builder?

Hermogenes: A ship's captain. c

Socrates: And who can best supervise the work of a rule-setter, whether here or abroad, and judge its products? Isn't it whoever will use them?

Hermogenes: Yes.

Socrates: And isn't that the person who knows how to ask questions?

Hermogenes: Certainly.

Socrates: And he also knows how to answer them?

Hermogenes: Yes.

Socrates: And what would you call someone who knows how to ask and answer questions? Wouldn't you call him a dialectician?

Hermogenes: Yes, I would.

Socrates: So it's the work of a carpenter to make a rudder. And if the d
rudder is to be a fine one, a ship-captain must supervise him.

Hermogenes: Evidently.

Socrates: But it's the work of a rule-setter, it seems, to make a name. And if names are to be given well, a dialectician must supervise him.

Hermogenes: That's right.

Socrates: It follows that the giving of names can't be as inconsequential
a matter as you think, Hermogenes, nor can it be the work of an inconse-
quential or chance person. So Cratylus is right in saying that things have
natural names, and that not everyone is a craftsman of names, but only e
someone who looks to the natural name of each thing and is able to put
its form into letters and syllables.

Hermogenes: I don't know how to oppose you, Socrates. It isn't easy
for me suddenly to change my opinion, though. I think you would be 391
more likely to persuade me if you showed me just what this natural
correctness of names you're talking about consists in.

Socrates: My dear Hermogenes, I don't have a position on this. You
have forgotten what I told you a while ago, namely that I didn't know
about names but that I would investigate them with you. And now that
we *are* investigating them, you and I, at least this much is clearer than
before, that names do possess some sort of natural correctness and that it
isn't every man who knows how to name things well. Isn't that right? b

Hermogenes: Certainly.

Socrates: So our next task is to try to discover what this correctness is, if indeed you want to know.

Hermogenes: Of course I do.

Socrates: Then investigate the matter.

Hermogenes: How am I to do that?

Socrates: The most correct way is together with people who already know, but you must pay them well and show gratitude besides—these are the sophists. Your brother Callias got his reputation for wisdom from
c them in return for a lot of money. So you had better beg and implore him to teach you what he learned from Protagoras about the correctness of names, since you haven't yet come into any money of your own.

Hermogenes: But it would be absurd for me to beg for Protagoras' "Truth," Socrates, as if I desired the things contained in it and thought them worthwhile, when I totally reject them.

Socrates: Well, if that doesn't suit you, you'll have to learn from Homer
d and the other poets.

Hermogenes: And where does Homer say anything about names, Socrates, and what does he say?

Socrates: In lots of places. The best and most important are the ones in which he distinguishes between the names humans call things and those the gods call them. Or don't you think that these passages tell us something remarkable about the correctness of names? Surely, the gods call things
e by their naturally correct names—or don't you think so?

Hermogenes: I certainly know that if they call them by any names at all, it's by the correct ones. But what passages are you referring to?

Socrates: Do you know where he says that the Trojan river that had single combat with Hephaestus is "called 'Xanthos' by the gods and 'Skamandros' by men"?[8]

Hermogenes: I certainly do.

392 Socrates: And don't you think it's an awe-inspiring thing to know that the river is more correctly called 'Xanthos' than 'Skamandros'? Or consider, if you like, when he says about a certain bird that

*The gods call it 'chalcis' but men call it 'cymindis'.*[9]

Do you think it's an inconsequential matter to learn that it is far more correct to call this bird '*chalcis*' than to call it '*cymindis*'? What about all the similar things that Homer and the other poets tell us? For example,
b that it is more correct to call a certain hill 'Murine' than 'Batieia'?[10] But perhaps these examples are too hard for you and me to figure out. It is

8. *Iliad* xxi.332–80 and xx.74.

9. *Iliad* xiv.291.

10. *Iliad* ii.813 ff.

easier and more within human power, I think, to investigate the kind of correctness Homer ascribes to 'Skamandrios' and 'Astyanax', which he says are the names of Hector's son. You know, of course, the lines to which I refer.[11]

Hermogenes: Certainly.

Socrates: Which of the names given to the boy do you suppose Homer thought was more correct, 'Astyanax' or 'Skamandrios'?

Hermogenes: I really can't say. c

Socrates: Look at it this way. If you were asked who gives names more correctly, those who are wiser or those who are more foolish, what would you answer?

Hermogenes: That it is clearly those who are wiser.

Socrates: And which class do you think is wiser on the whole, a city's women or its men?

Hermogenes: Its men.

Socrates: Now you know, don't you, that Homer tells us that Hector's son was called 'Astyanax' by the men of Troy?[12] But if the men called him d
'Astyanax', isn't it clear that 'Skamandrios' must be what the women called him?

Hermogenes: Probably so.

Socrates: And didn't Homer also think that the Trojans were wiser than their women?

Hermogenes: I suppose he did.

Socrates: So mustn't he have thought that 'Astyanax' was a more correct name for the boy than 'Skamandrios'?

Hermogenes: Evidently.

Socrates: Well, let's investigate why it is more correct. Doesn't Homer himself suggest a very good explanation when he says

*He alone defended their city and long walls?*[13] e

For because of this, you see, it seems correct to call the son of the defender 'Astyanax' or lord of the city (*astu, anax*) which, as Homer says, his father was defending.

Hermogenes: That seems right to me.

Socrates: It does? You understand it, Hermogenes? For I don't understand it yet myself.

Hermogenes: Then *I* certainly don't.

Socrates: But, my good friend, didn't Homer also give Hector his name? 393

Hermogenes: What if he did?

11. *Iliad* vi.402–3.

12. *Iliad* xxii.506.

13. *Iliad* xxii.507, referring to Hector.

SOCRATES: Well, it seems to me that 'Hector' is more or less the same as 'Astyanax', since both names seem to be Greek. After all, 'lord' ('*anax*') and 'possessor' ('*hektōr*') signify pretty much the same, since both are names for a king. Surely, a man possesses that of which he is lord, since it is clear that he controls, owns, and has it. But perhaps you think I'm
b talking nonsense, and that I'm wrong to suppose that I've found a clue to Homer's beliefs about the correctness of names.

HERMOGENES: No, I don't think you're wrong. You may well have found a clue.

SOCRATES: At any rate, it seems to me that it is right to call a lion's offspring a 'lion' and a horse's offspring a 'horse'. I'm not talking about some monster other than a horse that happens to be born from a horse
c but one that is a natural offspring of its kind. If, contrary to nature, a horse gave birth to a calf, it should be called a 'calf', not a 'colt'. And if something that isn't a human offspring is born to a human, I don't think it should be called a 'human'. And the same applies to trees and all the rest. Don't you agree?

HERMOGENES: I agree.

SOCRATES: Good. But you had better watch out in case I trick you, for by the same argument any offspring of a king should be called a 'king'. But it doesn't matter whether the same thing is signified by the same
d syllables or by different ones. And if a letter is added or subtracted, that doesn't matter either, so long as the being or essence of the thing is in control and is expressed in its name.

HERMOGENES: How do you mean?

SOCRATES: It's something fairly simple. You know that when we speak of the elements or letters of the alphabet, it is their names we utter, not the letters themselves, except in the case of these four *e, u, o*, and *ō*.[14] We make names for all the other vowels and consonants, as you know, by
e uttering additional letters together with them. But as long as we include the force or power of the letter, we may correctly call it by that name, and it will express it for us. Take '*bēta*', for example. The addition of '*ē*', '*t*', and '*a*' does no harm and doesn't prevent the whole name from expressing the nature of that element or letter which the rule-setter wished to name, so well did he know how to give names to the letters.

HERMOGENES: I believe you're right.

SOCRATES: Doesn't the same argument apply to 'king'? For a king will
394 probably be the son of a king, a good man the son of a good man, a fine man the son of a fine one, and so on. So, unless a monster is born, the offspring of a kind will be of the same kind and should be called by the same name. But because of variation in their syllables, names that are really the same seem different to the uninitiated. Similarly, a doctor's medicines, which have different colors and perfumes added to them, ap-

14. The names 'epsilon', 'upsilon', 'omicron' (short *o*), and 'omega' (long *o*) were not used in Plato's time; one simply pronounced the sound.

pear different to us, although they are really the same and appear the same to a doctor, who looks only to their power to cure and isn't disconcerted by b the additives. Similarly, someone who knows about names looks to their force or power and isn't disconcerted if a letter is added, transposed, or subtracted, or even if the force a name possesses is embodied in different letters altogether. So, for example, in the names 'Hector' and 'Astyanax', which we were discussing just now, none of the letters is the same, except '*t*', but they signify the same anyway. And what letters does 'Archepolis'— c 'Ruler-of-a-city'—have in common with them? Yet, it expresses the same thing. Many other names signify simply king; others signify general, for example, 'Agis' ('Leader'), 'Polemarchus' ('War-lord'), 'Eupolemus' ('Good-warrior'); and still others signify doctor, for example, 'Iatrocles' ('Famous-healer') and 'Acesimbrotus' ('Healer-of-mortals'). And we might perhaps find many others, which differ in their letters and syllables, but which have the same force or power when spoken. Is that plain to you or not?

Hermogenes Certainly. d

Socrates: Then those that are born according to nature should be given the same names as their fathers.

Hermogenes: Yes.

Socrates: What about the ones that are born contrary to nature, those that are some form of monster? For instance, when a good and pious man has an impious son, the latter shouldn't have his father's name but that of the kind to which he belongs, just as in our earlier example of a horse having a calf as offspring?

Hermogenes: Yes.

Socrates: Therefore the impious son of a pious father should be given e the name of the kind to which he belongs.

Hermogenes: That's right.

Socrates: Then he shouldn't be called 'Theophilus' ('God-beloved') or 'Mnesitheus' ('Mindful-of-god'), or anything of that sort, but something that signifies the opposite, if indeed names are to be actually correct.

Hermogenes: That's absolutely right, Socrates.

Socrates: Thus the name 'Orestes' ('Mountain-man') is surely correct, Hermogenes, whether it was given to him by chance or by some poet, who displayed in his name the brutality, savagery, and ruggedness of his nature.

Hermogenes: It seems so, Socrates. 395

Socrates: And his father's name also seems to accord with nature.

Hermogenes: It does.

Socrates: Yes, for Agamemnon is someone who worked hard and persevered, bringing his plans to completion because of his virtue or excellence. The stay of his army in Troy and his perseverance there is a sign of this. And thus the name 'Agamemnon' signifies that this man is admirable (*agastos*) for holding his ground (*epimonē*). The name 'Atreus' also seems to be correct; for both his murder of Chrysippus and his cruelty to Thyestes b

were damaging and destructive (*atēra*) to his virtue. However, the meaning of his name is somewhat distorted and obscure, so that it doesn't express his nature to everyone. But to those who understand about names it adequately expresses what 'Atreus' means. For whether the name accords with his stubbornness (*ateires*), or his boldness (*atrestos*), or his destructiveness (*at-*
c *ēros*), it is correctly given to him. I think Pelops also has a fitting name;
for 'Pelops' signifies he who sees only what is near at hand (*pelas, opsis*).

HERMOGENES: How is that?

SOCRATES: Because, according to legend, he didn't think about or foresee what the long-term consequences of murdering Myrtilus would be for his entire family, or all the misery that would overwhelm them. In his eagerness to win Hippodameia by any available means, he saw only what was ready
d to hand and on the spot—that is to say, what was nearby (*pelas*). Everyone
would agree, too, that 'Tantalus' was given correctly and according to nature, if what's said about its bearer is true.

HERMOGENES: What's that?

SOCRATES: They say that many terrible misfortunes happened to him in his life—the last of which was the total overthrow of his country—and that, in Hades, after his death, he had a stone suspended (*talanteia*) over
e his head, in wondrous harmony with his name. It's exactly as if someone
had wished to name him '*Talantatos*' ('Most-weighed-upon') but had disguised the name and said 'Tantalus' instead. In some such way, in any case, the chance of legend supplied him with this name. His father, who is said to have been Zeus, also seems to have had an altogether fine name
396 given to him—but it isn't easy to figure out. That's because the name
'Zeus' is exactly like a phrase that we divide into two parts, '*Zēna*' and '*Dia*', some of us using one of them and some the other.[15] But these two names, reunited into one, express the nature of the god—which is just what we said a name should do. Certainly, no one is more the cause of life (*zēn*), whether for us or for anything else, than the ruler and king of all things. Thus '*Zēna*' and '*Dia*' together correctly name the god that is
b always the cause of life (*di' hon zēn*) for all creatures. But, as I say, his
name, which is really one, is divided in two, '*Dia*' and '*Zēna*'. When one hears that Zeus is the son of Cronus, one might find that offensive at first, and it might seem more reasonable to say that he is the offspring of a great intellect. But in fact Cronus' name signifies not a child (*koros*), but the purity and clarity of his intellect or understanding.[16] According to legend, he was the son of Uranus (Heaven), whose name is also correctly given, for the sight of what is above is well called by the name '*ourania*' ('heavenly')—looking at the things above (*horōsa ta anō*)—and astronomers

15. '*Zeus*' (nominative) has two declensions, one of which (a poetical one) has '*Zēna*' in the accusative, the other (the ordinary one) '*Dia*'.

16. Socrates is treating Cronus' name as deriving not from '*koros*' but from '*korein*' ('to sweep'). Cronus' character is spotless and his intelligence clear because both have been well swept.

say, Hermogenes, that that results in purity of intellect. If I could remember c
Hesiod's genealogy, and the even earlier ancestors of the gods he mentions,
I wouldn't have stopped explaining the correctness of the names he gives
them, until I had tested this wisdom which has suddenly come upon me—
I do not know from where—to see whether or not it holds up till the end. d

HERMOGENES: Indeed, Socrates, you do seem to me to be exactly like a prophet who has suddenly been inspired to deliver oracles.

SOCRATES: Yes, Hermogenes, and I, for my part, mostly blame Euthyphro,
of the deme of Prospalta,[17] for its coming upon me. I was with him at
dawn, lending an ear to his lengthy discussion. He must have been inspired,
because it looks as though he has not only filled my ears with his superhu-
man wisdom but taken possession of my soul as well. So it seems to me
that this is what we ought to do: Today, we'll use this wisdom and finish e
our examination of names, but tomorrow, if the rest of you agree, we'll
exorcise it and purify ourselves, as soon as we've found someone—whether
priest or wise man—who is clever at that kind of purification. 397

HERMOGENES: That's fine with me. I'd be very glad to hear what remains to be said about names.

SOCRATES: Then that's what we must do. Since we now have some sort
of outline to follow, which names do you want us to begin with, in order
to find out whether names themselves will testify to us that they are not
given by chance, but have some sort of correctness? The names that heroes
and men are said to have might perhaps deceive us. After all, as we saw b
at the beginning, they are often given because they are the names of
ancestors, and some of them are wholly inappropriate. Many, too, are
given in the hope that they will prove appropriate, such as 'Eutychides'
('Son-of-good-fortune'), 'Sosias' ('Saviour'), 'Theophilus' ('God-beloved'),
and many others. In my view, we must leave such names aside. We are
most likely to find correctly given names among those concerned with the
things that by nature always are, since it is proper for their names to be
given with the greatest care, and some may even be the work of a more c
than human power.

HERMOGENES: I think that's sensible, Socrates.

SOCRATES: So isn't it right to begin by seeing why the name '*theoi*' ('gods') is itself one that the gods are correctly called?

HERMOGENES: It probably is.

SOCRATES: I suspect something like this. It seems to me that the first
inhabitants of Greece believed only in those gods in which many foreigners d
still believe today—the sun, moon, earth, stars, and sky. And, seeing that
these were always moving or running, they gave them the name '*theoi*'
because it was their nature to run (*thein*). Later, when they learned about
the other gods, they called them all by that name. Does that seem likely—
or am I talking nonsense?

17. This is probably the Euthyphro who appears in the dialogue of that name, where he is described as claiming authority on Uranus, Cronus, and Zeus (*Euthyphro* 4e–5a, 5e–6a).

HERMOGENES: It's very likely.

SOCRATES: What shall we investigate next? Clearly, it's daemons,[18] then heroes, then humans, isn't it?[19]

e HERMOGENES: Yes, daemons are next.[20]

SOCRATES: And what is the correct meaning of the name 'daemons', Hermogenes? See if you think there's anything in what I'm about to say.

HERMOGENES: Say it, and I will.

SOCRATES: Do you know what Hesiod says daemons are?

HERMOGENES: No, I don't remember.

SOCRATES: Do you remember that he speaks of a golden race, which was the first race of human beings to be born?

HERMOGENES: Yes, I remember that.

SOCRATES: He says this about it:

> *Since this race has been eclipsed by fate,*
> 398 *They are called sacred daemons;*
> *They live on earth and are good,*
> *Warding off evil and guarding mortal men.*[21]

HERMOGENES: So what?

SOCRATES: Well, I don't think he's saying that the golden race is by nature made of gold, but that it is good and fine. I consider it a proof of this that he calls us a race of iron.

HERMOGENES: That's true.

SOCRATES: So don't you think that if someone who presently exists were
b good, Hesiod would say that he too belonged to the golden race?

HERMOGENES: He probably would.

SOCRATES: Are good people any different from wise ones?

HERMOGENES: No, they aren't.

SOCRATES: It is principally because daemons are wise and knowing (*daēmones*), I think, that Hesiod says they are named 'daemons' ('*daimones*'). In our older Attic dialect, we actually find the word '*daēmones*'. So, Hesiod and many other poets speak well when they say that when a good man dies, he has a great destiny and a great honor and becomes a 'daemon',
c which is a name given to him because it accords with wisdom. And I myself assert, indeed, that every good man, whether alive or dead, is daemonic, and is correctly called a 'daemon'.

18. Daemons are gods or children of the gods (*Apology* 27d–e) or messengers from the gods (*Symposium* 202e).

19. Reading *ē dēlon dē hoti daimonas te kai hērōas kai anthrōpous?* in d9–e1, attributing these words to Socrates.

20. Attributing *daimonas* in e1 to Hermogenes.

21. *Works and Days*, 121–23, with minor variations.

Hermogenes: And I think that I completely agree with you, Socrates. But what about the name 'hero' ('*hērōs*')? What is it?

Socrates: That one isn't so hard to understand because the name has been little altered. It expresses the fact that heroes were born out of love (*erōs*).

Hermogenes: How do you mean?

Socrates: Don't you know that the heroes are demigods?

Hermogenes: So what?

Socrates: So all of them sprang from the love of a god for a mortal woman or of a mortal man for a goddess. And if, as before, you investigate d the matter by relying on old Attic, you will get a better understanding, since it will show you that the name 'hero' ('*hērōs*') is only a slightly altered form of the word 'love' ('*erōs*')—the very thing from which the heroes sprang. And either this is the reason they were called 'heroes' or else because they were sophists, clever speech-makers (*rhētores*) and dialecticians, skilled questioners (*erōtan*)—for '*eirein*' is the same as '*legein*' ('to speak'). And therefore, as we were saying just now, in the Attic dialect, the heroes turn out to be speech-makers and questioners. Hence the noble e breed of heroes turns out be a race of speech-makers and sophists. That isn't hard to understand. But can you tell me why members of the human race are called 'humans' ('*anthrōpoi*')? That's much harder to understand.

Hermogenes: How could *I* do that, Socrates? I wouldn't strain myself to find it even if I could, because I think you're much more likely to find it than I am.

Socrates: You really do have faith in Euthyphro's inspiration, it seems. 399

Hermogenes: Clearly.

Socrates: And you're certainly right to have faith in it. Indeed, I seem to have had such a clever insight just now, that, if I'm not careful, I'll be in danger of becoming altogether *too* wise before the day is out. So pay attention. First of all, we must bear in mind the following point about names: we often add letters or take them out and change the accents as well, thus swerving aside from what we want to name. For instance, take '*Dii philos*' ('Friend-to-Zeus'). In order for us to have a name instead of a phrase, we took out the second '*i*', and pronounced the second syllable b with a grave accent instead of an acute ('*Diphilos*'). In other cases, we do the opposite, inserting letters and pronouncing a syllable with an acute accent instead of a grave.

Hermogenes: That's true.

Socrates: Now, I think our name for human beings is a case of just this sort. It was a phrase but became a name. One letter—'*a*'—has been taken away and the accent on the final syllable has become a grave.

Hermogenes: What do you mean?

Socrates: The name 'human' signifies that the other animals do not c investigate or reason about anything they see, nor do they observe anything closely. But a human being no sooner sees something—that is to say, '*opōpe*'—than he observes it closely and reasons about it. Hence human

beings alone among the animals are correctly named *'anthrōpos'*—one who observes closely what he has seen (*anathrōn ha opōpe*).

Hermogenes: What comes next? May I tell you what I'd like to have explained?

Socrates: Of course.

d Hermogenes: It seems to me to be next in order. We speak of the body and soul of a human being.

Socrates: Certainly.

Hermogenes: Then let's try to analyze their names as we did the previous ones.

Socrates: Are you saying that we should investigate whether soul and then body are reasonably named?

Hermogenes: Yes.

Socrates: Speaking off the top of my head, I think that those who gave soul its name had something like this in mind. They thought that when the soul is present in the body, it causes it to live and gives it the power
e to breathe the air and be revitalized (*anapsuchon*), and that when this revitalization fails, the body dies and is finished. It's for this reason, I think, that they called it 'soul' (*'psuchē*). But hold on a minute, if you don't mind, for I imagine that the followers of Euthyphro would despise this
400 analysis and think it crude. But I think I glimpse one they will find more persuasive. Have a look and see whether it pleases you.

Hermogenes: Tell it to me and I will.

Socrates: When you consider the nature of every body, what, besides the soul, do you think sustains and supports it, so that it lives and moves about?

Hermogenes: There isn't anything.

Socrates: What about when you consider the nature of everything else? Don't you agree with Anaxagoras that it is ordered and sustained by mind or soul?

Hermogenes: I do.

b Socrates: So a fine name to give this power, which supports and sustains (*ochei kai echei*) the whole of nature (*phusis*), would be 'nature-sustainer' (*'phusechē'*). This may also be pronounced more elegantly, *'psuchē'*.

Hermogenes: Absolutely, and I also think this *is* a more scientific explanation than the other.

Socrates: Yes, it is. Nevertheless, it sounds funny when it's named in the true way, with its actual name (i.e., *'phusechē'*).

Hermogenes: What are we going to say about the next one?

Socrates: Are you referring to the name 'body'?

Hermogenes: Yes.

Socrates: There's a lot to say, it seems to me—and if one distorted the name a little, there would be even more. Thus some people say that the
c body (*sōma*) is the tomb (*sēma*) of the soul, on the grounds that it is entombed in its present life, while others say that it is correctly called 'a sign' (*'sēma'*) because the soul signifies whatever it wants to signify by means of the body. I think it is most likely the followers of Orpheus who gave the body

its name, with the idea that the soul is being punished for something, and that the body is an enclosure or prison in which the soul is securely kept (*sōzetai*)—as the name '*sōma*' itself suggests—until the penalty is paid; for, on this view, not even a single letter of the word needs to be changed.

HERMOGENES: I think we've adequately examined these names, Socrates. d
But could we investigate the names of the other gods along the lines of your earlier discussion of 'Zeus', to see with what kind of correctness they have been given?

SOCRATES: By Zeus, we certainly can, Hermogenes. The first and finest line of investigation, which as intelligent people we must acknowledge, is this, that we admit that we know nothing about the gods themselves or about the names they call themselves—although it is clear that they call themselves by true ones. The second best line on the correctness of names is to say, as is customary in our prayers, that we hope the gods are pleased by the names we give them, since we know no others. I think this is an excellent custom. So, if it's all right with you, let's begin our investiga- 401
tion by first announcing to the gods that we will not be investigating *them*—since we do not regard ourselves as worthy to conduct such an investigation—but rather human beings, and the beliefs they had in giving the gods their names. After all, there's no offense in doing that.

HERMOGENES: What you say seems reasonable to me, Socrates, so let's proceed as you suggest.

SOCRATES: Shall we begin, as is customary, with Hestia?[22] b

HERMOGENES: All right.

SOCRATES: What do you think the person who gave Hestia her name had in mind by naming her that?

HERMOGENES: That's no easy question to answer, in my opinion.

SOCRATES: At any rate, Hermogenes, the first name-givers weren't ordinary people, but lofty thinkers and subtle reasoners.

HERMOGENES: What of it?

SOCRATES: Well, it's obvious to me that it was people of this sort who gave things names, for even if one investigates names foreign to Attic Greek, it is equally easy to discover what they mean. In the case of what c
we in Attic call '*ousia*' ('being'), for example, some call it '*essia*' and others '*ōsia*'. First, then, it is reasonable, according to the second of these names, to call the being or essence (*ousia*) of things 'Hestia'. Besides, we ourselves say that what partakes of being 'is' ('*estin*'), so being is also correctly called 'Hestia' for this reason. We even seem to have called being '*essia*' in ancient times. And, if one has sacrifices in mind, one will realize that the name-givers themselves understood matters in this way, for anyone who called d
the being or essence of all things '*essia*' would naturally sacrifice to Hestia before all the other gods. On the other hand, those who use the name '*ōsia*' seem to agree pretty much with Heraclitus' doctrine that the things that are

22. Hestia, the goddess of the hearth, usually received the first part of a sacrifice and was named first in prayers and (often) in oaths.

are all flowing and that nothing stands fast—for the cause and originator of them is then the pusher (*ōthoun*), and so is well named '*ōsia*'. But that's
e enough for us to say about this, since we know nothing. After Hestia, it is right to investigate Rhea and Cronus, though we've already discussed the latter's name. Now, maybe what I'm about to tell you is nonsense.

HERMOGENES: Why do you say that, Socrates?

SOCRATES: Because I've got a whole swarm of wisdom in my mind!

HERMOGENES: What sort of wisdom?

SOCRATES: It sounds completely absurd, yet it seems to me to have some-
402 thing very plausible about it.

HERMOGENES: How so?

SOCRATES: I seem to see Heraclitus spouting some ancient bits of wisdom that Homer also tells us—wisdom as old as the days of Cronus and Rhea.

HERMOGENES: What are you referring to?

SOCRATES: Heraclitus says somewhere that "everything gives way and nothing stands fast," and, likening the things that are to the flowing (*rhoē*) of a river, he says that "you cannot step into the same river twice."[23]

HERMOGENES: So he does.

SOCRATES: Well, then, don't you think that whoever gave the names 'Rhea' and 'Cronus' to the ancestors of the other gods understood things
b in the same way as Heraclitus? Or do you think he gave them both the names of streams (*rheumata*) merely by chance?[24] Similarly, Homer speaks of

*Ocean, origin of the gods, and their mother Tethys;*[25]

I think Hesiod says much the same. Orpheus, too, says somewhere that

*Fair-flowing Ocean was the first to marry,*
c *And he wedded his sister, the daughter of his mother.*[26]

See how they agree with each other, and how they all lean towards the doctrines of Heraclitus.

HERMOGENES: I think there's something in what you say, Socrates, but I don't understand what the name 'Tethys' means.

SOCRATES: But it practically tells you itself that it is the slightly disguised name of a spring! After all, what is strained (*diattōmenon*) and filtered
d (*ēthoumenon*) is like a spring, and the name 'Tethys' is a compound of these two names.

23. Frg. 91 (Diels-Kranz).

24. 'Rhea' sounds a lot like '*rheuma*' ('stream'); apparently Socrates expects Hermogenes to hear 'Cronus' as connected with '*krounos*' ('spring').

25. *Iliad* xiv.201, 302.

26. Frg. 15 (Kern).

Hermogenes: That's elegant, Socrates.

Socrates: Indeed, it is. But what comes next? We've already talked about Zeus.

Hermogenes: Yes, we have.

Socrates: So let's discuss his brothers, Posidon and Pluto (whether we call him 'Pluto' or by his other name).

Hermogenes: Certainly.

Socrates: It seems to me that whoever first gave Posidon his name, gave it to him because he saw that the force of the waves stopped him from
walking and prevented him from going any further, just like a shackle e
around his feet (*desmos tōn podōn*). So he called this god, who is the ruler of the sea's power, 'Posidon', because his 'feet were shackled' (*'posidesmon'*)—the *'e'* was probably added for the sake of euphony. But perhaps this isn't what it says. Perhaps, instead of the *'s'* the name was originally pronounced with a double *'l'*, because many things are known (*poll' eidōs*)
to the god. Or maybe he was called 'The Shaker' (*'ho seiōn'*), because he 403
shook (*seiein*) the earth, and the *'p'* and *'d'* were added on. As for Pluto, he was given that name because it accords with his being the source of wealth (*ploutos*), since wealth comes up from below the ground. It seems to me that most people call him by the name 'Pluto', because they are afraid of what they can't see (*aeides*), and they assume that his other name, 'Hades', associates him with that.

Hermogenes: And what do you think yourself, Socrates? b

Socrates: I think people have lots of mistaken opinions about the power of this god and are unduly afraid of him. They are afraid because once we are dead we remain in his realm forever. They are terrified because the soul goes there stripped of the body. But I think that all these things, together with the name and office of the god, point in the same direction.

Hermogenes: How so?

Socrates: I'll tell you how it looks to me. But first answer me this: Of c
the shackles that bind a living being and keep him in a place, which is stronger, force or desire?

Hermogenes: Desire is far stronger, Socrates.

Socrates: Don't you think then that many people would escape from Hades, if he didn't bind those who come to him with the strongest of shackles?

Hermogenes: Clearly.

Socrates: So, if he is to bind them with the strongest of shackles, rather than holding them by force, he must, it seems, bind them with some sort of desire.

Hermogenes: Evidently.

Socrates: Now, there are lots of desires, aren't there?

Hermogenes: Yes.

Socrates: So, if he is really going to hold them with the greatest shackles,
he has to bind them with the greatest desire. d

HERMOGENES: Yes.

SOCRATES: Is any desire greater than the desire to associate with someone whose company one believes will make one a better man?

HERMOGENES: No, there certainly isn't, Socrates.

SOCRATES: So let's say that it is for these reasons, Hermogenes, that hitherto no one has wished to come back here from there. The words
e Hades knows how to speak are so beautiful, it seems, that everyone—even the Sirens—has been overcome by his enchantments. On this account, therefore, this god is a perfect sophist, and a great benefactor to those who are with him. So great is the wealth that surrounds him there below, indeed, that he even sends many good things to us from it. This is how he got the name 'Pluto'. On the other hand, because he is unwilling to associate with human beings while they have their bodies, but converses with them only when their souls are purified of all the desires and evils
404 of the body, doesn't he seem to you to be a philosopher? For hasn't he well understood that when people are free of their bodies he can bind them with the desire for virtue, but that while they feel the agitation and madness of the body not even the famous shackles of his father Cronus could keep them with him?[27]

HERMOGENES: Probably so, Socrates.

b SOCRATES: It's much more likely then, Hermogenes, that Hades derives his name not from what cannot be seen (*aeides*), but from the fact that he knows (*eidenai*) everything fine and beautiful, and that that is why the rule-setter called him 'Hades'.

HERMOGENES: All right. But what about Demeter, Hera, Apollo, Athena, Hephaestus, and all the other gods? What are we to say about them?

SOCRATES: Demeter seems to have been so called because she gives (*didousa*) nourishment just like a mother (*mētēr*); Hera is a loveable one (*eratē*),
c and, indeed, Zeus is said to have married her for love. But perhaps the rule-setter, being a lofty thinker, called her 'Hera' as a disguised name for air (*aēr*), putting the end of her name at the beginning—you'll get the idea if you repeat the name 'Hera' over and over. As for '*pherrephatta*': it seems that many people dread the names 'Pherrephatta' and 'Apollo' because they are ignorant about the correctness of names, for they change the first name to 'Phersephone', and then it seems terrifying to them.[28] But really the name 'Pherrephatta' indicates that the goddess is wise—for since things
d are being swept along, wisdom is the power to grasp (*ephaptomenon*), comprehend (*epaphōn*), and follow (*epakolouthein*) them. Thus it would be correct to call this goddess 'Pherepapha', or something like that, because of her wisdom, that is to say, her power to comprehend what is being swept along (*epaphē tou pheromenou*)—this is also the reason that Hades, since he is himself wise, associates with her. But people nowadays attach

27. Cronus, the father of Posidon and Zeus, was dethroned by the latter and chained by him in Tartarus, the deepest part of Hades. See *Iliad* xiv.203–4.

28. Presumably because they see it as meaning 'who brings carnage' (*pherein phonon*).

more importance to euphony than to truth, so they distort her name and call her 'Pherrephatta'. And, as I said, the same thing has happened to Apollo. Many people are afraid of his name because they think it indicates e
something terrifying.[29] Haven't you noticed this?

HERMOGENES: I certainly have, and what you say is true.

SOCRATES: In my view, however, the name is most beautifully suited to the power of the god.

HERMOGENES: How so?

SOCRATES: I'll try to say how it seems to me, at least. I think no single name could be more in keeping with the four powers of the god. It compre- 405
hends each of them, expressing his power in music, prophecy, medicine, and archery.

HERMOGENES: It's a pretty remarkable name you're talking about; so go ahead and explain it.

SOCRATES: It's certainly a harmonious one. After all, it's the name of the god of music. To begin with, the purgations and purifications that doctors and prophets use, the fumigations with medicinal and magical drugs, and b
the various washings and sprinklings that are involved in these processes, all have the same effect, don't they, namely, to make a person pure in body and soul?

HERMOGENES: Certainly.

SOCRATES: But isn't Apollo the purifying god who washes away (*apolouōn*) such evil impurities and releases (*apoluōn*) us from them?

HERMOGENES: Certainly.

SOCRATES: Since he washes and releases and is a doctor for our evil impurities, he might correctly be called '*Apolouōn*' ('The Washer'). On the c
other hand, it may well be most correct to call him by the name the Thessalians use, since it accords with his prophecy, that is to say, with his single-mindedness (*haploun*) or truthfulness (these being the same thing), for all the Thessalians call this god '*Aploun*'. And since he always (*aei*) makes his shots (*bolōn*), because of his skill in archery, he is also '*Aeiballōn*' ('Always-shooting'). To understand how his name accords with his musical powers, we have to understand that the letter '*a*' often signifies togetherness (*to homou*), as it does in '*akolouthos*' ('follower' or 'attendant') and '*akoitis*' ('bed-fellow', 'spouse', 'husband').[30] In this case, it signifies moving together (*homou polēsis*), whether the moving together of the heavens around what we call the 'poles' ('*poloi*'), or the harmonious moving together in music, which we call 'being in concert' ('*sumphonia*'); for, as those who are clever in astronomy and music say, all these things move together simultaneously d
by a kind of harmony. Apollo is the god who directs the harmony, and makes all things move together (*homopolōn*), whether for gods or human beings. So, just as the names '*akolouthos*' and '*akoitis*' are derived from

29. They connect 'Apollo' with '*apolluōn*' ('who destroys').

30. Removing the brackets in c7.

*'homokolouthos'* and *'homokoitis'* by replacing *'homo'* with *'a'*, we called him
'Apollo', though he was really *'Homopolon'* ('the one who makes things
e move together'). We inserted the second *'l'* lest his name become an oppres-
sive one.[31] Even as it is, indeed, some people, who haven't correctly investi-
gated the force or power of his name, are afraid of it, because they suspect
that it does signify some kind of destructiveness. But, as we said earlier,
406 it really comprehends each of the powers of the god, who is a single-
minded, always shooting washer, who makes things move together. As
for the Muses and music and poetry in general, they seem to have derived
their name from their eager desire (*mōsthai*) to investigate and do philoso-
phy. Leto is so-called because of being very gentle (*pra(i)otētos*) and willing
(*ethelēmos*) to do whatever is asked of her. Or perhaps her name derives
from the one used by those who speak dialects other than Attic, many of
whom call her 'Letho'—apparently on account of the fact that her character
b isn't rough but gentle and smooth (*leion*). Artemis appears to have been
so-called because of her soundness (*artemes*) and orderliness, and because
of her desire for virginity (*parthenia*). Or perhaps the one who gave her
that name was calling her 'an investigator of virtue' (*'aretēs histōr'*) or 'a
hater of sexual intercourse between men and women' (*'aroton misēsasēs'*).
It is for some one of these reasons or for all of them that the one who gave
this name to the goddess gave it to her.

HERMOGENES: What about 'Dionysos' and 'Aphrodite'?

SOCRATES: You're asking great things of me, son of Hipponicus, because
there is not only a serious way of explaining the names of these divinities
c but a playful one as well. You'll have to ask others for the serious one,
but there's nothing to prevent us from going through the playful one—
even the gods love play. Dionysos, the giver of wine (*ho didous ton oinon*),
might playfully be called *'Didoinusos'*; while wine (*oinos*) would most justly
be called *'oionous'*, since it makes most drinkers think they understood
(*oiesthai noun echein*) when they don't. As far as Aphrodite is concerned,
there's no point in contradicting Hesiod—we should agree with him that
d she is called 'Aphrodite' because she was born from foam (*aphros*).[32]

HERMOGENES: Being an Athenian, Socrates, you surely aren't going to forget Athena, or Hephaestus and Ares either, for that matter.

SOCRATES: Not likely.

HERMOGENES: No, indeed.

SOCRATES: It isn't hard to explain how Athena got her other name.

HERMOGENES: Which one?

SOCRATES: 'Pallas'—you know we call her that.

HERMOGENES: Of course.

SOCRATES: In my view, we would be correct to think that this name
e derives from her dancing in arms and armor, for lifting oneself or anything

31. *'Apolōn'* means 'destroying utterly', 'killing', 'slaying'.

32. *Theogony* 195–97.

else up, whether from the ground or in one's hands, is called 'shaking'
('*pallein*') and 'dancing' or 'being shaken' ('*pallesthai*') and 'being danced'. 407

Hermogenes: Certainly.

Socrates: She's called 'Pallas' because of this.

Hermogenes: And correctly so. But how do you explain her other name?

Socrates: You mean 'Athena'?

Hermogenes: Yes.

Socrates: That's a much weightier issue, my friend. The ancients seem
to have had the same opinion about Athena as do contemporary experts
on Homer. Many of them say in their interpretations of the poet that he b
represents Athena as Understanding or Thought. The maker of names
seems to think the same sort of thing about the goddess. Indeed, he speaks
of her in still grander terms, saying she is the very mind of god (*theou
noēsis*), as if she is '*ha theonoa*'—using '*a*' in the non-Attic style in place of
'*ē*' and deleting '*i*' and '*s*'.[33] But perhaps this isn't the explanation. Perhaps
what he called her was '*Theonoē*', because of her unparalleled knowledge
of divine things (*ta theia noousa*). Nor would we be far off the mark if we
supposed that what he called her was '*Ēthonoē*', because he wanted to
identify the goddess with her understanding character (*hē en tōi ēthei noēsis*).
Then he himself or others after him made the name more beautiful, as c
they thought, and called her '*Athēnaa*'.

Hermogenes: What about Hephaestus? How do you explain him?

Socrates: Are you asking me about the noble judge of light (*phaeos histōr*)?

Hermogenes: It seems so.

Socrates: Isn't it clear to everyone then that he is 'Phaestus' with an '*ē*' added on?

Hermogenes: It probably is—unless you happen to have yet another opinion on the matter. And you probably do.

Socrates: Then to prevent me from giving it, ask me about Ares.

Hermogenes: Consider yourself asked!

Socrates: All right, if that's what you want. It is proper for a god who
is in every way warlike to be called 'Ares', for 'Ares' accords with virility
(*arren*) and courage (*andreia*), or with a hard and unbending nature, the d
one that is called '*arratos*'.

Hermogenes: It certainly is.

Socrates: Then for god's sake let's leave the subject of the gods, because it frightens me to talk about them. But ask me about anything else you like, "until we see what the horses" of Euthyphro "can do."[34]

Hermogenes: I'll do that, but there is still one god I want to ask you
about, and that's Hermes, since Cratylus says that I am no Hermogenes e

33. I.e., '*ha theonoa*' or 'Athena' is derived thus: delete '*sis*' from '*theou noēsis*', yielding a single word '*theounoē*'; add the feminine article in its non-Attic style and change '*ē*' to '*a*' to get '*ha theounoa*'. Since at this time there was not the distinction we now make between '*o*' and '*ou*', we get '*ha theonoa*'.

34. *Iliad* v.221–22. For Euthyphro, see 396d.

(Son-of-Hermes). So let's examine the name 'Hermes' and its meaning, to see whether there's anything in what he says.

Socrates: Well, the name 'Hermes' seems to have something to do with
speech: he is an interpreter (*hermēneus*), a messenger, a thief and a deceiver
408 in words, a wheeler-dealer—and all these activities involve the power of
speech. Now, as we mentioned before,[35] '*eirein*' means 'to use words', and
the other part of the name says—as Homer often does—'*emēsato*' ('he
contrived'), which means 'to devise'. And it was out of these two words
that the rule-setter established the name of the god who devised speech
(*legein*) and words, since '*eirein*' means the same as '*legein*' ('to speak'). It's
just as if he had told us: "Humans, it would be right for you to call
b the god who has contrived speech (*to eirein emēsato*) '*Eiremēs*'." But we,
beautifying the name, as we suppose, call him 'Hermes' nowadays.

Hermogenes: I'm certain that Cratylus was right when he said that I'm no Hermogenes then, since I'm no good at devising speeches.

Socrates: But it *is* reasonable for Pan to be Hermes' double-natured son.

c Hermogenes: How so?

Socrates: You know speech signifies all things (*to pan*) and keeps them circulating and always going about, and that it has two forms—true and false?

Hermogenes: Certainly.

Socrates: Well, the true part is smooth and divine and dwells among the gods above, while the false part dwells below among the human masses, and is rough and goatish (*tragikon*); for it is here, in the tragic (*tragikon*) life, that one finds the vast majority of myths and falsehoods.

Hermogenes: Certainly.

Socrates: Therefore the one who expresses all things (*pan*) and keeps
them always in circulation (*aei polōn*) is correctly called 'Pan-the-goat-herd'
d ('*Pan aipolos*'). The double-natured son of Hermes, he is smooth in his
upper parts, and rough and goatish in the ones below. He is either speech
itself or the brother of speech, since he is the son of Hermes. And it's not
a bit surprising that a brother resembles his brother. But, as I said, let's
leave the gods.

Hermogenes: That sort of gods, Socrates, if that's what you want. But
what keeps you from discussing these gods: the sun and moon, and stars,
e earth, aether, air, fire, water, and the seasons and the year?

Socrates: That's a lot you're asking of me! All the same, if it will please you, I am willing.

Hermogenes: Of course, it will.

Socrates: Which one do you want me to take up first? Or, since you mentioned the sun (*hēlios*) first, shall we begin with it?

Hermogenes: Certainly.

Socrates: If we use the Doric form of the name, I think matters will
409 become clearer, for the Dorians call the sun '*halios*'. So '*halios*' might accord

35. See 398d.

with the fact that the sun collects (*halizein*) people together when it rises, or with the fact that it is always rolling (*aei heilein iōn*) in its course around the earth, or with the fact that it seems to color (*poikillei*) the products of the earth, for '*poikillein*' means the same as '*aiolein*' ('to shift rapidly to and fro').

Hermogenes: What about the moon (*selēnē*)?

Socrates: The name certainly seems to put Anaxagoras in an awkward position.

Hermogenes: Why is that?

Socrates: It seems to reveal that his recent theory about the moon deriving its light from the sun is in fact quite old. b

Hermogenes: In what way?

Socrates: *Selas* (bright light) and *phōs* (light) are the same thing.

Hermogenes: Yes.

Socrates: Now, if what the Anaxagoreans say is true, the light of the moon (*selēnē*) is always both new (*neon*) and old (*henon*), for they say that as the sun circles around the moon it always casts new light on it, but that the light from the previous month also remains there.

Hermogenes: Certainly.

Socrates: But many people call the moon '*Selanaia*'.

Hermogenes: Yes, they do.

Socrates: And, since its light is always both new and old (*selas neon kai enon echei aei*), the right name to call it is '*Selaenoneoaeia*', and this is the c
one that has been compressed into '*Selanaia*'.

Hermogenes: And a dithyrambic[36] name it is too, Socrates! But what have you to say about the month and the stars?

Socrates: The correct name to call a month (*meis*) is '*meiēs*' from '*meiousthai*' ('to grow smaller'). And the stars (*astra*) seem to get their name given to them from '*astrapē*' ('lightning'), for lightning is what causes the eyes to turn upward (*anastrephei ta ōpa*). Hence, it should really be called '*anastrōpē*', but nowadays the name is beautified and it is called '*astrapē*'.

Hermogenes: What about fire and water?

Socrates: I'm really puzzled about fire (*pur*). So either Euthyphro's muse d
has abandoned me or this really is very hard. But notice the device I use in all such puzzling cases.

Hermogenes: What is that?

Socrates: I'll tell you. But first answer me this. Could you say in what way *pur* (fire) comes to be so called?

Hermogenes: I certainly can't.

Socrates: Here's what I suspect. I think that the Greeks, especially those who live abroad, have adopted many names from foreign tongues. e

Hermogenes: What of it?

36. A dithyramb is a choral song to the god Dionysus, noted for its complex and pompous language.

SOCRATES: Well, if someone were trying to discover whether these names had been reasonably given, and he treated them as belonging to the Greek language rather than the one they really come from, you know that he would be in a quandary.

HERMOGENES: He very probably would.

410 SOCRATES: Now, look at 'fire' ('*pur*') and see whether it isn't a foreign name—for it certainly isn't easy to connect it with the Greek language. Besides, it's obvious that the Phrygians use the same name slightly altered. And the same holds for 'water' ('*hudōr*) and 'dog' ('*kuōn*'), and lots of others.

HERMOGENES: So it does.

SOCRATES: Consequently, though one might say something about these
names, one mustn't push them too far. That, then, is how I get rid of 'fire'
('*pur*') and 'water' ('*hudōr*'). But what about air, Hermogenes? Is it called
b '*aēr*' because it raises (*airei*) things from the earth? Or because it is always
flowing (*aei rhei*)? Or because wind (*pneuma*) arises from its flow? For the
poets call the winds (*pneumata*) 'gales' (*aētai*'), don't they? So, perhaps a
poet says '*aētorrous*' ('gale flow') in place of '*pneumatorrous*' ('wind flow'),
thereby indicating that what he is talking about is air.[37] As for aether, I'd
explain it as follows: it is right to call it '*aeitheēr*', because it is always
running and flowing (*aei thei rheōn*) about the air. The earth (*gē*) is better
c signified by the name '*gaia*'; for *gaia* is correctly called a 'mother', as Homer
tells us by using '*gegaasi*' for 'to be born'. All right, what was to come next?

HERMOGENES: 'Seasons' ('*Hōrai*'), Socrates, and the two names for the year, '*eniautos*' and '*etos*'.

SOCRATES: If you want to know the probable truth about the name '*hōrai*'
('seasons'), you must look to the fact that it is spelled '*horai*' in old Attic.
The seasons are rightly called '*horai*' ('things that distinguish or mark off
one thing from another'), because they distinguish (*horizein*) the weathers
of winter and summer, the winds, and the fruits of the earth. As for
d '*eniautos*' and '*etos*', they are actually one name. We saw earlier that Zeus'
name was divided in two—some called him '*Zēna*', some '*Dia*' in the
accusative.[38] Well, exactly the same is true of the name of the year. It is
the year by itself that brings the plants and animals of the earth to light,
each in its proper season, and passes them in review within itself (*en heautōi
exetazei*). Hence, some people call it '*etos*', because it passes things in review
(*etazei*), while others call it '*eniautos*', because it does this within itself (*en
heautōi*). The whole phrase is 'passing things in review within itself' ('*en
heautōi etazon*'), but this single phrase results in the year being called these
two different names. Thus, the two names, '*eniautos*' and '*etos*', derive from
e a single phrase.

HERMOGENES: I say, Socrates, you *are* making great progress!

SOCRATES: I think I'm driving my apparent wisdom pretty hard at present.

37. Removing the brackets in b5–6.

38. See 395e ff.

Hermogenes: You certainly are.

Socrates: You'll be even more certain in a second.

Hermogenes: Now that we've examined that sort of name, I'd next like 411
to see with what correctness the names of the virtues are given. I mean 'wisdom' ('*phronēsis*'), 'comprehension' ('*sunesis*'), 'justice' ('*dikaiosunē*'), and all the other fine names of that sort.

Socrates: That's no inconsequential class of names you're stirring up, Hermogenes, but, since I have put on the lion's skin,[39] I mustn't lose heart. So, it seems I must investigate 'wisdom', 'comprehension', 'judgment' ('*gnōmē*'), 'knowledge' ('*epistēmē*'), and all those other fine names of which
you speak. b

Hermogenes: We certainly mustn't stop until we've done so.

Socrates: By the dog, I think that's a pretty good inspiration—what popped into my mind just now! Most of our wise men nowadays get so dizzy going around and around in their search for the nature of the things that are, that the things themselves appear to them to be turning around and moving every which way. Well, I think that the people who gave
things their names in very ancient times are exactly like these wise men. c
They don't blame this on their own internal condition, however, but on the nature of the things themselves, which they think are never stable or steadfast, but flowing and moving, full of every sort of motion and constant coming into being. I say this, because the names you just mentioned put me in mind of it.

Hermogenes: How did they do that, Socrates?

Socrates: Perhaps you didn't notice that they are given on the assumption that the things they name are moving, flowing, and coming into being.

Hermogenes: No, I didn't think of that at all.

Socrates: Well, to begin with, the first name we mentioned is undoubt- d
edly like this.

Hermogenes: What name was that?

Socrates: 'Wisdom' ('*phronēsis*'). Wisdom is the understanding of motion (*phoras noēsis*) and flow. Or it might be interpreted as taking delight in motion (*phoras onēsis*). In either case, it has to do with motion. If you want another example, the name 'judgment' ('*gnōmē*') expresses the fact that to judge is to examine or study whatever is begotten (*gonēs nōmēsis*); for 'studying' ('*nōman*') and 'examining' ('*skopein*') are the same. And if you want yet another example, understanding (*noēsis*) itself is the longing for the new (*neou hesis*). But to say that the things that are are new is to signify that they are always coming into being. And such things are what the soul
longs for, as the giver of the name, '*neoesis*' expressed, for the ancient name e
wasn't '*noēsis*' but '*noesis*', but an '*ē*' took the place of the double '*e*'. Moderation (*sōphrosunē*) is the saviour (*sōteria*) of the wisdom (*phronēsis*)
we just looked at. 'Knowledge' ('*epistēmē*') indicates that a worthwhile soul 412
follows (*hepetai*) the movement of things, neither falling behind nor running

39. The skin of the Nemean lion worn by Heracles.

on ahead. So we ought to insert an *'e'* in the name and spell it *'hepeïstēmē'*.
Comprehension (*sunesis*), in turn, seems to be a kind of summing up
(*sullogismos*), and whenever one says 'comprehends' (*'sunienai'*), it's exactly
as if one has said 'knows' (*'epistasthai'*), for *'sunienai'* (literally, 'goes along
b with') means that the soul 'journeys together' with things. As for 'wisdom'
(*'sophia'*), it signifies the grasp of motion. But it is rather obscure and
non-Attic. Nonetheless, we must remember that the poets often say of
something that begins to advance quickly that it "rushed" (*"esuthē"*). In-
deed, there was a famous Spartan man named *'Sous'*, for this is what the
Spartans call a rapid advance. 'Wisdom' signifies the grasping (*epaphē*) of
this motion, on the assumption that the things that are are moving. The
c name 'good' (*'agathon'*) is intended to signify everything in nature that is
admirable (*agaston*). The things that are are moving, but some are moving
quickly, others slowly. So what moves quickly is not all there is, but the
admirable part of it. Hence this name *'tagathon'* ('the good') is applied to
what is admirable (*agaston*) about the fast (*thoon*).

It's easy to figure out that 'justice' (*'dikaiosunē'*) is the name given to the
comprehension of the just (*dikaiou sunesis*), but the just itself is hard to
understand. It seems that many people agree with one another about it
d up to a point, but beyond that they disagree. Those who think that the
universe is in motion believe that most of it is of such a kind as to do
nothing but give way, but that something penetrates all of it and generates
everything that comes into being. This, they say, is the fastest and smallest
thing of all; for if it were not the smallest, so that nothing could keep it
out, or not the fastest, so that it could treat all other things as though
they were standing still, it wouldn't be able to travel through everything.
However, since it is governor and penetrator (*diaïon*) of everything else,
e it is rightly called 'just' (*'dikaïon'*)—the *'k'*-sound is added for the sake of
euphony. As I was saying before, many people agree about the just up to
413 this point. As for myself, Hermogenes, because I persisted at it, I learned
all about the matter in secret—that this is the just and the cause, since that
through which (*di' ho*) a thing comes to be is the cause. Indeed, someone
told me that it is correct to call this *'Dia'* ('Zeus') for that reason. Even
when I'd heard this, however, I persisted in gently asking, "If all this is
true, my friend, what actually *is* the just?" Thereupon, they think I am
b asking too many questions and demanding the impossible, and they tell
me that I have already learned enough. Then they try to satisfy me by
having each tell me his own view. But they disagree with each other. One
says that the just is the sun, since only the sun governs all of the things
that are, penetrating (*diaïōn*) and burning (*kaōn*) them. Well-satisfied, I tell
this fine answer to one of the others, but he ridicules me by asking if I
think nothing just ever happens in human affairs once the sun has set. So
c I persist, and ask him to tell me what *he* thinks the just is, and he says
that it is fire (*to pur*)—but that isn't easy to understand. Another says that
it isn't fire, but the heat itself that is in fire. Another says that all these
explanations are ridiculous, and that the just is what Anaxagoras talks

about, namely, mind; for he says that mind is self-ruling, mixes with nothing else, orders the things that are, and travels through everything.[40] Thereupon, my friend, I am even more perplexed than when I set out to learn what the just is. However, the goal of our investigation was the *name* d
'just', and it seems to have been given for the reasons we mentioned.

HERMOGENES: I think you really must have heard this from someone, Socrates, rather than making it up as you went along.

SOCRATES: What about the other explanations I've mentioned?

HERMOGENES: I certainly don't think you heard those.

SOCRATES: Listen, then, and perhaps I'll be able to deceive you into thinking that I haven't heard the remaining ones either. After justice what's left? I don't think we've discussed courage—but it's clear that injustice (*adikia*) is really nothing more than a hindering of that which penetrates (*diaïōn*). 'Courage' ('*andreia*') signifies that this virtue was given its name e
in battle. And if indeed the things that are are flowing, then a battle cannot be anything but an opposing flow. If we remove the '*d*' from '*andreia*' to get '*anreia*' ('flowing back'), the name itself indicates this fact. Of course, it is clear that courage doesn't oppose every flow, but only the one that is contrary to justice; otherwise, courage wouldn't be praiseworthy. Similarly, 414
'male' ('*arren*') and 'man' ('*anēr*') indicate upward flow (*anō rhoē*). It seems to me that '*gunē*' ('woman') wants to be '*gonē*' ('womb'), that '*thēlus*' ('female') comes from '*thēlē*' ('nipple'), and that a nipple (*thēlē*) is so-called, Hermogenes, because it makes things flourish (*tethēlenai*) in just the way that watering makes plants flourish.

HERMOGENES: Probably so, Socrates.

SOCRATES: Yes, '*thallein*' itself seems to me to be like the sudden and rapid growth of the young, for the name-giver has imitated something like this in the name, which he put together from '*thein*' ('to run') and b
'*hallesthai*' ('to jump'). Notice how I go off course, when I get on the flat. But there are still plenty of names left that seem important.

HERMOGENES: That's true.

SOCRATES: And one of them is to see what the name '*technē*' ('craft') means.

HERMOGENES: Certainly.

SOCRATES: If you remove the '*t*' and insert an '*o*' between the '*ch*' and the '*n*' and the '*n*' and the '*ē*',[41] doesn't it signify the possession of understanding (*hexis nou*)? c

HERMOGENES: Yes, Socrates, but getting it to do so is like trying to haul a boat up a very sticky ramp!

SOCRATES: But then you know, Hermogenes, that the first names given to things have long since been covered over by those who wanted to dress them up, and that letters were added or subtracted to make them sound good in the mouth, resulting in distortions and ornamentation of every

40. Frg. 12 (Diels-Kranz).

41. Resulting in '*echonoē*'.

kind. You know, too, that time has had a share in this process. Take '*katoptron* ('mirror'), for example, don't you think that the '*r*' is an absurd addition?[42] In my view, this sort of thing is the work of people who think
d nothing of the truth, but only of the sounds their mouths make. Hence, they keep embellishing the first names, until finally a name is reached that no human being can understand. One example, among many others, is that they call the Sphinx by that name instead of '*Phix*'.[43]

HERMOGENES: That's right, Socrates.

SOCRATES: And yet, if we can add whatever we like to names, or subtract whatever we like from them, it will be far too easy to fit any name to
e any thing.

HERMOGENES: That's true.

SOCRATES: Yes, it is true. So, I think a wise supervisor,[44] like yourself, will have to keep a close watch, to preserve balance and probability.

HERMOGENES: That's what I want to do.

SOCRATES: And I want to do it along with you, Hermogenes, but don't
415 demand too much precision, in case

*You enfeeble my strength.*[45]

Now that '*technē*' is out of the way, I'm about to come to the summit of our inquiries. But first I'll investigate '*mēchanē*' ('device'). It seems to me that '*mēchanē*' signifies great accomplishment (*anein epi polu*); for '*mēkos*' signifies some sort of greatness, and these two, '*mēkos*' and '*anein*' make up the name '*mēchanē*'. But, as I was saying just now, we must go on to the summit of our inquiries, and investigate the names '*aretē*' ('virtue')
b and '*kakia*' ('vice'). I don't yet understand the first of them, but the other seems clear enough, since it is in harmony with everything we said before. To the degree that things are in motion, all that is moving badly (*kakōs ion*) should be called '*kakia*', but the name for all such things is mostly given to a soul in which this bad movement in relation to things resides. It seems to me that the name '*deilia*' ('cowardice'), which we haven't discussed, expresses what this bad movement is.—We ought to have discussed
c '*deilia*' after '*andreia*' ('courage'), but we passed it by, as I believe we have passed by lots of other names.—Now, '*deilia*' signifies the soul's being bound with a strong shackle (*desmos*), for *lian* (too much) is a degree of strength. Therefore, '*deilia*' signifies the strongest of the soul's shackles.

42. Because it interrupts the sequence '*opto*', suggesting a verb for seeing.

43. Hesiod uses the latter form of the name at *Theogony* 326. Popular etymology inappropriately connects '*Sphinx*' with a verb meaning 'to torture'. '*Phix*', the Boeotian form of the word, connects it more appropriately with Mount Phikion in Boeotia, because of the special association of the Sphinx with Thebes.

44. See 390b ff.

45. *Iliad* vi.265.

*Aporia* (perplexity, inability to move on) is a vice of the same sort, and so, it seems, is everything else that hinders movement and motion. This makes it clear that the bad movement in question is a restrained or hindered motion, whose possession by a soul causes it to become filled with vice. And, if *'kakia'* is the name of that sort of thing, *'aretē'* is the opposite. It signifies, first, lack of perplexity (*euporia*, ease of movement), and, second,
that the flow of a good soul is always unimpeded; for it seems that it is d
given this name *'aretē'* because it is unrestrained and unhindered and so is always flowing (*aei rheon*). Thus it is correct to call it *'aeirheitē'*, but this has been contracted, and it is called *'aretē'*. Now, maybe you'll say that I'm inventing things again, but I think that if what I just said about *'kakia'*
is correct, then so is what I said about the name *'aretē'*. e

Hermogenes: What about *'kakon'* ('bad'), which has been involved in
many of the previous inquiries? What's the meaning of it? 416

Socrates: It's a strange word, by god! At least, that's what I think. And one that's hard to interpret. So I'll use the device I introduced earlier on it as well.

Hermogenes: Which one?

Socrates: That of attributing a foreign origin to it.[46]

Hermogenes: And you may well be correct. So suppose we leave these inquiries, and try to see what rationale there is for *'kalon'* ('fine', 'beautiful') and *'aischron'* ('disgraceful', 'ugly').

Socrates: The meaning of *'aischron'* seems clear to me, and it is also in
harmony with what we said before. It seems to me that the giver of names b
reviles everything that hinders or restrains the flowing of the things that are. In particular, he gave this name *'aeischoroun'* to what always restrains their flowing (*aei ischei ton rhoun*). But nowadays it is contracted and pronounced *'aischron'*.

Hermogenes: What about *'kalon'*?

Socrates: It's harder to understand. Indeed, it is pronounced like this only because it sounds harmonious to shorten the *'ou'* to *'o'*.

Hermogenes: How so?

Socrates: In my view, this name derives from a sort of thought (*dianoia*).

Hermogenes: What do you mean?

Socrates: Tell me. What caused each of the things that are to be called c
by a name? Isn't it whatever gave them their names?

Hermogenes: Certainly.

Socrates: And wasn't it thought—whether divine or human or both—that did this?

Hermogenes: Yes.

Socrates: And isn't what originally named them the same as what names (*kaloun*) them now, that is to say, thought?

Hermogenes: Evidently.

46. See 409d.

SOCRATES: Aren't all the works performed by thought and understanding praiseworthy, while those that aren't are blameworthy?

HERMOGENES: Certainly.

SOCRATES: Now, medicine performs medical works and carpentry per-
d forms works of carpentry? Do you agree?

HERMOGENES: I do.

SOCRATES: And to name things (*kaloun*) is to perform beautiful (*kalon*) works?

HERMOGENES: Necessarily.

SOCRATES: And we say that it is thought that does this?

HERMOGENES: Certainly.

SOCRATES: Therefore wisdom (*phronēsis*) is correctly given the name '*kalon*' ('beautiful'), since it performs the works that we say are beautiful and welcome as such.

HERMOGENES: Evidently.

e SOCRATES: What other such names still remain for us to examine?

HERMOGENES: Those related to the good and the beautiful, such as '*sum-pheron*' ('advantageous'), '*lusiteloun*' ('profitable'), '*ōphelimon*' ('beneficial'),
417 '*kerdaleon*' ('gainful'), and their opposites.

SOCRATES: In light of the previous investigations, you should now be able to explain '*sumpheron*' ('advantageous') for yourself, since it is obviously a close relative of '*epistēmē*' ('knowledge'). It expresses the fact that what is advantageous is nothing other than the movement (*phora*) of a soul in accord with the movement of things.[47] The things that are done as a result of this movement are probably called '*sumphora*' or '*sumpheronta*' because they are being moved in harmony with things (*sumperipheresthai*). But '*kerdaleon*' ('gainful') derives from '*kerdos*' ('gain'). If you replace the '*d*' in
b '*kerdos*' with a '*n*', the name expresses its meaning clearly; it names the good, but in another way. Because the good penetrates everything, it has the power to regulate (*kerannutai*) everything, and the one who gave it its name named it after this power. But he put a '*d*' instead of the '*n*' and pronounced it '*kerdos*'.

HERMOGENES: What about '*lusiteloun*' ('profitable')?

SOCRATES: I don't think, Hermogenes, that he uses the name '*lusiteloun*' to mean the profit that releases (*apoluei*) a capital sum for reinvestment, which is what retailers use it to mean. The namer-giver calls the good by
c that name because it is the fastest of the things that are, it doesn't allow things to remain at rest, or permit their motion to stop, pause, or reach an end. Instead, it always does away with (*luei*) any attempt to let motion end, making it unceasing and immortal. In my view, it is for this reason that the good is said to be '*lusiteloun*', because it does away with (*luon*) any end (*telos*) to motion. '*Ōphelimon*' ('beneficial') is a non-Attic name. Homer often uses it in the form '*ophellein*', which derives from '*auxein*' ('to increase') and '*poiein*' ('to make').
d HERMOGENES: And what are we to say about their opposites?

47. See 412a ff.

SOCRATES: Those that are mere negations don't need any discussion, in my view.

HERMOGENES: Which ones are they?

SOCRATES: '*Asumpheron*' ('disadvantageous'), '*anōpheles*' ('nonbeneficial'), '*alusiteles*' ('unprofitable'), and '*akerdes*' ('non-gainful').

HERMOGENES: It's true, they don't need discussion.

SOCRATES: But '*blaberon*' ('harmful') and '*zēmiōdes*' ('hurtful') do.

HERMOGENES: Yes.

SOCRATES: '*Blaberon*' ('harmful') means that which is harming (*blapton*)
the flow (*rhoun*). '*Blapton*', in turn, signifies wanting to grasp (*boulomenon* e
*haptein*). But grasping is the same as shackling, and the name-giver always finds fault with that. Now what wants to grasp the flow (*to boulomenon haptein rhoun*) would be most correctly called '*boulapteroun*', but this has been beautified, as it seems to me, and so it is called '*blaberon*'.

HERMOGENES: What intricate names you come up with, Socrates! When you uttered the name '*boulapteroun*' just now, you looked just as if you
were whistling the flute-prelude of the Hymn to Athena! 418

SOCRATES: I'm not responsible for them, Hermogenes; the name-givers are.

HERMOGENES: That's true. But what about '*zēmiōdes*' ('hurtful')? What does it mean?

SOCRATES: What does '*zēmiōdes*' mean? See how right I was to say, Hermogenes, that people make huge changes in the meaning of names by adding or subtracting letters, and how even a very slight alteration of this sort can make a name signify the opposite of what it used to signify. '*Deon*'
('obligation') is an example that has just occurred to me, and it reminds b
me of what I was about to say to you about '*zēmiōdes*'. Our fine modern language has obliterated the true meaning of these names by so twisting them around that they now mean the opposite of what they used to, whereas the ancient language expresses clearly what they mean.

HERMOGENES: What do you mean?

SOCRATES: I'll tell you. You know that our ancestors made great use of '*i*' and '*d*' (especially the women, who are the best preservers of the ancient
language). But nowadays people change '*i*' to '*ē*' or '*e*', which are supposed c
to sound more grandiose.

HERMOGENES: They do?

SOCRATES: Yes. For example, people now call the day '*hēmera*', but in very ancient times they called it '*himera*' or '*hemera*'.

HERMOGENES: That's true.

SOCRATES: You know then that only the ancient name expresses the name-giver's meaning clearly? People welcome the daylight that comes out of
the darkness and long for (*himeirousin*) it, and that's why they named d
it '*himera*'.

HERMOGENES: Evidently.

SOCRATES: But nowadays the name is so dressed up that no one can understand what it means. Although there are some who think the day is called '*hēmera*' because it makes things gentle (*hēmera*).

Hermogenes: So it seems.

Socrates: Do you also know that the ancients called a yoke *'duogon'* not *'zugon'*?

Hermogenes: Of course.

Socrates: Now, *'zugon'* expresses nothing clearly, but the name *'duogon'*,
on the other hand, is quite rightly given to whatever binds two animals
e together so that they can pull a plough or cart (*duoin agōgēn*). Nonetheless,
nowadays *'zugon'* it is. And there are plenty of other examples.

Hermogenes: Evidently.

Socrates: Similarly, *'deon'* ('obligation'), when pronounced in this way, seems at first to signify the opposite of all the other names for the good. After all, even though an obligation is a kind of good, *'deon'* plainly signifies a shackle (*desmos*) and obstacle to motion, and so is closely akin to *'blaberon'* ('harmful').

Hermogenes: Yes, Socrates, it does plainly signify that.

Socrates: But not if you use the ancient name, which is much more
likely to have been correctly given than the present one. If you replace
419 the *'e'* with an *'i'*, as in the ancient name, it agrees with the earlier names
of good things—for *'dion'* ('passing through'), not *'deon'*, signifies a good,
and is a term of praise. So the name-giver didn't contradict himself, and
*'deon'* ('obligation') is plainly the same as *'ōphelimon'* ('beneficial'), *'lusite-
loun'* ('profitable'), *'kerdaleon'* ('gainful'), *'agathon'* ('good'), *'sumpheron'* ('ad-
vantageous'), and *'euporon'* ('lack of perplexity'), which are different names
signifying what orders and moves. This is always praised, while what
b restrains and shackles is found fault with. Likewise, in the case of *'zēmiōdes'*
('hurtful'), if you replace the *'z'* with a *'d'*, as in the ancient language, it
will be plain to you that the name was given to what shackles motion
(*doun to ion*), since *'dēmiōdes'* derives from that.

Hermogenes: What about *'hēdonē'* ('pleasure'), *'lupē'* ('pain'), and *'epithumia'* ('appetite'), Socrates, and others like them?

Socrates: I don't think there is any great difficulty about them, Hermo-
genes. *Hēdonē* (pleasure) seems to have been given its name because it is
an activity that tends towards enjoyment (*hē onēsis*), but a *'d'* has been
inserted and we call it *'hēdonē'* instead of *'hēonē'*. *'Lupē'* ('pain') seems to
c derive from the weakening (*dialusis*) the body suffers when in pain. *'Ania'*
('sorrow') signifies what hinders (*hienai*) motion. *'Algēdōn'* ('distress') seems
to me to be a foreign name deriving from *'algeinos'* ('distressing'). *'Odunē'*
('grief') seems to be named after the entering in (*endusis*) of pain. It is clear
to everyone that pronouncing the name *'achthēdōn'* ('affliction') is like
giving motion a burden (*achthos*) to carry. *Chara* (joy) seems to have been
so called because it is an outpouring (*diachusis*) or good movement of the
soul's flow (*rhoē*). *'Terpsis'* ('delight') comes from *'terpnon'* ('delightful'),
d which, in turn, comes from that which glides (*herpsis*) through the soul
like a breath (*pnoē*). By rights it is called *'herpnoun'*, but over time its
name has been changed to *'terpnon'*. *Euphrosunē* (lightheartedness) needs
no explanation, since it is clear to everyone that it derives its name from

the movement of the soul that well accords (*eu sumpheresthai*) with that of
things. By rights it is called *'eupherosunē'*, but we call it *'euphrosunē'*. Nor
is there any difficulty about *epithumia* ('appetite'), for it is clear that its
name derives from the power that opposes the spirited part of the soul
(*epi ton thumon iousa*), while *'thumos'* ('spirit', 'anger') derives from the e
raging (*thusis*) and boiling of the soul. The name *'himeros'* ('desire') derives
from what most drives the soul's flow. It flows with a rush (*hiemenos rhei*)
and sets on (*ephiemenos*) things, thus violently dragging the soul because 420
of the rush of its flow. And so, because it has all this power, it is called
*'himeros'*. *'Pothos'* ('longing'), on the other hand, signifies that it isn't a
desire (or flow) for what is present but for what is elsewhere (*pou*) or
absent. So, when its object is absent, it is given the name *'pothos'*, and,
when its object is present, it is called *'himeros'*. *Erōs* (erotic love) is so called
because it flows in from outside, that is to say, the flow doesn't belong to
the person who has it, but is introduced into him through his eyes. Because b
of this it was called *'esros'* ('influx') in ancient times, when they used *'o'*
for *'ō'*, but now that *'o'* is changed to *'ō'*, it is called *'erōs'*. So, what other
names do you think are left for us to examine?

HERMOGENES: What do you think about *'doxa'* ('opinion') and the like?

SOCRATES: *'Doxa'* ('opinion) either derives from the pursuit (*diōxis*) the
soul engages in when it hunts for the knowledge of how things are, or it
derives from the shooting of a bow (*toxon*). But the latter is more likely.
At any rate, *'oiēsis'* ('thinking') is in harmony with it. It seems to express c
the fact that thinking is the motion (*oisis*) of the soul towards every thing,
towards how each of the things that are really is. In the same way, *'boulē'*
('planning') has to do with trying to hit (*bolē*) some target, and *'boulesthai'*
('wishing') and *'bouleuesthai'* ('deliberating') signify aiming at something
(*ephiesthai*). All these names seem to go along with *'doxa'* in that they're
all like *'bolē'*, like trying to hit some target. Similarly, the opposite, *'aboulia'*
('lack of planning'), seems to signify a failure to get something (*atuchia*),
as when someone fails to hit or get what he shot at, wished for, planned,
or desired.

HERMOGENES: The pace of investigating seems to be quickening, Socrates! d

SOCRATES: That's because I'm coming to the finishing post! But I still
want to investigate *'anankē'* ('compulsion') and *'hekousion'* ('voluntary'),
since they're next. The name *'hekousion'* expresses the fact that it signifies
yielding and not resisting, but yielding, as I said before, to the motion
(*eikon tōi ionti*)—the one that comes into being in accord with our wish.
*'Anankaion'* ('compulsory') and *'antitupnon'* ('resistant'), on the other hand,
since they signify motion contrary to our wish, are associated with 'error'
and 'ignorance'. Indeed, saying *'anankaion'* is like trying to get through a
ravine (*ankē*), for ravines restrain motion, since they are rough-going, filled
with bushes, and hard to get through. It's probably for this reason that e
we use *'anankaion'* in the way we do—because saying it is like trying to
get through a ravine. Nonetheless, while my strength lasts, let's not stop
using it. Don't you stop, either, but keep asking your questions.

421 HERMOGENES: Well, then, let me ask about the finest and most important names, *'alētheia'* ('truth'), *'pseudos'* ('falsehood'), *'on'* ('being'), and—the subject of our present conversation—*'onoma'* ('name'), and why it is so named.

SOCRATES: Do you know what *'maiesthai'* means?

HERMOGENES: Yes, it means 'to search' (*'zētein'*).

SOCRATES: Well, *'onoma'* ('name') seems to be a compressed statement which says: "this is a being for which there is a search." You can see this more easily in *'onomaston'* ('thing named'), since it clearly says: "this is a being for which there is a search (*on hou masma estin*)." *'Alētheia'* ('truth')
b is like these others in being compressed, for the divine motion of being is called *'alētheia'* because *'alētheia'* is a compressed form of the phrase "a wandering that is divine (*alē theia*)." *'Pseudos'* ('falsehood') is the opposite of this motion, so that, once again, what is restrained or compelled to be inactive is reviled by the name-giver, and likened to people asleep (*katheudousi*)—but the meaning of the name is concealed by the addition of *'ps'*. *'On'* ('being') or *'ousia'* ('being') says the same as *'alētheia'* once an *'i'* is added, since it signifies going (*ion*). *'Ouk on'* ('not being'), in turn, is
c *'ouk ion'* ('not going'), and indeed some people actually use that name for it.

HERMOGENES: I think you've hammered these into shape manfully, Socrates. But suppose someone were to ask you about the correctness of the names *'ion'* ('going'), *'rheon'* ('flowing'), and *'doun'* ('shackling') . . .

SOCRATES: "How should we answer him?" Is that what you were going to say?

HERMOGENES: Yes, exactly.

SOCRATES: One way of giving the semblance of an answer has been suggested already.[48]

HERMOGENES: What way is that?

SOCRATES: To say that a name has a foreign origin when we don't know what it signifies. Now, it may well be true that some of these names are
d foreign, but it is also possible that the basic or 'first' names are Greek, but not recoverable because they are so old. Names have been twisted in so many ways, indeed, that it wouldn't be surprising if the ancient Greek word was the same as the modern foreign one.

HERMOGENES: At any rate, it wouldn't be at all inappropriate for you to respond that way.

SOCRATES: No, it probably wouldn't. Nevertheless, it seems to me that "once we're in the competition, we're allowed no excuses,"[49] but must investigate these names vigorously. We should remember this, however: if someone asks about the terms from which a name is formed, and then
e about the ones from which those terms are formed, and keeps on doing this indefinitely, the answerer must finally give up. Mustn't he?

48. See 409d, 416a.

49. A proverbial expression. See *Laws* 751d.

Hermogenes: That's my view, at any rate.

Socrates: At what point would he be right to stop? Wouldn't it be when 422
he reaches the names that are as it were the elements of all the other statements and names? For, if these are indeed elements, it cannot be right to suppose that *they* are composed out of other names. Consider '*agathos*' ('good'), for example; we said it is composed out of '*agaston*' ('admirable') and '*thoon*' ('fast').[50] And probably '*thoon*' is composed out of other names, and those out of still other ones. But if we ever get hold of a name that
isn't composed out of other names, we'll be right to say that at last we've b
reached an element, which cannot any longer be carried back to other names.

Hermogenes: That seems right to me, at least.

Socrates: And if the names you're asking about now turn out to be elements, won't we have to investigate their correctness in a different manner from the one we've been using so far?

Hermogenes: Probably so.

Socrates: It is certainly probable, Hermogenes. At any rate, it's obvious that all the earlier ones were resolved into these. So, if they are indeed
elements, as they seem to me to be, join me again in investigating them, c
to ensure that I don't talk nonsense about the correctness of the first names.

Hermogenes: You have only to speak, and I will join in the investigation so far as I'm able.

Socrates: I think you agree with me that there is only one kind of correctness in all names, primary as well as derivative, and that considered simply as names there is no difference between them.

Hermogenes: Certainly.

Socrates: Now, the correctness of every name we analyzed was intended d
to consist in its expressing the nature of one of the things that are.

Hermogenes: Of course.

Socrates: And this is no less true of primary names than derivative ones, if indeed they are names.

Hermogenes: Certainly.

Socrates: But it seems that the derivative ones were able to accomplish this by means of the primary ones.

Hermogenes: Apparently.

Socrates: And if the primary names are indeed names, they must make the things that are as clear as possible to us. But how can they do this
when they aren't based on other names? Answer me this: If we hadn't a e
voice or a tongue, and wanted to express things to one another, wouldn't we try to make signs by moving our hands, head, and the rest of our body, just as dumb people do at present?

Hermogenes: What other choice would we have, Socrates?

Socrates: So, if we wanted to express something light in weight or above
us, I think we'd raise our hand towards the sky in imitation of the very 423

50. See 412b–c.

nature of the thing. And if we wanted to express something heavy or below us, we'd move our hand towards the earth. And if we wanted to express a horse (or any other animal) galloping, you know that we'd make our bodies and our gestures as much like theirs as possible.

HERMOGENES: I think we'd have to.

SOCRATES: Because the only way to express anything by means of our
b body is to have our body imitate whatever we want to express.

HERMOGENES: Yes.

SOCRATES: So, if we want to express a particular fact by using our voice, tongue, and mouth, we will succeed in doing so, if we succeed in imitating it by means of them?

HERMOGENES: That must be right, I think.

SOCRATES: It seems to follow that a name is a vocal imitation of what it imitates, and that someone who imitates something with his voice names what he imitates.

HERMOGENES: I think so.

c SOCRATES: Well, *I* don't. I don't think this is a fine thing to say at all.

HERMOGENES: Why not?

SOCRATES: Because then we'd have to agree that those who imitate sheep, cocks, or other animals are naming the things they imitate.

HERMOGENES: That's true, we would.

SOCRATES: And do you think that's a fine conclusion?

HERMOGENES: No, I don't. But then what sort of imitation is a name, Socrates?

SOCRATES: In the first place, if we imitate things the way we imitate them
d in music, we won't be naming them, not even if the imitation in question is vocal. And the same holds if we imitate the things music imitates. What I mean is this: each thing has a sound and a shape, and many of them have a color. Don't they?

HERMOGENES: Certainly.

SOCRATES: It doesn't seem to be the craft of naming that's concerned with imitating these qualities, however, but rather the crafts of music and painting. Isn't that so?

HERMOGENES: Yes.

e SOCRATES: And what about this? Don't you think that just as each thing has a color or some of those other qualities we mentioned, it also has a being or essence? Indeed, don't color and sound each have a being or essence, just like every other thing that we say "is"?

HERMOGENES: Yes, I think they do.

SOCRATES: So if someone were able to imitate in letters and syllables this being or essence that each thing has, wouldn't he express what each thing itself is?

424 HERMOGENES: He certainly would.

SOCRATES: And if you were to identify the person who is able to do this, in just the way that you said the first was a musician and the second a painter, what would you say he is?

Hermogenes: I think he's the namer, Socrates, the one we've been looking for from the beginning.

Socrates: If that's true, doesn't it seem that we are now in a position to investigate each of the names you were asking about—'*rhoē*' ('flowing'), '*ienai*' ('going'), and '*schesis*' ('restraining')—to see whether or not he has grasped the being or essence of each of the things they signify by imitating
its being or essence in the letters and syllables of its name. Isn't that so? b

Hermogenes: Certainly.

Socrates: Come, then, let's see if these are the only primary names or if there are many others.

Hermogenes: For my part, I think there are others.

Socrates: Yes, there probably are. But how are we to divide off the ones with which the imitator begins his imitation? Since an imitation of a thing's being or essence is made out of letters and syllables, wouldn't it be most correct for us to divide off the letters or elements first, just as those who
set to work on speech rhythms first divide off the forces or powers of c
the letters or elements, then those of syllables, and only then investigate rhythms themselves?

Hermogenes: Yes.

Socrates: So mustn't we first divide off the vowels and then the others in accordance with their differences in kind, that is to say, the "consonants" and "mutes" (as I take it they're called by specialists in these matters) and the semivowels, which are neither vowels nor mutes? And, as to the vowels themselves, mustn't we also divide off those that differ in kind from one another? Then when we've also well divided off the things that are—the
things to which we have to give names—if there are some things to which d
they can all be carried back, as names are to the letters, and from which we can see that they derive, and if different kinds of being are found among them, in just the way that there are among the letters—once we've done all this well, we'll know how to apply each letter to what it resembles, whether one letter or a combination of many is to be applied to one thing. It's just the same as it is with painters. When they want to produce a
resemblance, they sometimes use only purple, sometimes another color, e
and sometimes—for example, when they want to paint human flesh or something of that sort—they mix many colors, employing the particular color, I suppose, that their particular subject demands. Similarly, we'll apply letters to things, using one letter for one thing, when that's what seems to be required, or many letters together, to form what's called a
syllable, or many syllables combined to form names and verbs. From 425
names and verbs, in turn, we shall finally construct something important, beautiful, and whole. And just as the painter painted an animal, so—by means of the craft of naming or rhetoric or whatever it is—we shall construct sentences. Of course, I don't really mean *we ourselves*—I was carried away by the discussion. It was *the ancients* who combined things in this way. Our job—if indeed we are to examine all these things with scientific knowledge—is to divide where they put together, so as to see whether or

b not both the primary and derivative names are given in accord with nature. For, any other way of connecting names to things, Hermogenes, is inferior and unsystematic.

HERMOGENES: By god, Socrates, it probably is.

SOCRATES: Well, then, do you think you could divide them in that way? I don't think I could.

HERMOGENES: Then it's even less likely that I could.

SOCRATES: Shall we give up then? Or do you want us to do what we can, and try to see a little of what these names are like? Aren't we in a
c similar situation to the one we were in a while ago with the gods?[51] We prefaced that discussion by saying that we were wholly ignorant of the truth, and were merely describing human beliefs about the gods. So, shouldn't we now say this to ourselves before we proceed: If anyone, whether ourselves or someone else, divides names properly, he will divide them in the way we have just described, but, given our present situation, we must follow the proverb and "do the best we can" to work at them? Do you agree or not?

HERMOGENES: Of course, I agree completely.

d SOCRATES: Perhaps it will seem absurd, Hermogenes, to think that things become clear by being imitated in letters and syllables, but it is absolutely unavoidable. For we have nothing better on which to base the truth of primary names. Unless you want us to behave like tragic poets, who introduce a *deus ex machina* whenever they're perplexed. For we, too, could escape our difficulties by saying that the primary names are correct because they were given by the gods. But is that the best account we can give? Or
e is it this one: that we got them from foreigners, who are more ancient than we are? Or this: that just as it is impossible to investigate foreign names, so it is impossible to investigate the primary ones because they are too
426 ancient? Aren't all these merely the clever excuses of people who have no account to offer of how primary names are correctly given? And yet regardless of what kind of excuse one offers, if one doesn't know about the correctness of primary names, one cannot know about the correctness of derivative ones, which can only express something by means of those others about which one knows nothing. Clearly, then, anyone who claims to have a scientific understanding of derivative names must first and
b foremost be able to explain the primary ones with perfect clarity. Otherwise he can be certain that what he says about the others will be worthless. Or do you disagree?

HERMOGENES: No, Socrates, not in the least.

SOCRATES: Well, my impressions about primary names seem to me to be entirely outrageous and absurd. Nonetheless, I'll share them with you, if you like. But if you have something better to offer, I hope you'll share it with me.

HERMOGENES: Have no fear, I will.

c SOCRATES: First off, '*r*' seems to me to be a tool for copying every sort of motion (*kinēsis*).—We haven't said why motion has this name, but it's

51. See 401a.

clear that it means '*hesis*' ('a going forth'), since in ancient times we used '*e*' in place of '*ē*'. The first part comes from '*kiein*', a non-Attic name equivalent to '*ienai*' ('moving'). So if you wanted to find an ancient name corresponding to the present '*kinēsis*', the correct answer would be '*hesis*'. But nowadays, what with the non-Attic word '*kiein*', the change from '*e*' to '*ē*', and the insertion of '*n*', we say '*kinēsis*', though it ought to be '*kieinēsis*'. '*Stasis*' ('rest') is a beautified version of a name meaning the d
opposite of '*ienai*' ('moving').—In any case, as I was saying, the letter '*r*' seemed to the name-giver to be a beautiful tool for copying motion, at any rate he often uses it for this purpose. He first uses this letter to imitate motion in the name '*rhein*' ('flowing') and '*rhoē*' ('flow") themselves. Then in '*tromos*' ('trembling') and '*trechein*' ('running'), and in such verbs as e
'*krouein*' ('striking'), '*thrauein*' ('crushing'), '*ereikein*' ('rending'), '*thruptein*' ('breaking'), '*kermatizein*' ('crumbling'), '*rhumbein*' ('whirling'), it is mostly '*r*' he uses to imitate these motions. He saw, I suppose, that the tongue was most agitated and least at rest in pronouncing this letter, and that's probably why he used it in these names. He uses '*i*', in turn, to imitate all the small things that can most easily penetrate everything. Hence, in '*ienai*' 427
('moving') and '*hiesthai*' ('hastening'), he uses '*i*' to do the imitating. Similarly, he uses '*phi*', '*psi*', '*s*', and '*z*' to do the imitating in such names as '*psuchron*' ('chilling'), '*zeon*' ('seething'), '*seiesthai*' ('shaking'), and '*seismos*' ('quaking'), because all these letters are pronounced with an expulsion of breath. Indeed, whenever the name-giver wants to imitate some sort of blowing or hard breathing (*phusōdes*), he almost always seems to employ them. He also seems to have thought that the compression and stopping of the power of the tongue involved in pronouncing '*d*' and '*t*' made such b
names as '*desmos*' ('shackling') and '*stasis*' ('rest') appropriately imitative. And because he observed that the tongue glides most of all in pronouncing '*l*', he uses it to produce a resemblance in '*olisthanein*' ('glide') itself, and in such names as '*leion*' ('smooth'), '*liparon*' ('sleek'), '*kollōdes*' ('viscous'), and the like. But when he wants to imitate something cloying, he uses names, such as '*glischron*' ('gluey'), '*gluku*' ('sweet'), and '*gloiōdes*' ('clammy'), in which the gliding of the tongue is stopped by the power of the '*g*'. And because he saw that '*n*' is sounded inwardly, he used it in '*endon*' ('within') and '*entos*' ('inside'), in order to make the letters copy c
the things. He put an '*a*' in '*mega*' ('large') and an '*ē*' in '*mēkos*' ('length') because these letters are both pronounced long. He wanted '*o*' to signify roundness, so he mixed lots of it into the name '*gongulon*' ('round'). In the same way, the rule-setter apparently used the other letters or elements as likenesses in order to make a sign or name for each of the things that are, and then compounded all the remaining names out of these, imitating the things they name. That, Hermogenes, is my view of what it means to say that names are correct—unless, of course, Cratylus disagrees. d

HERMOGENES: Well, Socrates, as I said at the beginning, Cratylus confuses me a lot of the time. He *says* that there is such a thing as the correctness of names, but he never explains clearly what it is. Consequently, I'm never able to determine whether his lack of clarity is intentional or unintentional.

e So tell me now, Cratylus, here in the presence of Socrates, do you agree with what he has been saying about names, or do you have something better to say? If you have, tell it to us, and either you'll learn about your errors from Socrates or become our teacher.

CRATYLUS: But, Hermogenes, do you really think that any subject can be taught or learned so quickly, not to mention one like this, which seems to be among the most important?

428 HERMOGENES: No, by god, I don't. But I think that Hesiod is right in saying that

*If you can add even a little to a little, it's worthwhile.*[52]

So, if you can add even a little more, don't shrink from the labor, but assist Socrates—he deserves it—and assist me, too.

SOCRATES: Yes, Cratylus, please do. As far as I'm concerned, nothing I've said is set in stone. I have simply been saying what seems right to me as
a result of my investigations with Hermogenes. So, don't hesitate to speak,
b and if your views are better than mine, I'll gladly accept them. And it
wouldn't surprise me if they were better, for you've both investigated these matters for yourself and learned about them from others. So, if indeed you do happen to have something better to offer, you may sign me up as a student in your course on the correctness of names.

CRATYLUS: Yes, Socrates, I have, as you say, occupied myself with these
matters, and it's possible that you might have something to learn from
c me. But I fear the opposite is altogether more likely. So much so, indeed,
that it occurs to me to say to you what Achilles says to Ajax in the "Prayers":

*Ajax, son of Telamon, seed of Zeus, lord of the people,*
*All you have said to me seems spoken after my own mind.*[53]

The same is true of me where you're concerned, Socrates: your oracular utterances—whether inspired by Euthyphro or by some other Muse who has long inhabited your own mind without your knowing about it—seem to be pretty much spoken after *my* own mind.

d SOCRATES: But, Cratylus, *I* have long been surprised at my own wisdom—and doubtful of it, too. That's why I think it's necessary to keep re-investigating whatever I say, since self-deception is the worst thing of all. How could it not be terrible, indeed, when the deceiver never deserts you even for an instant but is always right there with you? Therefore, I think we have to turn back frequently to what we've already said, in order to test it by looking at it "backwards and forwards simultaneously," as the

52. *Works and Days*, 361.

53. *Iliad* ix.644–45.

aforementioned poet puts it.[54] So, let's now see what we *have* said. We said that the correctness of a name consists in displaying the nature of the thing it names. And is that statement satisfactory? e

CRATYLUS: In my view, Socrates, it is entirely satisfactory.

SOCRATES: So names are spoken in order to give instruction?

CRATYLUS: Certainly.

SOCRATES: Is there a craft for that and are there craftsmen who practice it?

CRATYLUS: Certainly.

SOCRATES: Who are they?

CRATYLUS: As you said at the beginning, they're the rule-setters.[55] 429

SOCRATES: Is this craft attributed to human beings in the same way as other crafts or not? What I mean is this: aren't some painters better or worse than others?

CRATYLUS: Certainly.

SOCRATES: And the better painters produce finer products or paintings, while the others produce inferior ones? Similarly with builders—some build finer houses, others build inferior ones?

CRATYLUS: Yes.

SOCRATES: What about rule-setters? Do some of them produce finer products, others inferior ones? b

CRATYLUS: No, there I no longer agree with you.

SOCRATES: So you don't think that some rules are better, others inferior?

CRATYLUS: Certainly not.

SOCRATES: Nor names either, it seems. Or do you think that some names have been better given, others worse?

CRATYLUS: Certainly not.

SOCRATES: So all names have been correctly given?

CRATYLUS: Yes, as many of them as are names at all.

SOCRATES: What about the case of Hermogenes, which we mentioned earlier? Has he not been given this name at all, unless he belongs to the family of Hermes? Or has he been given it, only not correctly? c

CRATYLUS: I think he hasn't been given it at all, Socrates. People take it to have been given to him, but it is really the name of someone else, namely, the very one who also has the nature.

SOCRATES: What about when someone says that our friend here is Hermogenes? Is he speaking falsely or is he not even managing to do that much? Is it even possible to say that he *is* Hermogenes, if he isn't?

CRATYLUS: What do you mean?

SOCRATES: That false speaking is in every way impossible, for isn't that d
what *you* are trying to say? Certainly, many people do say it nowadays, Cratylus, and many have said it in the past as well.

CRATYLUS: But, Socrates, how can anyone say the thing he says and not say something that is? Doesn't speaking falsely consist in not saying things that are?

54. *Iliad* i.343.

55. See 388d ff.

Socrates: Your argument is too subtle for me at my age. All the same, tell me this. Do you think it is possible to say something falsely, although
e not possible to speak it falsely?

Cratylus: In my view, one can neither speak nor say anything falsely.

Socrates: What about announcing something falsely or addressing someone falsely? For example, suppose you were in a foreign country and someone meeting you took your hand and said, "Greetings! Hermogenes, son of Smicrion, visitor from Athens," would he be speaking, saying, announcing, or addressing these words not to you but to Hermogenes—or to no one?

Cratylus: In my view, Socrates, he is not articulating them as he should.

Socrates: Well, that's a welcome answer. But are the words he articulates
430 true or false, or partly true and partly false? If you tell me that, I'll be satisfied.

Cratylus: For my part, I'd say he's just making noise and acting pointlessly, as if he were banging a brass pot.

Socrates: Let's see, Cratylus, if we can somehow come to terms with one another. You agree, don't you, that it's one thing to be a name and another to be the thing it names?

Cratylus: Yes, I do.

b Socrates: And you also agree that a name is an imitation of a thing?

Cratylus: Absolutely.

Socrates: And that a painting is a different sort of imitation of a thing?

Cratylus: Yes.

Socrates: Well, perhaps what you're saying is correct and I'm misunderstanding you, but can both of these imitations—both paintings and names—be assigned and applied to the things of which they are imitations, or not?

Cratylus: They can.

c Socrates: Then consider this. Can we assign a likeness of a man to a man and that of a woman to a woman, and so on?

Cratylus: Certainly.

Socrates: What about the opposite? Can we assign the likeness of a man to a woman and that of a woman to a man?

Cratylus: Yes, we can.

Socrates: And are both these assignments correct, or only the first?

Cratylus: Only the first.

Socrates: That is to say, the one that assigns to each thing the painting or name that is appropriate to it or like it?

Cratylus: That's my view, at least.

d Socrates: Since you and I are friends, we don't want to mince words, so here's what I think. I call the first kind of assignment correct, whether it's an assignment of a painting or a name, but if it's an assignment of a name, I call it both correct and *true*. And I call the other kind of assignment, the one that assigns and applies unlike imitations, incorrect, and, in the case of names, *false* as well.

CRATYLUS: But it may be, Socrates, that it's possible to assign paintings incorrectly, but not names, which must always be correctly assigned. e

SOCRATES: What do you mean? What's the difference between them? Can't I step up to a man and say "This is your portrait," while showing him what happens to be his own likeness, or what happens to be the likeness of a woman? And by "show" I mean bring before the sense of sight.

CRATYLUS: Certainly.

SOCRATES: Well, then, can't I step up to the same man a second time and say, "This is your name"? Now, a name is an imitation, just as a painting or portrait is. So, can't I say to him, "This is your name," and after that put before his sense of hearing what happens to be an imitation of himself, 431 saying "Man," or what happens to be an imitation of a female of the human species, saying "Woman"? Don't you think that all this is possible and sometimes occurs?

CRATYLUS: I'm willing to go along with you, Socrates, and say that it occurs.

SOCRATES: It's good of you to do so, Cratylus, provided you really are willing, since then we don't have to argue any further about the matter. So if some such assignments of names take place, we may call the first of b them speaking truly and the second speaking falsely. But if that is so, it is sometimes possible to assign names incorrectly, to give them not to things they fit but to things they don't fit. The same is true of verbs. But if verbs and names can be assigned in this way, the same must be true of statements, since statements are, I believe, a combination of names and verbs. What do you think, Cratylus? c

CRATYLUS: The same as you, since I think you're right.

SOCRATES: Further, primary names may be compared to paintings, and in paintings it's possible to present all the appropriate colors and shapes, or not to present them all. Some may be left out, or too many included, or those included may be too large. Isn't that so?

CRATYLUS: It is.

SOCRATES: So doesn't someone who presents all of them, present a fine painting or likeness, while someone who adds some or leaves some out, though he still produces a painting or likeness, produces a bad one?

CRATYLUS: Yes. d

SOCRATES: What about someone who imitates the being or essence of things in syllables and letters? According to this account, if he presents all the appropriate things, won't the likeness—that is to say, the name—be a fine one? But if he happens to add a little or leave a little out, though he'll still have produced an image, it won't be fine? Doesn't it follow that some names are finely made, while others are made badly?

CRATYLUS: Presumably.

SOCRATES: So presumably one person will be a good craftsman of names e and another a bad one?

CRATYLUS: Yes.

SOCRATES: And this craftsman is named a rule-setter.

Cratylus: Yes.

Socrates: By god, presumably some rule-setters are good and others bad then, especially if what we agreed to before is true, and they are just like other craftsmen.

Cratylus: That's right. But you see, Socrates, when we assign '*a*', '*b*', and each of the other letters to names by using the craft of grammar, if we add, subtract, or transpose a letter, we don't simply write the name
432 incorrectly, we don't write *it* at all, for it immediately becomes a different name, if any of those things happens.

Socrates: That's not a good way for us to look at the matter, Cratylus.

Cratylus: Why not?

Socrates: What you say may well be true of numbers, which have to be a certain number or not be at all. For example, if you add anything to the number ten or subtract anything from it, it immediately becomes a different number, and the same is true of any other number you choose. But this isn't the sort of correctness that belongs to things with sensory
b qualities, such as images in general. Indeed, the opposite is true of them—an image cannot remain an image if it presents all the details of what it represents. See if I'm right. Would there be two things—Cratylus and an image of Cratylus—in the following circumstances? Suppose some god didn't just represent your color and shape the way painters do, but made all the inner parts like yours, with the same warmth and softness, and put
c motion, soul, and wisdom like yours into them—in a word, suppose he made a duplicate of everything you have and put it beside you. Would there then be two Cratyluses or Cratylus and an image of Cratylus?

Cratylus: It seems to me, Socrates, that there would be two Cratyluses.

Socrates: So don't you see that we must look for some other kind of correctness in images and in the names we've been discussing, and not insist that if a detail is added to an image or omitted from it, it's no longer
d an image at all. Or haven't you noticed how far images are from having the same features as the things of which they are images?

Cratylus: Yes, I have.

Socrates: At any rate, Cratylus, names would have an absurd effect on the things they name, if they resembled them in every respect, since all of them would then be duplicated, and no one would be able to say which was the thing and which was the name.

Cratylus: That's true.

Socrates: Take courage then and admit that one name may be well-
e given while another isn't. Don't insist that it have all the letters and exactly resemble the thing it names, but allow that an inappropriate letter may be included. But if an inappropriate letter may be included in a name, an inappropriate name may be included in a phrase. And if an inappropriate name may be included in a phrase, a phrase which is inappropriate to the things may be employed in a statement. Things are still named and described when this happens, provided the phrases include the pattern of

the things they're about. Remember that this is just what Hermogenes and I claimed earlier about the names of the elements.[56] 433

CRATYLUS: I remember.

SOCRATES: Good. So even if a name doesn't include all the appropriate letters, it will still describe the thing if it includes its pattern—though it will describe the thing well, if it includes all the appropriate letters, and badly, if it includes few of them. I think we had better accept this, Cratylus, or else, like men lost on the streets of Aegina late at night, we, too, may incur the charge of truly seeming to be the sort of people who arrive at things later than they should. For if you deny it, you cannot agree that a b
name is correct if it expresses things by means of letters and syllables and you'll have to search for some other account of the correctness of names, since if you both deny it and accept this account of correctness, you'll contradict yourself.

CRATYLUS: You seem to me to be speaking reasonably, Socrates, and I take what you've said as established.

SOCRATES: Well, then, since we agree about that, let's consider the next point. If a name is well given, don't we say that it must have the appropriate letters?

CRATYLUS: Yes.

SOCRATES: And the appropriate letters are the ones that are like the things? c

CRATYLUS: Certainly.

SOCRATES: Therefore that's the way that well-given names are given. But if a name isn't well given, it's probable that most of its letters are appropriate or like the thing it names, if indeed it is a likeness of it, but that some are inappropriate and prevent the name from being good or well given. Is that our view or is it something different?

CRATYLUS: I don't suppose there's anything to be gained by continuing to quarrel, Socrates, but I'm not satisfied that something is a name if it isn't well given.

SOCRATES: But you *are* satisfied that a name is a way of expressing a thing? d

CRATYLUS: I am.

SOCRATES: And you think it's true that some names are composed out of more primitive ones, while others are primary?

CRATYLUS: Yes, I do.

SOCRATES: But if the primary names are to be ways of expressing things clearly, is there any better way of getting them to be such than by making each of them as much like the thing it is to express as possible? Or do you e
prefer the way proposed by Hermogenes and many others, who claim that names are conventional signs that express things to those who already knew the things before they established the conventions? Do you think that the correctness of names is conventional, so that it makes no difference whether we accept the present convention or adopt the opposite one,

56. See 393d–e.

calling 'big' what we now call 'small', and 'small' what we now call 'big'? Which of these two ways of getting names to express things do you prefer?

Cratylus: A name that expresses a thing by being like it is in every way
434 superior, Socrates, to one that is given by chance.

Socrates: That's right. But if a name is indeed to be like a thing, mustn't the letters or elements out of which primary names are composed be naturally like things? Let me explain by returning to our earlier analogy with painting. Could a painting ever be made like any of the things that are, if it were not composed of pigments that were by nature like the
b things that the art of painting imitates? Isn't that impossible?

Cratylus: Yes, it's impossible.

Socrates: Then by the same token can names ever be like anything unless the things they're composed out of have some kind of likeness to the things they imitate? And aren't they composed of letters or elements?

Cratylus: Yes.

Socrates: Now, consider what I said to Hermogenes earlier. Tell me,
c do you think I was right to say that '*r*' is like motion, moving, and hardness or not?

Cratylus: You were right.

Socrates: And '*l*' is like smoothness, softness, and the other things we mentioned.

Cratylus: Yes.

Socrates: Yet you know that the very thing that we call '*sklērotēs*' ('hardness') is called '*sklērotēr*' by the Eretrians?

Cratylus: Certainly.

Socrates: Then are both '*r*' and '*s*' like the same thing, and does the name ending in '*r*' express the same thing to them as the one ending in '*s*' does to us, or does one of them fail to express it?

d Cratylus: They both express it.

Socrates: In so far as '*r*' and '*s*' are alike, or in so far as they are unlike?

Cratylus: In so far as they are alike.

Socrates: Are they alike in all respects?

Cratylus: They are presumably alike with respect to expressing motion, at any rate.

Socrates: What about the '*l*' in these names? Doesn't it express the opposite of hardness?

Cratylus: Perhaps it is incorrectly included in them, Socrates. Maybe it's just like the examples you cited to Hermogenes a while ago in which you added or subtracted letters. You were correct to do so, in my view. So, too, in the present case perhaps we ought to replace '*l*' with '*r*'.

Socrates: You have a point. But what about when someone says '*sklēron*'
e ('hard'), and pronounces it the way we do at present? Don't we understand him? Don't you yourself know what *I* mean by it?

Cratylus: I do, but that's because of usage.

Socrates: When you say 'usage', do you mean something other than convention? Do you mean something by 'usage' besides this: when I utter

this name and mean hardness by it, you know that this is what I mean? Isn't that what you're saying?

Cratylus: Yes. 435

Socrates: And if when I utter a name, you know what I mean, doesn't that name become a way for me to express it to you?

Cratylus: Yes.

Socrates: Even though the name I utter is unlike the thing I mean—since '*l*' is unlike hardness (to revert to your example). But if that's right, surely you have entered into a convention with yourself, and the correctness of names has become a matter of convention for you, for isn't it the chance of usage and convention that makes both like and unlike letters express things? And even if usage is completely different from convention, still you must say that expressing something isn't a matter of likeness but b of usage, since usage, it seems, enables both like and unlike names to express things. Since we agree on these points, Cratylus, for I take your silence as a sign of agreement, both convention and usage must contribute something to expressing what we mean when we speak. Consider numbers, Cratylus, since you want to have recourse to them.[57] Where do you think you'll get names that are like each one of the numbers, if you don't allow this agreement and convention of yours to have some control over the correctness of names? I myself prefer the view that names should be as c much like things as possible, but I fear that defending this view is like hauling a ship up a sticky ramp, as Hermogenes suggested,[58] and that we have to make use of this worthless thing, convention, in the correctness of names. For probably the best possible way to speak consists in using names all (or most) of which are like the things they name (that is, are appropriate to them), while the worst is to use the opposite kind of names. But let me next ask you this. What power do names have for us? What's d the good of them?

Cratylus: To give instruction, Socrates. After all, the simple truth is that anyone who knows a thing's name also knows the thing.

Socrates: Perhaps you mean this, Cratylus, that when you know what a name is like, and it is like the thing it names, then you also know the thing, since it is like the name, and all like things fall under one and the e same craft. Isn't that why you say that whoever knows a thing's name also knows the thing?

Cratylus: Yes, you're absolutely right.

Socrates: Then let's look at that way of giving instruction about the things that are. Is there also another one, but inferior to this, or is it the only one? What do you think?

Cratylus: I think that it is the best and only way, and that there are no others. 436

57. See 432a.

58. At 414c.

SOCRATES: Is it also the best way to *discover* the things that are? If one discovers something's name has one also discovered the thing it names? Or are names only a way of getting people to learn things, and must investigation and discovery be undertaken in some different way?

CRATYLUS: They must certainly be undertaken in exactly the same way and by means of the same things.

SOCRATES: But don't you see, Cratylus, that anyone who investigates
b things by taking names as his guides and looking into their meanings runs no small risk of being deceived?

CRATYLUS: In what way?

SOCRATES: It's clear that the first name-giver gave names to things based on his conception of what those things were like. Isn't that right?

CRATYLUS: Yes.

SOCRATES: And if his conception was incorrect and he gave names based on it, what do you suppose will happen to us if we take him as our guide? Won't we be deceived?

CRATYLUS: But it wasn't that way, Socrates. The name-giver had to know
c the things he was naming. Otherwise, as I've been saying all along, his names wouldn't be names at all. And here's a powerful proof for you that the name-giver didn't miss the truth: His names are entirely consistent with one another. Or haven't you noticed that all the names you utter are based on the same assumption and have the same purpose?

SOCRATES: But surely that's no defense, Cratylus. The name-giver might have made a mistake at the beginning and then forced the other names
d to be consistent with it. There would be nothing strange in that. Geometrical constructions often have a small unnoticed error at the beginning with which all the rest is perfectly consistent. That's why every man must think a lot about the first principles of any thing and investigate them thoroughly to see whether or not it's correct to assume them. For if they have been adequately examined, the subsequent steps will plainly follow from them.
e However, I'd be surprised if names *are* actually consistent with one another. So let's review our earlier discussion. We said that names signify the being or essence of things to us on the assumption that all things are moving and flowing and being swept along.[59] Isn't that what you think names express?

437 CRATYLUS: Absolutely. Moreover, I think they signify correctly.

SOCRATES: Of those we discussed, let's reconsider the name '*epistēmē*' ('knowledge') first and see how ambiguous it is. It seems to signify that it stops (*histēsi*) the movement of our soul towards (*epi*) things, rather than that it accompanies them in their movement, so that it's more correct to pronounce the beginning of it as we now do than to insert an '*e*' and get '*hepeïstēmē*'[60]—or rather, to insert an '*i*' instead of an '*e*'.[61] Next, consider

59. See 411c.

60. As was suggested at 412a, yielding something to do with "following" things.

61. To get '*epihistēmē*', revealing more clearly the derivation from '*epi*' and '*histēsi*'.

*'bebaion'* ('certain'), which is an imitation of being based (*basis*) or resting (*stasis*), not of motion. *'Historia'* ('inquiry'), which is somewhat the same, signifies the stopping (*histēsi*) of the flow (*rhous*). *'Piston'* ('confidence'), b
too, certainly signifies stopping (*histan*). Next, anyone can see that *'mnēmē'* ('memory') means a staying (*monē*) in the soul, not a motion. Or consider *'hamartia'* ('error') and *'sumphora'* ('mishap'), if you like. If we take names as our guides, they seem to signify the same as *'sunesis'* ('comprehension') and *'epistēmē'* ('knowledge') and other names of excellent things.[62] Moreover, *'amathia'* ('ignorance') and *'akolasia'* ('licentiousness') also seem to be closely akin to them. For *'amathia'* seems to mean the journey of someone who accompanies god (*hama theōi iōn*), and *'akolasia'* seems precisely to c
mean movement guided by things (*akolouthia tois pragmasin*). Thus names of what we consider to be the very worst things seem to be exactly like those of the very best. And if one took the trouble, I think one could find many other names from which one could conclude that the name-giver intended to signify not that things were moving and being swept along, but the opposite, that they were at rest.

Cratylus: But observe, Socrates, that most of them signify motion. d

Socrates: What if they do, Cratylus? Are we to count names like votes and determine their correctness that way? If more names signify motion, does that make *them* the true ones?

Cratylus: No, that's not a reasonable view.

Socrates: It certainly isn't, Cratylus. So let's drop this topic, and return to the one that led us here. A little while ago, you said, if you remember, 438
that the name-giver had to know the things he named.[63] Do you still believe that or not?

Cratylus: I still do.

Socrates: Do you think that the giver of the first names also knew the things he named?

Cratylus: Yes, he did know them.

Socrates: What names did he learn or discover those things from? After all, the first names had not yet been given. Yet it's impossible, on our b
view, to learn or discover things except by learning their names from others or discovering them for ourselves?

Cratylus: You have a point there, Socrates.

Socrates: So, if things cannot be learned except from their names, how can we possibly claim that the name-givers or rule-setters had knowledge before any names had been given for them to know?

Cratylus: I think the truest account of the matter, Socrates, is that a c
more than human power gave the first names to things, so that they are necessarily correct.

62. *'Hamartia'* is like *'homartein'* ('to accompany'), and *'sumphora'* is like *'sumpheresthai'* ('to move together with').

63. At 435d.

Socrates: In your view then this name-giver contradicted himself, even though he's either a daemon or a god? Or do you think we were talking nonsense just now?

Cratylus: But one of the two apparently contradictory groups of names that we distinguished aren't names at all.

Socrates: Which one, Cratylus? Those which point to rest or those which point to motion? As we said just now, this cannot be settled by majority vote.

d Cratylus: No, that wouldn't be right, Socrates.

Socrates: But since there's a civil war among names, with some claiming that they are like the truth and others claiming that *they* are, how then are we to judge between them, and what are we to start from? We can't start from other different names because there are none. No, it's clear we'll have to look for something other than names, something that will make plain to us without using names which of these two kinds of names are the true ones—that is to say, the ones that express the truth about the
e things that are.

Cratylus: I think so, too.

Socrates: But if that's right, Cratylus, then it seems it must be possible to learn about the things that are, independently of names.

Cratylus: Evidently.

Socrates: How else would you expect to learn about them? How else than in the most legitimate and natural way, namely, learning them through one another, if they are somehow akin, and through themselves? For something different, something that was other than they, wouldn't signify them, but something different, something other.

Cratylus: That seems true to me.

439 Socrates: But wait a minute! Haven't we often agreed that if names are well given, they are like the things they name and so are likenesses of them?

Cratylus: Yes.

Socrates: So if it's really the case that one can learn about things through names and that one can also learn about them through themselves, which would be the better and clearer way to learn about them? Is it better to learn from the likeness both whether it itself is a good likeness and also the truth it is a likeness of? Or is it better to learn from the truth both the
b truth itself and also whether the likeness of it is properly made?

Cratylus: I think it is certainly better to learn from the truth.

Socrates: How to learn and make discoveries about the things that are is probably too large a topic for you or me. But we should be content to have agreed that it is far better to investigate them and learn about them through themselves than to do so through their names.

Cratylus: Evidently so, Socrates.

Socrates: Still, let's investigate one further issue so as to avoid being deceived by the fact that so many of these names seem to lean in the same
c direction—as we will be if, as seems to me to be the case, the name-givers really did give them in the belief that everything is always moving and

flowing, and as it happens things aren't really that way at all, but the name-givers themselves have fallen into a kind of vortex and are whirled around in it, dragging us with them. Consider, Cratylus, a question that I for my part often dream about: Are we or aren't we to say that there is a beautiful itself, and a good itself, and the same for each one of the things that are? d

CRATYLUS: I think we are, Socrates.

SOCRATES: Let's not investigate whether a particular face or something of that sort is beautiful then, or whether all such things seem to be flowing, but let's ask this instead: Are we to say that the beautiful itself is always such as it is?

CRATYLUS: Absolutely.

SOCRATES: But if it is always passing away, can we correctly say of it first that it is *this*, and then that it is *such and such*? Or, at the very instant we are speaking, isn't it inevitably and immediately becoming a different thing and altering and no longer being as it was?

CRATYLUS: It is.

SOCRATES: Then if it never stays the same, how can it *be* something? After e
all, if it ever stays the same, it clearly isn't changing—at least, not during that time; and if it always stays the same and is always the same thing, so that it never departs from its own form, how can it ever change or move?

CRATYLUS: There's no way.

SOCRATES: Then again it can't even be known by anyone. For at the very instant the knower-to-be approaches, what he is approaching is becoming a different thing, of a different character, so that he can't yet come to know 440
either what sort of thing it is or what it is like—surely, no kind of knowledge is knowledge of what isn't in any way.

CRATYLUS: That's right.

SOCRATES: Indeed, it isn't even reasonable to say that there is such a thing as knowledge, Cratylus, if all things are passing on and none remain. For if that thing itself, knowledge, did not pass on from being knowledge, then knowledge would always remain, and there would *be* such a thing as knowledge. On the other hand, if the very form of knowledge passed on from being knowledge, the instant it passed on into a different form b
than that of knowledge, there would be no knowledge. And if it were always passing on, there would always be no knowledge. Hence, on this account, no one could know anything and nothing could be known either. But if there is always that which knows and that which is known, if there are such things as the beautiful, the good, and each one of the things that are, it doesn't appear to me that these things can be at all like flowings or motions, as we were saying just now they were. So whether I'm right about these things or whether the truth lies with Heraclitus and many c
others[64] isn't an easy matter to investigate. But surely no one with any understanding will commit himself or the cultivation of his soul to names,

64. See 402a.

or trust them and their givers to the point of firmly stating that he knows something—condemning both himself and the things that are to be totally unsound like leaky sinks—or believe that things are exactly like people
440d with runny noses, or that all things are afflicted with colds and drip over everything. It's certainly possible that things are that way, Cratylus, but it is also possible that they are not. So you must investigate them courageously and thoroughly and not accept anything easily—you are still young and in your prime, after all. Then after you've investigated them, if you happen to discover the truth, you can share it with me.

CRATYLUS: I'll do that. But I assure you, Socrates, that I have already investigated them and have taken a lot of trouble over the matter, and
e things seem to me to be very much more as Heraclitus says they are.

SOCRATES: Instruct me about it another time, Cratylus, after you get back. But now go off into the country, as you were planning to do, and Hermogenes here will see you on your way.[65]

CRATYLUS: I'll do that, Socrates, but I hope that you will also continue to think about these matters yourself.

65. 'See on your way' (*propempsei*): as a good son of Hermes *pompaios* (who conducts souls of the dead to Hades) would do. Hermogenes is thus correctly named after all. See 384c, 408b.

# THEAETETUS

*Plato has much to say in other dialogues about knowledge, but this is his only sustained inquiry into the question 'What* is *knowledge?' As such, it is the founding document of what has come to be known as 'epistemology', as one of the branches of philosophy; its influence on Greek epistemology—in Aristotle and the Stoics particularly—is strongly marked. Theaetetus was a famous mathematician, Plato's associate for many years in the Academy; the dialogue's prologue seems to announce the work as published in his memory, shortly after his early death on military service in 369* B.C. *We can therefore date the publication of* Theaetetus *fairly precisely, to the few years immediately following Theaetetus' death. Plato was then about sixty years of age, and another famous longtime associate, Aristotle, was just joining the Academy as a student (367).*

*Though it is not counted as a 'Socratic' dialogue—one depicting Socrates inquiring into moral questions by examining and refuting the opinions of his fellow discussants—*Theaetetus *depicts a Socrates who makes much of his own ignorance and his subordinate position as questioner, and the dialogue concludes inconclusively. Socrates now describes his role, however, as he does not in the 'Socratic' dialogues, as that of a 'midwife': he brings to expression ideas of clever young men like Theaetetus, extensively develops their presuppositions and consequences so as to see clearly what the ideas amount to, and then establishes them as sound or defective by independent arguments of his own. The first of Theaetetus' three successive definitions of knowledge—that knowledge is 'perception'—is not finally 'brought to birth' until Socrates has linked it to Protagoras' famous 'man is the measure' doctrine of relativistic truth, and also to the theory that 'all is motion and change' that Socrates finds most Greek thinkers of the past had accepted, and until he has fitted it out with an elaborate and ingenious theory of perception and how it works. He then examines separately the truth of these linked doctrines—introduced into the discussion by him, not Theaetetus—and, in finally rejecting Theaetetus' idea as unsound, he advances his own positive analysis of perception and its role in knowledge. This emphasis on the systematic exploration of ideas before finally committing oneself to them or rejecting them as unsound is found in a different guise in* Parmenides, *with its systematic exploration of hypotheses about unity as a means of working hard toward an acceptable theory of Forms. Socrates establishes a clear link between the two dialogues when, at 183e, he drags in a reference back to the conversation reported in* Parmenides.

Theaetetus *has a unique format among Plato's dialogues. The prologue gives a brief conversation between Euclides and Terpsion, Socratics from*

*nearby Megara (they are among those present for the discussion on Socrates' last day in* Phaedo*). For the remainder, a slave reads out a book composed by Euclides containing a conversation of Socrates, Theodorus, and Theaetetus that took place many years previously. Since ancient sources tell us of Socratic dialogues actually published by Euclides, it is as if, except for the prologue, Plato is giving us under his own name one of* Euclides' *dialogues! The last line of the work establishes it as the first of a series, with* Sophist *and* Statesman *to follow—as noted above,* Parmenides *precedes. In* Theaetetus *Socrates tests Theaetetus' mettle with the geometer Theodorus' aid and in the presence of his namesake Socrates, another associate of Plato's in the Academy; in the other two works, first Theaetetus, then young Socrates will be discussion partners with an unnamed visitor from Elea, in Southern Italy, home to Parmenides and Zeno—a very different type of partner. Socrates and his midwifery are superseded.*

*Despite its lively and intellectually playful Socrates, reminiscent of the 'Socratic' dialogues,* Theaetetus *is a difficult work of abstract philosophical theory. The American logician and philosopher C. S. Peirce counted it, along with* Parmenides*, as Plato's greatest work, and more recently it has attracted favorable attention from such major philosophers as Ludwig Wittgenstein and Gilbert Ryle.*

*J.M.C.*

142 EUCLIDES: Are you only just in from the country, Terpsion? Or have you been here some time?

TERPSION: I've been here a good while. In fact, I have been looking for you in the market-place and wondering that I couldn't find you.

EUCLIDES: Well, you couldn't, because I was not in the city.

TERPSION: Where have you been, then?

EUCLIDES: I went down to the harbor; and as I was going, I met Theaetetus, being taken to Athens from the camp at Corinth.

TERPSION: Alive or dead?

b EUCLIDES: Alive; but that's about all one could say. Badly wounded for one thing; but the real trouble is this sickness that has broken out in the army.

TERPSION: Dysentery?

EUCLIDES: Yes.

TERPSION: What a man to lose!

EUCLIDES: Yes. A fine man, Terpsion. Only just now I was listening to some people singing his praises for the way he behaved in the battle.

TERPSION: Well, there's nothing extraordinary about that. Much more to
c be wondered at if he hadn't distinguished himself. But why didn't he put up here at Megara?

Translated by M. J. Levett, revised by Myles Burnyeat.

Euclides: He was in a hurry to get home. I kept asking him myself, and advising him; but he wouldn't. So I saw him on his way. And as I was coming back, I thought of Socrates and what a remarkably good prophet he was—as usual—about Theaetetus. It was not long before his death, if I remember rightly, that he came across Theaetetus, who was a boy at the time. Socrates met him and had a talk with him, and was very much struck with his natural ability; and when I went to Athens, he repeated to me the discussion they had had, which was well worth listening to. And he d
said to me then that we should inevitably hear more of Theaetetus, if he lived to grow up.

Terpsion: Well, he appears to have been right enough.—But what was this discussion? Could you tell it to me?

Euclides: Good Lord, no. Not from memory, anyway. But I made some 143
notes of it at the time, as soon as I got home; then afterwards I recalled it at my leisure and wrote it out, and whenever I went to Athens, I used to ask Socrates about the points I couldn't remember, and correct my version when I got home. The result is that I have got pretty well the whole discussion in writing.

Terpsion: Yes, of course. I have heard you say that before, and I have always been meaning to ask you to show it to me, though I have been so long about it. But is there any reason why we shouldn't go through it now? I want a rest, in any case, after my journey in from the country.

Euclides: Well, I shouldn't mind sitting down either. I saw Theaetetus as b
far as Erineum. Come along. We will get the slave to read it to us while we rest.

Terpsion: Right.

Euclides: This is the book, Terpsion. You see, I have written it out like this: I have not made Socrates relate the conversation as he related it to me, but I represent him as speaking directly to the persons with whom he said he had this conversation. (These were, he told me, Theodorus the geometer and Theaetetus.) I wanted, in the written version, to avoid the c
bother of having the bits of narrative in between the speeches—I mean, when Socrates, whenever he mentions his own part in the discussion, says 'And I maintained' or 'I said,' or, of the person answering, 'He agreed' or 'He would not admit this.' That is why I have made him talk directly to them and have left out these formulae.

Terpsion: Well, that's quite in order, Euclides.

Euclides: Now, boy, let us have it.

Socrates: If Cyrene were first in my affections, Theodorus, I should be d
asking you how things are there, and whether any of your young people are taking up geometry or any other branch of philosophy. But, as it is, I love Athens better than Cyrene, and so I'm more anxious to know which of our young men show signs of turning out well. That, of course, is what I am always trying to find out myself, as best I can; and I keep asking other people too—anyone round whom I see the young men are inclined to gather. Now you, of course, are very much sought after, and with good

e reason; your geometry alone entitles you to it, and that is not your only
claim. So if you have come across anyone worth mentioning, I should be
glad to hear.

Theodorus: Well, Socrates, I think you ought to be told, and I think I
ought to tell you, about a remarkable boy I have met here, one of your
fellow countrymen. And if he were beautiful, I should be extremely nervous
of speaking of him with enthusiasm, for fear I might be suspected of being
in love with him. But as a matter of fact—if you'll excuse my saying such
a thing—he is not beautiful at all, but is rather like you, snub-nosed, with
eyes that stick out; though these features are not quite so pronounced in
144 him. I speak without any qualms; and I assure you that among all the
people I have ever met—and I have got to know a good many in my
time—I have never yet seen anyone so amazingly gifted. Along with a
quickness beyond the capacity of most people, he has an unusually gentle
temper; and, to crown it all, he is as manly a boy as any of his fellows. I
never thought such a combination could exist; I don't see it arising else-
where. People as acute and keen and retentive as he is are apt to be very
b unbalanced. They get swept along with a rush, like ships without ballast;
what stands for courage in their makeup is a kind of mad excitement;
while, on the other hand, the steadier sort of people are apt to come to
their studies with minds that are sluggish, somehow—freighted with a
bad memory. But this boy approaches his studies in a smooth, sure, effective
way, and with great good temper; it reminds one of the quiet flow of a
stream of oil. The result is that it is astonishing to see how he gets through
his work, at his age.

Socrates: That is good news. And he is an Athenian—whose son is he?

c Theodorus: I have heard the name, but I don't remember it. But he is
the middle one of this group coming toward us. He and his companions
were greasing themselves outside just now; it looks as if they have finished
and are coming in here. But look and see if you recognize him.

Socrates: Yes, I know him. He's the son of Euphronius of Sunium—very much the kind of person, my friend, that you tell me his son is. A distinguished man in many ways; he left a considerable property too. But I don't know the boy's name.

d Theodorus: His name, Socrates, is Theaetetus. As for the property, that, I
think, has been made away with by trustees. All the same, he is wonderfully
open-handed about money, Socrates.

Socrates: A thoroughbred, evidently. I wish you would ask him to come and sit with us over here.

Theodorus: All right. Theaetetus, come here beside Socrates.

Socrates: Yes, come along, Theaetetus. I want to see for myself what
e sort of a face I have. Theodorus says I am like you. But look. If you and
I had each had a lyre, and Theodorus had told us that they were both
similarly tuned, should we have taken his word for it straightaway? Or
should we have tried to find out if he was speaking with any expert
knowledge of music?

THEAETETUS: Oh, we should have inquired into that.

SOCRATES: And if we had found that he was a musician, we should have believed what he said; but if we found he had no such qualification, we should have put no faith in him.

THEAETETUS: Yes, that's true.

SOCRATES: And now, I suppose, if we are interested in this question of our faces being alike, we ought to consider whether he is speaking with 145 any knowledge of drawing or not?

THEAETETUS: Yes, I should think so.

SOCRATES: Then is Theodorus an artist?

THEAETETUS: No, not so far as I know.

SOCRATES: Nor a geometer, either?

THEAETETUS: Oh, there's no doubt about his being that, Socrates.

SOCRATES: And isn't he also a master of astronomy and arithmetic and music—of all that an educated man should know?

THEAETETUS: Well, he seems to me to be.

SOCRATES: Then if he asserts that there is some physical resemblance between us—whether complimenting us or the reverse—one ought not to pay much attention to him?

THEAETETUS: No, perhaps not.

SOCRATES: But supposing it were the soul of one of us that he was b praising? Suppose he said one of us was good and wise? Oughtn't the one who heard that to be very anxious to examine the object of such praise? And oughtn't the other to be very willing to show himself off?

THEAETETUS: Yes, certainly, Socrates.

SOCRATES: Then, my dear Theaetetus, now is the time for you to show yourself and for me to examine you. For although Theodorus often gives me flattering testimonials for people, both Athenians and foreigners, I assure you I have never before heard him praise anybody in the way he c has just praised you.

THEAETETUS: That's all very well, Socrates; but take care he wasn't saying that for a joke.

SOCRATES: That is not Theodorus' way. Now don't you try to get out of what we have agreed upon with the pretence that our friend is joking, or you may make it necessary for him to give his evidence—since no charge of perjury is ever likely to be brought against him. So have the pluck to stand by your agreement.

THEAETETUS: All right, I must, then, if that's what you've decided.

SOCRATES: Tell me now. You are learning some geometry from Theodorus, I expect?

THEAETETUS: Yes, I am.

SOCRATES: And some astronomy and music and arithmetic? d

THEAETETUS: Well, I'm very anxious to, anyway.

SOCRATES: And so am I, my son—from Theodorus or from anyone who seems to me to know about these things. But although I get on with them pretty well in most ways, I have a small difficulty, which I think ought to

be investigated, with your help and that of the rest of the company.—Now isn't it true that to learn is to become wiser[1] about the thing one is learning?

THEAETETUS: Yes, of course.

SOCRATES: And what makes men wise, I take it, is wisdom?

THEAETETUS: Yes.

e SOCRATES: And is this in any way different from knowledge?

THEAETETUS: What?

SOCRATES: Wisdom. Isn't it the things which they know that men are wise about?

THEAETETUS: Well, yes.

SOCRATES: So knowledge and wisdom will be the same thing?

THEAETETUS: Yes.

SOCRATES: Now this is just where my difficulty comes in. I can't get a
146 proper grasp of what on earth knowledge really is. Could we manage to put it into words? What do all of you say? Who'll speak first? Anyone who makes a mistake shall sit down and be Donkey, as the children say when they are playing ball; and anyone who comes through without a miss shall be King and make us answer any question he likes.—Well, why this silence? Theodorus, I hope my love of argument is not making me forget my manners—just because I'm so anxious to start a discussion and get us all friendly and talkative together?

b THEODORUS: No, no, Socrates—that's the last thing one could call forgetting your manners. But do make one of the young people answer you. I am not used to this kind of discussion, and I'm too old to get into the way of it. But it would be suitable enough for them and they would profit more by it. For youth can always profit, that's true enough. So do go on; don't let Theaetetus off but ask him some more questions.

SOCRATES: Well, Theaetetus, you hear what Theodorus says. You won't
c want to disobey him, I'm sure; and certainly a wise man shouldn't be disobeyed by his juniors in matters of this kind—it wouldn't be at all the proper thing. Now give me a good frank answer. What do you think knowledge is?

THEAETETUS: Well, I ought to answer, Socrates, as you and Theodorus tell me to. In any case, you and he will put me right, if I make a mistake.

SOCRATES: We certainly will, if we can.

THEAETETUS: Then I think that the things Theodorus teaches are knowl-
d edge—I mean geometry and the subjects you enumerated just now. Then again there are the crafts such as cobbling, whether you take them together or separately. They must be knowledge, surely.

SOCRATES: That is certainly a frank and indeed a generous answer, my dear lad. I asked you for one thing and you have given me many; I wanted something simple, and I have got a variety.

1. The words 'wise' and 'wisdom' in the argument which begins here represent the Greek *sophos* and *sophia*. The point of the argument will come across more naturally in English if readers substitute in their mind the words 'expert' and 'expertise'.

Theaetetus: And what does that mean, Socrates?

Socrates: Nothing, I dare say. But I'll tell you what I think. When you talk about cobbling, you mean just knowledge of the making of shoes?

Theaetetus: Yes, that's all I mean by it.

Socrates: And when you talk about carpentering, you mean simply the e
knowledge of the making of wooden furniture?

Theaetetus: Yes, that's all I mean, again.

Socrates: And in both cases you are putting into your definition what the knowledge is of?

Theaetetus: Yes.

Socrates: But that is not what you were asked, Theaetetus. You were not asked to say what one may have knowledge of, or how many branches of knowledge there are. It was not with any idea of counting these up that the question was asked; we wanted to know what knowledge itself is.—Or am I talking nonsense?

Theaetetus: No, you are perfectly right.

Socrates: Now think about this too. Supposing we were asked about 147
some commonplace, everyday thing; for example, what is clay? And supposing we were to answer, 'clay of the potters' and 'clay of the stovemakers' and 'clay of the brickmakers', wouldn't that be absurd of us?

Theaetetus: Well, perhaps it would.

Socrates: Absurd to begin with, I suppose, to imagine that the person who asked the question would understand anything from our answer
when we say 'clay', whether we add that it is dollmakers' clay or any b
other craftsman's. Or do you think that anyone can understand the name of a thing when he doesn't know what the thing is?

Theaetetus: No, certainly not.

Socrates: And so a man who does not know what knowledge is will not understand 'knowledge of shoes' either?

Theaetetus: No, he won't.

Socrates: Then a man who is ignorant of what knowledge is will not understand what cobbling is, or any other craft?

Theaetetus: That is so.

Socrates: So when the question raised is 'What is knowledge?', to reply
by naming one of the crafts is an absurd answer; because it points out c
something that knowledge is of when this is not what the question was about.

Theaetetus: So it seems.

Socrates: Again, it goes no end of a long way round, in a case where, I take it, a short and commonplace answer is possible. In the question about clay, for example, it would presumably be possible to make the simple, commonplace statement that it is earth mixed with liquid, and let the question of whose clay it is take care of itself.

Theaetetus: That seems easier, Socrates, now you put it like that. But I
believe you're asking just the sort of question that occurred to your name- d
sake Socrates here and myself, when we were having a discussion a little while ago.

SOCRATES: And what was that, Theaetetus?

THEAETETUS: Theodorus here was demonstrating to us with the aid of diagrams a point about powers.[2] He was showing us that the power of three square feet and the power of five square feet are not commensurable in length with the power of one square foot; and he went on in this way, taking each case in turn till he came to the power of seventeen square feet; there for some reason he stopped. So the idea occurred to us that, since the powers were turning out to be unlimited in number, we might try to collect the powers in
e question under one term, which would apply to them all.

SOCRATES: And did you find the kind of thing you wanted?

THEAETETUS: I think we did. But I'd like you to see if it's all right.

SOCRATES: Go on, then.

THEAETETUS: We divided all numbers into two classes. Any number which can be produced by the multiplication of two equal numbers, we compared to a square in shape, and we called this a square or equilateral number.

SOCRATES: Good, so far.

148 THEAETETUS: Then we took the intermediate numbers, such as three and five and any number which can't be produced by multiplication of two equals but only by multiplying together a greater and a less; a number such that it is always contained by a greater and a less side. A number of this kind we compared to an oblong figure, and called it an oblong number.

SOCRATES: That's excellent. But how did you go on?

THEAETETUS: We defined under the term 'length' any line which produces in square an equilateral plane number; while any line which produces in square an oblong number we defined under the term 'power', for the
b reason that although it is incommensurable with the former in length, it is commensurable in the plane figures which they respectively have the

2. 'Powers' is a mathematical term for squares. By contrast, at 148a–b 'power' is given a new, specially defined use to denominate a species of line, viz. the incommensurable lines for which the boys wanted a general account. It may be useful to give a brief explanation of the mathematics of the passage.

Two lines are incommensurable if and only if they have no common measure; that is, no unit of length will measure both without remainder. Two squares are incommensurable *in length* if and only if their sides are incommensurable lines; the areas themselves may still be commensurable, i.e., both measurable by some unit of area, as is mentioned at 148b. When Theodorus showed for a series of powers (squares) that each is incommensurable in length with the one foot (unit) square, we can think of him as proving case by case the irrationality of $\sqrt{3}$, $\sqrt{5}, \ldots \sqrt{17}$. But this was not how he thought of it himself. Greek mathematicians did not recognize irrational *numbers* but treated of irrational quantities as geometrical entities: in this instance, lines identified by the areas of the squares that can be constructed on them. Similarly, we can think of the boys' formula for powers or square lines at 148a–b as making the point that, for any positive integer $n$, $\sqrt{n}$ is irrational if and only if there is no positive integer $m$ such that $n = m \times m$. But, once again, a Greek mathematician would think of this generalization in the geometrical terms in which Theaetetus expounds it.

power to produce. And there is another distinction of the same sort with regard to solids.

SOCRATES: Excellent, my boys. I don't think Theodorus is likely to be had up for false witness.

THEAETETUS: And yet, Socrates, I shouldn't be able to answer your question about knowledge in the same way that I answered the one about lengths and powers—though you seem to me to be looking for something of the same sort. So Theodorus turns out a false witness after all.

SOCRATES: Well, but suppose now it was your running he had praised; c
suppose he had said that he had never met anyone among the young people who was such a runner as you. And then suppose you were beaten by the champion runner in his prime—would you think Theodorus' praise had lost any of its truth?

THEAETETUS: No, I shouldn't.

SOCRATES: But do you think the discovery of what knowledge is is really what I was saying just now—a small thing? Don't you think that's a problem for the people at the top?

THEAETETUS: Yes, rather, I do; and the very topmost of them.

SOCRATES: Then do have confidence in yourself and try to believe that
Theodorus knew what he was talking about. You must put your whole d
heart into what we are doing—in particular into this matter of getting a statement of what knowledge really is.

THEAETETUS: If putting one's heart into it is all that is required, Socrates, the answer will come to light.

SOCRATES: Go on, then. You gave us a good lead just now. Try to imitate your answer about the powers. There you brought together the many powers within a single form; now I want you in the same way to give one single account of the many branches of knowledge.

THEAETETUS: But I assure you, Socrates, I have often tried to think this e
out, when I have heard reports of the questions you ask. But I can never persuade myself that anything I say will really do; and I never hear anyone else state the matter in the way that you require. And yet, again, you know, I can't even stop worrying about it.

SOCRATES: Yes; those are the pains of labor, dear Theaetetus. It is because you are not barren but pregnant.

THEAETETUS: I don't know about that, Socrates. I'm only telling you what's happened to me.

SOCRATES: Then do you mean to say you've never heard about my being 149
the son of a good hefty midwife, Phaenarete?[3]

THEAETETUS: Oh, yes, I've heard that before.

SOCRATES: And haven't you ever been told that I practice the same art myself?

THEAETETUS: No, I certainly haven't.

3. The name means 'She who brings virtue to light'.

SOCRATES: But I do, believe me. Only don't give me away to the rest of the world, will you? You see, my friend, it is a secret that I have this art. That is not one of the things you hear people saying about me, because they don't know; but they do say that I am a very odd sort of person, always causing people to get into difficulties. You must have heard that, surely?

b THEAETETUS: Yes, I have.

SOCRATES: And shall I tell you what is the explanation of that?

THEAETETUS: Yes, please do.

SOCRATES: Well, if you will just think of the general facts about the business of midwifery, you will see more easily what I mean. You know, I suppose, that women never practice as midwives while they are still conceiving and bearing children themselves. It is only those who are past child-bearing who take this up.

THEAETETUS: Oh, yes.

SOCRATES: They say it was Artemis who was responsible for this custom;
c it was because she, who undertook the patronage of childbirth, was herself childless. She didn't, it's true, entrust the duties of midwifery to barren women, because human nature is too weak to acquire skill where it has no experience. But she assigned the task to those who have become incapable of child-bearing through age—honoring their likeness to herself.

THEAETETUS: Yes, naturally.

SOCRATES: And this too is very natural, isn't it?—or perhaps necessary? I mean that it is the midwives who can tell better than anyone else whether women are pregnant or not.

THEAETETUS: Yes, of course.

d SOCRATES: And then it is the midwives who have the power to bring on the pains, and also, if they think fit, to relieve them; they do it by the use of simple drugs, and by singing incantations. In difficult cases, too, they can bring about the birth; or, if they consider it advisable, they can promote a miscarriage.

THEAETETUS: Yes, that is so.

SOCRATES: There's another thing too. Have you noticed this about them, that they are the cleverest of match-makers, because they are marvellously knowing about the kind of couples whose marriage will produce the best children?

THEAETETUS: No, that is not at all familiar to me.

SOCRATES: But they are far prouder of this, believe me, than of cutting
e the umbilical cord. Think now. There's an art which is concerned with the cultivation and harvesting of the crops. Now is it the same art which prescribes the best soil for planting or sowing a given crop? Or is it a different one?

THEAETETUS: No, it is all the same art.

SOCRATES: Then applying this to women, will there be one art of the sowing and another of the harvesting?

THEAETETUS: That doesn't seem likely, certainly.

SOCRATES: No, it doesn't. But there is also an unlawful and unscientific 150
practice of bringing men and women together, which we call procuring;
and because of that the midwives—a most august body of women—are
very reluctant to undertake even lawful matchmaking. They are afraid
that if they practice this, they may be suspected of the other. And yet, I
suppose, reliable matchmaking is a matter for no one but the true midwife.

THEAETETUS: Apparently.

SOCRATES: So the work of the midwives is a highly important one; but
it is not so important as my own performance. And for this reason, that
there is not in midwifery the further complication, that the patients are b
sometimes delivered of phantoms and sometimes of realities, and that the
two are hard to distinguish. If there were, then the midwife's greatest and
noblest function would be to distinguish the true from the false offspring—
don't you agree?

THEAETETUS: Yes, I do.

SOCRATES: Now my art of midwifery is just like theirs in most respects.
The difference is that I attend men and not women, and that I watch over
the labor of their souls, not of their bodies. And the most important thing c
about my art is the ability to apply all possible tests to the offspring, to
determine whether the young mind is being delivered of a phantom, that
is, an error, or a fertile truth. For one thing which I have in common with
the ordinary midwives is that I myself am barren of wisdom. The common
reproach against me is that I am always asking questions of other people
but never express my own views about anything, because there is no
wisdom in me; and that is true enough. And the reason of it is this, that
God compels me to attend the travail of others, but has forbidden me to
procreate. So that I am not in any sense a wise man; I cannot claim as the d
child of my own soul any discovery worth the name of wisdom. But with
those who associate with me it is different. At first some of them may give
the impression of being ignorant and stupid; but as time goes on and our
association continues, all whom God permits are seen to make progress—
a progress which is amazing both to other people and to themselves. And
yet it is clear that this is not due to anything they have learned from me;
it is that they discover within themselves a multitude of beautiful things,
which they bring forth into the light. But it is I, with God's help, who
deliver them of this offspring. And a proof of this may be seen in the e
many cases where people who did not realize this fact took all the credit
to themselves and thought that I was no good. They have then proceeded
to leave me sooner than they should, either of their own accord or through
the influence of others. And after they have gone away from me they have
resorted to harmful company, with the result that what remained within
them has miscarried; while they have neglected the children I helped them
to bring forth, and lost them, because they set more value upon lies and
phantoms than upon the truth; finally they have been set down for ignorant
fools, both by themselves and by everybody else. One of these people was 151

Aristides the son of Lysimachus;[4] and there have been very many others. Sometimes they come back, wanting my company again, and ready to move heaven and earth to get it. When that happens, in some cases the divine sign that visits me forbids me to associate with them; in others, it permits me, and then they begin again to make progress.

There is another point also in which those who associate with me are like women in child-birth. They suffer the pains of labor, and are filled day and night with distress; indeed they suffer far more than women. And this pain my art is able to bring on, and also to allay.

b Well, that's what happens to them; but at times, Theaetetus, I come across people who do not seem to me somehow to be pregnant. Then I realize that they have no need of me, and with the best will in the world I undertake the business of match-making; and I think I am good enough—God willing—at guessing with whom they might profitably keep company. Many of them I have given away to Prodicus;[5] and a great number also to other wise and inspired persons.

Well, my dear lad, this has been a long yarn; but the reason was that I have a suspicion that you (as you think yourself) are pregnant and in
c labor. So I want you to come to me as to one who is both the son of a midwife and himself skilled in the art; and try to answer the questions I shall ask you as well as you can. And when I examine what you say, I may perhaps think it is a phantom and not truth, and proceed to take it quietly from you and abandon it. Now if this happens, you mustn't get savage with me, like a mother over her first-born child. Do you know, people have often before now got into such a state with me as to be literally ready to bite when I take away some nonsense or other from them. They never believe that I am doing this in all goodwill; they are so far from
d realizing that no God can wish evil to man, and that even I don't do this kind of thing out of malice, but because it is not permitted to me to accept a lie and put away truth.

So begin again, Theaetetus, and try to say what knowledge is. And don't on any account tell me that you can't. For if God is willing, and you play the man, you can.

THEAETETUS: Well, Socrates, after such encouragement from *you*, it would
e hardly be decent for anyone not to try his hardest to say what he has in him. Very well then. It seems to me that a man who knows something perceives what he knows, and the way it appears at present, at any rate, is that knowledge is simply perception.

SOCRATES: There's a good frank answer, my son. That's the way to speak one's mind. But come now, let us look at this thing together, and see whether what we have here is really fertile or a mere wind-egg. You hold that knowledge is perception?

4. Aristides is one of the two young men whose education Socrates discusses in *Laches* (see 178a–179b).

5. A famous Sophist. See *Protagoras* 315d, 337a–c, 340e–341c, 358a–b.

Theaetetus: Yes.

Socrates: But look here, this is no ordinary account of knowledge you've come out with: it's what Protagoras used to maintain. He said the very 152
same thing, only he put it in rather a different way. For he says, you know, that 'Man is the measure of all things: of the things which are, that they are, and of the things which are not, that they are not.' You have read this, of course?

Theaetetus: Yes, often.

Socrates: Then you know that he puts it something like this, that as each thing appears to me, so it is for me, and as it appears to you, so it is for you—you and I each being a man?

Theaetetus: Yes, that is what he says.

Socrates: Well, it is not likely that a wise man would talk nonsense. So b
let us follow him up. Now doesn't it sometimes happen that when the same wind is blowing, one of us feels cold and the other not? Or that one of us feels rather cold and the other very cold?

Theaetetus: That certainly does happen.

Socrates: Well then, in that case are we going to say that the wind itself, by itself, is cold or not cold? Or shall we listen to Protagoras, and say it is cold for the one who feels cold, and for the other, not cold?

Theaetetus: It looks as if we must say that.

Socrates: And this is how it appears to each of us?

Theaetetus: Yes.

Socrates: But this expression 'it appears' means 'he perceives it'?

Theaetetus: Yes, it does.

Socrates: The appearing of things, then, is the same as perception, in c
the case of hot and things like that. So it results, apparently, that things are for the individual such as he perceives them.

Theaetetus: Yes, that seems all right.

Socrates: Perception, then, is always of what is, and unerring—as befits knowledge.

Theaetetus: So it appears.

Socrates: But, I say, look here. Was Protagoras one of those omniscient people? Did he perhaps put this out as a riddle for the common crowd of us, while he revealed the *Truth*[6] as a secret doctrine to his own pupils?

Theaetetus: What do you mean by that, Socrates? d

Socrates: I'll tell you; and this, now, is certainly no ordinary theory—I mean the theory that there is nothing which in itself is just one thing: nothing which you could rightly call anything or any kind of thing. If you call a thing large, it will reveal itself as small, and if you call it heavy, it is liable to appear as light, and so on with everything, because nothing is one or anything or any kind of thing. What is really true, is this: the things
of which we naturally say that they 'are', are in process of coming to be, e

6. Protagoras of Abdera was a fifth century B.C. philosopher and sophist; this appears to have been the title of his book.

as the result of movement and change and blending with one another. We are wrong when we say they 'are', since nothing ever is, but everything is coming to be.

And as regards this point of view, let us take it as a fact that all the wise men of the past, with the exception of Parmenides, stand together. Let us take it that we find on this side Protagoras and Heraclitus and Empedocles; and also the masters of the two kinds of poetry, Epicharmus in comedy and Homer in tragedy.[7] For when Homer talked about 'Ocean, begetter of gods, and Tethys their mother', he made all things the offspring of flux and motion.[8]—Or don't you think he meant that?

THEAETETUS: Oh, I think he did.

153 SOCRATES: And if anyone proceeded to dispute the field with an army like that—an army led by Homer—he could hardly help making a fool of himself, could he?

THEAETETUS: It would not be an easy matter, Socrates.

SOCRATES: It would not, Theaetetus. You see, there is good enough evidence for this theory that being (what passes for such) and becoming are a product of motion, while not-being and passing-away result from a state of rest. There is evidence for it in the fact that heat or fire, which presumably generates and controls everything else, is itself generated out of movement and friction—these being motions.—Or am I wrong in saying these are the original sources of fire?

b THEAETETUS: Oh no, they certainly are.

SOCRATES: Moreover, the growth of living creatures depends upon these same sources?

THEAETETUS: Yes, certainly.

SOCRATES: And isn't it also true that bodily condition deteriorates with rest and idleness? While by exertion and motion it can be preserved for a long time?

THEAETETUS: Yes.

SOCRATES: And what about the condition of the soul? Isn't it by learning and study, which are motions, that the soul gains knowledge and is pre-
c served[9] and becomes a better thing? Whereas in a state of rest, that is, when it will not study or learn, it not only fails to acquire knowledge but forgets what it has already learned?

7. Heraclitus was famous for holding that 'everything flows' (cf. 179d ff.). Empedocles described a cosmic cycle in which things are constituted and dissolved by the coming together and separating of the four elements earth, air, fire, and water. Epicharmus made humorous use of the idea that everything is always changing by having a debtor claim he is not the same person as incurred the debt. Parmenides remains outside the chorus of agreement because he held that the only reality is one single, completely changeless thing (cf. 183e).

8. *Iliad* xiv.201, 302.

9. The Greek could equally be translated 'that the soul gains and preserves knowledge'; the reader may perhaps be expected to hear the clause both ways.

THEAETETUS: That certainly is so.

SOCRATES: And so we may say that the one thing, that is, motion, is beneficial to both body and soul, while the other has the opposite effect?

THEAETETUS: Yes, that's what it looks like.

SOCRATES: Yes, and I might go on to point out to you the effect of such conditions as still weather on land and calms on the sea. I might show you how these conditions rot and destroy things, while the opposite conditions make for preservation. And finally, to put the crown on my argument, I might bring in Homer's golden cord,[10] and maintain that he means by this
simply the sun; and is here explaining that so long as the revolution d
continues and the sun is in motion, all things are and are preserved, both in heaven and in earth, but that if all this should be 'bound fast', as it were, and come to a standstill, all things would be destroyed and, as the saying goes, the world would be turned upside down. Do you agree with this?

THEAETETUS: Yes, Socrates, I think that is the meaning of the passage.

SOCRATES: Then, my friend, you must understand our theory in this way. In the sphere of vision, to begin with, what you would naturally call a
white color is not itself a distinct entity, either outside your eyes or in e
your eyes. You must not assign it any particular place; for then, of course it would be standing at its post; it wouldn't be in process of becoming.

THEAETETUS: But what do you mean?

SOCRATES: Let us follow what we stated a moment ago, and posit that there is nothing which is, in itself, one thing. According to this theory, black or white or any other color will turn out to have come into being through the impact of the eye upon the appropriate motion; and what we
naturally call a particular color is neither that which impinges nor that 154
which is impinged upon, but something which has come into being between the two, and which is private to the individual percipient.—Or would you be prepared to insist that every color appears to a dog, or to any other animal, the same as it appears to you?

THEAETETUS: No, I most certainly shouldn't.

SOCRATES: Well, and do you even feel sure that anything appears to another human being like it appears to you? Wouldn't you be much more disposed to hold that it doesn't appear the same even to yourself because you never remain like yourself?

THEAETETUS: Yes, that seems to me nearer the truth than the other.

SOCRATES: Well now, supposing such things as size or warmth or white- b
ness really belonged to the object we measure ourselves against or touch, it would never be found that this object had become different simply by coming into contact with another thing and without any change in itself. On the other hand, if you suppose them to belong to what is measuring

10. *Iliad* viii.17–27. Zeus boasts that if he pulled on a golden cord let down from heaven, he could haul up earth, sea and all, bind the cord fast round the peak of Mt. Olympus, and leave the lot dangling in mid-air.

or touching, this again could never become different simply because something else had come into its neighborhood, or because something had happened to the first thing—nothing having happened to itself. As it is, you see, we may easily find ourselves forced into saying the most astonishing and ridiculous things, as Protagoras would point out or anyone who undertook to expound the same views.

Theaetetus: What do you mean? What sort of ridiculous things?

c Socrates: Let me give you a simple example of what I mean, and you will see the rest for yourself. Here are six dice. Put four beside them, and they are more, we say, than the four, that is, half as many again; but put twelve beside them, and we say they are less, that is, half the number. And there is no getting out of that—or do you think there is?

Theaetetus: No, I don't.

Socrates: Well now, supposing Protagoras or anyone else were to ask you this question: 'Is it possible, Theaetetus, for any thing to become bigger
d or more in number in any other way than by being increased?' What is your answer to that?

Theaetetus: Well, Socrates, if I answer what seems true in relation to the present question, I shall say 'No, it is not possible'; but if I consider it in relation to the question that went before, then in order to avoid contradicting myself, I say 'Yes, it is.'

Socrates: That's a good answer, my friend, by Jove it is; you are inspired. But, I think, if you answer 'Yes', it will be like that episode in Euripides—the tongue will be safe from refutation but the mind will not.[11]

Theaetetus: That's true.

Socrates: Now if you and I were professional savants, who had already analyzed all the contents of our minds, we should now spend our super-
e fluous time trying each other out; we should start a regular Sophists' set-to, with a great clashing of argument on argument. But, as it is, we are only plain men; and so our first aim will be to look at our thoughts themselves in relation to themselves, and see what they are—whether, in our opinion, they agree with one another or are entirely at variance.

Theaetetus: That would certainly be my aim, anyway.

Socrates: And mine. That being so, as we are not in any way pressed
155 for time, don't you think the thing to do is to reconsider this matter quietly and patiently, in all seriousness 'analyzing' ourselves, and asking what are these apparitions within us?—And when we come to review them, I suppose we may begin with the statement that nothing can possibly have become either greater or less, in bulk or in number, so long as it is equal to itself. Isn't that so?

Theaetetus: Yes.

Socrates: Secondly, we should say that a thing to which nothing is added and from which nothing is taken away neither increases nor diminishes but remains equal.

11. Cf. *Hippolytus* 612.

Theaetetus: Yes, certainly.

Socrates: Thirdly, that it is impossible that a thing should ever be b
what it was not before without having become and without any process of becoming?

Theaetetus: Yes, I think so.

Socrates: Now it seems to me that these three statements that we have admitted are fighting one another in our souls when we speak of the example of the dice; or when we say that, within the space of a year, I (a full-grown man) without having been either increased or diminished, am now bigger than you (who are only a boy) and, later on, smaller—though I have lost nothing and it is only that you have grown. For this means c
that I am, at a later stage, what I was not before, and that, too, without having become—for without becoming it is not possible to have become, and without suffering any loss in size I could never become less. And there are innumerable other examples of the same thing if once we admit these. You follow me, I take it, Theaetetus—I think you must be familiar with this kind of puzzle.

Theaetetus: Oh yes, indeed, Socrates, I often wonder like mad what these things can mean; sometimes when I'm looking at them I begin to feel quite giddy.

Socrates: I dare say you do, my dear boy. It seems that Theodorus was d
not far from the truth when he guessed what kind of person you are. For this is an experience which is characteristic of a philosopher, this wondering: this is where philosophy begins and nowhere else. And the man who made Iris the child of Thaumas was perhaps no bad genealogist.[12]—But aren't you beginning to see now what is the explanation of these puzzles, according to the theory which we are attributing to Protagoras?

Theaetetus: I don't think I am, yet.

Socrates: Then I dare say you will be grateful to me if I help you to e
discover the veiled truth in the thought of a great man—or perhaps I should say, of great men?

Theaetetus: Of course I shall be, Socrates, very grateful.

Socrates: Then you have a look round, and see that none of the uninitiated are listening to us—I mean the people who think that nothing exists but what they can grasp with both hands; people who refuse to admit that actions and processes and the invisible world in general have any place in reality.

Theaetetus: They must be tough, hard fellows, Socrates. 156

Socrates: They are, my son—very crude people. But these others, whose mysteries I am going to tell you, are a much more subtle type. These mysteries begin from the principle on which all that we have just been saying also depends, namely, that everything is really motion, and there is nothing but motion. Motion has two forms, each an infinite multitude,

12. *Theogony* 265. 'Thaumas' means wonder, while Iris, the messenger of the gods, is the rainbow which passes between earth and heaven.

but distinguished by their powers, the one being active and the other passive. And through the intercourse and mutual friction of these two
b there comes to be an offspring infinite in multitude but always twin births, on the one hand what is perceived, on the other, the perception of it, the perception in every case being generated together with what is perceived and emerging along with it. For the perceptions we have such names as sight, hearing, smelling, feeling cold and feeling hot; also what are called pleasures and pains, desires and fears; and there are others besides, a great number which have names, an infinite number which have not. And on the other side there is the race of things perceived, for each of these
c perceptions perceived things born of the same parentage, for all kinds of visions all kinds of colors, for all kinds of hearings all kinds of sounds; and so on, for the other perceptions the other things perceived, that come to be in kinship with them.

Now what does this tale really mean, from our point of view, Theaetetus? How does it bear on what we were saying before? Do you see?

THEAETETUS: Not really, Socrates.

SOCRATES: Look here, then, let us see if we can somehow round it off. What it is trying to express, presumably, is this. All these things are in motion, just as we say; and their motion is distinguished by its swiftness or slowness. What is slow has its motion in one and the same place, and
d in relation to the things in the immediate neighborhood; in this way it generates and the offspring are swifter, as they move through space, and their motion takes the form of spatial movement.

Thus the eye and some other thing—one of the things commensurate with the eye—which has come into its neighborhood, generate both whiteness and the perception which is by nature united with it (things which would never have come to be if it had been anything else that eye or object
e approached). In this event, motions arise in the intervening space, sight from the side of the eye and whiteness from the side of that which cooperates in the production of the color. The eye is filled with sight; at that moment it sees, and becomes not indeed sight, but a seeing eye; while its partner in the process of producing color is filled with whiteness, and becomes not whiteness but white, a white stick or stone or whatever it is that happens to be colored this sort of color.

157 We must understand this account as applying in the same way to hard and hot and everything else: nothing, as we were saying before, *is* in itself any of these. All of them, of all kinds whatsoever, are what things become through association with one another, as the result of motion. For even in the case of the active and passive motions it is impossible, as they say, for thought, taking them singly, to pin them down to being anything. There is no passive till it meets the active, no active except in conjunction with the passive; and what, in conjunction with one thing, is active, reveals itself as passive when it falls in with something else.

And so, wherever you turn, there is nothing, as we said at the outset,
b which in itself is just one thing; all things become relatively to something.

The verb 'to be' must be totally abolished—though indeed we have been led by habit and ignorance into using it ourselves more than once, even in what we have just been saying. That is wrong, these wise men tell us, nor should we allow the use of such words as 'something', 'of something', or 'mine', 'this' or 'that', or any other name that makes things stand still. We ought, rather, to speak according to nature and refer to things as 'becoming', 'being produced', 'passing away', 'changing'; for if you speak in such a way as to make things stand still, you will easily be refuted. And this applies in speaking both of the individual case and of many aggregated together—such an aggregate, I mean, as people call 'man' or c
'stone', or to which they give the names of the different animals and sorts of thing.

—Well, Theaetetus, does this look to you a tempting meal and could you take a bite of the delicious stuff?

THEAETETUS: I really don't know, Socrates. I can't even quite see what you're getting at—whether the things you are saying are what you think yourself, or whether you are just trying me out.

SOCRATES: You are forgetting, my friend. I don't know anything about this kind of thing myself, and I don't claim any of it as my own. I am barren of theories; my business is to attend you in your labor. So I chant incantations over you and offer you little tidbits from each of the wise till d
I succeed in assisting you to bring your own belief forth into the light. When it has been born, I shall consider whether it is fertile or a wind-egg. But you must have courage and patience; answer like a man whatever appears to you about the things I ask you.

THEAETETUS: All right, go on with the questions.

SOCRATES: Tell me again, then, whether you like the suggestion that good and beautiful and all the things we were just speaking of cannot be said to 'be' anything, but are always 'coming to be'.[13]

THEAETETUS: Well, as far as I'm concerned, while I'm listening to your exposition of it, it seems to me an extraordinarily reasonable view; and I feel that the way you have set out the matter has got to be accepted.

SOCRATES: In that case, we had better not pass over any point where our e
theory is still incomplete. What we have not yet discussed is the question of dreams, and of insanity and other diseases; also what is called mishearing or misseeing or other cases of misperceiving. You realize, I suppose, that it would be generally agreed that all these cases appear to provide a refutation of the theory we have just expounded. For in these conditions, 158
we surely have false perceptions. Here it is far from being true that all things which appear to the individual also are. On the contrary, no one of the things which appear to him really is.

THEAETETUS: That is perfectly true, Socrates.

13. An alternative translation would be: 'the suggestion that nothing is, but rather becomes, good, beautiful or any of the things we were speaking of just now'.

Socrates: Well then, my lad, what argument is left for the person who maintains that knowledge is perception and that what appears to any individual also is, for him to whom it appears to be?

Theaetetus: Well, Socrates, I hardly like to tell you that I don't know
b what to say, seeing I've just got into trouble with you for that. But I really shouldn't know how to dispute the suggestion that a madman believes what is false when he thinks he is a god; or a dreamer when he imagines he has wings and is flying in his sleep.

Socrates: But there's a point here which *is* a matter of dispute, especially as regards dreams and real life—don't you see?

Theaetetus: What do you mean?

Socrates: There's a question you must often have heard people ask—the question what evidence we could offer if we were asked whether in
c the present instance, at this moment, we are asleep and dreaming all our thoughts, or awake and talking to each other in real life.

Theaetetus: Yes, Socrates, it certainly is difficult to find the proof we want here. The two states seem to correspond in all their characteristics. There is nothing to prevent us from thinking when we are asleep that we are having the very same discussion that we have just had. And when we dream that we are telling the story of a dream, there is an extraordinary likeness between the two experiences.

Socrates: You see, then, it is not difficult to find matter for dispute,
d when it is disputed even whether this is real life or a dream. Indeed we may say that, as our periods of sleeping and waking are of equal length, and as in each period the soul contends that the beliefs of the moment are preeminently true, the result is that for half our lives we assert the reality of the one set of objects, and for half that of the other set. And we make our assertions with equal conviction in both cases.

Theaetetus: That certainly is so.

Socrates: And doesn't the same argument apply in the cases of disease and madness, except that the periods of time are not equal?

Theaetetus: Yes, that is so.

Socrates: Well now, are we going to fix the limits of truth by the clock?

e Theaetetus: That would be a very funny thing to do.

Socrates: But can you produce some other clear indication to show which of these beliefs are true?

Theaetetus: I don't think I can.

Socrates: Then you listen to me and I'll tell you the kind of thing that might be said by those people who propose it as a rule that whatever a man thinks at any time is the truth for him. I can imagine them putting their position by asking you this question: 'Now, Theaetetus, suppose you have something which is an entirely different thing from something else. Can it have in any respect the same powers as the other thing?' And observe, we are not to understand the question to refer to something which is the same in some respects while it is different in others, but to that which is wholly different.

THEAETETUS: In that case, then, it is impossible that it should have anything the same, either as regards its powers or in any other respect, if it is a completely different thing. 159

SOCRATES: And aren't we obliged to admit that such a thing is also unlike the other?

THEAETETUS: Yes, I think so.

SOCRATES: Now supposing a thing is coming to be like or unlike to something, whether to itself or to something else; are we to say that when it is growing like it is coming to be the same, and when it is growing unlike it is coming to be a different thing?

THEAETETUS: Yes, that must be so.

SOCRATES: Now weren't we saying, at an earlier stage, that there is a number—indeed an infinite number—of both active and passive factors?

THEAETETUS: Yes.

SOCRATES: Also this, that when a thing mixes now with one thing and now with another, it will not generate the same things each time but different things?

THEAETETUS: Yes, certainly. b

SOCRATES: Well, now let us apply this same statement to you and me and things in general. Take, for example, Socrates ill and Socrates well. Shall we say Socrates in health is like or unlike Socrates in sickness?

THEAETETUS: You mean the ill Socrates as a whole compared with the well Socrates as a whole?

SOCRATES: You get my point excellently; that is just what I mean.

THEAETETUS: Unlike, then, I suppose.

SOCRATES: And different also, in so far as he is unlike?

THEAETETUS: Yes, that follows.

SOCRATES: Similarly, you would say, when he is asleep or in any of the c
conditions we enumerated just now?

THEAETETUS: Yes, I should.

SOCRATES: Then it must surely be true that, when any one of the naturally active factors finds Socrates well, it will be dealing with one me, and when it finds Socrates ill, with a different me?

THEAETETUS: Yes, surely.

SOCRATES: Then in these two events the combination of myself as passive and it as the active factor will generate different things?

THEAETETUS: Of course.

SOCRATES: Now if I drink wine when I am well, it appears to me pleasant and sweet?

THEAETETUS: Yes. d

SOCRATES: Going by what we earlier agreed, that is so because the active and passive factors, moving simultaneously, generate both sweetness and a perception; on the passive side, the perception makes the tongue percipient, while on the side of the wine, sweetness moving about it makes it both be and appear sweet to the healthy tongue.

THEAETETUS: That's certainly the sense of what we agreed to before.

Socrates: But when the active factor finds Socrates ill, then, to begin with, it is not in strict truth the same man that it gets hold of, is it? Because here, as we saw, it has come upon an unlike.

Theaetetus: Yes.

e Socrates: Then this pair, Socrates ill and the draft of wine, generates, presumably, different things again: a perception of bitterness in the region of the tongue, and bitterness coming to be and moving in the region of the wine. And then the wine becomes, not bitterness, but bitter; and I become, not perception, but percipient.

Theaetetus: Yes, quite.

Socrates: And I shall never again become *thus* percipient of anything
160 else. A perception of something else is another perception, and makes another and a changed percipient. Nor again, in the case of that which acts on me, will it ever, in conjunction with something else, generate the same thing and itself become such as it now is. From something else it will generate something else, and itself become a changed thing.

Theaetetus: That is so.

Socrates: Nor will I become such for myself or it such for itself.

Theaetetus: No.

Socrates: But I must necessarily become percipient of something when
b I become percipient; it is impossible to become percipient, yet percipient of nothing. And it again, when it becomes sweet or bitter or anything of that kind, must become so for somebody, because it is impossible to become sweet and yet sweet for no one.

Theaetetus: Quite impossible.

Socrates: It remains, then, that I and it, whether we are or whether we become, are or become for each other. For our being is, by Necessity's decree, tied to a partner; yet we are tied neither to any other thing in the world nor to our respective selves. It remains, then, that we are tied to each other. Hence, whether you apply the term 'being' to a thing or the term 'becoming', you must always use the words 'for somebody' or 'of something' or 'relatively to something'. You must not speak of anything
c as in itself either being or becoming nor let anyone else use such expressions. That is the meaning of the theory we have been expounding.

Theaetetus: Yes, that's certainly true, Socrates.

Socrates: Then since that which acts on me is for me, and not for anyone else, it is I who perceive it too, and nobody else?

Theaetetus: Undoubtedly.

Socrates: Then my perception is true for me—because it is always a perception of that being which is peculiarly mine; and I am judge, as Protagoras said, of things that are, that they are, for me; and of things that are not, that they are not.

Theaetetus: So it seems.

d Socrates: How then, if I am thus unerring and never stumble in my thought about what is—or what is coming to be—how can I fail to be a knower of the things of which I am a perceiver?

Theaetetus: There is no way you could fail.

SOCRATES: Then that was a grand idea of yours when you told us that knowledge is nothing more or less than perception. So we find the various theories have converged to the same thing: that of Homer and Heraclitus and all their tribe, that all things flow like streams; of Protagoras, wisest of men, that man is the measure of all things; and of Theaetetus that, e
these things being so, knowledge proves to be perception. What about it, Theaetetus? Shall we say we have here your first-born child, the result of my midwifery? Or what would you say?

THEAETETUS: Oh, there's no denying it, Socrates.

SOCRATES: This, then, it appears, is what our efforts have at last brought forth—whatever it really is. And now that it has been born, we must perform the rite of running round the hearth with it; we must make it in good earnest go the round of discussion. For we must take care that we don't overlook some defect in this thing that is entering into life; it may be something not worth bringing up, a wind-egg, a falsehood. What do 161
you say? Is it your opinion that your child ought in any case to be brought up and not exposed to die? Can you bear to see it found fault with, and not get into a rage if your first-born is stolen away from you?

THEODORUS: Theaetetus will put up with it, Socrates. He is not at all one to lose his temper. But tell me, in Heaven's name, in what way is it not as it should be?

SOCRATES: You are the complete lover of discussion, Theodorus, and it is too good of you to think that I am a sort of bag of arguments, and can easily pick one out which will show you that this theory is wrong. b
But you don't realize what is happening. The arguments never come from me; they always come from the person I am talking to. All that I know, such as it is, is how to take an argument from someone else—someone who *is* wise—and give it a fair reception. So, now, I propose to try to get our answer out of Theaetetus, not to make any contribution of my own.

THEODORUS: That's a better way of putting it, Socrates; do as you say.

SOCRATES: Well then, Theodorus, do you know what astonishes me about your friend Protagoras?

THEODORUS: No—what is it? c

SOCRATES: Well, I was delighted with his general statement of the theory that a thing is for any individual what it seems to him to be; but I was astonished at the way he began. I was astonished that he did not state at the beginning of the *Truth* that 'Pig is the measure of all things' or 'Baboon' or some yet more out-of-the-way creature with the power of perception. That would have made a most imposing and disdainful opening. It would have made it clear to us at once that, while we were standing astounded at his wisdom as though he were a god, he was in reality no better authority d
than a tadpole—let alone any other man.

Or what are we to say, Theodorus? If whatever the individual judges by means of perception is true for him; if no man can assess another's experience better than he, or can claim authority to examine another man's judgment and see if it be right or wrong; if, as we have repeatedly said,

only the individual himself can judge of his own world, and what he
judges is always true and correct: how could it ever be, my friend, that
e Protagoras was a wise man, so wise as to think himself fit to be the teacher
of other men and worth large fees; while we, in comparison with him the
ignorant ones, needed to go and sit at his feet—we who are ourselves
each the measure of his own wisdom? Can we avoid the conclusion that
Protagoras was just playing to the crowd when he said this? I say nothing
about my own case and my art of midwifery and how silly we look. So
too, I think, does the whole business of philosophical discussion. To exam-
ine and try to refute each other's appearances and judgments, when each
162 person's are correct—this is surely an extremely tiresome piece of nonsense,
if the *Truth* of Protagoras is true, and not merely an oracle speaking in
jest from the impenetrable sanctuary of the book.

THEODORUS: Protagoras was my friend, Socrates, as you have just re-
marked. I could not consent to have him refuted through my admissions;
and yet I should not be prepared to resist you against my own judgment.
So take on Theaetetus again. He seemed to be following you very sympa-
thetically just now.

b SOCRATES: Now, Theodorus, supposing you went to Sparta and were
visiting the wrestling-schools. Would you think it right to sit and watch
other men exercising naked—some of them not much to look at—and
refuse to strip yourself alongside of them, and take your turn of letting
people see what you look like?

THEODORUS: Why not, if I could persuade them to leave the choice to
me? Similarly I am hoping to persuade you to allow me to be a spectator
and not drag me into the arena now that I am grown stiff; but to take on
someone who is younger and more supple.

SOCRATES: Well, Theodorus, what you like I'll not dislike, as the saying
c goes. So we must again resort to our wise Theaetetus. Come, Theaetetus.
Think, to begin with, of what we have just been saying, and tell me if you
are not yourself astonished at suddenly finding that you are the equal in
wisdom of any man or even a god?—Or do you think the Protagorean
measure isn't meant to be applied to gods as much as to men?

THEAETETUS: I most certainly don't. And, to answer your question, yes,
d I am very much astonished. When we were working out the meaning of
the principle that a thing is for each man what it seems to him to be, it
appeared to me a very sound one. But now, all in a minute, it is quite the
other way round.

SOCRATES: Yes, because you are young, dear lad; and so you lend a ready
ear to mob-oratory and let it convince you. For Protagoras, or anyone
speaking on his behalf, will answer us like this: 'My good people, young
e and old,' he will say, 'you sit here orating; you drag in gods, whose
existence or nonexistence I exclude from all discussion, written or spoken;[14]

14. A reference to a notorious declaration by Protagoras (Diog. Laert. 9.51): 'Concerning gods I am unable to know whether they exist or do not exist, or what they are like in

you keep on saying whatever is likely to be acceptable to the mob, telling them that it would be a shocking thing if no man were wiser than any cow in a field; but of proof or necessity not a word. You just rely on plausibility; though if Theodorus or any other geometer were to do that in his branch of science, it's a good-for-nothing geometer he would be'. So you and Theodorus had better consider whether, in matters of such importance, you are going to accept arguments which are merely persua- 163
sive or plausible.

THEAETETUS: You wouldn't say we had any business to do that, Socrates; and neither should we.

SOCRATES: Then, it seems, you and Theodorus say our criticism should take a different line?

THEAETETUS: Yes, it certainly should.

SOCRATES: Here, then, is another way in which we might consider whether knowledge and perception are the same or different things—for that is the question which our argument has held in view throughout, isn't it? And it was for its sake that we have unearthed all this extraordinary stuff?

THEAETETUS: Undoubtedly.

SOCRATES: Well, now, are we going to agree that when we perceive things b
by seeing or hearing them, we always at the same time *know* them? Take, for example, the case of hearing people speaking a foreign language which we have not yet learned. Are we going to say that we do not hear the sound of their voices when they speak? Or that we both hear it and know what they are saying? Again, supposing we do not know our letters, are we going to insist that we do not see them when we look at them? Or shall we maintain that, if we see them, we know them?

THEAETETUS: We shall say, Socrates, that we know just that in them which we see and hear. We both see and know the shape and the color of the letters; and with the spoken words we both hear and know the rise and c
fall of the voice. But what schoolmasters and interpreters tell us about them, we don't perceive by seeing or hearing, and we don't know, either.

SOCRATES: Very good indeed, Theaetetus; and it would not be right for me to stand in the way of your progress by raising objections to what you say. But look, there is another difficulty coming upon us. You must think now how we are going to fend it off.

THEAETETUS: What kind of difficulty?

SOCRATES: I mean something like this. Supposing you were asked, 'If a d
man has once come to know a certain thing, and continues to preserve the memory of it, is it possible that, at the moment when he remembers it, he doesn't know this thing that he is remembering?' But I am being long-winded, I'm afraid. What I am trying to ask is, 'Can a man who has learned something not know it when he is remembering it?'

THEAETETUS: How could that happen, Socrates? That would be a most extraordinary thing.

---

form; for there are many hindrances to knowledge, the obscurity of the subject and the brevity of human life'.

Socrates: Then am I perhaps talking nonsense? But think now. You say that seeing is perceiving and sight is perception?

Theaetetus: Yes.

e Socrates: Then a man who has seen something has come to know that which he saw, according to the statement you made just now?

Theaetetus: Yes.

Socrates: But you do say—don't you?—that there is such a thing as memory?

Theaetetus: Yes.

Socrates: Memory of nothing? Or of something?

Theaetetus: Of something, surely.

Socrates: That is to say, of things which one has learned, that is, perceived—that kind of 'something'?

Theaetetus: Of course.

Socrates: And what a man has once seen, he recalls, I take it, from time to time?

Theaetetus: He does.

Socrates: Even if he shuts his eyes? Or does he forget it if he does this?

Theaetetus: That would be a strange thing to say, Socrates.

164 Socrates: Yet it is what we must say, if we are to save our previous statement. Otherwise, it's all up with it.

Theaetetus: Yes, by Jove, I begin to have my suspicions too; but I don't quite see it yet. You explain.

Socrates: This is why. According to us, the man who sees has acquired knowledge of what he sees, as sight, perception and knowledge are agreed to be the same thing.

Theaetetus: Yes, certainly.

Socrates: But the man who sees and has acquired knowledge of the thing he saw, if he shuts his eyes remembers but does not see it. Isn't that so?

Theaetetus: Yes.

b Socrates: But to say 'He doesn't see' is to say 'He doesn't know', if 'sees' is 'knows'?

Theaetetus: True.

Socrates: Then we have this result, that a man who has come to know something and still remembers it doesn't know it because he doesn't see it? And that's what we said would be a most extraordinary thing to happen.

Theaetetus: That's perfectly true.

Socrates: Then apparently we get an impossible result when knowledge and perception are identified?

Theaetetus: It looks like it.

Socrates: Then we have got to say that perception is one thing and knowledge another?

Theaetetus: Yes, I'm afraid so.

c Socrates: Then what *is* knowledge? We shall have to begin again at the beginning, it seems. And yet—whatever are we thinking about, Theaetetus?

Theaetetus: What do you mean?

SOCRATES: We appear to be behaving like a base-born fighting-cock, jumping away off the theory, and crowing before we have the victory over it.

THEAETETUS: How are we doing that?

SOCRATES: We seem to have been adopting the methods of professional controversialists: we've made an agreement aimed at getting words to agree consistently; and we feel complacent now that we have defeated the theory by the use of a method of this kind. We profess to be philosophers,
not champion controversialists; and we don't realize that we are doing d
just what those clever fellows do.

THEAETETUS: I still don't quite see what you mean.

SOCRATES: Well, I will try to explain what I have in mind here. We were enquiring into the possibility that a man should not know something that he has learned and remembers. And we showed that a man who has seen something, and then shuts his eyes, remembers but does not see it; and that showed that he does not know the thing at the very time that he remembers it. We said that this was impossible. And so the tale of Protagoras comes to an untimely end; yours too, your tale about the identity of knowledge and perception.

THEAETETUS: So it appears. e

SOCRATES: But I don't think this would have happened, my friend, if the father of the other tale were alive. He would find plenty of means of defending it. As things are, it is an orphan we are trampling in the mud. Not even the people Protagoras appointed its guardians are prepared to come to its rescue; for instance, Theodorus here. In the interests of justice, it seems that we shall have to come to the rescue ourselves.

THEODORUS: I think you must. It is not I, you know, Socrates, but Callias, 165
the son of Hipponicus,[15] who is the guardian of Protagoras' relicts. As it happened, I very soon inclined away from abstract discussion to geometry. But I shall be very grateful if you can rescue the orphan.

SOCRATES: Good, Theodorus. Now will you give your mind to this rescue work of mine—what little I can do? Because one might be driven into making even more alarming admissions than we have just made, if one paid as little attention to the words in which we express our assertions and denials as we are for the most part accustomed to doing. Shall I tell you how this might happen? Or shall I tell Theaetetus?

THEODORUS: Tell us both, Socrates; but the younger had better answer.
It will not be so undignified for him to get tripped up. b

SOCRATES: Well, then, here is the most alarming poser of all. It goes something like this, I think: 'Is it possible for a man who knows something not to know this thing which he knows?'

15. A wealthy Athenian famous for his patronage of the sophists: 'a man who has spent more money on sophists than everyone else put together' (*Apology* 20a). The discussion of Plato's *Protagoras* is set in his house, where Protagoras and other visiting sophists are staying.

Theodorus: What are we going to answer now, Theaetetus?

Theaetetus: That it is impossible, I should think.

Socrates: But it is not, if you are going to premise that seeing is knowing. For what are you going to do when some intrepid fellow has you 'trapped in the well-shaft', as they say, with a question that leaves you no way out:
c clapping his hand over one of your eyes, he asks you whether you see his cloak with the eye that is covered—how will you cope with that?

Theaetetus: I shall say that I don't see it with this one, but I do with the other.

Socrates: So you both see and do not see the same thing at the same time?

Theaetetus: Well, yes, in that sort of way I do.

Socrates: 'That's not the question I'm setting you,' he will say, 'I was not asking you in what way it happened. I was asking you "*Does* it happen that you don't know what you know?" You now appear to be seeing what you don't see; and you have actually admitted that seeing is knowing, and not to see is not to know. I leave you to draw your conclusion.'

d Theaetetus: Well, I draw a conclusion that contradicts my original suppositions.

Socrates: And that is the kind of thing that might have happened to you more than once, you wonderful fellow. It might have happened if someone had gone on asking you whether it was possible to know sometimes clearly and sometimes dimly; or to know near at hand and not from a distance; or to know the same thing both intensely and slightly. And there are a million other questions with which one of the mercenary skirmishers of debate might ambush you, once you had proposed that knowledge and perception are the same thing. He would lay into hearing and smelling and other perceptions of that kind; and would keep on refuting
e you and not let you go till you had been struck with wonder at his wisdom—that 'answer to many prayers'—and had got yourself thoroughly tied up by him. Then, when he had you tamed and bound, he would set you free for a ransom—whatever price seemed appropriate to the two of you.

But perhaps you'll ask, what argument would Protagoras himself bring to the help of his offspring. Shall we try to state it?

Theaetetus: Yes, surely.

Socrates: Well, he will say all the things that we are saying in our
166 attempt to defend him; and then, I imagine, he will come to grips with us, and in no respectful spirit either. I imagine him saying: 'This good Socrates here—what he did was to frighten a small boy by asking him if it were possible that the same man should at once remember and not know the same thing; and when the boy in his fright answered "No," because he couldn't see what was coming, then, according to Socrates, the laugh was against *me* in the argument. You are too easy-going, Socrates. The true position is this. When you are examining any doctrine of mine by the method of question and answer, if the person being questioned answers as I myself would answer, and gets caught, then it is I who am refuted;

but if his answers are other than I should give, then it is he who is put in b
the wrong.

'Now, to begin with, do you expect someone to grant you that a man
has a present memory of things he experienced in the past, this being an
experience rather like the original one, unless he is still experiencing them?
That is very far from being true. Again, do you suppose he will hesitate
to admit that it is possible for the same man to know and not know the
same thing? Or—if he has misgivings about this—do you expect him to
concede to you that the man, who is in process of becoming unlike, is the
same as he was before the process began? Do you expect him even to
speak of "the man" rather than of "the men," indeed of an infinite number
of these men coming to be in succession, assuming this process of becoming
unlike? Not if we really must take every precaution against each other's c
verbal traps. Show a little more spirit, my good man,' he will say, 'and
attack my actual statement itself, and refute it, if you can, by showing that
each man's perceptions are not his own private events; or that, if they are
his own private events, it does not follow that the thing which appears
"becomes" or, if we may speak of being, "is" only for the man to whom
it appears. You keep talking about pigs and baboons; you show the mentality
of a pig yourself, in the way you deal with my writings, and you
persuade your audience to follow your example. That is not the way d
to behave.

'I take my stand on the truth being as I have written it. Each one of us
is the measure both of what is and of what is not; but there are countless
differences between men for just this very reason, that different things
both are and appear to be to different subjects. I certainly do not deny the
existence of both wisdom and wise men: far from it. But the man whom
I call wise is the man who can change the appearances—the man who in
any case where bad things both appear and are for one of us, works a
change and makes good things appear and be for him.

'And I must beg you, this time, not to confine your attack to the letter e
of my doctrine. I am now going to make its meaning clearer to you. For
instance, I would remind you of what we were saying before, namely,
that to the sick man the things he eats both appear and are bitter, while
to the healthy man they both appear and are the opposite. Now what we
have to do is not to make one of these two wiser than the other—that is 167
not even a possibility—nor is it our business to make accusations, calling
the sick man ignorant for judging as he does, and the healthy man wise,
because he judges differently. What we have to do is to make a change
from the one to the other, because the other state is *better*. In education,
too, what we have to do is to change a worse state into a better state; only
whereas the doctor brings about the change by the use of drugs, the
professional teacher[16] does it by the use of words. What never happens is
that a man who judges what is false is made to judge what is true. For it

16. Literally, 'the sophist'.

is impossible to judge what is not, or to judge anything other than what one
b is immediately experiencing; and what one is immediately experiencing is always true. This, in my opinion, is what really happens: when a man's soul is in a pernicious state, he judges things akin to it, but giving him a sound state of the soul causes him to think different things, things that are good. In the latter event, the things which appear to him are what some people, who are still at a primitive stage, call "true"; my position, however, is that the one kind are *better* than the others, but in no way *truer*.

'Nor, my dear Socrates, should I dream of suggesting that we might look for wisdom among frogs. I look for wisdom, as regards animal bodies, in doctors; as regards plant-life, in gardeners—for I am quite prepared to
c maintain that gardeners too, when they find a plant sickly, proceed by causing it to have good and healthy, that is, "true" perceptions, instead of bad ones. Similarly, the wise and efficient politician is the man who makes wholesome things seem just to a city instead of pernicious ones. Whatever in any city is regarded as just and admirable *is* just and admirable, in that city and for so long as that convention maintains itself; but the wise man replaces each pernicious convention by a wholesome one, making this both be and seem just. Similarly the professional teacher who is able
d to educate his pupils on these lines is a wise man, and is worth his large fees to them.

'In this way we are enabled to hold both that some men are wiser than others, and also that no man judges what is false. And you, too, whether you like it or not, must put up with being a "measure." For this is the line we must take if we are to save the theory.

'If you feel prepared to go back to the beginning, and make a case against this theory, let us hear your objections set out in a connected argument. Or, if you prefer the method of question and answer, do it that way; there is no reason to try to evade that method either, indeed an intelligent person might well prefer it to any other. Only I beg that you will observe this
e condition: do not be unjust in your questions. It is the height of unreasonableness that a person who professes to care for moral goodness should be consistently unjust in discussion. I mean by injustice, in this connection, the behavior of a man who does not take care to keep controversy distinct from discussion; a man who forgets that in controversy he may play about and trip up his opponent as often as he can, but that in discussion he must be serious, he must keep on helping his opponent to his feet again, and
168 point out to him only those of his slips which are due to himself or to the intellectual society which he has previously frequented. If you observe this distinction, those who associate with you will blame themselves for their confusion and their difficulties, not you. They will seek your company, and think of you as their friend; but they will loathe themselves, and seek refuge from themselves in philosophy, in the hope that they may thereby become different people and be rid forever of the men that they once were. But if you follow the common practice and do the opposite, you will

get the opposite results. Instead of philosophers, you will make your b
companions grow up to be the enemies of philosophy.

'So, if you take my advice, as I said before, you will sit down with us without ill will or hostility, in a kindly spirit. You will genuinely try to find out what our meaning is when we maintain (*a*) that all things are in motion and (*b*) that for each person and each city, things are what they seem to them to be. And upon this basis you will inquire whether knowledge and perception are the same thing or different things. But you will not proceed as you did just now. You will not base your argument upon the use and
wont of language; you will not follow the practice of most men, who drag c
words this way and that at their pleasure, so making every imaginable difficulty for one another.'

Well, Theodorus, here is my contribution to the rescue of your friend—the best I can do, with my resources, and little enough that is. If he were alive himself, he would have come to the rescue of his offspring in a grander style.

THEODORUS: That must be a joke, Socrates. It was a very spirited rescue.

SOCRATES: You are kind, my friend. Tell me now, did you notice that
Protagoras was complaining of us, in the speech that we have just heard, d
for addressing our arguments to a small boy and making the child's nervousness a weapon against his ideas? And how he disparaged our method of arguments as merely an amusing game, and how solemnly he upheld his 'measure of all things' and commanded us to be serious when we dealt with his theory?

THEODORUS: Yes, of course I noticed that, Socrates.

SOCRATES: Then do you think we should obey his commands?

THEODORUS: Most certainly I do.

SOCRATES: Look at the company then. They are all children but you. So
if we are to obey Protagoras, it is you and I who have got to be serious e
about his theory. It is you and I who must question and answer one another. Then he will not have *this* against us, at any rate, that we turned the criticism of his philosophy into sport with boys.

THEODORUS: Well, isn't our Theaetetus better able to follow the investigation of a theory than many an old fellow with a long beard?

SOCRATES: But not better than *you*, Theodorus. Do not go on imagining
that it is my business to be straining every nerve to defend your dead 169
friend while you do nothing. Come now, my very good Theodorus, come a little way with me. Come with me at any rate until we see whether in questions of geometrical proofs it is really you who should be the measure or whether all men are as sufficient to themselves as you are in astronomy and all the other sciences in which you have made your name.

THEODORUS: Socrates, it is not easy for a man who has sat down beside you to refuse to talk. That was all nonsense just now when I was pretending that you were going to allow me to keep my coat on, and not use compulsion like the Spartans. So far from that, you seem to me to have leanings

b towards the methods of Sciron.[17] The Spartans tell one either to strip or
to go away; but you seem rather to be playing the part of Antaeus.[18] You
don't let any comer go till you have stripped him and made him wrestle
with you in an argument.

SOCRATES: That, Theodorus, is an excellent simile to describe what is the
matter with me. But I am more of a fiend for exercise than Sciron and
Antaeus. I have met with many and many a Heracles and Theseus in my
time, mighty men of words; and they have well battered me. But for all
c that I don't retire from the field, so terrible a lust has come upon me for
these exercises. *You* must not grudge me this, either; try a fall with me
and we shall both be the better.

THEODORUS: All right. I resign myself; take me with you where you like. In any case, I see, I have got to put up with the fate you spin for me, and submit to your inquisition. But not further than the limits you have laid down; beyond that I shall not be able to offer myself.

SOCRATES: It will do if you will go with me so far. Now there is one kind
of mistake I want you to be specially on your guard against, namely, that
d we do not unconsciously slip into some childish form of argument. We
don't want to get into disgrace for this again.

THEODORUS: I will do my best, I promise you.

SOCRATES: The first thing, then, is to tackle the same point that we were dealing with before. We were making a complaint. Now let us see whether we were right or wrong in holding it to be a defect in this theory that it made every man self-sufficient in wisdom; and whether we were right or wrong when we made Protagoras concede that some men are superior to others in questions of better and worse, these being 'the wise'. Do you agree?

THEODORUS: Yes.

SOCRATES: It would be a different matter if Protagoras were here in person
e and agreed with us, instead of our having made this concession on his
behalf in our attempt to help him. In that case, there would be no need
to take this question up again and make sure about it. In the circumstances,
however, it might be decided that we had no authority on his behalf, and
so it is desirable that we should come to a clearer agreement on this point;
for it makes no small difference whether this is so or not.

THEODORUS: True.

170 SOCRATES: Then don't let us obtain this concession through anybody else.
Let us take the shortest way, an appeal to his own statement.

THEODORUS: How?

17. A legendary highwayman who attacked travellers on the coast between Megara and Corinth. His most famous 'method' was to compel them to wash his feet, and kick them over the cliff into the sea while they were so doing.

18. Antaeus was said to have lived in a cave and compelled all passers-by to wrestle with him, with results invariably fatal to them.

Socrates: In this way. He says, does he not, that things are for every man what they seem to him to be?

Theodorus: Yes, that is what he says.

Socrates: Well, then, Protagoras, we too are expressing the judgments of a man—I might say, of all men—when we say that there is no one in the world who doesn't believe that in some matters he is wiser than other men; while in other matters, they are wiser than he. In emergencies—if at no other time—you see this belief. When they are in distress, on the battlefield, or in sickness or in a storm at sea, all men turn to their leaders
in each sphere as to gods and look to them for salvation because they are b
superior in precisely this one thing—knowledge. And wherever human life and work goes on, you find everywhere men seeking teachers and masters, for themselves and for other living creatures and for the direction of all human works. You find also men who believe that they are able to teach and to take the lead. In all these cases, what else can we say but that men do believe in the existence of both wisdom and ignorance among themselves?

Theodorus: There can be no other conclusion.

Socrates: And they believe that wisdom is true thinking? While ignorance is a matter of false judgment?

Theodorus: Yes, of course. c

Socrates: What then, Protagoras, are we to make of your argument? Are we to say that all men, on every occasion, judge what is true? Or that they judge sometimes truly and sometimes falsely? Whichever we say, it comes to the same thing, namely, that men do not always judge what is true; that human judgments are both true and false. For think, Theodorus. Would you, would anyone of the school of Protagoras be prepared to contend that no one ever thinks his neighbor is ignorant or judging falsely?

Theodorus: No, that's not a thing one could believe, Socrates.

Socrates: And yet it is to this that our theory has been driven—this d
theory that man is the measure of all things.

Theodorus: How is that?

Socrates: Well, suppose you come to a decision in your own mind and then express a judgment about something to me. Let us assume with Protagoras that your judgment is true for *you*. But isn't it possible that the rest of us may criticize your verdict? Do we always agree that your judgment is true? Or does there rise up against you, every time, a vast army of persons who think the opposite, who hold that your decisions and your thoughts are false?

Theodorus: Heaven knows they do, Socrates, in their 'thousands and e
tens of thousands', as Homer says,[19] and give me all the trouble that is humanly possible.

19. *Odyssey* xvi.121.

SOCRATES: Then do you want us to say that you are then judging what is true for yourself, but false for the tens of thousands?

THEODORUS: It looks as if that is what we must say, according to the theory, at any rate.

SOCRATES: And what of Protagoras himself? Must he not say this, that supposing he himself did not believe that man is the measure, any more than the majority of people (who indeed do not believe it), then this *Truth*
171 which he wrote is true for no one? On the other hand, suppose he believed it himself, but the majority of men do not agree with him; then you see—to begin with—the more those to whom it does not seem to be the truth outnumber those to whom it does, so much the more it isn't than it is?

THEODORUS: That must be so, if it is going to be or not be according to the individual judgment.

SOCRATES: Secondly, it has this most exquisite feature: Protagoras admits, I presume, that the contrary opinion about his own opinion (namely, that it is false) must be true, seeing he agrees that all men judge what is.

THEODORUS: Undoubtedly.

b SOCRATES: And in conceding the truth of the opinion of those who think him wrong, he is really admitting the falsity of his own opinion?

THEODORUS: Yes, inevitably.

SOCRATES: But for their part the others do not admit that they are wrong?

THEODORUS: No.

SOCRATES: But Protagoras again admits *this* judgment to be true, according to his written doctrine?

THEODORUS: So it appears.

SOCRATES: It will be disputed, then, by everyone, beginning with Protagoras—or rather, it will be admitted by him, when he grants to the person
c who contradicts him that he judges truly—when he does that, even Protagoras himself will be granting that neither a dog nor the 'man in the street' is the measure of anything at all which he has not learned. Isn't that so?

THEODORUS: It is so.

SOCRATES: Then since it is disputed by everyone, the *Truth* of Protagoras is not true for anyone at all, not even for himself?

THEODORUS: Socrates, we are running my friend too hard.

SOCRATES: But it is not at all clear, my dear Theodorus, that we are running off the right track. Hence it is likely that Protagoras, being older
d than we are, really is wiser as well; and if he were to stick up his head from below as far as the neck just here where we are, he would in all likelihood convict me twenty times over of talking nonsense, and show you up too for agreeing with me, before he ducked down to rush off again. But we have got to take ourselves as we are, I suppose, and go on saying the things which seem to us to be. At the moment, then, mustn't we maintain that any man would admit at least this, that some men are wiser than their fellows and others more ignorant?

THEODORUS: So it seems to me, at any rate.

SOCRATES: We may also suggest that the theory would stand firm most
successfully in the position which we sketched out for it in our attempt e
to bring help to Protagoras. I mean the position that most things are for
the individual what they seem to him to be; for instance, warm, dry, sweet
and all this type of thing. But if the theory is going to admit that there is
any sphere in which one man is superior to another, it might perhaps be
prepared to grant it in questions of what is good or bad for one's health.
Here it might well be admitted that it is not true that every creature—
woman or child or even animal—is competent to recognize what is good
for it and to heal its own sickness; that here, if anywhere, one person is
better than another. Do you agree?

THEODORUS: Yes, that seems so to me.

SOCRATES: Then consider political questions. Some of these are questions 172
of what may or may not fittingly be done, of just and unjust, of pious and
impious; and here the theory may be prepared to maintain that whatever
view a city takes on these matters and establishes as its law or convention,
is truth and fact for that city. In such matters neither any individual nor
any city can claim superior wisdom. But when it is a question of laying
down what is to the interest of the state and what is not, the matter is
different. The theory will again admit that here, if anywhere, one counsellor
is better than another; here the decision of one city may be more in confor-
mity with the truth than that of another. It would certainly not have the b
hardihood to affirm that when a city decides that a certain thing is to its
own interest, that thing will undoubtedly turn out to be to its interest. It
is in those other questions I am talking about—just and unjust, pious and
impious—that men are ready to insist that no one of these things has by
nature any being of its own; in respect of these, they say, what seems to
people collectively to be so is true, at the time when it seems that way
and for just as long as it so seems. And even those who are not prepared
to go all the way with Protagoras take some such view of wisdom. But I
see, Theodorus, that we are becoming involved in a greater discussion c
emerging from the lesser one.

THEODORUS: Well, we have plenty of time, haven't we, Socrates?

SOCRATES: We appear to . . . That remark of yours, my friend, reminds
me of an idea that has often occurred to me before—how natural it is that
men who have spent a great part of their lives in philosophical studies make
such fools of themselves when they appear as speakers in the law courts.

THEODORUS: How do you mean now?

SOCRATES: Well, look at the man who has been knocking about in law
courts and such places ever since he was a boy; and compare him with
the man brought up in philosophy, in the life of a student. It is surely like d
comparing the upbringing of a slave with that of a free man.

THEODORUS: How is that, now?

SOCRATES: Because the one man always has what you mentioned just
now—plenty of time. When he talks, he talks in peace and quiet, and his

time is his own. It is so with us now: here we are beginning on our third
new discussion; and he can do the same, if he is like us, and prefers the
newcomer to the question in hand. It does not matter to such men whether
they talk for a day or a year, if only they may hit upon that which is. But
e the other—the man of the law courts—is always in a hurry when he is
talking; he has to speak with one eye on the clock. Besides, he can't make
his speeches on any subject he likes; he has his adversary standing over
him, armed with compulsory powers and with the sworn statement, which
is read out point by point as he proceeds, and must be kept to by the
speaker. The talk is always about a fellow-slave, and is addressed to a
master, who sits there holding some suit or other in his hand. And the
struggle is never a matter of indifference; it always directly concerns the
speaker, and sometimes life itself is at stake.

173 Such conditions make him keen and highly strung, skilled in flattering
the master and working his way into favor; but cause his soul to be small
and warped. His early servitude prevents him from making a free, straight
growth; it forces him into doing crooked things by imposing dangers and
alarms upon a soul that is still tender. He cannot meet these by just and
honest practice, and so resorts to lies and to the policy of repaying one
b wrong with another; thus he is constantly being bent and distorted, and
in the end grows up to manhood with a mind that has no health in it,
having now become—in his own eyes—a man of ability and wisdom.

There is your practical man, Theodorus. What about our own set? Would you like us to have a review of them, or shall we let them be, and return to the argument? We don't want to abuse this freedom to change our subject of which we were speaking just now.

c THEODORUS: No, no, Socrates. Let us review the philosophers. What you
said just now was quite right; we who move in such circles are not the
servants but the masters of our discussions. Our arguments are our own,
like slaves; each one must wait about for us, to be finished whenever we
think fit. We have no jury, and no audience (as the dramatic poets have),
sitting in control over us, ready to criticize and give orders.

SOCRATES: Very well, then; we must review them, it seems, since you
have made up your mind. But let us confine ourselves to the leaders;
why bother about the second-rate specimens? To begin with, then, the
d philosopher grows up without knowing the way to the market-place, or
the whereabouts of the law courts or the council chambers or any other
place of public assembly. Laws and decrees, published orally or in writing,
are things he never sees or hears. The scrambling of political cliques for
office; social functions, dinners, parties with flute-girls—such doings never
enter his head even in a dream. So with questions of birth—he has no
more idea whether a fellow citizen is high-born or humble, or whether he
has inherited some taint from his forebears, male or female, than he has
e of the number of pints in the sea, as they say. And in all these matters,
he knows not even that he knows not; for he does not hold himself aloof
from them in order to get a reputation, but because it is in reality only his

body that lives and sleeps in the city. His mind, having come to the
conclusion that all these things are of little or no account, spurns them
and pursues its wingéd way, as Pindar says,[20] throughout the universe,
'in the deeps beneath the earth' and geometrizing its surfaces, 'in the
heights above the heaven', astronomizing, and tracking down by every
path the entire nature of each whole among the things that are, never 174
condescending to what lies near at hand.

THEODORUS: What do you mean by that, Socrates?

SOCRATES: Well, here's an instance: they say Thales[21] was studying the
stars, Theodorus, and gazing aloft, when he fell into a well; and a witty
and amusing Thracian servant-girl made fun of him because, she said, he
was wild to know about what was up in the sky but failed to see what
was in front of him and under his feet. The same joke applies to all who
spend their lives in philosophy. It really is true that the philosopher fails b
to see his next-door neighbor; he not only doesn't notice what he is doing;
he scarcely knows whether he is a man or some other kind of creature.
The question he asks is, What is Man? What actions and passions properly
belong to human nature and distinguish it from all other beings? This is
what he wants to know and concerns himself to investigate. You see what
I mean, Theodorus, don't you?

THEODORUS: Yes, and what you say is true.

SOCRATES: This accounts, my friend, for the behavior of such a man when
he comes into contact with his fellows, either privately with individuals c
or in public life, as I was saying at the beginning. Whenever he is obliged,
in a law court or elsewhere, to discuss the things that lie at his feet and
before his eyes, he causes entertainment not only to Thracian servant-girls
but to all the common herd, by tumbling into wells and every sort of
difficulty through his lack of experience. His clumsiness is awful and gets
him a reputation for fatuousness. On occasions when personal scandal is
the topic of conversation, he never has anything at all of his own to
contribute; he knows nothing to the detriment of anyone, never having
paid any attention to this subject—a lack of resource which makes him d
look very comic. And again, when compliments are in order, and self-
laudation, his evident amusement—which is by no means a pose but
perfectly genuine—is regarded as idiotic. When he hears the praises of a
despot or a king being sung, it sounds to his ears as if some stock-breeder
were being congratulated—some keeper of pigs or sheep, or cows that are
giving him plenty of milk; only he thinks that the rulers have a more
difficult and treacherous animal to rear and milk, and that such a man,
having no spare time, is bound to become quite as coarse and uncultivated e
as the stock-farmer; for the castle of the one is as much a prison as the

20. This quotation from a lost poem of Pindar's is listed as his frag. 292 (Snell).

21. The first founder of Greek natural philosophy (sixth century B.C.), about whom we have anecdotes but little solid information.

mountain fold of the other. When he hears talk of land—that so-and-so has a property of ten thousand acres or more, and what a vast property that is, it sounds to him like a tiny plot, used as he is to envisage the whole earth. When his companions become lyric on the subject of great families, and exclaim at the noble blood of one who can point to seven wealthy ancestors, he thinks that such praise comes of a dim and limited
175 vision, an inability, through lack of education, to take a steady view of the whole, and to calculate that every single man has countless hosts of ancestors, near and remote, among whom are to be found, in every instance, rich men and beggars, kings and slaves, Greeks and foreigners, by the thousand. When men pride themselves upon a pedigree of twenty-five ancestors, and trace their descent back to Heracles the son of Amphitryon,
b they seem to him to be taking a curious interest in trifles. As for the twenty-fifth ancestor of Amphitryon, what *he* may have been is merely a matter of luck, and similarly with the fiftieth before him again. How ridiculous, he thinks, not to be able to work that out, and get rid of the gaping vanity of a silly mind.

On all these occasions, you see, the philosopher is the object of general derision, partly for what men take to be his superior manner, and partly for his constant ignorance and lack of resource in dealing with the obvious.

THEODORUS: What you say exactly describes what does happen, Socrates.

SOCRATES: But consider what happens, my friend, when he in his turn draws someone to a higher level, and induces him to abandon questions
c of 'My injustice towards you, or yours towards me' for an examination of justice and injustice themselves—what they are, and how they differ from everything else and from each other; or again, when he gets him to leave such questions as 'Whether a king who possesses much gold is happy?'[22] for an inquiry into kingship, and into human happiness and misery in general—what these two things are, and what, for a human being, is the proper method by which the one can be obtained and the other avoided.
d When it is an account of matters like all these that is demanded of our friend with the small, sharp, legal mind, the situation is reversed; his head swims as, suspended at such a height, he gazes down from his place among the clouds; disconcerted by the unusual experience, he knows not what to do next, and can only stammer when he speaks. And that causes great entertainment, not to Thracian servant-girls or any other uneducated persons—they do not see what is going on—but to all men who have not been brought up like slaves.

e These are the two types, Theodorus. There is the one who has been brought up in true freedom and leisure, the man you call a philosopher; a man to whom it is no disgrace to appear simple and good-for-nothing when he is confronted with menial tasks, when, for instance, he doesn't know how to make a bed, or how to sweeten a sauce or a flattering speech. Then you have the other, the man who is keen and smart at doing all

22. Reading, with Madvig, *taü chrusion*.

these jobs, but does not know how to strike up a song in his turn like a free man, or how to tune the strings of common speech to the fitting praise 176 of the life of gods and of the happy among men.

Theodorus: Socrates, if your words convinced everyone as they do me, there would be more peace and less evil on earth.

Socrates: But it is not possible, Theodorus, that evil should be destroyed—for there must always be something opposed to the good; nor is it possible that it should have its seat in heaven. But it must inevitably haunt human life, and prowl about this earth. That is why a man should make all haste to escape from earth to heaven; and escape means becoming b as like God as possible; and a man becomes like God when he becomes just and pious, with understanding. But it is not at all an easy matter, my good friend, to persuade men that it is not for the reasons commonly alleged that one should try to escape from wickedness and pursue virtue. It is not in order to avoid a bad reputation and obtain a good one that virtue should be practiced and not vice; that, it seems to me, is only what c men call 'old wives' talk'.

Let us try to put the truth in this way. In God there is no sort of wrong whatsoever; he is supremely just, and the thing most like him is the man who has become as just as it lies in human nature to be. And it is here that we see whether a man is truly able, or truly a weakling and a nonentity; for it is the realization of this that is genuine wisdom and goodness, while the failure to realize it is manifest folly and wickedness. Everything else that passes for ability and wisdom has a sort of commonness—in those who wield political power a poor cheap show, in the manual workers a matter of mechanical routine. If, therefore, one meets a man who practices d injustice and is blasphemous in his talk or in his life, the best thing for him by far is that one should never grant that there is any sort of ability about his unscrupulousness; such men are ready enough to glory in the reproach, and think that it means not that they are mere rubbish, cumbering the ground to no purpose, but that they have the kind of qualities that are necessary for survival in the community. We must therefore tell them the truth—that their very ignorance of their true state fixes them the more firmly therein. For they do not know what is the penalty of injustice, which is the last thing of which a man should be ignorant. It is not what they suppose—scourging and death—things which they may entirely evade in spite of their wrongdoing. It is a penalty from which there is no escape. e

Theodorus: And what is that?

Socrates: My friend, there are two patterns set up in reality. One is divine and supremely happy; the other has nothing of God in it, and is the pattern of the deepest unhappiness. This truth the evildoer does not see; blinded by folly and utter lack of understanding, he fails to perceive 177 that the effect of his unjust practices is to make him grow more and more like the one, and less and less like the other. For this he pays the penalty of living the life that corresponds to the pattern he is coming to resemble. And if we tell him that, unless he is delivered from this 'ability' of his,

when he dies the place that is pure of all evil will not receive him; that he will forever go on living in this world a life after his own likeness—a bad man tied to bad company: he will but think, 'This is the way fools talk to a clever rascal like me.'

THEODORUS: Oh, yes, Socrates, sure enough.

b SOCRATES: I know it, my friend. But there is one accident to which the unjust man is liable. When it comes to giving and taking an account in a private discussion of the things he disparages; when he is willing to stand his ground like a man for long enough, instead of running away like a coward, then, my friend, an odd thing happens. In the end the things he says do not satisfy even himself; that famous eloquence of his somehow dries up, and he is left looking nothing more than a child.

c But we had better leave it there; all this is really a digression; and if we go on, a flood of new subjects will pour in and overwhelm our original argument. So, if you don't mind, we will go back to what we were saying before.

THEODORUS: As a matter of fact, Socrates, *I* like listening to this kind of talk; it is easier for a man of my years to follow. Still, if you like, let us go back to the argument.

SOCRATES: Well, then, we were at somewhere about this point in the argument, weren't we? We were speaking of the people who assert a being that is in motion, and who hold that for every individual things always are whatever they seem to him to be; and we said that they were prepared to stand upon their principle in almost every case—not least in questions of what is just and right. Here they are perfectly ready to maintain that
d whatever any community decides to be just and right, and establishes as such, actually is what is just and right for that community and for as long as it remains so established. On the other hand, when it is a question of what things are good, we no longer find anyone so heroic that he will venture to contend that whatever a community thinks useful, and establishes, really is useful, so long as it is the established order—unless, of course, he means that it is *called* 'useful'; but that would be making a game of our argument, wouldn't it?

THEODORUS: It would indeed.

e SOCRATES: Let us suppose, then, that he is not talking about the name 'useful' but has in view the thing to which it is applied.

THEODORUS: Agreed.

SOCRATES: It is surely this that a government aims at when it legislates, whatever name it calls it. A community always makes such laws as are most useful to it—so far as the limits of its judgment and capacity permit.—Or do you think legislation may have some other object in view?

178 THEODORUS: Oh no, not at all.

SOCRATES: And does a community always achieve this object? Or are there always a number of failures?

THEODORUS: It seems to me that there are failures.

Socrates: Now we might put this matter in a rather different way and be still more likely to get people generally to agree with our conclusions. I mean, one might put a question about the whole class of things to which 'what is useful' belongs. These things are concerned, I take it, with future time; thus when we legislate, we make laws that are going to be useful in the time to come. This kind of thing we may properly call 'future'.

Theodorus: Yes, certainly. b

Socrates: Come then, let's put a question to Protagoras (or to anyone who professes the same views): 'Now, Protagoras, "Man is the measure of all things" as you people say—of white and heavy and light and all that kind of thing without exception. He has the criterion of these things within himself; so when he thinks that they are as he experiences them, he thinks what is true and what really is for him.' Isn't that so?

Theodorus: It is.

Socrates: 'Then, Protagoras,' we shall say, 'what about things that are
going to be in the future? Has a man the criterion of these within himself? c
When he thinks certain things *will be*, do they actually happen, for him, as he thought they would? Take heat, for example. Suppose the ordinary man thinks he is going to take a fever, and that his temperature will go up to fever point; while another man, this time a doctor, thinks the opposite. Do we hold that the future will confirm either the one judgment or the other? Or are we to say that it will confirm both; that is, that for the doctor the man will not have a temperature or be suffering from fever, while for himself he will?'

Theodorus: That would be absurd.

Socrates: But, when there is a question of the sweetness and dryness
of the next vintage, I presume it would always be the grower's judgment d
that would carry authority, rather than that of a musician?

Theodorus: Of course.

Socrates: Nor again, in any question of what will be in tune or out of tune, would the judgment of a teacher of gymnastic be superior to that of a musician—even about what is going to seem to be in tune to the gymnastic master himself?

Theodorus: No, never.

Socrates: Or suppose a dinner is being prepared. Even the guest who is going to eat it, if he has no knowledge of cooking, will not be able to pronounce so authoritative a verdict as the professional cook on how nice
it is going to be. I say 'going to be', because we had better not at this stage e
press our point as regards what is *now* pleasant to any individual, or what has been in the past. Our question for the moment is, whether the individual himself is the best judge, for himself, of what is going to seem and be for him in the future. 'Or,' we will ask, 'would not you, Protagoras, predict better than any layman about the persuasive effect that speeches in a law court will have upon any one of us?'

THEODORUS: And in fact, Socrates, this at any rate is a point on which Protagoras used to make strong claims to superiority over other people.

SOCRATES: Of course he did, my dear good fellow. No one would have
179 paid large fees for the privilege of talking with him if he had not been in
the habit of persuading his pupils that he was a better judge than any fortune-teller—or anyone else—about what was going to be and seem to be in the future.[23]

THEODORUS: That's true enough.

SOCRATES: Legislation also and 'what is useful' is concerned with the future; and it would be generally admitted to be inevitable that a city when it legislates often fails to achieve what is the most useful.

THEODORUS: Yes, surely.

SOCRATES: Then we shall be giving your master fair measure if we tell
b him that he has now got to admit that one man is wiser than another, and
that it is such a man who is 'the measure'; but that I, the man with no special knowledge, have not by any means got to be a measure—a part which the recent speech in his defense was trying to force upon me, whether I liked it or not.

THEODORUS: Now that, Socrates, seems to me to be the chief point on which the theory is convicted of error—though it stands convicted also when it makes other men's judgments carry authority and these turn out to involve thinking that Protagoras' statements are completely untrue.

c SOCRATES: There is more than one point besides these, Theodorus, on which a conviction might be secured—at least so far as it is a matter of proving that not every man's judgment is true. But so long as we keep within the limits of that immediate present experience of the individual which gives rise to perceptions and to perceptual judgments, it is more difficult to convict these latter of being untrue—but perhaps I'm talking nonsense. Perhaps it is not possible to convict them at all; perhaps those who profess that they are perfectly evident and are always knowledge
may be saying what really is. And it may be that our Theaetetus was not
d far from the mark with his proposition that knowledge and perception
are the same thing. We shall have to come to closer grips with the theory, as the speech on behalf of Protagoras required us to do. We shall have to consider and test this moving Being, and find whether it rings true or sounds as if it had some flaw in it. There is no small fight going on about it, anyway—and no shortage of fighting men.

THEODORUS: No, indeed; but in Ionia it seems to be even growing, and assuming vast dimensions. On the side of this theory, the Heraclitean party is conducting a most vigorous campaign.

23. An alternative text (accepting the conjecture of *dē* for *mē* at 179a1 and retaining the mss' *hautōi* at a3) yields: 'if he really was in the habit of persuading his pupils that, even about the future, neither a fortune-teller nor anyone else can judge better than one can for oneself'.

SOCRATES: The more reason, then, my dear Theodorus, why we should
examine it by going back to its first principle,[24] which is the way they e
present it themselves.

THEODORUS: I quite agree. You know, Socrates, these Heraclitean doc-
trines (or, as you say, Homeric or still more ancient)—you can't discuss
them in person with any of the people at Ephesus who profess to be adepts,
any more than you could with a maniac. They are just like the things they
say in their books—always on the move. As for abiding by what is said,
or sticking to a question, or quietly answering and asking questions in turn, 180
there is less than nothing of that in their capacity. That's an exaggeration, no
doubt. I mean there isn't so much as a tiny bit of repose in these people.
If you ask any one of them a question, he will pull out some little enigmatic
phrase from his quiver and shoot it off at you; and if you try to make him
give an account of what he has said, you will only get hit by another, full
of strange turns of language. You will never reach any conclusion with
any of them, ever; indeed they never reach any conclusion with each other,
they are so very careful not to allow anything to be stable, either in an b
argument or in their own souls. I suppose they think that if they did it
would be something that stands still—this being what they are totally at
war with, and what they are determined to banish from the universe, if
they can.

SOCRATES: I dare say, Theodorus, you have seen these men only on the
field of battle, and never been with them in times of peace—as you don't
belong to their set. I expect they keep such matters to be explained at
leisure to their pupils whom they want to make like themselves.

THEODORUS: *Pupils*, my good man? There are no pupils and teachers
among these people. They just spring up on their own, one here, one there, c
wherever they happen to catch their inspiration; and no one of them will
credit another with knowing anything. As I was just going to say, you
will never get these men to give an account of themselves, willingly or
unwillingly. What we must do is to take their doctrine out of their hands
and consider it for ourselves, as we should a problem in geometry.

SOCRATES: What you say is very reasonable. This problem now, we have
inherited it, have we not, from the ancients? They used poetical forms d
which concealed from the majority of men their real meaning, namely,
that Ocean and Tethys, the origin of all things, are actually flowing streams,
and nothing stands still. In more modern times, the problem is presented
to us by men who, being more accomplished in these matters, plainly
demonstrate their meaning so that even shoemakers may hear and assimi-
late their wisdom, and give up the silly idea that some things in this world
stand still while others move, learn that all things are in motion, and
recognize the greatness of their instructors.

24. I.e., the principle that everything is really motion (156a).

But I was almost forgetting, Theodorus, that there are other thinkers
e who have announced the opposite view; who tell us that 'Unmoved is the Universe',[25] and other similar statements which we hear from a Melissus[26] or a Parmenides as against the whole party of Heracliteans. These philosophers insist that all things are One, and that this One stands still, itself within itself, having no place in which to move.

What are we to do with all these people, my friend? We have been gradually advancing till, without realizing it, we have got ourselves in
181 between the two parties; and if we don't in some way manage to put up a fight and make our escape, we shall pay for it, like the people who play that game on the line in the wrestling schools, and get caught by both parties and pulled in opposite directions.

Now I think we ought to begin by examining the other party, the fluent fellows we started to pursue. If they appear to us to be talking sense, we will help them to drag us over to their side, and try to escape the others. But if those who make their stand for the whole appear to be nearer the
b truth, we will take refuge with them from the men who 'move what should not be moved'. And if it appears that neither party has a reasonable theory, then we shall be very absurd if we think that insignificant people like ourselves can have anything to say, after we have rejected the views of men who lived so long ago and possessed all wisdom. Think now, Theodorus, is it of any use for us to go forward upon such a dangerous venture?

THEODORUS: We can't refuse to examine the doctrines of these two schools, Socrates; that couldn't be allowed.

c SOCRATES: Then we must examine them, if *you* feel so strongly about it. Now it seems to me that the proper starting point of our criticism is the nature of motion; what is this thing that they are talking about when they say that all things are in motion? I mean, for example, are they referring to one form of motion only, or, as I think, to two—but don't let this be only what *I* think. You commit yourself as well, so that we may come to grief together, if need be. Tell me, do you call it 'motion' when a thing changes from one place to another or turns round in the same place?

THEODORUS: I do, yes.

SOCRATES: Here then is one form of motion. Then supposing a thing
d remains in the same place, but grows old, or becomes black instead of white, or hard instead of soft, or undergoes any other alteration; isn't it right to say that here we have motion in another form?

THEODORUS: Unquestionably.

SOCRATES: Then I now have two forms of motion, alteration and spatial movement.

THEODORUS: Yes; and that's quite correct.

SOCRATES: Then now that we have made this distinction, let us have a talk with the people who allege that all things are in motion. Let us ask

25. Both the text and the sense of this quotation are uncertain.

26. Melissus of Samos was a fifth-century follower of Parmenides.

them, 'Do you hold that everything is in motion in both ways, that is, that e
it both moves through space and undergoes alteration? Or do you suggest that some things are in motion in both ways, and some only in one or the other?'

Theodorus: Heaven knows, *I* can't answer that. I suppose they would say, in both ways.

Socrates: Yes; otherwise, my friend, it will turn out that, in their view, things are both moving and standing still; and it will be no more correct to say that all things are in motion than to say that all things stand still.

Theodorus: That's perfectly true.

Socrates: Then since they must be in motion, and there is no such thing anywhere as absence of motion, it follows that all things are always in 182
every kind of motion.

Theodorus: Yes, that must be so.

Socrates: Then I want you to consider this point in their theory. As we were saying, they hold that the genesis of things such as warmth and whiteness occurs when each of them is moving, together with a perception, in the space between the active and passive factors: the passive factor thereby becoming percipient, but not a perception, while the active factor becomes such or such, but not a quality—isn't that so? But perhaps 'quality' seems a strange word to you; perhaps you don't quite understand it as a general expression.[27] So I will talk about particular cases. What I mean is that the active factor becomes not warmth or whiteness, but warm and b
white; and so on. You will remember, perhaps, that we said in the earlier stages of the argument that there is nothing which in itself is just one thing; and that this applies also to the active and passive factors. It is by the association of the two with one another that they generate perceptions and the things perceived; and in so doing, the active factor becomes such and such, while the passive factor becomes percipient.

Theodorus: Yes, I remember that, of course.

Socrates: Then we need not concern ourselves about other points in c
their doctrine, whether they mean what we say or something else. We must keep our eyes simply upon the object of our discussion. We must ask them this question: 'According to you, all things move and flow; isn't that so?'

Theodorus: Yes.

Socrates: And they have both the motions that we distinguished, that is to say, they both move and alter?

Theodorus: That must be so, if they are to be wholly and completely in motion.

Socrates: Now if they were only moving through space and not altering, we should presumably be able to say *what* the moving things flow? Or how do we express it?

27. This is the first occurrence in Greek of the word *poiotēs*, 'quality' or 'what-sort-ness', coined by Plato from the interrogative adjective *poios*, 'of what sort?'.

THEODORUS: That's all right.

d SOCRATES: But since not even this abides, that what flows flows white, but rather it is in process of change, so that there is flux of this very thing also, the whiteness, and it is passing over into another color, lest it be convicted of standing still in this respect—since that is so, is it possible to give any name to a color which will properly apply to it?

THEODORUS: I don't see how one could, Socrates; nor yet surely to anything else of that kind, if, being in flux, it is always quietly slipping away as you speak?

SOCRATES: And what about any particular kind of perception; for exam-
e ple, seeing or hearing? Does it ever abide, and remain seeing or hearing?

THEODORUS: It ought not to, certainly, if all things are in motion.

SOCRATES: Then we may not call anything seeing rather than not-seeing; nor indeed may we call it any other perception rather than not—if it be admitted that all things are in motion in every way?

THEODORUS: No, we may not.

SOCRATES: Yet Theaetetus and I said that knowledge was perception?

THEODORUS: You did.

SOCRATES: And so our answer to the question, 'What is knowledge?' gave something which is no more knowledge than not.

183 THEODORUS: It seems as if it did.

SOCRATES: A fine way this turns out to be of making our answer right. We were most anxious to prove that all things are in motion, in order to make that answer come out correct; but what has really emerged is that, if all things are in motion, every answer, on whatever subject, is equally correct, both 'it is thus' and 'it is not thus'—or if you like 'becomes', as we don't want to use any expressions which will bring our friends to a standstill.

THEODORUS: You are quite right.

b SOCRATES: Well, yes, Theodorus, except that I said 'thus' and 'not thus'. One must not use even the word 'thus'; for this 'thus' would no longer be in motion; nor yet 'not thus' for here again there is no motion. The exponents of this theory need to establish some other language; as it is, they have no words that are consistent with their hypothesis—unless it would perhaps suit them best to use 'not at all thus' in a quite indefinite sense.

THEODORUS: That would at least be an idiom most appropriate to them.

c SOCRATES: Then we are set free from your friend, Theodorus. We do not yet concede to him that every man is the measure of all things, if he be not a man of understanding. And we are not going to grant that knowledge is perception, not at any rate on the line of inquiry which supposes that all things are in motion; we are not going to grant it unless Theaetetus here has some other way of stating it.

THEODORUS: That's very good hearing, Socrates, for when these matters were concluded I was to be set free from my task of answering you,

according to our agreement, which specified the end of the discussion of Protagoras' theory.

THEAETETUS: Oh, no, indeed, Theodorus! Not till you and Socrates have d
done what you proposed just now, and dealt with the other side, the people who say that the Universe stands still.

THEODORUS: What's this, Theaetetus? You at your age teaching your elders to be unjust and break their agreements? What you have got to do is to prepare to render account to Socrates yourself for the rest of the discussion.

THEAETETUS: All right, if he likes. But I would rather have listened to a discussion of these views.

THEODORUS: Well, challenging Socrates to an argument is like inviting 'cavalry into the plain'. So ask your questions and you shall hear.

SOCRATES: But I don't think, Theodorus, that I am going to be persuaded
by Theaetetus to do what he demands. e

THEODORUS: But what is it makes you unwilling?

SOCRATES: Shame. I am afraid our criticism might be a very cheap affair. And if I feel like this before the many who have made the universe one and unmoved, Melissus and the rest of them, I feel it still more in the face of the One—Parmenides. Parmenides seems to me, in the words of Homer, to be 'reverend' and 'awful'.[28] I met him when I was very young and he
was a very old man; and he seemed to me to have a wholly noble depth.[29] 184
So I am afraid we might not understand even what he says; still less should we attain to his real thought. Above all, I am afraid that the very object of our discussion, the nature of knowledge, might be left unexamined amid the crowd of theories that will rush in upon us if we admit them; especially as the theory we have now brought up is one which involves unmanageably vast issues. To treat it as a sideshow would be insult and injury; while if it is adequately discussed, it is likely to spread out until it completely eclipses the problems of knowledge. We must not do either.
What we must do is to make use of our midwife's art to deliver Theaetetus b
of the thoughts which he has conceived about the nature of knowledge.*

THEODORUS: Well, if that is what you think proper, it must be done.

SOCRATES: Now, Theaetetus, I want you to think about one point in what has been said. Your answer was that knowledge is perception, wasn't it?

THEAETETUS: Yes.

SOCRATES: Now supposing you were asked: 'With what does a man see white and black things, and with what does he hear high and low notes?' You would reply, I imagine, 'With his eyes and ears.'

THEAETETUS: I should, yes.

28. *Iliad* iii.172.

29. A reference probably to the discussion between Socrates and Parmenides in *Parmenides*.

*Alternatively, this sentence could be translated: 'What we must do is to make use of our midwife's art to set Theaetetus free from the thoughts which he has conceived about the nature of knowledge'.

c Socrates: Now as a rule it is no sign of ill-breeding to be easy in the use of language and take no particular care in one's choice of words; it is rather the opposite that gives a man away. But such exactness is sometimes necessary; and it is necessary here, for example, to fasten upon something in your answer that is not correct. Think now. Is it more correct to say that the eyes are that *with* which we see, or that *through* which we see? Do we hear *with* the ears or *through* the ears?

Theaetetus: Well, I should think, Socrates, that it is '*through* which' we perceive in each case, rather than '*with* which.'

d Socrates: Yes, my son. It would be a very strange thing, I must say, if there were a number of perceptions sitting inside us as if we were Wooden Horses, and there were not some single form, soul or whatever one ought to call it, to which all these converge—something *with* which, *through* those things,[30] as if they were instruments, we perceive all that is perceptible.

Theaetetus: That sounds to me better than the other way of putting it.

Socrates: Now the reason why I am being so precise with you is this. I want to know if it is with one and the same part of ourselves that we
e reach, through our eyes to white and black things, and through the other means to yet further things; and whether, if asked, you will be able to refer all these to the body. But perhaps it would be better if you stated the answers yourself, rather than that I should busy myself on your behalf. Tell me: the instruments through which you perceive hot, hard, light, sweet things—do you consider that they all belong to the body? Or can they be referred elsewhere?

Theaetetus: No, they all belong to the body.

Socrates: And are you also willing to admit that what you perceive
185 through one power, you can't perceive through another? For instance, what you perceive through hearing, you couldn't perceive through sight, and similarly what you perceive through sight you couldn't perceive through hearing?

Theaetetus: I could hardly refuse to grant that.

Socrates: Then suppose you think something about both; you can't possibly be having a perception about both, either through one of these instruments or through the other?

Theaetetus: No.

Socrates: Now take a sound and a color. First of all, don't you think this same thing about both of them, namely, that they both are?

Theaetetus: I do.

Socrates: Also that each of them is different from the other and the same as itself?

b Theaetetus: Of course.

Socrates: And that both together are two, and each of them is one?

Theaetetus: Yes, I think that too.

30. Viz., the eyes and ears.

Socrates: Are you also able to consider whether they are like or unlike each other?

Theaetetus: Yes, I may be.

Socrates: Now what is it through which you think all these things about them? It is not possible, you see, to grasp what is common to both either through sight or through hearing. Let us consider another thing which will show the truth of what we are saying. Suppose it were possible to
inquire whether both are salty or not. You can tell me, of course, with c
what you would examine them. It would clearly be neither sight nor hearing, but something else.

Theaetetus: Yes, of course; the power which functions through the tongue.

Socrates: Good. Now through what does that power function which reveals to you what is common in the case both of all things and of these two—I mean that which you express by the words 'is' and 'is not' and the other terms used in our questions about them just now? What kind of instruments will you assign for all these? Through what does that which is percipient in us perceive all of them?

Theaetetus: You mean being and not-being, likeness and unlikeness,
same and different; also one, and any other number applied to them. And d
obviously too your question is about odd and even, and all that is involved with these attributes; and you want to know through what bodily instruments we perceive all these with the soul.

Socrates: You follow me exceedingly well, Theaetetus. These are just the things I am asking about.

Theaetetus: But *I* couldn't possibly say. All I can tell you is that it doesn't seem to me that for these things there is any special instrument at all, as
there is for the others. It seems to me that in investigating the common e
features of everything the soul functions through itself.

Socrates: Yes, Theaetetus, you would say that, because you are handsome and not ugly as Theodorus would have it.[31] For handsome is as handsome says. And besides being handsome, you have done me a good turn; you have saved me a vast amount of talk if it seems to you that, while the soul considers some things through the bodily powers, there are others which it considers alone and through itself. This was what I thought myself, but I wanted you to think it too.

Theaetetus: Well, it does seem to me to be so. 186

Socrates: Now in which class do you put being? For that, above all, is something that accompanies everything.

Theaetetus: I should put it among the things which the soul itself reaches out after by itself.

Socrates: Also like and unlike, same and different?

Theaetetus: Yes.

Socrates: What about beautiful and ugly, good and bad?

31. Cf. 143e.

THEAETETUS: Yes, these too; in these, above all, I think the soul examines
b their being in comparison with one another. Here it seems to be making a calculation within itself of past and present in relation to future.

SOCRATES: Not so fast, now. Wouldn't you say that it is through touch that the soul perceives the hardness of what is hard, and similarly the softness of what is soft?

THEAETETUS: Yes.

SOCRATES: But as regards their being—the fact that they are—their opposition to one another, and the being, again, of this opposition, the matter is different. Here the soul itself attempts to reach a decision for us by rising to compare them with one another.

THEAETETUS: Yes, undoubtedly.

c SOCRATES: And thus there are some things which all creatures, men and animals alike, are naturally able to perceive as soon as they are born; I mean, the experiences which reach the soul through the body. But calculations regarding their being and their advantageousness come, when they do, only as the result of a long and arduous development, involving a good deal of trouble and education.

THEAETETUS: Yes, that certainly is so.

SOCRATES: Now is it possible for someone who does not even get at being to get at truth?

THEAETETUS: No; it's impossible.

SOCRATES: And if a man fails to get at the truth of a thing, will he ever be a person who knows that thing?

d THEAETETUS: I don't see how, Socrates.

SOCRATES: Then knowledge is to be found not in the experiences but in the process of reasoning about them; it is here, seemingly, not in the experiences, that it is possible to grasp being and truth.

THEAETETUS: So it appears.

SOCRATES: Then in the face of such differences, would you call both by the same name?

THEAETETUS: One would certainly have no right to.

SOCRATES: Now what name do you give to the former—seeing, hearing, smelling, feeling cold or warm?

e THEAETETUS: I call that perceiving—what else could I call it?

SOCRATES: So the whole lot taken together you call perception?

THEAETETUS: Necessarily.

SOCRATES: Which, we say, has no share in the grasping of truth, since it has none in the grasping of being.

THEAETETUS: No, it has none.

SOCRATES: So it has no share in knowledge either.

THEAETETUS: No.

SOCRATES: Then, Theaetetus, perception and knowledge could never be the same thing.

THEAETETUS: No, apparently not, Socrates; we have now got the clearest possible proof that knowledge is something different from perception.

SOCRATES: But our object in beginning this discussion was not to find 187
out what knowledge is not, but to find out what it is. However, we have made a little progress. We shall not now look for knowledge in sense-perception at all, but in whatever we call that activity of the soul when it is busy by itself about the things which are.

THEAETETUS: Well, the name, Socrates, I suppose is judgment.

SOCRATES: Your opinion, my dear lad, is correct. Now look back to the
beginning. Wipe out all that we have said hitherto, and see if you can see b
any better from where you have now progressed to. Tell me again, what is knowledge?

THEAETETUS: Well, Socrates, one can't say that it is judgment in general, because there is also false judgment—but true judgment may well be knowledge. So let that be my answer. If the same thing happens again, and we find, as we go on, that it turns out not to be so, we'll try something else.

SOCRATES: And even so, Theaetetus, you have answered me in the way
one ought—with a good will, and not reluctantly, as you did at first. If c
we continue like this, one of two things will happen. Either we shall find what we are going out after; or we shall be less inclined to think we know things which we don't know at all—and even that would be a reward we could not fairly be dissatisfied with. Now what is this that you say? There are two forms of judgment, true and false; and your definition is that true judgment is knowledge?

THEAETETUS: Yes. That is how it looks to me now.

SOCRATES: Now I wonder if it's worth while, at this stage, to go back to an old point about judgment—

THEAETETUS: What point do you mean?

SOCRATES: I have something on my mind which has often bothered me d
before, and got me into great difficulty, both in my own thought and in discussion with other people—I mean, I can't say what it is, this experience we have, and how it arises in us.

THEAETETUS: What experience?

SOCRATES: Judging what is false. Even now, you know, I'm still considering; I'm in two minds whether to let it go or whether to look into it in a different manner from a short while ago.

THEAETETUS: Why not, Socrates, if this appears for any reason to be the right thing to do? As you and Theodorus were saying just now, and quite rightly, when you were talking about leisure, we are not pressed for time in talk of this kind.

SOCRATES: A very proper reminder. Perhaps it would not be a bad mo- e
ment to go back upon our tracks. It is better to accomplish a little well than a great deal unsatisfactorily.

THEAETETUS: Yes, it certainly is.

SOCRATES: Now how are we to proceed? And actually what is it that we are saying? We claim, don't we, that false judgment repeatedly occurs and one of us judges falsely, the other truly, as if it was in the nature of things for this to happen?

Theaetetus: That is what we claim.

188 Socrates: Now isn't it true about all things, together or individually, that we must either know them or not know them? I am ignoring for the moment the intermediate conditions of learning and forgetting, as they don't affect the argument here.

Theaetetus: Of course, Socrates, in that case there is no alternative. With each thing we either know it or we do not.

Socrates: Then when a man judges, the objects of his judgment are necessarily either things which he knows or things which he doesn't know?

Theaetetus: Yes, that must be so.

Socrates: Yet if he knows a thing, it is impossible that he should not
b know it; or if he does not know it, he cannot know it.

Theaetetus: Yes, of course.

Socrates: Now take the man who judges what is false. Is he thinking that things which he knows are not these things but some other things which he knows—so that knowing both he is ignorant of both?

Theaetetus: But that would be impossible, Socrates.

Socrates: Then is he imagining that things which he doesn't know are other things which he doesn't know? Is it possible that a man who knows neither Theaetetus nor Socrates should take it into his head that Socrates is Theaetetus or Theaetetus Socrates?

c Theaetetus: I don't see how that could happen.

Socrates: But a man certainly doesn't think that things he knows are things he does not know, or again that things he doesn't know are things he knows.

Theaetetus: No, that would be a very odd thing.

Socrates: Then in what way is false judgment still possible? There is evidently no possibility of judgment outside the cases we have mentioned, since everything is either a thing we know or a thing we don't know; and within these limits there appears to be no place for false judgment to be possible.

Theaetetus: That's perfectly true.

Socrates: Then perhaps we had better take up a different line of inquiry;
d perhaps we should proceed not by way of knowing and not-knowing, but by way of being and not-being?

Theaetetus: How do you mean?

Socrates: Perhaps the simple fact is this: it is when a man judges about anything things which are not, that he is inevitably judging falsely, no matter what may be the nature of his thought in other respects.

Theaetetus: That again is very plausible, Socrates.

Socrates: Now how will that be? What are we going to say, Theaetetus, if somebody sets about examining us, and we are asked, 'Is what these words express possible for anyone? Can a man judge what is not, either
e about one of the things which are, or just by itself?' I suppose we shall reply, 'Yes, when he is thinking, but thinking what is not true.' Or how shall we answer?

Theaetetus: That's our answer.

Socrates: Now does this kind of thing happen elsewhere?

Theaetetus: What kind of thing?

Socrates: Well, for instance, that a man sees something, yet sees nothing.

Theaetetus: How could he?

Socrates: On the contrary, in fact, if he is seeing any one thing, he must be seeing a thing which is. Or do you think that a 'one' can be found among the things which are not?

Theaetetus: I certainly don't.

Socrates: Then a man who is seeing any one thing is seeing something which is?

Theaetetus: Apparently.

Socrates: It also follows that a man who is hearing anything is hearing 189
some one thing and something which is.

Theaetetus: Yes.

Socrates: And a man who is touching anything is touching some one thing, and a thing which is, if it is one?

Theaetetus: Yes, that also follows.

Socrates: And a man who is judging is judging some one thing, is he not?

Theaetetus: Necessarily.

Socrates: And a man who is judging some one thing is judging something which is?

Theaetetus: I grant that.

Socrates: Then that means that a man who is judging something which is not is judging nothing?

Theaetetus: So it appears.

Socrates: But a man who is judging nothing is not judging at all.

Theaetetus: That seems clear.

Socrates: And so it is not possible to judge what is not, either about b
the things which are or just by itself.

Theaetetus: Apparently not.

Socrates: False judgment, then, is something different from judging things which are not?

Theaetetus: It looks as if it were.

Socrates: Then neither on this approach nor on the one we followed just now does false judgment exist in us.

Theaetetus: No, indeed.

Socrates: Then is it in this way that the thing we call by that name arises?

Theaetetus: How?

Socrates: We say that there is false judgment, a kind of 'other-judging', c
when a man, in place of one of the things that are, has substituted in his thought another of the things that are and asserts that it is.[32] In this way,

32. Reading [*anti tinos*] for Burnet's [*ti*] at 189c1; the latter reading would yield: 'when a man asserts that one of the things which are is another of the things which are, having substituted one for the other in his thought'.

he is always judging something which is, but judges one thing in place of another; and having missed the thing which was the object of his consideration, he might fairly be called one who judges falsely.

THEAETETUS: Now you seem to me to have got it quite right. When a man judges 'ugly' instead of 'beautiful', or 'beautiful' instead of 'ugly', then he is truly judging what is false.

SOCRATES: Evidently, Theaetetus, you have not much opinion of me; you don't find me at all alarming.

THEAETETUS: What in particular makes you say that?

d SOCRATES: Well, I suppose you don't think me capable of taking up your 'truly false', and asking you whether it is possible that a thing should be slowly swift, or heavily light, or whether anything else can possibly occur in a way not in accordance with its own nature but in accordance with that of its opposite and contrary to itself. But let that pass; I don't want your boldness to go unrewarded. You like the suggestion, you say, that false judgment is 'other-judging'?

THEAETETUS: Yes, I do.

SOCRATES: Then, according to your judgment, it is possible to set down a thing in one's thought as another thing and not itself?

THEAETETUS: Surely it is.

e SOCRATES: Now when a man's thought is accomplishing this, isn't it essential that he should be thinking of either one or both of these two things?

THEAETETUS: It is essential; either both together, or each in turn.

SOCRATES: Very good. Now by 'thinking' do you mean the same as I do?

THEAETETUS: What do you mean by it?

SOCRATES: A talk which the soul has with itself about the objects under its consideration. Of course, I'm only telling you my idea in all ignorance; but this is the kind of picture I have of it. It seems to me that the soul
190 when it thinks is simply carrying on a discussion in which it asks itself questions and answers them itself, affirms and denies. And when it arrives at something definite, either by a gradual process or a sudden leap, when it affirms one thing consistently and without divided counsel, we call this its judgment. So, in my view, to judge is to make a statement, and a judgment is a statement which is not addressed to another person or spoken aloud, but silently addressed to oneself. And what do you think?

THEAETETUS: I agree with that.

SOCRATES: So that when a man judges one thing to be another, what he is doing, apparently, is to say to himself that the one thing is the other.

b THEAETETUS: Yes, of course.

SOCRATES: Now try to think if you have ever said to yourself 'Surely the beautiful is ugly',[33] or 'The unjust is certainly just'. Or—to put it in the most general terms—have you ever tried to persuade yourself that 'Surely

33. The Greek idiom here could be used to say either that some particular beautiful thing is ugly, or that beauty is ugliness.

one thing is another'? Wouldn't the very opposite of this be the truth? Wouldn't the truth be that not even in your sleep have you ever gone so far as to say to yourself 'No doubt the odd is even', or anything of that kind?

THEAETETUS: Yes, that's so.

SOCRATES: And do you think that anyone else, in his right mind or out c of it, ever ventured seriously to tell himself, with the hope of winning his own assent, that 'A cow must be a horse' or 'Two must be one'?

THEAETETUS: No, indeed I don't.

SOCRATES: Well, then, if to make a statement to oneself is to judge, no one who makes a statement, that is, a judgment, about both things, getting hold of both with his soul, can state, or judge, that one is the other. And you, in your turn, must let this form of words pass.[34] What I mean by it is this: no one judges 'The ugly is beautiful' or makes any other such d judgment.

THEAETETUS: All right, Socrates, I pass it; and I think you're right.

SOCRATES: Thus a man who has both things before his mind when he judges cannot possibly judge that one is the other.

THEAETETUS: So it seems.

SOCRATES: But if he has only one of them before his mind in judging, and the other is not present to him at all, he will never judge that one is the other.

THEAETETUS: That's true. For he would have to have hold also of the one that is not present to his judgment.

SOCRATES: Then 'other-judging' is not possible for anyone either when he has both things present to him in judgment or when he has one only. e So, if anyone is going to define false judgment as 'heterodoxy',[35] he will be saying nothing. The existence of false judgment in us cannot be shown in this way any more than by our previous approaches.

THEAETETUS: It seems not.

SOCRATES: And yet, Theaetetus, if it is not shown to exist, we shall be driven into admitting a number of absurdities.

THEAETETUS: And what would they be?

SOCRATES: I am not going to tell you until I have tried every possible way of looking at this matter. I should be ashamed to see us forced into 191 making the kind of admissions I mean while we are still in difficulties. If we find what we're after, and become free men, then we will turn round and talk about how these things happen to other people—having secured our own persons against ridicule. While if we can't find any way of

34. In the Greek the opposition here between 'one' and 'the other' is expressed by the repetition of the word meaning 'other'—thus yielding, literally, the unparadoxical tautology 'the other is other'. As Socrates refrained at 189c–d from taking up the paradoxical construal of Theaetetus' 'truly false', so Theaetetus must refrain from taking up this unparadoxical construal of Socrates' 'one is the other'.

35. A transliteration of a variant Greek expression for 'other-judging' that Socrates uses here.

extricating ourselves, then I suppose we shall be laid low, like seasick passengers, and give ourselves into the hands of the argument and let it trample all over us and do what it likes with us. And now let me tell you where I see a way still open to this inquiry.

THEAETETUS: Yes, do tell me.

SOCRATES: I am going to maintain that we were wrong to agree that it
b is impossible for a man to be in error through judging that things he knows are things he doesn't know. In a way, it is possible.

THEAETETUS: Now I wonder if you mean the same thing as I too suspected at the time when we suggested it was like that—I mean, that sometimes I, who know Socrates, have seen someone else in the distance whom I don't know and thought it to be Socrates whom I do know. In a case like that, the sort of thing you are referring to does happen.

SOCRATES : But didn't we recoil from this suggestion because it made us not know, when we do know, things which we know?

THEAETETUS: Yes, we certainly did.

SOCRATES: Then don't let us put the case in that way; let's try another
c way. It may prove amenable or it may be obstinate; but the fact is we are in such an extremity that we need to turn every argument over and over and test it from all sides. Now see if there is anything in this. Is it possible to learn something you didn't know before?

THEAETETUS: Surely it is.

SOCRATES: And again another and yet another thing?

THEAETETUS: Well, why not?

SOCRATES: Now I want you to suppose, for the sake of the argument, that we have in our souls a block of wax, larger in one person, smaller in
d another, and of purer wax in one case, dirtier in another; in some men rather hard, in others rather soft, while in some it is of the proper consistency.

THEAETETUS: All right, I'm supposing that.

SOCRATES: We may look upon it, then, as a gift of Memory, the mother of the Muses. We make impressions upon this of everything we wish to remember among the things we have seen or heard or thought of ourselves; we hold the wax under our perceptions and thoughts and take a stamp from them, in the way in which we take the imprints of signet rings. Whatever is impressed upon the wax we remember and know so long as
e the image remains in the wax; whatever is obliterated or cannot be impressed, we forget and do not know.

THEAETETUS: Let that be our supposition.

SOCRATES: Then take the case of a man who knows these things, but is also considering something he is seeing or hearing; and see if he might judge falsely in this way.

THEAETETUS: In what kind of way?

SOCRATES: In thinking, of things which he knows, sometimes that they are things which he knows and sometimes that they are things which he doesn't know—these cases being what at an earlier stage we wrongly admitted to be impossible.

THEAETETUS: And what do you say now?

SOCRATES: We must begin this discussion by making certain distinctions. 192
We must make it clear that it is impossible to think (1) that a thing you know, because you possess the record of it in your soul, but which you are not perceiving, is another thing which you know—you have its imprint too—but are not perceiving, (2) that a thing you know is something you do not know and do not have the seal of, (3) that a thing you don't know is another thing you don't know, (4) that a thing you don't know is a thing you know.

Again, it is impossible to think (1) that a thing you are perceiving is another thing that you are perceiving, (2) that a thing you are perceiving is a thing which you are not perceiving, (3) that a thing you are not b
perceiving is another thing you are not perceiving, (4) that a thing you are not perceiving is a thing you are perceiving.

Yet again, it is impossible to think (1) that a thing you both know and are perceiving, when you are holding its imprint in line with your perception of it, is another thing which you know and are perceiving, and whose imprint you keep in line with the perception (this indeed is even more impossible than the former cases, if that can be), (2) that a thing which you both know and are perceiving, and the record of which you are keeping in its true line, is another thing you know, (3) that a thing you both know and are perceiving and of which you have the record correctly in line as before, is another thing you are perceiving, (4) that a thing you neither know nor c
are perceiving is another thing you neither know nor perceive, (5) that a thing you neither know nor perceive is another thing you don't know, (6) that a thing you neither know nor perceive is another thing you are not perceiving.

In all these cases, it is a sheer impossibility that there should be false judgment. It remains that it arises, if anywhere, in the cases I am just going to tell you.

THEAETETUS: What are they? Perhaps I may understand a little better from them; at present, I don't follow.

SOCRATES: In these cases of things you know: when you think (1) that they are other things you know and are perceiving, (2) that they are things you don't know but are perceiving, (3) that things you both know and are d
perceiving are other things you both know and are perceiving.

THEAETETUS: Well, now you have left me further behind than ever.

SOCRATES: I'll go over it again in another way. I know Theodorus and remember within myself what he is like; and in the same way I know Theaetetus. But sometimes I am seeing them and sometimes not; sometimes I am touching them, and sometimes not; or I may hear them or perceive them through some other sense, while at other times I have no perception about you two at all, but remember you none the less, and know you within myself—isn't that so?

THEAETETUS: Yes, certainly. e

SOCRATES: Now please take this first point that I want to make clear to you—that we sometimes perceive and sometimes do not perceive the things that we know.

THEAETETUS: That's true.

SOCRATES: Then as regards the things we don't know, we often don't perceive them either, but often we only perceive them.

THEAETETUS: That is so, also.

193 SOCRATES: Now see if you can follow me a little better. Supposing Socrates knows both Theodorus and Theaetetus, but is not seeing either of them, or having any other perception about them: he could never in that case judge within himself that Theaetetus was Theodorus. Is that sense or not?

THEAETETUS: Yes, that's quite true.

SOCRATES: This, then, was the first of the cases I was speaking of.

THEAETETUS: It was.

SOCRATES: Secondly then. Supposing I am acquainted with one of you and not the other, and am perceiving neither of you: in that case, I could never think the one I do know to be the one I don't know.

THEAETETUS: That is so.

b SOCRATES: Thirdly, supposing I am not acquainted with either of you, and am not perceiving either of you: I could not possibly think that one of you, whom I don't know, is another of you whom I don't know. Now will you please take it that you have heard all over again in succession the other cases described before—the cases in which I shall never judge falsely about you and Theodorus, either when I am familiar or when I am unfamiliar with both of you; or when I know one and not the other. And similarly with perceptions, you follow me.

THEAETETUS: I follow.

SOCRATES: So there remains the possibility of false judgment in this case.
c I know both you and Theodorus; I have your signs upon that block of wax, like the imprints of rings. Then I see you both in the distance, but cannot see you well enough; but I am in a hurry to refer the proper sign to the proper visual perception, and so get this fitted into the trace of itself, that recognition may take place. This I fail to do; I get them out of line, applying the visual perception of the one to the sign of the other. It is like people putting their shoes on the wrong feet, or like what happens when
d we look at things in mirrors, when left and right change places. It is then that 'heterodoxy' or false judgment arises.

THEAETETUS: Yes, that seems very likely, Socrates; it is an awfully good description of what happens to the judgment.

SOCRATES: Then, again, supposing I know both of you, and am also perceiving one of you, and not the other, but am not keeping my knowledge of the former in line with my perception—that's the expression I used before and you didn't understand me then.

THEAETETUS: No, I certainly didn't.

SOCRATES: Well, I was saying that if you know one man and perceive
e him as well, and keep your knowledge of him in line with your perception, you will never take him for some other person whom you know and are perceiving, and the knowledge of whom you are holding straight with the perception. Wasn't that so?

THEAETETUS: Yes.

SOCRATES: There remained, I take it, the case we have just mentioned
where false judgment arises in the following manner: you know both men 194
and you are looking at both, or having some other perception of them; and you don't hold the two signs each in line with its own perception, but like a bad archer you shoot beside the mark and miss—which is precisely what we call falsehood.

THEAETETUS: Naturally so.

SOCRATES: And when for one of the signs there is also a present perception but there is not for the other, and you try to fit to the present perception the sign belonging to the absent perception, in all such cases thought is in error.

We may sum up thus: it seems that in the case of things we do not b
know and have never perceived, there is no possibility of error or of false judgment, if what we are saying is at all sound; it is in cases where we both know things and are perceiving them that judgment is erratic and varies between truth and falsity. When it brings together the proper stamps and records directly and in straight lines, it is true; when it does so obliquely and crosswise, it is false.

THEAETETUS: Well, isn't that beautiful, Socrates?

SOCRATES: Ah, when you've heard what is coming next, you will say so c
all the more. For true judgment is beautiful, right enough, and error is ugly.

THEAETETUS: No doubt about that.

SOCRATES: Well, this, then, they say, is why the two things occur. In some men, the wax in the soul is deep and abundant, smooth and worked to the proper consistency; and when the things that come through the senses are imprinted upon this 'heart' of the soul—as Homer calls it, hinting at
the likeness to the wax[36]—the signs that are made in it are lasting, because d
they are clear and have sufficient depth. Men with such souls learn easily and remember what they learn; they do not get the signs out of line with the perceptions, but judge truly. As the signs are distinct and there is plenty of room for them, they quickly assign each thing to its own impress in the wax—the things in question being, of course, what we call the things that are and these people being the ones we call wise.

Or do you feel any doubts about this?

THEAETETUS: No, I find it extraordinarily convincing.

SOCRATES: But it is a different matter when a man's 'heart' is 'shaggy' e
(the kind of heart our marvellously knowing poet praises), or when it is dirty and of impure wax; or when it is very soft or hard. Persons in whom the wax is soft are quick to learn but quick to forget; when the wax is hard, the opposite happens. Those in whom it is 'shaggy' and rugged, a stony thing with earth or filth mixed all through it, have indistinct impressions. So too if the wax is hard, for then the impressions have no depth;
similarly they are indistinct if the wax is soft, because they quickly run 195
together and are blurred. If, in addition to all this, the impresses in the wax are crowded upon each other for lack of space, because it is only

36. *Iliad* ii.851, xvi.554. The word for 'heart' attributed to Homer here is *kear*, which has a superficial resemblance to the word for wax, *kēros*.

some little scrap of a soul, they are even more indistinct. All such people are liable to false judgment. When they see or hear or think of anything, they can't quickly allot each thing to each impress; they are slow and allot things to impresses which do not belong to them, misseeing, mishearing and misthinking most of them—and these in turn are the ones we describe as in error about the things that are and ignorant.

b Theaetetus: That's exactly it, Socrates; no man could improve on your account.

Socrates: Then are we to say that false judgments do exist in us?

Theaetetus: Yes, most emphatically.

Socrates: And true ones, of course?

Theaetetus: And true ones.

Socrates: And we think we have now reached a satisfactory agreement, when we say that these two kinds of judgment certainly exist?

Theaetetus: There's no earthly doubt about it, Socrates.

Socrates: Theaetetus, I'm afraid a garrulous man is really an awful nuisance.

Theaetetus: Why, what are you talking about?

c Socrates: I'm annoyed at my own stupidity—my own true garrulousness. What else could you call it when a man will keep dragging arguments up and down, because he is too slow-witted to reach any conviction, and will not be pulled off any of them?

Theaetetus: But why should *you* be annoyed?

Socrates: I am not only annoyed; I am alarmed. I am afraid of what I may say if someone asks me: 'So, Socrates, you've discovered false judgment, have you? You have found that it arises not in the relation of
d perceptions to one another, or of thoughts to one another, but in the connecting of perception with thought?' I believe I am very likely to say 'Yes', with an air of flattering myself upon our having made some beautiful discovery.

Theaetetus: Well, Socrates, what you have just shown us looks to me quite a presentable thing anyway.

Socrates: 'You mean', he goes on, 'that we would never suppose that a man we are merely thinking of but not seeing is a horse which again we are not seeing or touching, but just thinking of and not perceiving anything else about it?' I suppose I shall agree that we do mean this.

Theaetetus: Yes, and quite rightly.

e Socrates: 'Well then,' he goes on, 'doesn't it follow from this theory that a man couldn't possibly suppose that eleven, which he is merely thinking about, is twelve, which again he is merely thinking about?' Come now, you answer.

Theaetetus: Well, my answer will be that someone who is seeing or touching them could suppose that eleven are twelve, but not with those that he has in his thought: he would never judge this in that way about them.

196 Socrates: Well, now, take the case where a man is considering five and seven within himself—I don't mean seven men and five men, or anything

of that sort, but five and seven themselves; the records, as we allege, in that waxen block, things among which it is not possible that there should be false judgment. Suppose he is talking to himself about them, and asking himself how many they are. Do you think that in such a case it has ever happened that one man thought they were eleven and said so, while another thought and said that they were twelve? Or do all men say and all men think that they are twelve?

Theaetetus: Oh, good Heavens, no; lots of people would make them b
eleven. And with larger numbers they go wrong still more often—for I suppose what you say is intended to apply to all numbers.

Socrates: Quite right. And I want you to consider whether what happens here is not just this, that a man thinks that twelve itself, the one on the waxen block, is eleven.

Theaetetus: It certainly looks as if he does.

Socrates: Then haven't we come back to the things we were saying at the outset? You see, anyone to whom this happens is thinking that one thing he knows is another thing he knows. And this we said was impossible; in fact, it was just this consideration which led us to exclude the possibility
of false judgment, because, if admitted, it would mean that the same man c
must, at one and the same time, both know and not know the same objects.

Theaetetus: That's perfectly true.

Socrates: Then we shall have to say that false judgment is something other than a misapplication of thought to perception; because if this were so, we could never be in error so long as we remained within our thoughts themselves. But as the matter now stands, either there is no such thing as false judgment; or a man may not know what he knows. Which do you choose?

Theaetetus: You are offering me an impossible choice, Socrates.

Socrates: But I'm afraid the argument will not permit both. Still— d
we must stop at nothing; supposing now we were to set about being quite shameless?

Theaetetus: How?

Socrates: By consenting to say what knowing is like.

Theaetetus: And why should that be shameless?

Socrates: You don't seem to realize that our whole discussion from the beginning has been an inquiry about knowledge, on the assumption that we do not yet know what it is.

Theaetetus: Oh but I do.

Socrates: Well, then, don't you think it is a shameless thing that we,
who don't know what knowledge is, should pronounce on what knowing e
is like? But as a matter of fact, Theaetetus, for some time past our whole method of discussion has been tainted. Time and again we have said 'we are acquainted with' and 'we are not acquainted with', 'we know' and 'we do not know', as if we could to some extent understand one another while we are still ignorant of what knowledge is. Or here's another example, if you like: at this very moment, we have again used the words 'to be

ignorant of', and 'to understand', as if these were quite proper expressions for us when we are deprived of knowledge.

Theaetetus: But how are you going to carry on the discussion at all, Socrates, if you keep off these words?

197 Socrates: Quite impossible, for a man like me; but if I were one of the experts in contradiction, I might be able to. If one of those gentlemen were present, he would have commanded us to refrain from them, and would keep coming down upon us heavily for the faults I'm referring to. But since we are no good anyway, why don't I make bold to tell you what knowing is like? It seems to me that this might be of some help.

Theaetetus: Then do be bold, please. And if you don't keep from using these words, we'll forgive you all right.

Socrates: Well, then, have you heard what people are saying nowadays that knowing is?

Theaetetus: I dare say I have; but I don't remember it at the moment.

b Socrates: Well, they say, of course, that it is 'the having of knowledge'.

Theaetetus: Oh, yes, that's true.

Socrates: Let us make a slight change; let us say 'the possession of knowledge'.

Theaetetus: And how would you say that was different from the first way of putting it?

Socrates: Perhaps it isn't at all; but I will tell you what I think the difference is, and then you must help me to examine it.

Theaetetus: All right—if I can.

Socrates: Well, then, to 'possess' doesn't seem to me to be the same as to 'have'. For instance, suppose a man has bought a coat and it is at his disposal but he is not wearing it; we would not say that he 'has' it on, but we would say he 'possesses' it.

Theaetetus: Yes, that would be correct.

c Socrates: Now look here: is it possible in this way to possess knowledge and not 'have' it? Suppose a man were to hunt wild birds, pigeons or something, and make an aviary for them at his house and look after them there; then, in a sense, I suppose, we might say he 'has' them all the time, because of course he possesses them. Isn't that so?

Theaetetus: Yes.

Socrates: But in another sense he 'has' none of them; it is only that he has acquired a certain power in respect of them, because he has got them
d under his control in an enclosure of his own. That is to say, he has the power to hunt for any one he likes at any time, and take and 'have' it whenever he chooses, and let it go again; and this he can do as often as he likes.

Theaetetus: That is so.

Socrates: Well a little while ago we were equipping souls with I don't know what sort of a waxen device. Now let us make in each soul a sort of aviary of all kinds of birds; some in flocks separate from the others,

some in small groups, and others flying about singly here and there among all the rest.

THEAETETUS: All right, let us suppose it made. What then? e

SOCRATES: Then we must say that when we are children this receptacle is empty; and by the birds we must understand pieces of knowledge. When anyone takes possession of a piece of knowledge and shuts it up in the pen, we should say that he has learned or has found out the thing of which this is the knowledge; and knowing, we should say, is this.

THEAETETUS: That's given, then.

SOCRATES: Now think: when he hunts again for any one of the pieces of 198
knowledge that he chooses, and takes it and 'has' it, then lets it go again, what words are appropriate here? The same as before, when he took possession of the knowledge, or different ones?—You will see my point more clearly in this way. There is an art you call arithmetic, isn't there?

THEAETETUS: Yes.

SOCRATES: Now I want you to think of this as a hunt for pieces of knowledge concerning everything odd and even.

THEAETETUS: All right, I will.

SOCRATES: It is by virtue of this art, I suppose, that a man both has under b
his control pieces of knowledge concerning numbers and also hands them over to others?

THEAETETUS: Yes.

SOCRATES: And we call it 'teaching' when a man hands them over to others, and 'learning' when he gets them handed over to him; and when he 'has' them through possessing them in this aviary of ours, we call that 'knowing'.

THEAETETUS: Yes, certainly.

SOCRATES: Now you must give your attention to what is coming next. It must surely be true that a man who has completely mastered arithmetic knows all numbers? Because there are pieces of knowledge covering all numbers in his soul.

THEAETETUS: Of course.

SOCRATES: And a man so trained may proceed to do some counting, c
either counting to himself the numbers themselves, or counting something else, one of the external things which have number?

THEAETETUS: Yes, surely.

SOCRATES: And counting we shall take to be simply a matter of considering how large a number actually is?

THEAETETUS: Yes.

SOCRATES: Then it looks as if this man were considering something which he knows as if he did not know it (for we have granted that he knows all numbers). I've no doubt you've had such puzzles put to you.

THEAETETUS: I have, yes.

SOCRATES: Then using our image of possessing and hunting for the pi- d
geons, we shall say that there are two phases of hunting; one before you

have possession in order to get possession, and another when you already possess in order to catch and have in your hands what you previously acquired. And in this way even with things you learned and got the knowledge of long ago and have known ever since, it is possible to learn them—these same things—all over again. You can take up again and 'have' that knowledge of each of them which you acquired long ago but had not ready to hand in your thought, can't you?

Theaetetus: True.

e Socrates: Now this is what I meant by my question a moment ago.
What terms ought we to use about them when we speak of what the arithmetician does when he proceeds to count, or the scholar when he proceeds to read something? Here, it seems, a man who knows something is setting out to learn again from himself things which he already knows.

Theaetetus: But that would be a very odd thing, Socrates.

Socrates: But are we to say that it is things which he does not know
199 that such a man is going to read and count—remembering that we have
granted him knowledge of all letters and all numbers?

Theaetetus: That wouldn't be reasonable, either.

Socrates: Then would you like us to take this line? Suppose we say we do not mind at all about the names; let people drag around the terms 'knowing' and 'learning' to their heart's content. We have determined that to 'possess' knowledge is one thing and to 'have' it is another; accordingly we maintain that it is impossible for anyone not to possess that which he has possession of, and thus, it never happens that he does not know something he knows. But he may yet make a false judgment about it. This
b is because it is possible for him to 'have', not the knowledge of this thing,
but another piece of knowledge instead. When he is hunting for one piece of knowledge, it may happen, as they fly about, that he makes a mistake and gets hold of one instead of another. It was this that happened when he thought eleven was twelve. He got hold of the knowledge of eleven that was in him, instead of the knowledge of twelve, as you might catch a ring-dove instead of a pigeon.

Theaetetus: Yes; that is reasonable, now.

Socrates: But when he gets hold of the one he is trying to get hold of,
then he is free from error; when he does that, he is judging what is. In
c this way, both true and false judgment exist; and the things that worried
us before no longer stand in our way. I daresay you'll agree with me? Or, if not, what line will you take?

Theaetetus: I agree.

Socrates: Yes; we have now got rid of this 'not knowing what one knows'. For we now find that at no point does it happen that we do not possess what we possess, whether we are in error about anything or not. But it looks to me as if something else more alarming is by way of coming upon us.

Theaetetus: What's that?

Socrates: I mean, what is involved if false judgment is going to become a matter of an interchange of pieces of knowledge.

Theaetetus: What do you mean?

Socrates: To begin with, it follows that a man who has knowledge of d
something is ignorant of this very thing not through want of knowledge but actually in virtue of his knowledge. Secondly, he judges that this is something else and that the other thing is it. Now surely this is utterly unreasonable; it means that the soul, when knowledge becomes present to it, knows nothing and is wholly ignorant. According to this argument, there is no reason why an accession of ignorance should not make one know something, or of blindness make one see something, if knowledge is ever going to make a man ignorant.

Theaetetus: Well, perhaps, Socrates, it wasn't a happy thought to make e
the birds only pieces of knowledge. Perhaps we ought to have supposed that there are pieces of ignorance also flying about in the soul along with them, and what happens is that the hunter sometimes catches a piece of knowledge and sometimes a piece of ignorance concerning the same thing; and the ignorance makes him judge falsely, while the knowledge makes him judge truly.

Socrates: I can hardly refrain from expressing my admiration of you, Theaetetus; but do think again about that. Let us suppose it is as you say:
then, you maintain, the man who catches a piece of ignorance will judge 200
falsely. Is that it?

Theaetetus: Yes.

Socrates: But presumably he will not think he is judging falsely?

Theaetetus: No, of course he won't.

Socrates: He will think he is judging what is true; and his attitude towards the things about which he is in error will be as if he knew them.

Theaetetus: Of course.

Socrates: He will think he has hunted down and 'has' a piece of knowledge and not a piece of ignorance.

Theaetetus: Yes, that's clear.

Socrates: So, after going a long way round, we are back at our original
difficulty. Our friend the expert in refutation will laugh. 'My very good b
people,' he will say, 'do you mean that a man who knows both knowledge and ignorance is thinking that one of them which he knows is the other which he knows? Or is it that he knows neither, and judges the one he doesn't know to be the other which he doesn't know? Or is it that he knows one and not the other, and judges that the one he knows is the one he doesn't know? Or does he think that the one he doesn't know is the one he does? Or are you going to start all over again and tell me that there's another set of pieces of knowledge concerning pieces of knowledge and ignorance, which a man may possess shut up in some other ridiculous
aviaries or waxen devices, which he knows so long as he possesses them c
though he may not have them ready to hand in his soul—and in this way

end up forced to come running round to the same place over and over again and never get any further?' What are we going to say to that, Theaetetus?

Theaetetus: Oh, dear me, Socrates, I don't know what one ought to say.

Socrates: Then don't you think, my boy, that the argument is perhaps dealing out a little proper chastisement, and showing us that we were
d wrong to leave the question about knowledge and proceed to inquire into false judgment first? While as a matter of fact it's impossible to know this until we have an adequate grasp of what knowledge is.

Theaetetus: Well, at the moment, Socrates, I feel bound to believe you.

Socrates: Then, to go back to the beginning, what are we going to say knowledge is?—We are not, I suppose, going to give up yet?

Theaetetus: Certainly not, unless you give up yourself.

Socrates: Tell me, then, how could we define it with the least risk of contradicting ourselves?

e Theaetetus: In the way we were attempting before, Socrates; I can't think of any other.

Socrates: In what way do you mean?

Theaetetus: By saying that knowledge is true judgment. Judging truly is at least something free of mistakes, I take it, and everything that results from it is admirable and good.

Socrates: Well, Theaetetus, as the man who was leading the way across
201 the river said, 'It will show you.'[37] If we go on and track this down, perhaps we may stumble on what we are looking for; if we stay where we are, nothing will come clear.

Theaetetus: You're right; let's go on and consider it.

Socrates: Well, this won't take long to consider, anyway; there is a whole art indicating to you that knowledge is not what you say.

Theaetetus: How's that? What art do you mean?

Socrates: The art of the greatest representatives of wisdom—the men called orators and lawyers. These men, I take it, use their art to produce conviction not by teaching people, but by making them judge whatever they themselves choose. Or do you think there are any teachers so clever
b that within the short time allowed by the clock they can teach adequately to people who were not eye-witnesses the truth of what happened to people who have been robbed or assaulted?

Theaetetus: No, I don't think they possibly could; but they might be able to *persuade* them.

Socrates: And by 'persuading them', you mean 'causing them to judge', don't you?

Theaetetus: Of course.

Socrates: Then suppose a jury has been justly persuaded of some matter which only an eye-witness could know, and which cannot otherwise be

37. According to the scholiast the story was: some travellers came to the bank of a river, which they wished to cross at the ford; one of them asked the guide, 'Is the water deep?' He said, 'It will show you', i.e., you must try it for yourself.

known; suppose they come to their decision upon hearsay, forming a c
true judgment: then they have decided the case without knowledge, but, granted they did their job well, being correctly persuaded?

Theaetetus: Yes, certainly.

Socrates: But, my dear lad, they couldn't have done that if true judgment is the same thing as knowledge; in that case the best juryman in the world couldn't form a correct judgment without knowledge. So it seems they must be different things.

Theaetetus: Oh, yes, Socrates, that's just what I once heard a man say; I had forgotten, but now it's coming back to me. He said that it is true d
judgment with an account[38] that is knowledge; true judgment without an account falls outside of knowledge. And he said that the things of which there is no account are not knowable (yes, he actually called them that),[39] while those which have an account are knowable.

Socrates: Very good indeed. Now tell me, how did he distinguish these knowables and unknowables? I want to see if you and I have heard the same version.

Theaetetus: I don't know if I can find that out; but I think I could follow if someone explained it.

Socrates: Listen then to a dream in return for a dream. In my dream, too, I thought I was listening to people saying that the primary elements, e
as it were, of which we and everything else are composed, have no account. Each of them, in itself, can only be named; it is not possible to say anything else of it, either that it is or that it is not. That would mean that we were 202
adding being or not-being to it; whereas we must not attach anything, if we are to speak of that thing itself alone. Indeed we ought not to apply to it even such words as 'itself' or 'that', 'each', 'alone', or 'this', or any other of the many words of this kind; for these go the round and are applied to all things alike, being other than the things to which they are added, whereas if it were possible to express the element itself and it had its own proprietary account, it would have to be expressed without any other thing. As it is, however, it is impossible that any of the primaries b
should be expressed in an account; it can only be named, for a name is all that it has. But with the things composed of these, it is another matter. Here, just in the same way as the elements themselves are woven together, so their names may be woven together and become an account of something—an account being essentially a complex of names. Thus the elements are unaccountable and unknowable, but they are perceivable, whereas the

38. 'Account' translates *logos,* which can also mean 'statement,' 'argument', 'speech', and 'discourse'.

39. The parenthesis may alternatively be translated: '(that was the word he used)'. The translation in the text expresses surprise about the claim that some things are not knowable at all. The alternative translation calls attention to the particular Greek word used for 'knowable'.

complexes are both knowable and expressible and can be the objects of true judgment.

c Now when a man gets a true judgment about something without an account, his soul is in a state of truth as regards that thing, but he does not know it; for someone who cannot give and take an account of a thing is ignorant about it. But when he has also got an account of it, he is capable of all this and is made perfect in knowledge. Was the dream you heard the same as this or a different one?

THEAETETUS: No, it was the same in every respect.

SOCRATES: Do you like this then, and do you suggest that knowledge is true judgment with an account?

THEAETETUS: Yes, certainly.

d SOCRATES: Theaetetus, can it be that all in a moment, you and I have today laid hands upon something which many a wise man has searched for in the past—and gone gray before he found it?

THEAETETUS: Well, it does seem to me anyway, Socrates, that what has just been said puts the matter very well.

SOCRATES: And it seems likely enough that the matter is really so; for what knowledge could there be apart from an account and correct judgment? But there is one of the things said which I don't like.

THEAETETUS: And what's that?

SOCRATES: What looks like the subtlest point of all—that the elements
e are unknowable and the complexes knowable.

THEAETETUS: And won't that do?

SOCRATES: We must make sure; because, you see, we do have as hostages for this theory the original models that were used when all these statements were made.

THEAETETUS: What models?

SOCRATES: Letters—the elements of language—and syllables.[40] It must have been these, mustn't it, that the author of our theory had in view—it couldn't have been anything else?

THEAETETUS: No, he must have been thinking of letters and syllables.

203 SOCRATES: Let's take and examine them then. Or rather let us examine ourselves, and ask ourselves whether we really learned our letters in this way or not. Now, to begin with, one can give an account of the syllables but not of the letters—is that it?

THEAETETUS: Well, perhaps.

SOCRATES: It most certainly looks like that to me. At any rate, supposing you were asked about the first syllable of 'Socrates': 'Tell me, Theaetetus, what is SO?' What would you answer to that?

THEAETETUS: That it's S and O.

SOCRATES: And there you have an account of the syllable?

40. 'Letters' translates *stoicheia*, which can also mean 'elements' more generally (and is so translated sometimes below). 'Syllables': in Greek *sullabai*, also translated below as 'complexes.'

Theaetetus: Yes.

Socrates: Come along then, and let us have the account of S in the b
same way.

Theaetetus: How *can* anyone give the letters of a letter? S is just one of the voiceless letters, Socrates, a mere sound like a hissing of the tongue. B again has neither voice nor sound, and that's true of most letters. So the statement that they themselves are unaccountable holds perfectly good. Even the seven clearest have only voice; no sort of account whatever can be given of them.[41]

Socrates: So here, my friend, we have established a point about knowledge.

Theaetetus: We do appear to have done so.

Socrates: Well then: we have shown that the syllable is knowable but c
not the letter—is that all right?

Theaetetus: It seems the natural conclusion, anyway.

Socrates: Look here, what do we mean by 'the syllable'? The two letters (or if there are more, all the letters)? Or do we mean some single form produced by their combination?

Theaetetus: I think we mean all the letters.

Socrates: Then take the case of the two letters, S and O; these two are the first syllable of my name. If a man knows the syllable, he must know both the letters?

Theaetetus: Of course. d

Socrates: So he knows S and O.

Theaetetus: Yes.

Socrates: But can it be that he is ignorant of each one, and knows the two of them without knowing either?

Theaetetus: That would be a strange and unaccountable thing, Socrates.

Socrates: And yet, supposing it is necessary to know each in order to know both, then it is absolutely necessary that anyone who is ever to know a syllable must first get to know the letters. And in admitting this, we shall find that our beautiful theory has taken to its heels and got clean away from us.

Theaetetus: And very suddenly too. e

Socrates: Yes; we are not keeping a proper watch on it. Perhaps we ought not to have supposed the syllable to be the letters; perhaps we ought to have made it some single form produced out of them, having its own single nature—something different from the letters.

Theaetetus: Yes, certainly; that might be more like it.

Socrates: We must look into the matter; we have no right to betray a great and imposing theory in this faint-hearted manner.

Theaetetus: Certainly not.

41. I.e., the seven vowels of ancient Greek, as contrasted with two classes of consonant: mutes like B, which cannot be pronounced without a vowel, and semivowels like S, which can.

204 Socrates: Then let it be as we are now suggesting. Let the complex be a single form resulting from the combination of the several elements when they fit together; and let this hold both of language and of things in general.

Theaetetus: Yes, certainly.

Socrates: Then it must have no parts.

Theaetetus: Why is that, now?

Socrates: Because when a thing has parts, the whole is necessarily all the parts. Or do you mean by 'the whole' also a single form arising out of the parts, yet different from all the parts?

Theaetetus: I do.

b Socrates: Now do you call 'sum'[42] and 'whole' the same thing or different things?

Theaetetus: I don't feel at all certain; but as you keep telling me to answer up with a good will, I will take a risk and say they are different.

Socrates: Your good will, Theaetetus, is all that it should be. Now we must see if your answer is too.

Theaetetus: We must, of course.

Socrates: As the argument stands at present, the whole will be different from the sum?

Theaetetus: Yes.

Socrates: Well now, is there any difference between all the things and
c the sum? For instance, when we say 'one, two, three, four, five, six'; or, 'twice three', or 'three times two', 'four and two', 'three and two and one'; are we speaking of the same thing in all these cases or different things?

Theaetetus: The same thing.

Socrates: That is, six?

Theaetetus: Precisely.

Socrates: Then with each expression have we not spoken of all the six?

Theaetetus: Yes.

Socrates: And when we speak of them all, aren't we speaking of a sum?

Theaetetus: We must be.

Socrates: That is, six?

Theaetetus: Precisely.

d Socrates: Then in all things made up of number, at any rate, by 'the sum' and 'all of them' we mean the same thing?

Theaetetus: So it seems.

Socrates: Now let us talk about them in this way. The number of an acre is the same thing as an acre, isn't it?

Theaetetus: Yes.

Socrates: Similarly with a mile.

Theaetetus: Yes.

42. The word translated 'sum' (*pan*) and the word translated 'all' (*panta*) in the phrase 'all the parts' are singular and plural forms of the same Greek word.

SOCRATES: And the number of an army is the same as the army? And so always with things of this sort; their total number is the sum that each of them is.

THEAETETUS: Yes.

SOCRATES: But is the number of each anything other than its parts? e

THEAETETUS: No.

SOCRATES: Now things which have parts consist of parts?

THEAETETUS: That seems true.

SOCRATES: And it is agreed that all the parts are the sum, seeing that the total number is to be the sum.

THEAETETUS: That is so.

SOCRATES: Then the whole does not consist of parts. For if it did, it would be all the parts and so would be a sum.

THEAETETUS: It looks as if it doesn't.

SOCRATES: But can a part, as such, be a part of anything but the whole?

THEAETETUS: Yes; of the sum.

SOCRATES: You are putting up a good fight anyway, Theaetetus. But this 205
sum now—isn't it just when there is nothing lacking that it is a sum?

THEAETETUS: Yes, necessarily.

SOCRATES: And won't this very same thing—that from which nothing anywhere is lacking—be a whole? While a thing from which something is absent is neither a whole nor a sum—the same consequence having followed from the same condition in both cases at once?

THEAETETUS: Well, it doesn't seem to me now that there can be any difference between whole and sum.

SOCRATES: Very well. Now were we not saying[43] that in the case of a thing that has parts, both the whole and the sum will be all the parts?

THEAETETUS: Yes, certainly.

SOCRATES: Now come back to the thing I was trying to get at just now.[44]
Supposing the syllable is not just its letters, doesn't it follow that it cannot b
contain the letters as parts of itself? Alternatively, if it is the same as the letters, it must be equally knowable with them?

THEAETETUS: That is so.

SOCRATES: Well, wasn't it just in order to avoid this result that we supposed it different from the letters?

THEAETETUS: Yes.

SOCRATES: Well then, if the letters are not parts of the syllable, can you tell me of any other things, not its letters, which are?

THEAETETUS: No, indeed. If I were to admit that it had component parts, Socrates, it would be ridiculous, of course, to set aside the letters and look for other components.

43. At 204a.

44. See 203d–e.

c Socrates: Then, Theaetetus, according to our present argument, a syllable is an absolutely single form, indivisible into parts.

Theaetetus: It looks like it.

Socrates: Now, my friend, a little while ago, if you remember, we were inclined to accept a certain proposition which we thought put the matter very well—I mean the statement that no account can be given of the primaries of which other things are constituted, because each of them is in itself incomposite; and that it would be incorrect to apply even the term 'being' to it when we spoke of it or the term 'this', because these terms signify different and alien things; and that is the reason why a primary is an unaccountable and unknowable thing. Do you remember?

Theaetetus: I remember.

d Socrates: And is that the reason also why it is single in form and indivisible into parts or is there some other reason for that?[45] I can see no other myself.

Theaetetus: No, there really doesn't seem to be any other.

Socrates: And hasn't the complex now fallen into the same class as the primary, seeing it has no parts and is a single form?

Theaetetus: Yes, it certainly has.

Socrates: Well now, if the complex is both many elements and a whole, with them as its parts, then both complexes and elements are equally capable of being known and expressed, since all the parts turned out to be the same thing as the whole.

e Theaetetus: Yes, surely.

Socrates: But if, on the other hand, the complex is single and without parts, then complexes and elements are equally unaccountable and unknowable—both of them for the same reason.

Theaetetus: I can't dispute that.

Socrates: Then if anyone tries to tell us that the complex can be known and expressed, while the contrary is true of the element, we had better not listen to him.

Theaetetus: No, we'd better not, if we go along with the argument.

206 Socrates: And, more than this, wouldn't you more easily believe somebody who made the contrary statement, because of what you know of your own experience in learning to read and write?

Theaetetus: What kind of thing do you mean?

Socrates: I mean that when you were learning you spent your time just precisely in trying to distinguish, by both eye and ear, each individual letter in itself so that you might not be bewildered by their different positions in written and spoken words.

Theaetetus: That's perfectly true.

45. Alternatively (accepting the conjecture of *to* for *touto* at 205d): 'And is there any other reason for this than that it is single in form and indivisible into parts?'

Socrates: And at the music-teacher's, wasn't the finished pupil the one who would follow each note and tell to which string it belonged—the b notes being generally admitted to be the elements in music?

Theaetetus: Yes, that's just what it amounted to.

Socrates: Then if the proper procedure is to take such elements and complexes as we ourselves have experience of, and make an inference from them to the rest, we shall say that the elements are much more clearly known, and the knowledge of them is more decisive for the mastery of any branch of study than knowledge of the complex. And if anyone maintains that the complex is by nature knowable, and the element unknowable, we shall regard this as tomfoolery, whether it is intended to be or not.

Theaetetus: Oh, quite.

Socrates: I think that might be proved in other ways too. But we mustn't c let them distract us from the problem before us. We wanted to see what can be meant by the proposition that it is in the addition of an account to a true judgment that knowledge is perfected.

Theaetetus: Well yes, we must try to see that.

Socrates: Come then, what are we intended to understand by an 'account'? I think it must be one of three meanings.

Theaetetus: What are they?

Socrates: The first would be, making one's thought apparent vocally d by means of words and verbal expressions—when a man impresses an image of his judgment upon the stream of speech, like reflections upon water or in a mirror. Don't you think this kind of thing is an account?

Theaetetus: Yes, I do. At least, a man who does this is said to be giving an account.[46]

Socrates: But isn't that a thing that everyone is able to do more or less readily—I mean, indicate what he thinks about a thing, if he is not deaf or dumb to begin with? And that being so, anyone at all who makes a correct judgment will turn out to have it 'together with an account'; correct e judgment without knowledge will no longer be found anywhere.

Theaetetus: True.

Socrates: Well then, we mustn't be too ready to condemn the author of the definition of knowledge now before us for talking nonsense. Perhaps he didn't mean this; perhaps he meant being able, when questioned about 207 what a thing is, to give an answer by reference to its elements.

Theaetetus: As for example, Socrates?

Socrates: As for example, what Hesiod is doing when he says, 'One hundred are the timbers of a wagon.'[47] Now I couldn't say what they are; and I don't suppose you could either. If you and I were asked what a

46. 'Giving an account' here translates *legein*, the ordinary Greek word for 'say, speak, speak of', which corresponds to *logos* in its wider meanings 'speech, discourse, statement'.

47. *Works and Days* 456.

wagon is, we should be satisfied if we could answer, 'Wheels, axle, body, rails, yoke.'

Theaetetus: Yes, surely.

Socrates: But he might think us ridiculous, just as he would if we were
asked what your name is, and replied by giving the syllables. In that case,
b he would think us ridiculous because although we might be correct in our
judgment and our expression of it, we should be fancying ourselves as
scholars, thinking we knew and were expressing a scholar's account of
Theaetetus' name. Whereas in fact no one gives an account of a thing with
knowledge till, in addition to his true judgment, he goes right through
the thing element by element—as I think we said before.

Theaetetus: We did, yes.

Socrates: In the same way, in the example of the wagon, he would say
c that we have indeed correct judgment; but it is the man who can explore
its being by going through those hundred items who has made the addition
which adds an account to his true judgment. It is this man who has passed
from mere judgment to expert knowledge of the being of a wagon; and
he has done so in virtue of having gone over the whole by means of
the elements.

Theaetetus: And doesn't that seem sound to you, Socrates?

Socrates: Well, tell me if it seems sound to you, my friend. Tell me if
you are prepared to accept the view that an account is a matter of going
through a thing element by element, while going through it by 'syllables'
d or larger divisions falls short of being an account. Then we shall be able
to discuss it.

Theaetetus: I'm certainly prepared to accept that.

Socrates: And do you at the same time think that a man has knowledge of anything when he believes the same thing now to be part of one thing and now part of something else? Or when he judges that now one thing and now something different belongs to one and the same object?

Theaetetus: No, indeed I don't.

Socrates: Then have you forgotten that at first when you were learning to read and write that is just what you and the other boys used to do?

Theaetetus: You mean we used to think that sometimes one letter
e and sometimes another belonged to the same syllable, and used to
put the same letter sometimes into its proper syllable and sometimes
into another?

Socrates: Yes, that is what I mean.

Theaetetus: Well, I certainly haven't forgotten; and I don't think people at that stage can be said to have knowledge yet.

Socrates: Well, suppose now that someone who is at this sort of stage
is writing the name 'Theaetetus'; he thinks he ought to write THE and
208 does so. Then suppose another time he is trying to write 'Theodorus', and
this time he thinks he should write TE and proceeds to do so. Are we
going to say that he knows the first syllable of your names?

Theaetetus: No. We've admitted that anyone who is at that stage has not yet knowledge.

Socrates: And is there anything to prevent the same person being in that situation as regards the second and third and fourth syllables?

Theaetetus: No, nothing.

Socrates: Now at the time when he does this, he will be writing 'Theaetetus' not only with correct judgment, but with command of the way through its letters; that must be so whenever he writes them out one after another in their order.

Theaetetus: Yes, clearly.

Socrates: And still without knowledge though with correct judgment— b
isn't that our view?

Theaetetus: Yes.

Socrates: Yet possessing an account of it along with his correct judgment. He was writing it, you see, with command of the way through its letters; and we agreed that that is an account.

Theaetetus: True.

Socrates: So here, my friend, we have correct judgment together with an account, which we are not yet entitled to call knowledge.

Theaetetus: Yes, I'm afraid that's so.

Socrates: So it was only the poor man's dream of gold that we had when we thought we had got the truest account of knowledge. Or is it
early days to be harsh? Perhaps this is not the way in which one is to c
define 'account'. We said that the man who defines knowledge as correct judgment together with an account would choose one of three meanings for 'account'. Perhaps the last is the one to define it by.

Theaetetus: Yes, you're right to remind me; there is one possibility still left. The first was, a kind of vocal image of thought; the one we have just discussed was the way to the whole through the elements. Now what's your third suggestion?

Socrates: What the majority of people would say—namely, being able to tell some mark by which the object you are asked about differs from all other things.

Theaetetus: Can you give me an example of such an 'account' of something?

Socrates: Well, take the sun, if you like. You would be satisfied, I d
imagine, with the answer that it is the brightest of the bodies that move round the earth in the heavens.

Theaetetus: Oh yes, quite.

Socrates: Now I want you to get hold of the principle that this illustrates. It is what we were just saying—that if you get hold of the difference that distinguishes a thing from everything else, then, so some people say, you will have got an account of it. On the other hand, so long as it is some common feature that you grasp, your account will be about all those things which have this in common.

e Theaetetus: I see; I think it's very good to call this kind of thing an account.

Socrates: Then if a man with correct judgment about any one of the things that are grasps in addition its difference from the rest, he has become a knower of the thing he was a judger of before.

Theaetetus: That's our present position, anyway.

Socrates: Well, at this point, Theaetetus, as regards what we are saying, I'm for all the world like a man looking at a shadow-painting;[48] when I'm close up to it I can't take it in in the least, though when I stood well back from it, it appeared to me to have some meaning.

Theaetetus: How's that?

209 Socrates: I'll see if I can explain. Suppose I have formed a correct judgment about you; if I can grasp your account in addition, I know you, but if not, I am merely judging you.

Theaetetus: Yes.

Socrates: And an account was to be a matter of expounding your differentness?

Theaetetus: That is so.

Socrates: Then when I was merely judging, my thought failed to grasp any point of difference between you and the rest of mankind?

Theaetetus: Apparently.

Socrates: What I had in mind, it seems, was some common characteristic—something that belongs no more to you than to anybody else.

b Theaetetus: Yes, that must be so.

Socrates: Then tell me, in Heaven's name how, if that was so, did it come about that you were the object of my judgment and nobody else? Suppose my thought is that 'This is Theaetetus—one who is a human being, and has a nose and eyes and mouth', and so on through the whole list of limbs. Will this thought cause me to be thinking of Theaetetus rather than of Theodorus, or of the proverbial 'remotest Mysian'?

Theaetetus: No, how could it?

Socrates: But suppose I think not merely of 'the one with nose and
c eyes', but of 'the one with a snub nose and prominent eyes'. Shall I even then be judging you any more than myself or anyone who is like that?

Theaetetus: Not at all.

Socrates: It will not, I take it, be Theaetetus who is judged in my mind until this snub-nosedness of yours has left imprinted and established in me a record that is different in some way from the other snub-nosednesses I have seen; and so with the other details of your makeup. And this will remind me, if I meet you tomorrow, and make me judge correctly about you.

48. The pictorial technique referred to (*skiagraphia*) seems to have been one which depended on contrasts between light and shade to create the appearance of form and volume. A more familiar comparison for modern readers would be a pointilliste painting by Seurat.

THEAETETUS: That's perfectly true.

SOCRATES: Then correct judgment also must be concerned with the differ- d
entness of what it is about?

THEAETETUS: So it seems, anyway.

SOCRATES: Then what more might this 'adding an account to correct judgment' be? If, on the one hand, it means that we must make another judgment about the way in which a thing differs from the rest of things, we are being required to do something very absurd.

THEAETETUS: How's that?

SOCRATES: Because we already have a correct judgment about the way a thing differs from other things; and we are then directed to add a correct judgment about the way it differs from other things. At that rate, the way
a roller goes round or a pestle or anything else proverbial would be nothing e
compared with such directions; they might be more justly called a matter of 'the blind leading the blind'. To tell us to add what we already have, in order to come to know what we are judging about, bears a generous resemblance to the behavior of a man benighted.

THEAETETUS: Whereas if, on the other hand, . . . ?[49] What else were you going to suggest when you started this inquiry just now?

SOCRATES: Well, if 'adding an account' means that we are required to get to *know* the differentness, not merely judge it, this most splendid of
our accounts of knowledge turns out to be a very amusing affair. For 210
getting to know of course is acquiring knowledge, isn't it?

THEAETETUS: Yes.

SOCRATES: So, it seems, the answer to the question 'What is knowledge?' will be 'Correct judgment accompanied by *knowledge* of the differentness'—for this is what we are asked to understand by the 'addition of an account.'

THEAETETUS: Apparently so.

SOCRATES: And it is surely just silly to tell us, when we are trying to discover what knowledge is, that it is correct judgment accompanied by *knowledge*, whether of differentness or of anything else? And so, Theaetetus,
knowledge is neither perception nor true judgment, nor an account added b
to true judgment.

THEAETETUS: It seems not.

SOCRATES: Well now, dear lad, are we still pregnant, still in labor with any thoughts about knowledge? Or have we been delivered of them all?

THEAETETUS: As far as I'm concerned, Socrates, you've made me say far more than ever was in me, Heaven knows.

SOCRATES: Well then, our art of midwifery tells us that all of these offspring are wind-eggs and not worth bringing up?

THEAETETUS: Undoubtedly.

SOCRATES: And so, Theaetetus, if ever in the future you should attempt
to conceive or should succeed in conceiving other theories, they will be c
better ones as the result of this inquiry. And if you remain barren, your

49. Reading *Ei ge dē . . .* for *Eipe dē* at 209e5.

companions will find you gentler and less tiresome; you will be modest and not think you know what you don't know. This is all my art can achieve—nothing more. I do not know any of the things that other men know—the great and inspired men of today and yesterday. But this art of midwifery my mother and I had allotted to us by God; she to deliver
210d women, I to deliver men that are young and generous of spirit, all that have any beauty. And now I must go to the King's Porch to meet the indictment that Meletus has brought against me; but let us meet here again in the morning, Theodorus.

# SOPHIST

*The day following their conversation in* Theaetetus, *the geometer Theodorus, together with his Athenian pupils Theaetetus and Socrates' young namesake, rejoins Socrates for further discussion. They bring with them a philosopher visiting from Elea, a Greek town of Southern Italy famous as home to the great philosopher Parmenides and his pupil, the logician Zeno—both of whom Socrates had encountered in yet another dialogue closely linked to this one,* Parmenides. *Socrates asks whether this visitor and the others at Elea treat the philosopher, the statesman, and the sophist as actually being just one thing—a single sort of person, though appearing to different people as falling under just one or another of these headings—or rather as having three distinct intellectual capacities, as their three names indicate. Hearing that the latter is the Eleatics' view, he thus initiates two successive, complex discussions. First, in* Sophist, *the visitor, opting to use Socrates' favorite procedure of question and answer, displays in full detail his own conception of the sophist. In* Statesman *he then continues in a similar way with the statesman. There is no third discussion of the philosopher, despite occasional suggestions that the initial agenda calls for one. The visitor, after all,* is *a distinguished philosopher. Perhaps Plato's intention is to mark the philosopher off for us from these other two through showing a supreme philosopher at work defining them and therein demonstrating his own devotion to truth, and the correct method of analysis for achieving it: for Plato these together define the philosopher.*

*In defining the sophist, the visitor employs the 'method of division'—or, more accurately, of 'collection and division'—described in* Phaedrus *265d ff. and early on in* Philebus; *this also underlies the latter's discussion of the varieties of pleasure and knowledge. He first offers six distinct routes for understanding the sophist, by systematically demarcating specific classes within successively smaller, nested, more inclusive classes of practitioners; these specific subclasses are then identified as the sophists. Apparently 'sophistry' is a somewhat loosely associated set of distinct capacities—it hunts rich, prominent young men so as to receive a wage for speaking persuasively to them about virtue, it sells (in several different circumstances) items of alleged knowledge on this same subject, it is expert at winning private debates about right and wrong, it cleanses people's souls by refuting their false or poorly supported ideas. Yet in a final accounting—whose long-delayed completion is reached only at the very end of the dialogue—the sophist is 'penned in' as one who,*

*though aware that he does not know anything, produces in words totally inadequate 'copies' of the truth on important subjects, ones he makes appear to others to* be *the truth, even though, being false, they are hardly even like it. The relation of this final definition to the six first ones is not fully explored. The visitor may be intimating the general principle that sometimes a 'nature' or real 'kind' has no single place in a systematic division; it unifies a set of differently located functions, each with its own differences from its more immediate intellectual neighbors. In any case, the essential idea of the 'method of collection and division' is that each thing is to be understood through a full, lively awareness of its similarities and differences in relation to other things—the sort of awareness that the varied divisions encourage us to reach. Much other general instruction on how to make proper use of the 'method' is given in* Statesman.

*The visitor delays completing his final accounting because he sees the need first to show how it is even possible for anyone to do what he wants to say the sophist does do—speak words that appear to be true but in fact are false. The trouble is that he understands speaking falsely as saying 'what is not', while his teacher Parmenides famously maintained that that is impossible: so he is required to engage in 'parricide'—in showing how Parmenides was wrong. There ensues an elaborate discussion of the meaning of 'what is' as well as of 'what is not', in which we can see Plato working out a new theory of the nature of the Form of being, and its relations to other 'greatest' or most comprehensive Forms: such a theory is needed to make saying 'what is not'—speaking falsely—intelligible after all. Much of the interest of the dialogue has always been found in this metaphysical excursion into the topic of being—and not being—in general.*

*J.M.C.*

216 THEODORUS: We've come at the proper time by yesterday's agreement, Socrates. We're also bringing this man who's visiting us. He's from Elea and he's a member of the group who gather around Parmenides and Zeno. And he's very much a philosopher.

SOCRATES: Are you bringing a visitor, Theodorus? Or are you bringing a god without realizing it instead, like the ones Homer mentions? He says
b gods accompany people who are respectful and just.[1] He also says the god of visitors—who's at least as much a god as any other—is a companion who keeps an eye on people's actions, both the criminal and the lawful ones. So your visitor might be a greater power following along with you,

Translated by Nicholas P. White.

1. See *Odyssey* ix.270–71.

a sort of god of refutation to keep watch on us and show how bad we are at speaking—and to refute us.

Theodorus: That's not our visitor's style, Socrates. He's more moderate than the enthusiasts for debating are. And he doesn't seem to me to be a god at all. He *is* divine—but then I call all philosophers that. c

Socrates: And that's the right thing for you to do, my friend. But probably it's no easier, I imagine, to distinguish that kind of person than it is to distinguish gods. Certainly the genuine philosophers who "haunt our cities"[2]—by contrast to the fake ones—take on all sorts of different appearances just because of other people's ignorance. As philosophers look down from above at the lives of those below them, some people think they're worthless and others think they're worth everything in the world. Sometimes they take on the appearance of statesmen, and sometimes of sophists. d
Sometimes, too, they might give the impression that they're completely insane. But if it's all right with our visitor I'd be glad to have him tell us what the people where he comes from used to apply the following names to, and what they thought about these things? 217

Theodorus: What things?

Socrates: *Sophist*, *statesman*, and *philosopher*.

Theodorus: What, or what kind of thing, especially makes you consider asking that question? What special problem about them do you have in mind?

Socrates: This: did they think that sophists, statesmen, and philosophers make up one kind of thing or two? Or did they divide them up into three kinds corresponding to the three names and attach one name to each of them?

Theodorus: I don't think it would offend him to tell us about it. Or would it, sir?

Visitor: No, Theodorus, it wouldn't offend me. I don't have any objection. b
And the answer is easy: they think there are three kinds. Distinguishing clearly what each of them is, though, isn't a small or easy job.

Theodorus: Luckily, Socrates, you've gotten hold of words that are very much like the ones we happened to be asking him about. And he made the same excuse to us that he made to you just now—since he's heard a lot about the issue, after all, and hasn't forgotten it.

Socrates: In that case, sir, don't refuse our very first request. Tell us c
this. When you want to explain something to somebody, do you usually prefer to explain it by yourself in a long speech, or to do it with questions? That's the way Parmenides did it one time, when he was very old and I was young.[3] He used questions to generate a very fine discussion.

2. See *Odyssey* xvii.483–87. . . . gods go from town to town disguised as visitors of varied appearance, just like Odysseus on this occasion, to observe the deeds of just and unjust people.

3. The reference is to the conversation in the *Parmenides.*

d VISITOR: It's easier to do it the second way, Socrates, if you're talking with someone who's easy to handle and isn't a trouble-maker. Otherwise it's easier to do it alone.

SOCRATES: You can pick anyone here you want. They'll all answer you politely. But if you take my advice you'll choose one of the young ones—Theaetetus here or for that matter any of the others you prefer.

VISITOR: As long as I'm here with you for the first time, Socrates, I'd be
e embarrassed not to make our meeting a conversational give-and-take, but instead to stretch things out and give a long continuous speech by myself or even to someone else, as if I were delivering an oration. A person wouldn't expect the issue you just mentioned to be as small as your question suggests. In fact it needs a very long discussion. On the other hand, it certainly seems rude and uncivilized for a visitor not to oblige you and these people here, especially when you've spoken the way you
218 have. So I'll accept Theaetetus as the person to talk with, on the basis of your urging, and because I've talked with him myself before.

THEAETETUS: Then please do that, sir, and you'll be doing us all a favor, just as Socrates said.

VISITOR: We probably don't need to say anything more about that, then, Theaetetus. From now on you're the one I should have the rest of our talk with. But if you're annoyed at how long the job takes, you should blame your friends here instead of me.

b THEAETETUS: I don't think I'll give out now, but if anything like that does happen we'll have to use this other Socrates over here as a substitute. He's Socrates' namesake, but he's my age and exercises with me and he's used to sharing lots of tasks with me.

VISITOR: Good. As the talk goes along you'll think about that on your own. But with me I think you need to begin the investigation from the
c sophist—by searching for him and giving a clear account of what he is. Now in this case you and I only have the name in common, and maybe we've each used it for a different thing. In every case, though, we always need to be in agreement about the thing itself by means of a verbal explanation, rather than doing without any such explanation and merely agreeing about the name. But it isn't the easiest thing in the world to grasp the tribe we're planning to search for—I mean, the sophist—or say what it is. But if an important issue needs to be worked out well, then as everyone
d has long thought, you need to practice on unimportant, easier issues first. So that's my advice to us now, Theaetetus: since we think it's hard to hunt down and deal with the kind, *sophist*, we ought to practice our method of hunting on something easier first—unless you can tell us about another way that's somehow more promising.

THEAETETUS: I can't.

VISITOR: Do you want us to focus on something trivial and try to use it as a model for the more important issue?

Theaetetus: Yes. e

Visitor: What might we propose that's unimportant and easy to understand, but can have an account given of it just as much as more important things can? For example, *an angler*: isn't that recognizable to everybody, but not worth being too serious about?

Theaetetus: Yes.

Visitor: That, I expect, will provide an appropriate method of hunting 219
and way of talking for what we want.

Theaetetus: That would be fine.

Visitor: Well then, let's go after the angler from this starting point. Tell me, shall we take him to be an expert at something, or a nonexpert with another sort of capacity?

Theaetetus: He's definitely not a nonexpert.

Visitor: But expertise as a whole falls pretty much into two types.

Theaetetus: How?

Visitor: There's farming, or any sort of caring for any mortal body; and there's also caring for things that are put together or fabricated, which we
call equipment; and there's imitation. The right thing would be to call all b
those things by a single name.

Theaetetus: How? What name?

Visitor: When you bring anything into being that wasn't in being before, we say you're a producer and that the thing you've brought into being is produced.

Theaetetus: That's right.

Visitor: And all the things we went through just now have their own capacity for that.

Theaetetus: Yes.

Visitor: Let's put them under the heading of production.

Theaetetus: All right. c

Visitor: Next, consider the whole type that has to do with learning, recognition, commerce, combat, and hunting. None of these creates anything. They take things that are or have come into being, and they take possession of some of them with words and actions, and they keep other things from being taken possession of. For that reason it would be appropriate to call all the parts of this type acquisition.

Theaetetus: Yes, that would be appropriate.

Visitor: If every expertise falls under acquisition or production, Theaete- d
tus, which one shall we put angling in?

Theaetetus: Acquisition, obviously.

Visitor: Aren't there two types of expertise in acquisition? Is one type mutually willing exchange, through gifts and wages and purchase? And would the other type, which brings things into one's possession by actions or words, be expertise in taking possession?

Theaetetus: It seems so, anyway, given what we've said.

Visitor: Well then, shouldn't we cut possession-taking in two?

Theaetetus: How?

e Visitor: The part that's done openly we label combat, and the part that's secret we call hunting.

Theaetetus: Yes.

Visitor: And furthermore it would be unreasonable not to cut hunting in two.

Theaetetus: How?

Visitor: We divide it into the hunting of living things and the hunting of lifeless things.

Theaetetus: Yes, if there are both kinds.

220 Visitor: How could there not be? But we should let the part involving lifeless things go. It doesn't have a name, except for some kinds of diving and other trivial things like that. The other part—namely the hunting of living animals—we should call animal-hunting.

Theaetetus: All right.

Visitor: And isn't it right to say that animal-hunting has two types? One is land-hunting, the hunting of things with feet, which is divided into many types with many names. The other is aquatic hunting, which hunts animals that swim.

Theaetetus: Of course.

b Visitor: And things that swim, we see, fall into things with wings and things living underwater.

Theaetetus: Of course.

Visitor: And all hunting of things that have wings, I suppose, is called bird-catching.

Theaetetus: Yes.

Visitor: And all hunting of underwater things is fishing.

Theaetetus: Yes.

Visitor: Well then, this kind of hunting might be divided into two main parts.

Theaetetus: What are they?

Visitor: One of them does its hunting with stationary nets and the other one does it by striking.

Theaetetus: What do you mean? How are you dividing them?

c Visitor: The first one is whatever involves surrounding something and enclosing it to prevent it from escaping, so it's reasonable to call it enclosure.

Theaetetus: Of course.

Visitor: Shouldn't baskets, nets, slipknots, creels, and so forth be called enclosures?

Theaetetus: Yes.

Visitor: So we'll call this part of hunting enclosure-hunting or something like that.

Theaetetus: Yes.

Visitor: But the kind that's done by striking with hooks or three-pronged
spears is different, and we should call it by one word, strike-hunting. Or d
what term would be better?

Theaetetus: Let's not worry about the name. That one will do.

Visitor: Then there's a part of striking that's done at night by firelight, and as it happens is called torch-hunting by the people who do it.

Theaetetus: Of course.

Visitor: But the whole daytime part is called hooking, since even the three-pronged spears have hooks on their points.

Theaetetus: Yes, that's what it's called. e

Visitor: Then one part of the hooking part of striking is done by striking downward from above. And since you usually use a three-pronged spear that way, I think it's called spearing.

Theaetetus: Some people do call it that.

Visitor: And I suppose there's only one type left.

Theaetetus: What?

Visitor: It's the type of striking contrary to the previous one. It's done
with a hook, not to just any part of the fish's body but always to the prey's 221
head and mouth, and pulls it upward from below with rods or reeds.
What are we going to say its name should be, Theaetetus?

Theaetetus: I think we've now found what we said we aimed to find.

Visitor: So now we're in agreement about the angler's expertise, not b
just as to its name; in addition we've also sufficiently grasped a verbal
explanation concerning the thing itself. Within expertise as a whole one
half was acquisitive; half of the acquisitive was taking possession; half of
possession-taking was hunting; half of hunting was animal-hunting; half
of animal-hunting was aquatic hunting; all of the lower portion of aquatic
hunting was fishing; half of fishing was hunting by striking; and half of
striking was hooking. And the part of hooking that involves a blow drawing
a thing upward from underneath is called by a name that's derived by its c
similarity to the action itself, that is, it's called draw-fishing or angling—
which is what we're searching for.

Theaetetus: We've got a completely adequate demonstration of that, anyway.

Visitor: Well then, let's use that model to try and find the sophist, and see what he is.

Theaetetus: Fine.

Visitor: The first question, then, was whether we should suppose the angler is a nonexpert, or that he's an expert at something?

Theaetetus: Yes.

Visitor: Well, shall we suppose the sophist is a layman, or completely d
and truly an expert?

Theaetetus: He's not a layman at all. I understand what you're saying: he has to be the kind of person that the name *sophist* indicates.[4]

Visitor: So it seems we need to take him to have a kind of expertise.

Theaetetus: But what is it?

Visitor: For heaven's sake, don't we recognize that the one man belongs to the same kind as the other?

Theaetetus: Which men?

Visitor: The angler and the sophist.

Theaetetus: In what way?

Visitor: To me they both clearly appear to be hunters.

e Theaetetus: We said which kind of hunting the angler does. What kind does the sophist do?

Visitor: We divided all hunting into two parts, one for land animals and one for swimming animals.

Theaetetus: Yes.

Visitor: We went through one part, about the animals that swim underwater. But we left the land part undivided, though we noted that it contains many types.

222 Theaetetus: Of course.

Visitor: Up till that point the sophist and the angler go the same way, beginning from expertise in acquisition.

Theaetetus: They seem to, anyway.

Visitor: Starting from animal hunting, though, they turn away from each other. One goes to ponds, rivers, and the sea, and hunts for the animals there.

Theaetetus: Of course.

Visitor: The other one goes to the land and to different kinds of rivers, which are like plentiful meadows of wealthy youths, to take possession of the things living there.

b Theaetetus: What do you mean?

Visitor: There are two main kinds of things to hunt on land.

Theaetetus: What are they?

Visitor: Tame things and wild ones.

Theaetetus: Is there any such thing as hunting tame animals?

Visitor: There is if human beings are tame animals, at any rate. Make whichever assumption you like: either there are no tame animals, or there are tame animals but humans are wild, or else, you'll say, humans are tame but aren't hunted. Specify whichever you prefer to say.

c Theaetetus: I think we're tame animals and I'll say that humans are in fact hunted.

4. The word "sophist" (*sophistēs*) is etymologically related to the word "wise" (*sophos*), and so can be taken to connote knowledge and expertise.

VISITOR: Then let's say that the hunting of tame animals falls into two parts.

THEAETETUS: How?

VISITOR: Let's take piracy, enslavement, tyranny, along with everything that has to do with war, and let's define them all together as hunting by force.

THEAETETUS: Fine.

VISITOR: And we'll also take legal oratory, political oratory, and conversation all together in one whole, and call them all one single sort of expertise, d
expertise in persuasion.

THEAETETUS: Right.

VISITOR: Let's say that there are two kinds of persuasion.

THEAETETUS: What are they?

VISITOR: One is done privately, and the other is done in public.

THEAETETUS: Yes, each of those is one type.

VISITOR: And doesn't one part of private hunting earn wages, while the other part gives gifts?

THEAETETUS: I don't understand.

VISITOR: It seems you aren't paying attention to the way lovers hunt.

THEAETETUS: In what connection?

VISITOR: The fact that when they hunt people they give presents to e
them too.

THEAETETUS: Very true.

VISITOR: Let's call this type expertise in love.

THEAETETUS: All right.

VISITOR: One part of the wage-earning type approaches people by being agreeable, uses only pleasure as its bait, and earns only its own room and
board. I think we'd all call it flattery, or expertise in pleasing people. 223

THEAETETUS: Of course.

VISITOR: But doesn't the kind of wage-earning that actually earns money, though it claims to deal with people for the sake of virtue, deserve to be called by a different name?

THEAETETUS: Of course.

VISITOR: What name? Try and tell me.

THEAETETUS: It's obvious. I think we've found the sophist. I think that's the name that would be suitable for him.

VISITOR: So according to our account now, Theaetetus, it seems that this b
sort of expertise belongs to appropriation, taking possession, hunting, animal-hunting, hunting on land, human hunting, hunting by persuasion, hunting privately, and money-earning.[5] It's the hunting of rich, prominent young men. And according to the way our account has turned out, it's what should be called the expertise of the sophist.

5. In addition to the words bracketed by Burnet, we bracket *doxopaideutikēs* also.

THEAETETUS: Absolutely.

c VISITOR: Still, let's look at it this way too, since what we're looking for isn't a trivial sort of expertise but quite a diverse one. And even in what we've just said earlier it actually presents the appearance of being not what we're now saying, but a different type.

THEAETETUS: How?

VISITOR: Expertise in acquisition had two parts, hunting and exchanging.

THEAETETUS: Yes.

VISITOR: And let's say there are two types of exchanging, giving and selling.

THEAETETUS: All right.

VISITOR: And we're also going to say that selling divides in two.

d THEAETETUS: How?

VISITOR: One part is the sale of things that the seller himself makes. The other is purveying, that is, the purveying of things other people make.

THEAETETUS: Of course.

VISITOR: Then what? Isn't the part of purveying that's done within the city—about half of it—called retailing?

THEAETETUS: Yes.

VISITOR: And isn't wholesaling the part that buys and sells things for exchange between one city and another?

THEAETETUS: Of course.

e VISITOR: And can't we see that one part of wholesaling sells things for the nourishment and use of the body in exchange for cash, and the other sells things for the soul?

THEAETETUS: What do you mean by that?

VISITOR: Maybe we don't understand the one for the soul—since certainly we understand the other kind.

THEAETETUS: Yes.

224 VISITOR: Let's consider every kind of music that's carried from one city to another and bought here and sold there, as well as painting and shows and other things for the soul. Some of them are transported and sold for amusement and others for serious purposes. We can use the word *wholesaler* for the transporter and seller of these things just as well as for someone who sells food and beverages.

THEAETETUS: That's absolutely true.

b VISITOR: Wouldn't you use the same name for somebody who bought and exchanged items of knowledge for money from city to city?

THEAETETUS: Definitely.

VISITOR: Wouldn't the right thing to say be that the art of display is one part of that soul-wholesaling? And don't we have to call the other part of it, the part that consists in selling knowledge, by a name that's similar and also equally ridiculous?

THEAETETUS: Definitely.

Visitor: And one name should be used for the part of this knowledge-selling that deals with knowledge of virtue, and another name for the part c that deals with knowledge of other things?

Theaetetus: Of course.

Visitor: "Expertise-selling" would fit the second one. You try and tell me the name of the first one.

Theaetetus: What other name could you mention that would fit, except for the kind, *sophist*, which we're looking for right now?

Visitor: I couldn't mention any other one. Come on now and let's collect it all together. We'll say that the expertise of the part of acquisition, exchange, selling, wholesaling, and soul-wholesaling, dealing in words and learning d that have to do with virtue—that's sophistry in its second appearance.

Theaetetus: Definitely.

Visitor: In the third place I think you'd call somebody just the same thing if he settled here in the city and undertook to make his living selling those same things, both ones that he'd bought and ones that he'd made himself.

Theaetetus: Yes, I would.

Visitor: So apparently you'll still say that sophistry falls under acquisi- e tion, exchange, and selling, either by retailing things that others make or by selling things that he makes himself. It's the retail sale of any learning that has to do with the sorts of things we mentioned.

Theaetetus: It has to be, since we need to stay consistent with what we said before.

Visitor: Now let's see whether the type we're chasing is something like the following.

Theaetetus: What? 225

Visitor: Combat was one part of acquisition.

Theaetetus: Yes.

Visitor: And it makes sense to divide it in two.

Theaetetus: How?

Visitor: We'll take one part to be competition and the other part to be fighting.

Theaetetus: Yes.

Visitor: And it would be fitting and proper to give a name like *violence* to the part of fighting in which one body fights against another.

Theaetetus: Yes.

Visitor: And as for the part that pits words against words, what else would you call it other than controversy? b

Theaetetus: Nothing else.

Visitor: But we have to have two types of controversy.Theaetetus: In what way?

Visitor: So far as it involves one long public speech directed against another and deals with justice and injustice, it's forensic.

Theaetetus: Yes.

Visitor: But if it goes on in private discussions and is chopped up into questions and answers, don't we usually call it disputation?

Theaetetus: Yes.

Visitor: One part of disputation involves controversy about contracts
c and isn't carried on in any systematic or expert way. We should take that
to be a type of disputation, since we can express what makes it different.
But it hasn't been given a name before and it doesn't deserve to get one
from us.

Theaetetus: That's true. Its subtypes are too small and varied.

Visitor: But what about disputation that's done expertly and involves controversy about general issues, including what's just and what's unjust? Don't we normally call that debating?[6]

Theaetetus: Of course.

d Visitor: Part of debating, it turns out, wastes money and the other
part makes money.

Theaetetus: Absolutely.

Visitor: Let's try and say what each of them ought to be called.

Theaetetus: We have to.

Visitor: I think one type of debating is a result of the pleasure a person gets from the activity, and involves neglecting his own livelihood. But its style is unpleasant to most people who hear it, and in my view it's right to call it chatter.

Theaetetus: That's pretty much what people do call it.

e Visitor: You take a turn now. Say what its contrary is, which makes
money from debates between individuals.

Theaetetus: How could anyone go wrong in saying that the amazing sophist we've been after has turned up once again for the fourth time.

226 Visitor: It seems his type is precisely the money-making branch of ex-
pertise in debating, disputation, controversy, fighting, combat, and acquisi-
tion. According to what our account shows us now, that's the sophist.

Theaetetus: Absolutely.

Visitor: So you see how true it is that the beast is complex and can't be caught with one hand, as they say.

Theaetetus: It does take both hands.

b Visitor: Yes, and you need all your capacity to follow his tracks in what's
to come. Tell me: don't we call some things by names that houseservants
use?

Theaetetus: A lot of things. But what are you asking about?

Visitor: For example things like filtering, straining, winnowing.

6. The word here translated by "debating," *eristikon*, is sometimes translated (or transliterated) "eristic." It refers to a practice of competitive debating which the sophists made popular in Athens. Plato's use of the term stigmatizes the practice as not directed at truth.

Theaetetus: Of course.

Visitor: And also we know about carding, spinning, weaving, and a million other things like that which are involved in experts' crafts. Is that right?

Theaetetus: What general point are you trying to make with these ex- c
amples?

Visitor: All the things I've mentioned are kinds of dividing.

Theaetetus: Yes.

Visitor: Since there's a single kind of expertise involved in all of them, then according to what I've said we'll expect it to have a single name.

Theaetetus: What shall we call it?

Visitor: Discrimination.

Theaetetus: All right.

Visitor: Think about whether we can see two types in it.

Theaetetus: You're asking me to do some quick thinking.

Visitor: In fact in what we've called discriminations one kind separates d
what's worse from what's better and the other separates like from like.

Theaetetus: That's obvious—now that you've said it.

Visitor: I don't have an ordinary name for one of them, but I do have a name for the kind of discrimination that leaves what's better and throws away what's worse.

Theaetetus: What? Tell me.

Visitor: I think everyone says that that kind of discrimination is cleansing.

Theaetetus: Yes.

Visitor: Won't everyone see that cleansing has two types? e

Theaetetus: Yes, maybe, if they had time, but I don't see now.

Visitor: Many kinds of cleansing that have to do with the body can appropriately be included under a simple name.

Theaetetus: Which ones? What name?

Visitor: There's the cleansing of the inside part of living bodies, which
is done by gymnastics and medicine. And there's the cleansing of the 227
insignificant outside part that's done by bathing. And also there's the cleansing of nonliving bodies, which fulling and all kinds of furbishing take care of and which have lots of specialized and ridiculous-seeming names.

Theaetetus: Very ridiculous.

Visitor: Of course, Theaetetus. But our method of dealing with words doesn't care one way or the other whether cleansing by sponging or by taking medicine does a lot of good or only a little. The method aims at
acquiring intelligence, so it tries to understand how all kinds of expertise b
belong to the same kind or not. And so for that it values them all equally without thinking that some of them are more ridiculous than others, as far as their similarity is concerned. And it doesn't consider a person more impressive because he exemplifies hunting by military expertise rather

than by picking lice. Instead it usually considers him more vapid. Moreover
you just asked about what name we call all the capacities that are assigned
c to living or nonliving bodies. As far as that's concerned, it doesn't matter
to our method which name would seem to be the most appropriate, just
so long as it keeps the cleansing of the soul separate from the cleansing
of everything else. For the time being, the method has only tried to distinguish the cleansing that concerns thinking from the other kinds—if, that is, we understand what its aim is.

Theaetetus: I do understand, and I agree that there are two types of cleansing, one dealing with the soul and a separate one dealing with the body.

Visitor: Fine. Next listen and try to cut the one we've mentioned in two.

d Theaetetus: I'll try to follow your lead and cut it however you say.

Visitor: Do we say that wickedness in the soul is something different from virtue?

Theaetetus: Of course.

Visitor: And to cleanse something was to leave what's good and throw out whatever's inferior.

Theaetetus: Yes.

Visitor: So insofar as we can find some way to remove what's bad in the soul, it will be suitable to call it cleansing.

Theaetetus: Of course.

Visitor: We have to say that there are two kinds of badness that affect the soul.

Theaetetus: What are they?

228 Visitor: One is like bodily sickness, and the other is like ugliness.

Theaetetus: I don't understand.

Visitor: Presumably you regard sickness and discord as the same thing, don't you?

Theaetetus: I don't know what I should say to that.

Visitor: Do you think that discord is just dissension among things that are naturally of the same kind, and arises out of some kind of corruption?

Theaetetus: Yes.

Visitor: And ugliness is precisely a consistently unattractive sort of disproportion?

b Theaetetus: Yes.

Visitor: Well then, don't we see that there's dissension in the souls of people in poor condition, between beliefs and desires, anger and pleasures, reason and pains, and all of those things with each other?

Theaetetus: Absolutely.

Visitor: But all of them do have to be akin to each other.

Theaetetus: Of course.

Visitor: So we'd be right if we said that wickedness is discord and sickness of the soul.

Theaetetus: Absolutely right.

Visitor: Well then, suppose something that's in motion aims at a target c
and tries to hit it, but on every try passes by it and misses. Are we going to say that it does this because it's properly proportioned or because it's out of proportion?

Theaetetus: Out of proportion, obviously.

Visitor: But we know that no soul is willingly ignorant of anything.

Theaetetus: Definitely.

Visitor: But ignorance occurs precisely when a soul tries for the truth, d
but swerves aside from understanding and so is beside itself.

Theaetetus: Of course.

Visitor: So we have to take it that an ignorant soul is ugly and out of proportion.

Theaetetus: It seems so.

Visitor: Then there are, it appears, these two kinds of badness in the soul. Most people call one of them wickedness, but it's obviously a disease of the soul.

Theaetetus: Yes.

Visitor: They call the other one ignorance, but if it occurs only in a person's soul they aren't willing to agree that it's a form of badness.

Theaetetus: One thing absolutely must be granted—the point I was in e
doubt about when you made it just now—that there are two kinds of deficiency in the soul. We need to say that cowardice, licentiousness, and injustice are a disease in us, and that to be extremely ignorant of all sorts of things is a kind of ugliness.

Visitor: In the case of the body, weren't there two kinds of expertise dealing with those two conditions?

Theaetetus: What were they?

Visitor: Gymnastics for ugliness and medicine for sickness. 229

Theaetetus: Apparently.

Visitor: And isn't correction the most appropriate of all kinds of expertise for treating insolence, injustice, and cowardice?[7]

Theaetetus: So it seems, to judge by what people think.

Visitor: Well then, for all kinds of ignorance wouldn't teaching be the right treatment to mention?

Theaetetus: Yes.

Visitor: Now should we say that there's only one kind of expertise in b
teaching or more than one, with two of them being the most important ones? Think about it.

Theaetetus: I am.

Visitor: I think we'll find it quickest this way.

Theaetetus: How?

7. The text seems faulty here. The general sense, however, is clear.

Visitor: By seeing whether ignorance has a cut down the middle of it. If it has two parts, that will force teaching to have two parts too, one for each of the parts of ignorance.

Theaetetus: Well, do you see what we're looking for?

c Visitor: I think I see a large, difficult type of ignorance marked off from the others and overshadowing all of them.

Theaetetus: What's it like?

Visitor: Not knowing, but thinking that you know. That's what probably causes all the mistakes we make when we think.

Theaetetus: That's true.

Visitor: And furthermore it's the only kind of ignorance that's called lack of learning.

Theaetetus: Certainly.

Visitor: Well then, what should we call the part of teaching that gets rid of it?

d Theaetetus: The other part consists in the teaching of crafts, I think, but here in Athens we call this one education.

Visitor: And just about all other Greeks do too, Theaetetus. But we still have to think about whether education is indivisible or has divisions that are worth mentioning.

Theaetetus: We do have to think about that.

Visitor: I think it can be cut somehow.

Theaetetus: How?

e Visitor: One part of the kind of teaching that's done in words is a rough road, and the other part is smoother.

Theaetetus: What do you mean by these two parts?

Visitor: One of them is our forefathers' time-honored method of scolding
or gently encouraging. They used to employ it especially on their sons,
230 and many still use it on them nowadays when they do something wrong.
Admonition would be the right thing to call all of this.

Theaetetus: Yes.

Visitor: As for the other part, some people seem to have an argument to give to themselves that lack of learning is always involuntary, and that if someone thinks he's wise, he'll never be willing to learn anything about what he thinks he's clever at. These people think that though admonition is a lot of work, it doesn't do much good.

Theaetetus: They're right about that.

b Visitor: So they set out to get rid of the belief in one's own wisdom in another way.

Theaetetus: How?

Visitor: They cross-examine someone when he thinks he's saying something though he's saying nothing. Then, since his opinions will vary inconsistently, these people will easily scrutinize them. They collect his opinions together during the discussion, put them side by side, and show that they

conflict with each other at the same time on the same subjects in relation
to the same things and in the same respects. The people who are being
examined see this, get angry at themselves, and become calmer toward
others. They lose their inflated and rigid beliefs about themselves that c
way, and no loss is pleasanter to hear or has a more lasting effect on them.
Doctors who work on the body think it can't benefit from any food that's
offered to it until what's interfering with it from inside is removed. The
people who cleanse the soul, my young friend, likewise think the soul,
too, won't get any advantage from any learning that's offered to it until d
someone shames it by refuting it, removes the opinions that interfere with
learning, and exhibits it cleansed, believing that it knows only those things
that it does know, and nothing more.

Theaetetus: That's the best and most healthy-minded way to be.

Visitor: For all these reasons, Theaetetus, we have to say that refutation
is the principal and most important kind of cleansing. Conversely we have
to think that even the king of Persia, if he remains unrefuted, is uncleansed e
in the most important respect. He's also uneducated and ugly, in just the
ways that anyone who is going to be really happy has to be completely
clean and beautiful.

Theaetetus: Absolutely.

Visitor: Well then, who are we going to say the people who apply this
form of expertise are? I'm afraid to call them sophists. 231

Theaetetus: Why?

Visitor: So we don't pay sophists too high an honor.

Theaetetus: But there's a similarity between a sophist and what we've been talking about.

Visitor: And between a wolf and a dog, the wildest thing there is and
the gentlest. If you're going to be safe, you have to be especially careful
about similarities, since the type we're talking about is very slippery.
Anyway, let that description of them stand. I certainly don't think that
when the sophists are enough on their guard the dispute will be about an
unimportant distinction. b

Theaetetus: That seems right.

Visitor: So let it be the cleansing part of the expertise of discriminating things; and let it be marked off as the part of that which concerns souls; and within that it's teaching; and within teaching it's education. And let's say that within education, according to the way the discussion has turned now, the refutation of the empty belief in one's own wisdom is nothing other than our noble sophistry.

Theaetetus: Let's say that. But the sophist has appeared in lots of differ-
ent ways. So I'm confused about what expression or assertion could convey c
the truth about what he really is.

Visitor: You're right to be confused. But we have to think that he's extremely confused, too, about where he can go to escape from our account

of him. The saying that you can't escape all your pursuers is right. So now we really have to go after him.

Theaetetus: Right.

Visitor: But let's stop first and catch our breath, so to speak. And while
d we're resting let's ask ourselves, "Now, how many different appearances
has the sophist presented to us?" I think we first discovered him as a hired
hunter of rich young men.

Theaetetus: Yes.

Visitor: Second, as a wholesaler of learning about the soul.

Theaetetus: Right.

Visitor: Third, didn't he appear as a retailer of the same things?

Theaetetus: Yes, and fourth as a seller of his own learning?

Visitor: Your memory's correct. I'll try to recall the fifth way: he was
e an athlete in verbal combat, distinguished by his expertise in debating.

Theaetetus: Yes.

Visitor: The sixth appearance was disputed, but still we made a concession to him and took it that he cleanses the soul of beliefs that interfere with learning.

Theaetetus: Definitely.

232 Visitor: Well then, suppose people apply the name of a single sort of expertise to someone, but he appears to have expert knowledge of lots of things. In a case like that don't you notice that something's wrong with the way he appears? Isn't it obvious that if somebody takes him to be an expert at many things, then that observer can't be seeing clearly what it is in his expertise that all of those many pieces of learning focus on—which is why he calls him by many names instead of one?

Theaetetus: That definitely does seem to be the nature of the case.

b Visitor: So let's not let laziness make that happen to us. First let's take up one of the things we said about the sophist before, which seemed to me to exhibit him especially clearly.

Theaetetus: What is it?

Visitor: We said that he engages in disputes, didn't we?

Theaetetus: Yes.

Visitor: And also that he teaches other people to do the same thing too?

Theaetetus: Of course.

Visitor: Then let's think: what subject do people like him claim to make
others able to engage in disputes about? Let's start with something like
c this: do sophists make people competent to dispute about issues about the
gods, which are opaque to most people?

Theaetetus: Well, people say they do.

Visitor: And also things that are open to view, on the earth and in the sky, and related matters?

Theaetetus: Of course.

Visitor: And when people make general statements in private discussions about being and coming-to-be, we know that sophists are clever at contradicting them and they also make other people able to do the same thing?

Theaetetus: Absolutely.

Visitor: And what about laws and all kinds of political issues? Don't d
sophists promise to make people capable of engaging in controversies about them?

Theaetetus: If they didn't promise that, practically no one would bother to discuss anything with them.

Visitor: As a matter of fact you can find anything you need to say to contradict any expert himself, both in general and within each particular field, laid out published and written down for anybody who wants to learn it.

Theaetetus: Apparently you're talking about Protagoras' writings on
wrestling and other fields of expertise. e

Visitor: And on many other things, too, my friend. In fact, take expertise in disputation as a whole. Doesn't it seem like a capacity that's sufficient for carrying on controversies about absolutely everything?

Theaetetus: It doesn't seem to leave much of anything out, anyway.

Visitor: But for heaven's sake, my boy, do you think that's possible? Or maybe you young people see into this issue more keenly than we do.

Theaetetus: Into what? What are you getting at? I don't fully understand 233
what you're asking.

Visitor: Whether it's possible for any human being to know everything.

Theaetetus: If it were, sir, we'd be very well off.

Visitor: But how could someone who didn't know about a subject make a sound objection against someone who knew about it?

Theaetetus: He couldn't.

Visitor: Then what is it in the sophist's capacity that's so amazing?

Theaetetus: About what?

Visitor: How the sophists can ever make young people believe they're b
wiser than everyone else about everything. It's obvious that they didn't make correct objections against anyone, or didn't appear so to young people. Or if they did appear to make correct objections, but their controversies didn't make them look any the wiser for it, then—just as you say—people would hardly be willing to pay them money to become their students.

Theaetetus: Right.

Visitor: But people are willing to?

Theaetetus: They certainly are.

Visitor: Since sophists do seem, I think, to know about the things they c
dispute about.

Theaetetus: Of course.

Visitor: And they do it, we say, about every subject?

Theaetetus: Yes.

Visitor: So to their students they appear wise about everything?

Theaetetus: Of course.

Visitor: But without actually being wise—since that appeared impossible.

Theaetetus: Of course it's impossible.

Visitor: So the sophist has now appeared as having a kind of belief-knowledge about everything, but not truth.

d Theaetetus: Absolutely. What you've said about them is probably just right.

Visitor: But let's consider a pattern that will exhibit them more clearly.

Theaetetus: What pattern is that?

Visitor: This one. Pay attention to me, and try to do a good job of answering my questions.

Theaetetus: Which questions?

Visitor: If someone claimed that by a single kind of expertise he could know, not just how to say things or to contradict people, but how to make and do everything, then . . .

e Theaetetus: What do you mean, *everything*?

Visitor: You don't understand the first thing I say! Seemingly you don't understand *everything*!

Theaetetus: No, I don't.

Visitor: Well, I mean everything to include you and me and also the other animals and plants . . .

Theaetetus: What are you talking about?

Visitor: If someone claimed that he'd make you and me and all the other living things . . .

234 Theaetetus: What kind of making are you talking about? You're not talking about some kind of gardener—after all, you did say he made animals.

Visitor: Yes, and also I mean the sea and earth and heaven and gods and everything else. And furthermore he makes them each quickly and sells them at a low price.

Theaetetus: You're talking about some kind of game for schoolchildren.

Visitor: Well, if someone says he knows everything and would teach it to someone else cheaply and quickly, shouldn't we think it's a game?

Theaetetus: Of course.

b Visitor: Do you know of any game that involves more expertise than imitation does, and is more engaging?

Theaetetus: No, not at all, since you've collected everything together and designated a very broad, extremely diverse type.

Visitor: So think about the man who promises he can make everything by means of a single kind of expertise. Suppose that by being expert at

drawing he produces things that have the same names as real things. Then we know that when he shows his drawings from far away he'll be able to fool the more mindless young children into thinking that he can actually produce anything he wants to.

Theaetetus: Of course. c

Visitor: Well then, won't we expect that there's another kind of expertise—this time having to do with words—and that someone can use it to trick young people when they stand even farther away from the truth about things? Wouldn't he do it by putting words in their ears, and by showing them spoken copies of everything, so as to make them believe that the words are true and that the person who's speaking to them is the wisest person there is?

Theaetetus: Yes, why shouldn't there be that kind of expertise too? d

Visitor: So, Theaetetus, suppose enough time has passed and the sophist's hearers have gotten older, and that they approach closer to real things and are forced by their experiences to touch up palpably against them. Won't most of them inevitably change their earlier beliefs, which made large things appear small and easy things appear hard? And won't the
facts they've encountered in the course of their actions completely overturn e
all the appearances that had come to them in the form of words?

Theaetetus: Yes—at least as far as what someone my age can tell. But I think I'm one of the young people who are still standing far away from real things.

Visitor: That's why all of us here will keep trying to take you as close to them as possible, but without your needing those experiences to force you. But tell me about the sophist. Is it obvious by now that he's a kind
of cheat who imitates real things? Or are we still in any doubt about 235
whether he truly knows all the things that he seems to be able to engage in controversies about?

Theaetetus: But, sir, how could we be in any doubt? By this time it's pretty obvious from what we've said that he's one of those people who play games.

Visitor: So we have to regard him as a cheat and an imitator.

Theaetetus: How could we avoid it?

Visitor: Well, now it's our job not to let the beast escape. We've
almost hemmed him in with one of those net-like devices that words b
provide for things like this. So anyway he won't get away from this next point.

Theaetetus: What is it?

Visitor: From being taken to be a kind of magician.

Theaetetus: That's what he seems to me to be too.

Visitor: So it's settled. We'll divide the craft of copy-making as quickly as we can and we'll go down into it. Then if the sophist gives up right
away we'll obey the royal command and we'll capture him and hand our c

catch over to the king. But if the sophist slips down somewhere into the parts of the craft of imitation, we'll follow along with him and we'll divide each of the parts that contain him until we catch him. Anyway, neither he nor any other kind will ever be able to boast that he's escaped from the method of people who are able to chase a thing through both the particular and the general.

THEAETETUS: Good. That's how we have to do it.

VISITOR: Going by the method of division that we've used so far, I think
d I see two types of imitation here too. But I don't think I can clearly tell
yet which one the type or form we're looking for is in.

THEAETETUS: Well, first tell us what distinction you mean.

VISITOR: One type of imitation I see is the art of likeness-making. That's
the one we have whenever someone produces an imitation by keeping to
e the proportions of length, breadth, and depth of his model, and also by
keeping to the appropriate colors of its parts.

THEAETETUS: But don't all imitators try to do that?

VISITOR: Not the ones who sculpt or draw very large works. If they
reproduced the true proportions of their beautiful subjects, you see, the
236 upper parts would appear smaller than they should, and the lower parts
would appear larger, because we see the upper parts from farther away
and the lower parts from closer.

THEAETETUS: Of course.

VISITOR: So don't those craftsmen say goodbye to truth, and produce in their images the proportions that seem to be beautiful instead of the real ones?

THEAETETUS: Absolutely.

VISITOR: So can't the first sort of image be called a likeness, since it's like the thing?

THEAETETUS: Yes.

b VISITOR: And as we said before, the part of imitation that deals with that
should be called likeness-making.

THEAETETUS: Yes.

VISITOR: Now, what are we going to call something that appears to be like a beautiful thing, but only because it's seen from a viewpoint that's not beautiful, and would seem unlike the thing it claims to be like if you came to be able to see such large things adequately? If it appears the way the thing does but in fact isn't like it, isn't it an appearance?

THEAETETUS: Of course.

c VISITOR: And this part of imitation covers a great deal of painting and
of the rest of imitation.

THEAETETUS: Of course.

VISITOR: Wouldn't appearance-making be the right thing to call expertise in producing appearances that aren't likenesses?

THEAETETUS: Yes, definitely.

Visitor: Well, these are the two types of copy-making I meant, likeness-making and appearance-making.

Theaetetus: You were right about that.

Visitor: But still I can't see clearly the thing I was in doubt about then, namely, which type we should put the sophist in. He's really an amazing man—very hard to make out. He's still escaped neatly into an impossibly d
confusing type to search through.

Theaetetus: It seems that way.

Visitor: Are you agreeing with me because you know that, or is the current dragging you, so to speak, into agreement so quickly because the discussion has given you a habit of agreeing?

Theaetetus: What do you mean? Why do you say that?

Visitor: Really, my young friend, this is a very difficult investigation we're engaged in. This appearing, and this seeming but not being, and e
this saying things but not true things—all these issues are full of confusion, just as they always have been. It's extremely hard, Theaetetus, to say what form of speech we should use to say that there really is such a thing as false saying or believing, and moreover to utter this without being caught 237
in a verbal conflict.

Theaetetus: Why?

Visitor: Because this form of speech of ours involves the rash assumption that that which is not is, since otherwise falsity wouldn't come into being. But when we were boys, my boy, the great Parmenides testified to us from start to finish, speaking in both prose and poetic rhythms, that

> *Never shall this force itself on us, that that which is not may be;*
> *While you search, keep your thought far away from this path.*[8]

So we have his testimony to this. And our own way of speaking itself b
would make the point especially obvious if it we examined it a little. So if it's all the same to you, let's look at that first.

Theaetetus: As far as I'm concerned you can do what you want. But as far as our way of speaking is concerned, think about how it will go best, and follow along with it and take me along the road with you.

Visitor: That's what we have to do. Tell me: do we dare to utter the sound *that which in no way is*?

Theaetetus: Of course.

Visitor: But suppose one of our listeners weren't debating or playing a game but had to think seriously and answer the following question: What c
should the name, *that which is not*, be applied to? Why do we think he'd

8. See Parmenides, frg. 7, ll.1–2. The same lines reoccur, with one slight textual difference, at 258d.

use it, and in what connection, and for what kind of purpose? And what would he indicate by it to someone else who wanted to find out about it?

THEAETETUS: That's a hard question. In fact, it's just about completely, impossibly confusing for someone like me to answer.

VISITOR: But anyway this much is obvious to us, that *that which is not* can't be applied to any of those which are.

THEAETETUS: Of course not.

VISITOR: So if you can't apply it to that which is, it wouldn't be right either to apply it to *something*.

THEAETETUS: Why not?

d VISITOR: It's obvious to us that we always apply this *something* to a being, since it's impossible to say it by itself, as if it were naked and isolated from all beings. Isn't that right?

THEAETETUS: Yes.

VISITOR: Are you agreeing because you're thinking that a person who says *something* has to be saying some *one* thing?

THEAETETUS: Yes.

VISITOR: Since you'd say that *something* is a sign of *one*, and that *a couple of things* is a sign of *two*, and *somethings* is a sign of a *plurality*?

THEAETETUS: Of course.

e VISITOR: And it's absolutely necessary, it seems, that someone who does not say *something* says *nothing*[9] at all.

THEAETETUS: Yes.

VISITOR: Therefore don't we have to refuse to admit that a person like that speaks but says nothing? Instead, don't we have to deny that anyone who tries to utter *that which is not* is even speaking?

THEAETETUS: Then our way of speaking would have reached the height of confusion.

238 VISITOR: Don't do any boasting yet. There are still more confusions to come, including the primary and most fundamental one, which actually happens to be at the source of the whole problem.

THEAETETUS: What do you mean? Don't hold back. Tell me.

VISITOR: To that which is there might belong some other of those which are.

THEAETETUS: Of course.

VISITOR: But shall we say that any of those which are can ever belong to that which is not?

THEAETETUS: How could they?

VISITOR: Now then, we take all the numbers to be beings.

b THEAETETUS: Yes, if we take anything else to be.

VISITOR: Then let's not even try to apply either plurality of number or one to that which is not.

9. Note that the Greek word for "nothing," *mēden*, literally means something like "not even one" (*mēde hen*).

Theaetetus: Our way of speaking itself tells us that it would be wrong to try to.

Visitor: Then how would anyone try either to say *those which are not* or *that which is not* out loud, or even grasp them in thought, apart from number?

Theaetetus: Tell me.

Visitor: Whenever we speak of *those which are not*, aren't we trying to c
apply numerical plurality to them?

Theaetetus: Of course.

Visitor: And when we speak of *that which is not* aren't we applying *one* to it?

Theaetetus: Obviously.

Visitor: But we say it isn't either right or correct to try to attach *that which is* to that which is not.

Theaetetus: That's absolutely true.

Visitor: Do you understand, then, that it's impossible to say, speak, or think *that which is not* itself correctly by itself? It's unthinkable, unsayable, unutterable, and unformulable in speech.

Theaetetus: Absolutely.

Visitor: So was I wrong just now when I said that I would formulate d
the biggest confusion about it, when we have this other one to state which is even bigger?

Theaetetus: What is it?

Visitor: My good young friend, don't you notice on the basis of the things we said that *that which is not* even confuses the person who's refuting it in just this way, that whenever someone tries to refute it, he's forced to say mutually contrary things about it?

Theaetetus: What do you mean? Say it more clearly.

Visitor: You shouldn't expect more clarity from me. I was the one who
made the statement that *that which is not* should not share either in *one* or e
in *plurality*. But even so I've continued after all that to speak of it as *one*, since I say *that which is not*. You understand?

Theaetetus: Yes.

Visitor: And again a little earlier I said that it *is* unutterable, unsayable, and inexpressible in speech. Do you follow?

Theaetetus: I follow, of course.

Visitor: So in trying to attach *being* to it wasn't I saying things that were 239
the contrary of what I'd said before?

Theaetetus: Apparently.

Visitor: And in attaching *that which*,[10] wasn't I speaking of it as *one*?

Theaetetus: Yes.

10. Accepting the conjecture *to "to,"* translated by "that which" on the view that it is part of the phrase *to mē on*, which is generally translated by "that which is not." In Greek the form is singular (in contrast with *ta*, for example, "those which").

Visitor: And also in speaking of it as something inexpressible in speech, unsayable, and unutterable, I was speaking of it as one thing.

Theaetetus: Of course.

Visitor: But we say that if someone speaks correctly he shouldn't definitely fix it as either one or plural. He shouldn't even call it *it* at all, since even calling it by that label he'd be addressing it by means of the form, *one*.

Theaetetus: Absolutely.

b Visitor: Then what would somebody say about me? He'd find that the refutation of that which is not has been defeating me for a long time. So, as I said, let's not use what I say to help us think of how to speak correctly about that which is not. Come on, let's use what you say instead.

Theaetetus: What do you mean?

Visitor: Come on, pull yourself together for us as well as you can and try it—since you're young. Try to say something correct about that which is not, without attaching either *being*, *one*, or numerical *plurality* to it.

c Theaetetus: I'd have to have a strangely large amount of enthusiasm for the project to try it myself after seeing what you've gone through.

Visitor: Well, let's give up on both you and me, if you prefer. But until we meet someone who can do it let's say that the sophist has stopped at nothing. He's escaped down into inaccessible confusion.

Theaetetus: He certainly seems to have.

Visitor: So if we say he has some expertise in appearance-making, it
d will be easy for him to grab hold of our use of words in return and twist our words in the contrary direction. Whenever we call him a copy-maker he'll ask us what in the world we mean by a "copy." We need to think, Theaetetus, about how to answer the young man's question.

Theaetetus: Obviously we'll say we mean copies in water and mirrors, and also copies that are drawn and stamped and everything else like that.

e Visitor: Evidently, Theaetetus, you haven't seen a sophist.

Theaetetus: Why do you say that?

Visitor: He'll seem to you to have his eyes shut, or else not to have any eyes at all.

Theaetetus: How?

Visitor: He'll laugh at what you say when you answer him that way, with talk about things in mirrors or sculptures, and when you speak
240 to him as if he could see. He'll pretend he doesn't know about mirrors or water or even sight, and he'll put his question to you only in terms of words.

Theaetetus: What sort of question?

Visitor: He'll ask about what runs through all those things which you call many, but which you thought you should call by the one name, *copy*, to cover them all, as if they were all one thing. Say something, then, and defend yourself, and don't give any ground to him.

Theaetetus: What in the world would we say a copy is, sir, except something that's made similar to a true thing and is another thing that's b
like it?

Visitor: You're saying it's another *true* thing like it? Or what do you mean by *like it*?

Theaetetus: Not that it's *true* at all, but that it resembles the true thing.

Visitor: Meaning by *true*, really being?

Theaetetus: Yes.

Visitor: And meaning by *not true*, contrary of true?

Theaetetus: Of course.

Visitor: So you're saying that that which is like is not really that which is, if you speak of it as not true.

Theaetetus: But it *is*, in a way.

Visitor: But not truly, you say.

Theaetetus: No, except that it really is a likeness.

Visitor: So it's not really what is, but it really is what we call a likeness?

Theaetetus: Maybe *that which is not* is woven together with *that which* c
*is* in some way like that—it's quite bizarre.

Visitor: Of course it's strange. Anyway, you can see that the many-headed sophist is still using this interweaving to force us to agree unwillingly that that which is not in a way is.

Theaetetus: I definitely do see it.

Visitor: Well then, how can we define his field of expertise, so as to be consistent?

Theaetetus: What do you mean? What kind of problem are you afraid of?

Visitor: When we say that he deceives us about appearances and that d
he's an expert at deception, are we saying so because his expertise makes our souls believe what is false? Or what shall we say?

Theaetetus: Just that. What else would we say?

Visitor: Again, a false belief will be a matter of believing things that are contrary to those which are? Or what?

Theaetetus: Yes, contrary.

Visitor: So you're saying that a false belief is believing those which are not.

Theaetetus: Necessarily.

Visitor: Believing that those which are not are not, or that those which e
in no way are in a way are?

Theaetetus: That those which are not are in a way, it has to be, if anyone is ever going to be even a little bit wrong.

Visitor: Well, doesn't a false belief also believe that those which completely are in no way are?

Theaetetus: Yes.

Visitor: And this is false too?

Theaetetus: Yes.

241 Visitor: And I think we'll also regard false speaking the same way, as saying that those which are are not, and that those which are not are.

Theaetetus: How else would it be false?

Visitor: I don't suppose there's any other way. The sophist, though, is going to deny that this way is possible. And how could any sensible person accept it, now that what we agreed to earlier has been reinforced.[11] Do we understand what he's saying, Theaetetus?

Theaetetus: How could we not understand that when we dare to say that falsity is in beliefs and words contain falsity, we're saying what is
b contrary to what we said just before. We're forced to attach that which is to that which is not, even though we agreed just now that that's completely impossible.

Visitor: Your memory's correct. But think about what we need to do about the sophist. You see how many and easily available his supply of objections and confusions is if we assume, as we search for him, that he's an expert at cheating and falsehood-making.

Theaetetus: Definitely.

c Visitor: He's got a practically infinite supply of them, and we've gone through only a small fraction.

Theaetetus: If so, then it seems it would be impossible to catch him.

Visitor: What, then? Are we going to go soft and give up?

Theaetetus: I say we shouldn't, if there's even the smallest chance that we can catch him.

Visitor: So you'll be forgiving and, as you said, happy if we can somehow extricate ourselves even slightly from such a powerful argument?

Theaetetus: Of course.

d Visitor: Then I've got something even more urgent to request.

Theaetetus: What?

Visitor: Not to think that I'm turning into some kind of patricide.

Theaetetus: What do you mean?

Visitor: In order to defend ourselves we're going to have to subject father Parmenides' saying to further examination, and insist by brute force both that *that which is not* somehow is, and then again that *that which is* somehow is not.

Theaetetus: It does seem that in what we're going to say, we'll to have to fight through that issue.

e Visitor: That's obvious even to a blind man, as they say. We'll never be able to avoid having to make ourselves ridiculous by saying conflicting things whenever we talk about false statements and beliefs, either as copies or likenesses or imitations or appearances, or about whatever sorts of expertise there are concerning those things—unless, that is, we either refute Parmenides' claims or else agree to accept them.

11. I.e., 237a–238c, reinforced by 238d–239c.

Theaetetus: That's true.

Visitor: So that's why we have to be bold enough to attack what our 242
father says. Or, if fear keeps us from doing that, then we'll have to leave it alone completely.

Theaetetus: Fear, anyway, isn't going to stop us.

Visitor: Well then, I've got a third thing to ask you, something small.

Theaetetus: Just tell me what it is.

Visitor: When I was talking a minute ago I said that I've always given up whenever I've tried to refute what Parmenides said, just the way I did this time.

Theaetetus: Yes, you did say that.

Visitor: I'm afraid I'll seem insane to you if I'm always shifting my position back and forth, given what I've said. It's for your sake that we'll b
be trying to refute what Parmenides said—*if* we can do it.

Theaetetus: Go ahead, then. Don't worry about that. I won't think you're behaving inappropriately in any way if you go right ahead with your refutation and demonstration.

Visitor: Well then, how shall I begin this dangerous discussion? The path we absolutely have to turn onto, my boy, is this.

Theaetetus: Namely, . . . ?

Visitor: We have to reconsider whether we may not be somehow confused about things that now seem to be clear, and whether over-hasty c
judgment may make us agree too easily.

Theaetetus: Say what you mean more clearly.

Visitor: Parmenides' way of talking to us has been rather easygoing, it seems to me. So does the way of talking that everyone uses who has ever urged us to specify just how many beings there are and what they're like.

Theaetetus: How?

Visitor: They each appear to me to tell us a myth, as if we were children. One tells us that there are three beings, and that sometimes they're somehow at war with each other, while at other times they become friendly, d
marry, give birth, and bring up their offspring. Another one says that there are two beings, wet and dry or hot and cold. He marries them off and makes them set up house together. And our Eleatic tribe, starting from Xenophanes and even people before him, tells us their myth on the assumption that what they call "all things" are just one.[12] Later on, some Ionian and Sicilian muses both had the idea that it was safer to weave the two e
views together. They say that *that which is* is both many and one, and is bound by both hatred and friendship. According to the terser of these muses, in being taken apart they're brought together.[13] The more relaxed

12. This group includes Parmenides of Elea (the Visitor, of course, comes from there).

13. The reference here is to Heraclitus, who was Ionian. See frg. 51 (cf. Plato, *Symp*. 187a).

muses, though, allow things to be free from that condition sometimes. They say that all that there is alternates, and that sometimes it's one and
243 friendly under Aphrodite's influence, but at other times it's many and at war with itself because of some kind of strife.[14] It's hard to say whether any one of these thinkers has told us the truth or not, and it wouldn't be appropriate for us to be critical of such renowned and venerable men. But it wouldn't be offensive to note the following thing, either.

Theaetetus: What?

Visitor: That they've overlooked the many of us and belittled us. They've simply been talking their way through their explanations, without
b paying any attention to whether we were following them or were left behind.

Theaetetus: What do you mean?

Visitor: For heaven's sake, Theaetetus, do you understand anything of what they mean each time one of them says that many or one or two things *are* or *have become* or *are becoming*, or when another one speaks of hot mixed with cold and supposes that there are separations and combinations?[15] Earlier in my life I used to think I understood exactly what someone meant when he said just what we're confused about now, namely, this *is not*. You do see what confusion we're in about it?

c Theaetetus: Yes, I do.

Visitor: But just perhaps the very same thing has happened to us equally about *is*. We say we're in the clear about it, and that we understand when someone says it, but that we don't understand *is not*. But maybe we're in the same state about both.

Theaetetus: Maybe.

Visitor: And let's suppose the same thing may be true of the other expressions we've just used.

Theaetetus: All right.

d Visitor: We can look into most of them later, if that seems to be the best thing to do. Now we'll think about the most fundamental and most important expression.

Theaetetus: Which one? Oh, obviously you're saying that *being* is the one we have to explore first—that we have to ask what people who say it think they're indicating by it.

Visitor: You understand exactly, Theaetetus. I'm saying we have to follow the track this way. Let's ask—as if they were here—"Listen, you people who say that all things are just some two things, hot and cold or
e some such pair. What are you saying about them both when you say that they both *are* and each one *is*? What shall we take this *being* to be? Is it a

14. Here Plato refers to Empedocles, who lived in Sicily.

15. Accepting the emendation of *allos eipēi for allothi pēi* in b5.

third thing alongside those two beings, so that according to you everything is no longer two but three? Surely in calling one or the other of the two of them *being*, you aren't saying that they both are, since then in either case they'd be one and not two."

Theaetetus: That's true.

Visitor: "But you do want to call both of them *being*?"

Theaetetus: Probably.

Visitor: "But," we'll say, "if you did that, friends, you'd also be saying 244
very clearly that the two are one."

Theaetetus: That's absolutely right.

Visitor: "Then clarify this for us, since we're confused about it. What do you want to signify when you say *being*? Obviously you've known for a long time. We thought we did, but now we're confused about it. So first teach it to us, so we won't think we understand what you're saying when just the contrary is the case." Would it be the least bit inappropriate for b
us to ask them this, and anyone else who says that everything is more than one?

Theaetetus: Not at all.

Visitor: Well, then, shouldn't we do our best to find out from the people who say that everything is one what they mean by *being*?

Theaetetus: Of course.

Visitor: Then they should answer this question: "Do you say that only one thing is?" "We do," they'll say, won't they?

Theaetetus: Yes.

Visitor: "Well then, you call something *being*?"

Theaetetus: Yes.

Visitor: "Is that just what you call *one*, so that you use two names for c
the same thing? Or what?"

Theaetetus: How will they answer that question?

Visitor: Obviously it's not the easiest thing in the world to answer that question—or any other question, either—for someone who makes the supposition that they do.

Theaetetus: Why not?

Visitor: Surely it's absurd for someone to agree that there are two names when he maintains that there's only one thing.

Theaetetus: Of course.

Visitor: And it's completely absurd, and unacceptable, for someone to say that there's a name if there's no account of it. d

Theaetetus: What do you mean?

Visitor: If he supposes that a thing is different from its name, then surely he's mentioning two things.

Theaetetus: Yes.

Visitor: And moreover if he supposes that the name is the same as the thing, he'll either be forced to say that the name is the name of nothing,

or else, if he says that it's the name of something, then it's the name of nothing other than itself and so will turn out to be only the name of a name and nothing else.

Theaetetus: Yes.

Visitor: And also *the one*, being the name of *the one*, will also be the one of the name.[16]

Theaetetus: It will have to be.

Visitor: Well then, will they say that *the whole* is different from *the one being*, or the same as it?

e Theaetetus: Of course they'll say it's the same, and they do.

Visitor: But suppose a whole is, as even Parmenides says,

*All around like the bulk of a well-formed sphere,*
*Equal-balanced all ways from the middle, since neither anything more*
*Must it be, this way or that way, nor anything less.*

If it's like that, then *that which is* will have a middle and extremities. And if it has those then it absolutely has to have parts, doesn't it?

Theaetetus: Yes.

245 Visitor: But if a thing has parts then nothing keeps it from having the characteristic of being one in all its parts, and in that way it's all being and it's also one whole.

Theaetetus: Of course.

Visitor: But something with that characteristic can't be just the one itself, can it?

Theaetetus: Why not?

Visitor: Surely a thing that's truly one, properly speaking, has to be completely without parts.

Theaetetus: Yes.

b Visitor: But a thing like what we've described, which consists of many parts, won't fit that account.

Theaetetus: I understand.

Visitor: Now if that which is has the characteristic of the one in this way, will it be one and a whole? Or shall we simply deny it's a whole at all?

Theaetetus: That's a hard choice.

Visitor: You're right. If it has the characteristic of somehow being one, it won't appear to be the same as the one. Moreover, everything will then be more than one.

Theaetetus: Yes.

16. Plato is relying on the thought that if the terms "one" and "name" designate one thing (in the sense that he assumes is relevant), then they are interchangeable, even to the point of generating the strange phrase "the one of the name."

Visitor: Further if *that which is* is not a whole by possessing that as a c
characteristic, but rather just is *the whole* itself, *that which is* will turn out to be less than itself.

Theaetetus: Certainly.

Visitor: And because it's deprived of itself, *that which is* will be *not being*, according to that account.

Theaetetus: Yes.

Visitor: And everything will be more than one, since *that which is* and *the whole* will each have its own separate nature.

Theaetetus: Yes.

Visitor: But if *the whole* is not at all, then the very same things are true
of *that which is*, and in addition to not being, it would not even become d
a being.

Theaetetus: Why not?

Visitor: Invariably whatever becomes has at some point become as a whole. So we can't label either *being* or *becoming* as being without taking *the whole* to be among the beings too.

Theaetetus: That seems entirely right.

Visitor: And moreover something that isn't a whole can't be of any quantity at all, since something that's of a certain quantity has to be a whole of that quantity, whatever it may be.

Theaetetus: Exactly.

Visitor: And millions of other issues will also arise, each generating
indefinitely many confusions, if you say that being is only two or one. e

Theaetetus: The ones that just turned up show that. One problem led to another, and at each step there was more and more difficulty and uncertainty about what we'd just said at the previous stage.

Visitor: We haven't gone through all the detailed accounts that people give of *that which is* and *that which is not*, but this is enough. Now we have to look at the people who discuss the issue in another way. Our aim is to
have them all in view and that way to see that saying what *that which is* 246
is isn't a bit easier than saying what *that which is not* is.

Theaetetus: So we need to go on to these people too.

Visitor: It seems that there's something like a battle of gods and giants among them, because of their dispute with each other over being.[17]

Theaetetus: How?

Visitor: One group drags everything down to earth from the heavenly region of the invisible, actually clutching rocks and trees with their hands. When they take hold of all these things they insist that only what offers
tangible contact is, since they define being as the same as body. And if b
any of the others say that something without a body is, they absolutely despise him and won't listen to him any more.

17. See *Theogony*, esp. 675–715.

Theaetetus: These are frightening men you're talking about. I've met quite a lot of them already.

Visitor: Therefore the people on the other side of the debate defend their position very cautiously, from somewhere up out of sight. They insist violently that true being is certain nonbodily forms that can be thought about. They take the bodies of the other group, and also what they call
c the truth, and they break them up verbally into little bits and call them a process of coming-to-be instead of being. There's a never-ending battle going on constantly between them about this issue.

Theaetetus: That's true.

Visitor: Let's talk with each of these groups about the being that they posit.

Theaetetus: How shall we do it?

Visitor: It's easier to talk with the ones who put being in the forms. They're gentler people. It's harder—and perhaps just about impossible—
d with the ones who drag everything down to body by force. It seems to me that we have to deal with them this way.

Theaetetus: Namely . . . ?

Visitor: Mainly by making them actually better than they are—if we somehow could. But if we can't do that in fact, then let's do it in words, by supposing that they're willing to answer less wildly than they actually do. Something that better people agree to is worth more than what worse ones agree to. Anyway we're not concerned with the people; we're looking for what's true.

e Theaetetus: That's absolutely right.

Visitor: Then tell the better people to answer you and interpret what they say.

Theaetetus: All right.

Visitor: Then let them tell us this: do they say that anything is a mortal animal?

Theaetetus: Of course they do.

Visitor: And they agree that a mortal animal is an ensouled body?

Theaetetus: Of course.

247 Visitor: And so they're placing soul among the beings?

Theaetetus: Yes.

Visitor: What then? Do they say that this soul is just and that soul is unjust, and that this one's intelligent and that one isn't?

Theaetetus: Of course.

Visitor: But isn't a soul just by the possession and presence of justice, and isn't another soul contrary to it by the possession and presence of the contrary?

Theaetetus: Yes, they agree with that.

Visitor: But they'll say further that at any rate what can be present to a thing or absent from it is something.

Theaetetus: Yes.

Visitor: So since there is justice and intelligence and the rest of virtue, b
and also their contraries, and moreover since there is a soul in which those things come to be present, do they say that any of these are visible or touchable, or that they all are invisible?

Theaetetus: They can hardly say any of them is visible.

Visitor: And what about these invisible things? Do they say that they have bodies?

Theaetetus: They don't give one single answer to that question. They do say that the soul seems to them to have a kind of body. But as far as intelligence and the other things you've asked about are concerned, they're
ashamed and don't dare either to agree that they are not beings or to insist c
that they are all bodies.

Visitor: Obviously this breed of men has improved, Theaetetus. The native earthborn giants would never have been ashamed to hold the line for their position, that anything they can't squeeze in their hands is absolutely nothing.

Theaetetus: That pretty much describes their thinking.

Visitor: Then let's go back to questioning them. It's enough if they admit
that even a small part of *that which is* doesn't have body. They need to d
say something about what's common to both it and the things that do have body, which they focus on when they say that they both *are*. Maybe that will raise some confusion for them. If it does, then think about whether they'd be willing to accept our suggestion that *that which is* is something like the following.

Theaetetus: Like what? Tell me and maybe we'll know.

Visitor: I'm saying that a thing really is if it has any capacity at all, e
either by nature to do something to something else or to have even the smallest thing done to it by even the most trivial thing, even if it only happens once. I'll take it as a definition that *those which are* amount to nothing other than *capacity*.

Theaetetus: They accept that, since they don't have anything better to say right now.

Visitor: Fine. Maybe something else will occur to them later, and to us
too. For now let's agree with them on this much. 248

Theaetetus: All right.

Visitor: Let's turn to the other people, the friends of the forms. You serve as their interpreter for us.

Theaetetus: All right.

Visitor: You people distinguish coming-to-be and being and say that they are separate? Is that right?

Theaetetus: "Yes."

Visitor: And you say that by our bodies and through perception we have dealings with coming-to-be, but we deal with real being by our souls

and through reasoning. You say that being always stays the same and in the same state, but coming-to-be varies from one time to another.

b Theaetetus: "We do say that."

Visitor: And what shall we say this *dealing with* is that you apply in the two cases? Doesn't it mean what we said just now?

Theaetetus: "What?"

Visitor: What happens when two things come together, and by some capacity one does something to the other or has something done to it. Or maybe you don't hear their answer clearly, Theaetetus. But I do, probably because I'm used to them.

Theaetetus: Then what account do they give?

c Visitor: They don't agree with what we just said to the earth people about being.

Theaetetus: What's that?

Visitor: We took it as a sufficient definition of *beings* that the capacity be present in a thing to do something or have something done to it, to or by even the smallest thing or degree.

Theaetetus: Yes.

Visitor: In reply they say that coming-to-be has the capacity to do something or have something done to it, but that this capacity doesn't fit with being.

Theaetetus: Is there anything to that?

d Visitor: We have to reply that we need them to tell us more clearly whether they agree that the soul knows and also that *being* is known.

Theaetetus: "Yes," they say.

Visitor: Well then, do you say that knowing and being known are cases of doing, or having something done, or both? Is one of them doing and the other having something done? Or is neither a case of either?

Theaetetus: Obviously that neither is a case of either, since otherwise they'd be saying something contrary to what they said before.

e Visitor: Oh, I see. You mean that if knowing is doing something, then necessarily what is known has something done to it. When being is known by knowledge, according to this account, then insofar as it's known it's changed by having something done to it—which we say wouldn't happen to something that's at rest.

Theaetetus: That's correct.

Visitor: But for heaven's sake, are we going to be convinced that it's true that change, life, soul, and intelligence are not present in *that which*
249 *wholly is*, and that it neither lives nor thinks, but stays changeless, solemn,
and holy, without any understanding?

Theaetetus: If we did, sir, we'd be admitting something frightening.

Visitor: But are we going to say that it has understanding but doesn't have life?

Theaetetus: Of course not.

Visitor: But are we saying that it has both those things in it while denying that it has them in a soul?

Theaetetus: How else would it have them?

Visitor: And are we saying that it has intelligence, life, and soul, but that it's at rest and completely changeless even though it's alive?

Theaetetus: All that seems completely unreasonable. b

Visitor: Then both *that which changes* and also *change* have to be admitted as being.

Theaetetus: Of course.

Visitor: And so, Theaetetus, it turns out that if no beings change then nothing anywhere possesses any intelligence about anything.[18]

Theaetetus: Absolutely not.

Visitor: But furthermore if we admit that everything is moving and changing, then on that account we take the very same thing away from those which are.

Theaetetus: Why?

Visitor: Do you think that without rest anything would be the same, in the same state in the same respects? c

Theaetetus: Not at all.

Visitor: Well then, do you see any case in which intelligence is or comes-to-be anywhere without these things?

Theaetetus: Not in the least.

Visitor: And we need to use every argument we can to fight against anyone who does away with knowledge, understanding, and intelligence but at the same time asserts anything at all about anything.

Theaetetus: Definitely.

Visitor: The philosopher—the person who values these things the most—absolutely has to refuse to accept the claim that everything is at rest, either from defenders of the one or from friends of the many forms. d
In addition he has to refuse to listen to people who make *that which is* change in every way. He has to be like a child begging for "both," and say that *that which is*—everything—is both the unchanging and that which changes.

Theaetetus: True.

Visitor: Well now, apparently we've done a fine job of making our account pull together *that which is*, haven't we?

Theaetetus: Absolutely.

Visitor: But for heaven's sake, Theaetetus, . . . NowI think we'll recognize how confused our investigation about it is.

Theaetetus: Why, though? What do you mean? e

Visitor: Don't you notice, my young friend, that we're now in extreme ignorance about it, though it appears to us that we're saying something.

18. Accepting the emendation of inserting *pantōn* after *ontōn*.

Theaetetus: It does to me anyway. But I don't completely understand how we got into this situation without noticing.

Visitor: Then think more clearly about it. Given what we've just agreed
250 to, would it be fair for someone to ask us the same question we earlier asked the people who say that everything is just *hot* and *cold*?

Theaetetus: What was it? Remind me.

Visitor: Certainly. And I'll try, at any rate, to do it by asking you in just the same way as I asked them, so that we can move forward at the same pace.

Theaetetus: Good.

Visitor: Now then, wouldn't you say that change and rest are completely contrary to each other?

Theaetetus: Of course.

Visitor: And you'd say they both equally are, and that each of them equally is?

b Theaetetus: Yes.

Visitor: When you admit that they are, are you saying that both and each of them change?

Theaetetus: Not at all.

Visitor: And are you signifying that they rest when you say that they both are?

Theaetetus: Of course not.

Visitor: So do you conceive *that which is* as a third thing alongside them which encompasses rest and change? And when you say that they both are, are you taking the two of them together and focusing on their association with being?

c Theaetetus: It does seem probably true that when we say change and rest are, we do have a kind of omen of *that which is* as a third thing.

Visitor: So *that which is* isn't both change and rest; it's something different from them instead.

Theaetetus: It seems so.

Visitor: Therefore by its own nature *that which is* doesn't either rest or change.

Theaetetus: I suppose it doesn't.

Visitor: Which way should someone turn his thoughts if he wants to establish for himself something clear about it?

Theaetetus: I don't know.

Visitor: I don't think any line is easy. If something isn't changing, how
d can it not be resting? And how can something not change if it doesn't in any way rest? But now *that which is* appears to fall outside both of them. Is that possible?

Theaetetus: Absolutely not.

Visitor: In this connection we ought to remember the following.

Theaetetus: What?

Visitor: When we were asked what we should apply the name *that which is not* to, we became completely confused. Do you remember?

Theaetetus: Of course.

Visitor: And now aren't we in just as much confusion about *that* e
*which is*?

Theaetetus: We seem to be in even more confusion, if that's possible.

Visitor: Then we've now given a complete statement of our confusion. But there's now hope, precisely because both *that which is* and *that which is not* are involved in equal confusion. That is, in so far as one of them is
clarified, either brightly or dimly, the other will be too. And if we can't 251
see either of them, then anyway we'll push our account of both of them forward as well as we can.

Theaetetus: Fine.

Visitor: Let's give an account of how we call the very same thing, whatever it may be, by several names.

Theaetetus: What, for instance? Give me an example.

Visitor: Surely we're speaking of a man even when we name him several things, that is, when we apply colors to him and shapes, sizes, defects, and virtues. In these cases and a million others we say that he's not only
a man but also is good and indefinitely many different things. And similarly b
on the same account we take a thing to be one, and at the same time we speak of it as many by using many names for it.

Theaetetus: That's true.

Visitor: Out of all this we've prepared a feast for young people and for old late-learners. They can grab hold of the handy idea that it's impossible for that which is many to be one and for that which is one to be many.
They evidently enjoy forbidding us to say that a man is good, and only c
letting us say that that which is good is good, or that the man is a man. You've often met people, I suppose, who are carried away by things like that. Sometimes they're elderly people who are amazed at this kind of thing, because their understanding is so poor and they think they've discovered something prodigiously wise.

Theaetetus: Of course.

Visitor: Then let's direct our questions now both to these people and d
also to the others we were talking with before. That way our account will be addressed to everyone who's ever said anything at all about being.

Theaetetus: What questions do you mean?

Visitor: Shall we refuse to apply being to change or to rest, or anything to anything else? Shall we take these things to be unblended and incapable of having a share of each other in the things we say? Or shall we pull them all together and treat them all as capable of associating with each other? Or shall we say that some can associate and some can't? Which of
these options shall we say they'd choose, Theaetetus? e

Theaetetus: I don't know how to answer for them.

Visitor: Why don't you reply to the options one by one by thinking about what results from each of them?

Theaetetus: Fine.

Visitor: First, if you like, let's take them to say that nothing has any capacity at all for association with anything. Then change and rest won't have any share in being.

252 Theaetetus: No, they won't.

Visitor: Well then, will either of them be, if they have no association with being?

Theaetetus: No.

Visitor: It seems that agreeing to that destroys everything right away, both for the people who make everything change, for the ones who make everything an unchanging unit, and for the ones who say that beings are forms that always stay the same and in the same state. All of these people apply *being*. Some do it when they say that things really are changing, and others do it when they say that things really are at rest.

Theaetetus: Absolutely.

b Visitor: Also there are people who put everything together at one time and divide them at another.[19] Some put them together into one and divide them into indefinitely many, and others divide them into a finite number of elements and put them back together out of them. None of these people, regardless of whether they take this to happen in stages or continuously, would be saying anything if there isn't any blending.

Theaetetus: Right.

Visitor: But furthermore the most ridiculous account is the one that's adopted by the people who won't allow anything to be called by a name that it gets by association with something else.

c Theaetetus: Why?

Visitor: They're forced to use *being* about everything, and also *separate*, *from others*, *of itself*, and a million other things. They're powerless to keep from doing it—that is, from linking them together in their speech. So they don't need other people to refute them, but have an enemy within, as people say, to contradict them, and they go carrying him around talking in an undertone inside them like the strange ventriloquist Eurycles.[20]

d Theaetetus: That's a very accurate comparison.

Visitor: Well then, what if we admit that everything has the capacity to associate with everything else?

Theaetetus: I can solve that one.

Visitor: How?

Theaetetus: Because if change and rest belonged to each other then change would be completely at rest and conversely rest itself would be changing.

19. These thinkers were introduced at 242c–d, e–243a.

20. See Aristophanes, *Wasps*, 1017–20.

VISITOR: But I suppose it's ruled out by very strict necessity that change should be at rest and that rest should change.

THEAETETUS: Of course.

VISITOR: So the third option is the only one left.

THEAETETUS: Yes.

VISITOR: Certainly one of the following things has to be the case: either everything is willing to blend, or nothing is, or some things are and some are not. e

THEAETETUS: Of course.

VISITOR: And we found that the first two options were impossible.

THEAETETUS: Yes.

VISITOR: So everyone who wants to give the right answer will choose the third.

THEAETETUS: Absolutely.

VISITOR: Since some will blend and some won't, they'll be a good deal like letters of the alphabet. Some of them fit together with each other and some don't. 253

THEAETETUS: Of course.

VISITOR: More than the other letters the vowels run through all of them like a bond, linking them together, so that without a vowel no one of the others can fit with another.

THEAETETUS: Definitely.

VISITOR: So does everyone know which kinds of letters can associate with which, or does it take an expert?

THEAETETUS: It takes an expert.

VISITOR: What kind?

THEAETETUS: An expert in grammar.

VISITOR: Well then, isn't it the same with high and low notes? The musician is the one with the expertise to know which ones mix and which ones don't, and the unmusical person is the one who doesn't understand that. b

THEAETETUS: Yes.

VISITOR: And in other cases of expertise and the lack of it we'll find something similar.

THEAETETUS: Of course.

VISITOR: Well then, we've agreed that kinds mix with each other in the same way. So if someone's going to show us correctly which kinds harmonize with which and which kinds exclude each other, doesn't he have to have some kind of knowledge as he proceeds through the discussion? And in addition doesn't he have to know whether there are any kinds that run through all of them and link them together to make them capable of blending, and also, when there are divisions, whether certain kinds running through wholes are always the cause of the division? c

THEAETETUS: Of course that requires knowledge—probably just about the most important kind.

Visitor: So, Theaetetus, what shall we label this knowledge? Or for heaven's sake, without noticing have we stumbled on the knowledge that free people have? Maybe we've found the philosopher even though we were looking for the sophist?

Theaetetus: What do you mean?

d Visitor: Aren't we going to say that it takes expertise in dialectic to divide things by kinds and not to think that the same form is a different one or that a different form is the same?

Theaetetus: Yes.

Visitor: So if a person can do that, he'll be capable of adequately discriminating a single form spread out all through a lot of other things, each of which stands separate from the others. In addition he can discriminate forms that are different from each other but are included within a single form that's outside them, or a single form that's connected as a unit throughout many wholes, or many forms that are completely separate
e from others.[21] That's what it is to know how to discriminate by kinds how things can associate and how they can't.

Theaetetus: Absolutely.

Visitor: And you'll assign this dialectical activity only to someone who has a pure and just love of wisdom.

Theaetetus: You certainly couldn't assign it to anyone else.

Visitor: We'll find that the philosopher will always be in a location like
254 this if we look for him. He's hard to see clearly too, but not in the same way as the sophist.

Theaetetus: Why not?

Visitor: The sophist runs off into the darkness of *that which is not*, which he's had practice dealing with, and he's hard to see because the place is so dark. Isn't that right?

Theaetetus: It seems to be.

Visitor: But the philosopher always uses reasoning to stay near the form, *being*. He isn't at all easy to see because that area is so bright and the eyes
b of most people's souls can't bear to look at what's divine.

Theaetetus: That seems just as right as what you just said before.

Visitor: We'll think about the philosopher more clearly soon if we want to. But as far as the sophist is concerned we obviously shouldn't give up until we've gotten a good enough look at him.

Theaetetus: Fine.

21. Alternatively, the two previous sentences can be translated: "So if a person can do that, he'll adequately discriminate a single form spread out all through many, each of which stands separate from the others, and many forms that are different from each other but are included within a single form that's outside them; and another single form connected as a unit through many wholes, and many forms that are all marked off in separation."

Visitor: We've agreed on this: some kinds will associate with each other and some won't, some will to a small extent and others will associate a great deal, nothing prevents still others from being all-pervading—from c
being associated with every one of them. So next let's pursue our account together this way. Let's not talk about every form. That way we won't be thrown off by dealing with too many of them. Instead let's choose some of the most important ones. First we'll ask what they're like, and next we'll ask about their ability to associate with each other. Even if our grasp of *that which is* and *that which is not* isn't completely clear, our aim will be to avoid being totally without an account of them—so far as that's allowed by our present line of inquiry—and see whether we can get away with d
saying that *that which is not* really is that which is not.

Theaetetus: That's what we have to do.

Visitor: The most important kinds we've just been discussing are *that which is*, *rest*, and *change*.

Theaetetus: Yes, by far.

Visitor: And we say that two of them don't blend with each other.

Theaetetus: Definitely not.

Visitor: But *that which is* blends with both of them, since presumably both of them are.

Theaetetus: Of course.

Visitor: We do have three of them.

Theaetetus: Yes.

Visitor: So each of them is different from two of them, but is the same as itself.

Theaetetus: Yes. e

Visitor: But what in the world are *the same* and *the different* that we've been speaking of? Are they two kinds other than those three but necessarily always blending with them? And do we have to think of them all as being five and not three? Or have what we've been calling *the same* and *the* 255
*different* turned out, without our realizing it, to be among those three?

Theaetetus: Maybe.

Visitor: But change and rest are certainly not *different* or *the same*.

Theaetetus: Why not?

Visitor: Whatever we call change and rest in common can't be either one of them.

Theaetetus: Why not?

Visitor: Then change would rest and rest would change. In both cases, if either change or rest comes to be either same or different, then it will force the other to change to the contrary of its own nature, since it will b
share in its contrary.

Theaetetus: Absolutely.

Visitor: And both do share in the same and in the different.

Theaetetus: Yes.

Visitor: Then anyway let's not say that change is the same or the different, nor that rest is.

Theaetetus: All right.

Visitor: But do we have to think of *that which is* and the same as one thing?

Theaetetus: Maybe.

Visitor: But if *that which is* and the same don't signify distinct things,
c then when we say that change and rest both are, we'll be labeling both of them as being the same.

Theaetetus: But certainly that's impossible.

Visitor: So it's impossible for *the same* and *that which is* to be one.

Theaetetus: I suppose so.

Visitor: Shall we take *the same* as a fourth in addition to the other three forms?

Theaetetus: Of course.

Visitor: Well then, do we have to call *the different* a fifth? Or should we think of it and *that which is* as two names for one kind?

Theaetetus: Maybe.

Visitor: But I think you'll admit that some of those which are are said by themselves, but some are always said in relation to other things.

Theaetetus: Of course.

d Visitor: But *the different* is always said in relation to another, isn't it?

Theaetetus: Yes.

Visitor: But it wouldn't be if *that which is* and the different weren't completely distinct. If the different shared in both kinds the way *that which is* does, then some of the things that are different would be different without being different in relation to anything different. In fact, though, it turns out that whatever is different definitely has to be what it is *from* something that's different.

Theaetetus: That's exactly the way it is.

e Visitor: And we do have to call the nature of the different a fifth among the forms we're choosing.

Theaetetus: Yes.

Visitor: And we're going to say that it pervades all of them, since each of them is different from the others, not because of its own nature but because of sharing in the type of the different.

Theaetetus: Absolutely.

Visitor: Let's take up each of the five one by one and say this.

Theaetetus: What?

Visitor: First let's say that change is completely different from rest. Shall we say that?

Theaetetus: Yes.

Visitor: So it is not rest.

Theaetetus: Not at all.

256 Visitor: But it is, because it shares in *that which is*.

THEAETETUS: Yes.

VISITOR: Then again change is different from the same.

THEAETETUS: Pretty much.

VISITOR: So it is not the same.

THEAETETUS: No.

VISITOR: But still it was the same, we said,[22] because everything has a share of that.

THEAETETUS: Definitely.

VISITOR: We have to agree without any qualms that change is the same and not the same. When we say that it's the same and not the same, we aren't speaking the same way. When we say it's the same, that's because b
it shares in the same in relation to itself. But when we say it's not the same, that's because of its association with the different. Because of its association with the different, change is separated from the same, and so becomes not it but different. So that it's right to say that it's not *the same*.

THEAETETUS: Of course.

VISITOR: So if change itself ever somehow had a share in rest, there would be nothing strange about labeling it resting?

THEAETETUS: That's absolutely right, as long as we admit that some kinds will blend with each other and some won't.

VISITOR: That, though, we demonstrated earlier, before we came to this c
point, and we showed that by nature it has to be so.[23]

THEAETETUS: Of course.

VISITOR: To repeat,[24] change is different from *different*, just as it's other than both the same and rest.

THEAETETUS: It has to be.

VISITOR: So in a way it is different and not different, according to what we've said.

THEAETETUS: Right.

VISITOR: So what next? Are we going to say that *change* is different from the first three but not from the fourth, in spite of the fact that we've agreed that there were five things we were going to investigate? d

THEAETETUS: How could we do that? We can't admit that there are fewer of them than there appeared to be just now.

VISITOR: So shall we go on fearlessly contending that *change* is different from *that which is*?

22. Cf. 255a.

23. At 251a–252c.

24. Alternatively: "Let's continue, then:" (On this translation, the Visitor is here taking the next step in his plan announced at 255e8; he has said how change relates to rest and to the same, and now proceeds to say how it relates to the different—after which, c11 ff., he completes the plan by saying how it relates to being. Thus he is not repeating anything already said previously.)

Theaetetus: Yes, we should be absolutely fearless.

Visitor: So it's clear that *change* really is both something that is not, but also a thing that is since it partakes in *that which is*?

Theaetetus: That's absolutely clear.

Visitor: So it has to be possible for *that which is not* to be, in the case of change and also as applied to all the kinds. That's because as applied to
e all of them the nature of *the different* makes each of them not be, by making it different from that which is. And we're going to be right if we say that all of them *are not* in this same way. And on the other hand we're also going to be right if we call them beings, because they have a share in that which is.

Theaetetus: It seems that way.

Visitor: So as concerning each of the forms that which is is extensive, and that which is not is indefinite in quantity.

Theaetetus: That seems right.

257 Visitor: So we have to say that *that which is* itself is different from the others.

Theaetetus: Necessarily.

Visitor: So even *that which is* is not, in as many applications as there are of the others, since, not being them, it is one thing, namely itself, and on the other hand it is not those others, which are an indefinite number.

Theaetetus: I suppose so.

Visitor: So then we shouldn't even be annoyed about this conclusion, precisely because it's the nature of kinds to allow association with each other. And if somebody doesn't admit that, then he needs to win us over from our earlier line of argument for it, in order to win us over from its consequences.

Theaetetus: That's entirely fair.

b Visitor: Now let's look at this.

Theaetetus: What?

Visitor: It seems that when we say *that which is not*, we don't say something contrary to *that which is*, but only something different from it.

Theaetetus: Why?

Visitor: It's like this. When we speak of something as not large, does it seem to you that we indicate the small rather than the equal?

Theaetetus: Of course not.

Visitor: So we won't agree with somebody who says that negation
c signifies a contrary. We'll only admit this much: when "not" and "non-" are prefixed to names that follow them, they indicate something *other* than the names, or rather, other than the things to which the names following the negation are applied.

Theaetetus: Absolutely.

Visitor: If you don't mind, though, let's think about this.

Theaetetus: What?

Visitor: The nature of the different appears to be chopped up, just like knowledge.

Theaetetus: Why?

Visitor: Knowledge is a single thing, too, I suppose. But each part of it that has to do with something is marked off and has a name peculiar to
itself. That's why there are said to be many expertises and many kinds d
of knowledge.

Theaetetus: Of course.

Visitor: And so the same thing happens to the parts of the nature of the different, too, even though it's one thing.

Theaetetus: Maybe. But shall we say how?

Visitor: Is there a part of the different that's placed over against the beautiful?

Theaetetus: Yes.

Visitor: Shall we say that it's nameless, or does it have a name?

Theaetetus: It has a name. What we call *not beautiful* is the thing that's different from nothing other than the nature of the beautiful.

Visitor: Now go ahead and tell me this.

Theaetetus: What? e

Visitor: Isn't it in the following way that *the not beautiful* turns out to be, namely, by being both marked off within one kind of *those that are*, and also set over against one of *those that are*?

Theaetetus: Yes.

Visitor: Then it seems that *the not beautiful* is a sort of setting of a being over against a being.

Theaetetus: That's absolutely right.

Visitor: Well then, according to this account, is the beautiful more a being than the not beautiful?

Theaetetus: Not at all.

Visitor: So we have to say that both the not large and the large 258
equally *are*.

Theaetetus: Yes.

Visitor: So we also have to put the not just on a par with the just, in that neither *is* any more than the other.

Theaetetus: Of course.

Visitor: And we'll speak about the others in the same way too, since the nature of the different appeared as being one of *those that are*. And because it *is*, we have to posit its parts as no less beings.

Theaetetus: Of course.

Visitor: So it seems that the setting against each other of the nature of
a part of the different and the nature of *that which is* is not any less being— b
if we're allowed to say such a thing—than *that which is* itself. And it does not signify something contrary to *that which is* but only something different from it.

THEAETETUS: Clearly.

VISITOR: So what shall we call it?

THEAETETUS: Obviously *that which is not*—which we were looking for because of the sophist—is just exactly this.

VISITOR: Then does it have just as much being as any of the others, as you said it did? Should we work up the courage now to say that *that which is not* definitely is something that has its own nature? Should we say that
c just as *the large* was large, *the beautiful* was beautiful, *the not large* was not large, and *the not beautiful* was not beautiful, in the same way *that which is not* also was and is not being, and is one form among the many *that are*? Do we, Theaetetus, still have any doubts about that?

THEAETETUS: No.

VISITOR: You know, our disbelief in Parmenides has gone even farther than his prohibition.

THEAETETUS: How?

VISITOR: We've pushed our investigation ahead and shown him something even beyond what he prohibited us from even thinking about.

THEAETETUS: In what way?

d VISITOR: Because he says, remember,

*Never shall it force itself on us, that that which is not may be;*
*Keep your thought far away from this path of searching.*

THEAETETUS: That's what he says.

VISITOR: But we've not only shown that *those which are not* are. We've also caused what turns out to be the form of *that which is not* to appear.
e Since we showed that the nature of *the different* is, chopped up among all beings in relation to each other, we dared to say that *that which is not* really is just this, namely, each part of the nature of the different that's set over against *that which is*.

THEAETETUS: And what we've said seems to me completely and totally true.

VISITOR: Nobody can say that this *that which is not*, which we've made to appear and now dare to say is, is the contrary of *that which is*. We've
259 said good-bye long ago to any contrary of *that which is*, and to whether it is or not, and also to whether or not an account can be given of it. With regard to *that which is not*, which we've said is, let someone refute us and persuade us that we've made a mistake—or else, so long as he can't do that, he should say just what we say. He has to say that the kinds blend with each other, that *that which is* and *the different* pervade all of them and each other, that *the different* shares in *that which is* and so, because of that sharing, is. But he won't say that it is that which it shares in, but that it is different from it, and necessarily, because it *is* different from *that which*
b *is*, it clearly can be *what is not*. On the other hand *that which is* has a share

in *the different*, so, being different from all of the others, it is not each of them and it is not all of the others except itself. So *that which is* indisputably is not millions of things, and all of the others together, and also each of them, are in many ways and also are not in many ways.

Theaetetus: True.

Visitor: And if anyone doesn't believe these contrarieties, he has to think about them himself and say something better than what we've said. But
if he thinks he's recognized a problem in it and enjoys dragging the c
argument back and forth, then he's been carried away by something that's not worth much of anyone's attention—to go by what we've just been saying, anyway. A thing like that isn't clever or hard to discover, but the other thing is both difficult and at the same time beautiful.

Theaetetus: What other thing?

Visitor: The thing we said earlier. That is, we should leave pointless things like this alone. Instead we should be able to follow what a person says and scrutinize it step by step. When he says that what's different is the same in a certain way or that what's the same is different in a certain
way, we should understand just what way he means, and the precise d
respect in which he's saying that the thing is the same or different. But when someone makes that which is the same appear different in just any old way, or vice versa, or when he makes what's large appear small or something that's similar appear dissimilar—well, if someone enjoys constantly trotting out contraries like that in discussion, that's not true refutation. It's only the obvious new-born brain-child of someone who just came into contact with *those which are*.[25]

Theaetetus: Definitely.

Visitor: In fact, my friend, it's inept to try to separate everything from
everything else. It's the sign of a completely unmusical and unphilosophi- e
cal person.

Theaetetus: Why?

Visitor: To dissociate each thing from everything else is to destroy totally everything there is to say. The weaving together of forms is what makes speech possible for us.

Theaetetus: That's true.

Visitor: Think about what a good moment we picked to fight it out 260
against people like that, and to force them further to let one thing blend with another.

Theaetetus: Why a good moment?

Visitor: For speech's being one kind among *those that are*. If we were deprived of that, we'd be deprived of philosophy—to mention the most important thing. Besides, now we have to agree about what speech is, but we'd be able to say nothing if speech were taken away from us and weren't

25. See 234d–e.

b anything at all. And it would be taken away if we admitted that there's
no blending of anything with anything else.

Theaetetus: This last thing is right, anyway. But I don't understand why we have to agree about speech.

Visitor: Well, perhaps you'll understand if you follow me this way.

Theaetetus: Where?

Visitor: *That which is not* appeared to us to be one kind among others, but scattered over all *those which are*.

Theaetetus: Yes.

Visitor: So next we have to think about whether it blends with belief and speech.

Theaetetus: Why?

c Visitor: If it doesn't blend with them then everything has to be true.
But if it does then there will be false belief and false speech, since falsity
in thinking and speaking amount to believing and saying *those that are not*.

Theaetetus: Yes.

Visitor: And if there's falsity then there's deception.

Theaetetus: Of course.

Visitor: And if there's deception then necessarily the world will be full of copies, likenesses, and appearances.

Theaetetus: Of course.

Visitor: We said that the sophist had escaped into this region, but that
d he denied that there has come to be or is such a thing as falsity. For he
denied that anyone either thinks or says *that which is not*, on the ground
that *that which is not* never in any way has a share in being.

Theaetetus: That's what he said.

Visitor: But now it apparently does share in *that which is*, so he probably
wouldn't still put up a fight about that. Perhaps, though, he might say
that some forms share in *that which is not* and some don't, and that speech
and belief are ones that don't. So he might contend again that copy-making
e and appearance-making—in which we said he was contained—totally are
not. His ground would be that belief and speech don't associate with *that
which is not*, and that without this association falsity totally is not. That's
why we have to search around for speech, belief, and appearance, and
first discover what they are, so that when they appear we see their associa-
261 tion with *that which is not* clearly. Then when we've seen that clearly we
can show that falsity is, and when we've shown that we can tie the sophist
up in it, if we can keep hold of him—or else we'll let him go and look for
him in another kind.

Theaetetus: What you said at the start seems absolutely true. The sophist
is a hard kind to hunt down. He seems to have a whole supply of road-
blocks, and whenever he throws one down in our way we have to fight
through it before we can get to him. But now when we've barely gotten
through the one about how *that which is not* is not, he's thrown another
b one down and we have to show that falsity is present in both speech and

belief. And next, it seems, there will be another and another after that. A limit, it seems, never appears.

Visitor: Even if you can only make a little progress, Theaetetus, you should cheer up. If you give up in this situation, what will you do some other time when you don't get anywhere or even are pushed back? A person like that would hardly capture a city, as the saying goes. But since c
we've done what you just said, my friend, the largest wall may already have been captured and the rest of them may be lower and easier.

Theaetetus: Fine.

Visitor: Then let's take up speech and belief, as we said just now. That way we can calculate whether *that which is not* comes into contact with them, or whether they're both totally true and neither one is ever false.

Theaetetus: All right.

Visitor: Come on, then. Let's think about names again, the same way d
as we spoke about forms and letters of the alphabet. What we're looking for seems to lie in that direction.

Theaetetus: What kind of question about them do we have to answer?

Visitor: Whether they all fit with each other, or none of them do, or some of them will and some of them won't.

Theaetetus: Anyway it's clear that some will and some won't.

Visitor: Maybe you mean something like this: names that indicate something when you say them one after another fit together, and names that e
don't signify anything when you put them in a row don't fit.

Theaetetus: What do you mean?

Visitor: The same thing I thought you were assuming when you agreed with me just now—since there are two ways to use your voice to indicate something about being.

Theaetetus: What are they?

Visitor: One kind is called names, and the other is called verbs. 262

Theaetetus: Tell me what each of them is.

Visitor: A verb is the sort of indication that's applied to an action.

Theaetetus: Yes.

Visitor: And a name is the kind of spoken sign that's applied to things that perform the actions.

Theaetetus: Definitely.

Visitor: So no speech is formed just from names spoken in a row, and also not from verbs that are spoken without names.

Theaetetus: I didn't understand that.

Visitor: Clearly you were focusing on something else when you agreed b
with me just now. What I meant was simply this: things don't form speech if they're said in a row like this.

Theaetetus: Like what?

Visitor: For example, "walks runs sleeps," and other verbs that signify actions. Even if somebody said all of them one after another that wouldn't be speech.

THEAETETUS: Of course not.

VISITOR: Again, if somebody said "lion stag horse," and whatever names
c there are of things that perform actions, the series wouldn't make up speech. The sounds he uttered in the first or second way wouldn't indicate either an action or an inaction or the being of something that is or of something that is not—not until he mixed verbs with nouns. But when he did that, they'd fit together and speech—the simplest and smallest kind of speech, I suppose—would arise from that first weaving of name and verb together.

THEAETETUS: What do you mean?

VISITOR: When someone says "man learns," would you say that's the shortest and simplest kind of speech?

d THEAETETUS: Yes.

VISITOR: Since he gives an indication about what is, or comes to be, or has come to be, or is going to be. And he doesn't just name, but *accomplishes* something, by weaving verbs with names. That's why we said he speaks and doesn't just name. In fact this weaving is what we use the word "speech" for.

THEAETETUS: Right.

VISITOR: So some things fit together and some don't. Likewise some vocal
e signs don't fit together, but the ones that do produce speech.

THEAETETUS: Absolutely.

VISITOR: But there's still this small point.

THEAETETUS: What?

VISITOR: Whenever there's speech it has to be about something. It's impossible for it not to be about something.

THEAETETUS: Yes.

VISITOR: And speech also has to have some particular quality.

THEAETETUS: Of course.

VISITOR: Now let's turn our attention to ourselves.

THEAETETUS: All right.

VISITOR: I'll produce some speech by putting a thing together with an action by means of a name and a verb. You have to tell me what it's about.

263 THEAETETUS: I'll do it as well as I can.

VISITOR: "Theaetetus sits." That's not a long piece of speech, is it?

THEAETETUS: No, not too long.

VISITOR: Your job is to tell what it's about, what it's of.

THEAETETUS: Clearly it's about me, of me.

VISITOR: Then what about this one?

THEAETETUS: What one?

VISITOR: "Theaetetus (to whom I'm now talking) flies."

THEAETETUS: No one would ever deny that it's of me and about me.

VISITOR: We also say that each piece of speech has to have some particular quality.

THEAETETUS: Yes. b

VISITOR: What quality should we say each one of these has?

THEAETETUS: The second one is false, I suppose, and the other one is true.

VISITOR: And the true one says *those that are*, as they are, about you.[26]

THEAETETUS: Of course.

VISITOR: And the false one says things different from *those that are*.

THEAETETUS: Yes.

VISITOR: So it says *those that are not*, but that they are.

THEAETETUS: I suppose so.

VISITOR: But they're different things that are from the things that are about you—since we said that concerning each thing many beings are and many are not.[27]

THEAETETUS: Absolutely.

VISITOR: In the first place, the second piece of speech I said about you c must be one of the shortest there is, according to our definition of speech.

THEAETETUS: We agreed to that just now, anyway.

VISITOR: And we agreed that it's of something.

THEAETETUS: Yes.

VISITOR: And if it is not of you, it isn't of anything else.

THEAETETUS: Of course not.

VISITOR: And if it were not of anything it would not be speech at all, since we showed that it was impossible for speech that is, to be speech that is of nothing.

THEAETETUS: Absolutely right.

VISITOR: But if someone says things about you, but says different things d as the same or not beings as beings, then it definitely seems that false speech really and truly arises from that kind of putting together of verbs and names.

THEAETETUS: Yes, very true.

VISITOR: Well then, isn't it clear by now that both true and false thought and belief and appearance can occur in our souls?

THEAETETUS: How?

VISITOR: The best way for you to know how is for you first to grasp what they are and how they're different from each other. e

THEAETETUS: Then just tell me.

VISITOR: Aren't thought and speech the same, except that what we call thought is speech that occurs without the voice, inside the soul in conversation with itself?

26. This sentence is ambiguous. First, the Greek here uses an idiom which could mean either "says those that are, as they are" or "says those that are, that they are" (cf. 263d). Secondly, the additional explanatory phrase, "about you," could be taken with "says," with "are," or with both.

27. See 256e5–6.

Theaetetus: Of course.

Visitor: And the stream of sound from the soul that goes through the mouth is called speech?

Theaetetus: Right.

Visitor: And then again we know that speech contains . . .

Theaetetus: What?

Visitor: Affirmation and denial.

Theaetetus: Yes.

264 Visitor: So when affirmation or denial occurs as silent thought inside
the soul, wouldn't you call that belief?

Theaetetus: Of course.

Visitor: And what if that doesn't happen on its own but arises for someone through perception? When that happens, what else could one call it correctly, besides appearance?

Theaetetus: Yes.

Visitor: So since there is true and false speech, and of the processes just
mentioned, thinking appeared to be the soul's conversation with itself,
b belief the conclusion of thinking, and what we call appearing the blending
of perception and belief, it follows that since these are all the same kind
of thing as speech, some of them must sometimes be false.

Theaetetus: Of course.

Visitor: So you realize we've found false belief and speech sooner than we expected to just now. Then we were afraid that to look for it would be to attack a completely hopeless project.

Theaetetus: Yes.

Visitor: So let's not be discouraged about what's still left. Since these
c other things have come to light, let's remember the divisions by types that
we made earlier.

Theaetetus: Which ones?

Visitor: We divided copy-making into two types, likeness-making and appearance-making.

Theaetetus: Yes.

Visitor: And we said we were confused about which one to put the sophist in.

Theaetetus: Yes.

Visitor: And in our confusion about that we plunged into even greater
bewilderment, when an account emerged that disagreed with everyone,
by denying that there are likenesses or copies or appearances at all, on
d the ground that there isn't ever any falsity in any way anywhere.

Theaetetus: That's right.

Visitor: But now since false speech and false belief both appear to be, it's possible for imitations of *those that are* to be, and for expertise in deception to arise from that state of affairs.

Theaetetus: Yes.

Visitor: And we agreed before that the sophist does fall under one of the two types we just mentioned.

Theaetetus: Yes.

Visitor: Then let's try again to take the kind we've posited and cut it
in two. Let's go ahead and always follow the righthand part of what we've e
cut, and hold onto things that the sophist is associated with until we strip away everything that he has in common with other things. Then when we've left his own peculiar nature, let's display it, especially to ourselves
but also to people to whom this sort of procedure is naturally congenial. 265

Theaetetus: All right.

Visitor: Didn't we begin by dividing expertise into productive and acquisitive?

Theaetetus: Yes.

Visitor: And under the acquisitive part the sophist appeared in hunting, combat, wholesaling, and types of that sort.[28]

Theaetetus: Of course.

Visitor: But now, since he's included among experts in imitation, first we obviously have to divide productive expertise in two. We say imitation
is a sort of production, but of copies and not of the things themselves. Is b
that right?

Theaetetus: Absolutely.

Visitor: First of all, production has two parts.

Theaetetus: What are they?

Visitor: Divine and human.

Theaetetus: I don't understand yet.

Visitor: If you remember how we started,[29] we said production was any capacity that causes things to come to be that previously were not.

Theaetetus: I remember.

Visitor: Take animals and everything mortal, including plants and every- c
thing on the earth that grows from seeds and roots, and also all lifeless bodies made up inside the earth, whether fusible or not. Are we going to say that anything besides the craftsmanship of a god makes them come to be after previously not being? Or shall we rely on the saying and the widespread belief that . . . ?

Theaetetus: That what?

Visitor: Are we going to say that nature produces them by some spontaneous cause that generates them without any thought, or by a cause that works by reason and divine knowledge derived from a god?

Theaetetus: I often shift back and forth on that from one view to the d
other, maybe because of my age. When I'm focusing on you now, and

28. See 221c–225a.

29. See 219b.

supposing that you think they come to be by the agency of a god, that's what I think too.

Visitor: Fine, Theaetetus. If we thought you were the kind of person who might believe something different in the future we'd try to use some cogent, persuasive argument to make you agree. But since I know what
e your nature is and I know, too, that even without arguments from us it will tend in the direction that it's pulled toward now, I'll let the issue go. It would take too much time. I'll assume divine expertise produces the things that come about by so-called nature, and that human expertise produces the things that humans compound those things into. According to this account there are two kinds of production, human and divine.

Theaetetus: Right.

Visitor: Since there are two of them, cut each of them in two again.

Theaetetus: How?

266 Visitor: It's as if you'd already cut production all the way along its width, and now you'll cut it along its length.

Theaetetus: All right.

Visitor: That way there are four parts of it all together, two human ones related to us and two divine ones related to the gods.

Theaetetus: Yes.

Visitor: Then if we take the division we made the first way, one part of each of those parts is the production of originals. Just about the best thing to call the two parts that are left might be "copy-making." That way, production is divided in two again.

b Theaetetus: Tell me again how each of them is divided.

Visitor: We know that we human beings and the other living things, and also fire, water, and things like that, which natural things come from, are each generated and produced by a god. Is that right?

Theaetetus: Yes.

Visitor: And there are copies of each of these things, as opposed to the things themselves, that also come about by divine workmanship.

Theaetetus: What kinds of things?

Visitor: Things in dreams, and appearances that arise by themselves during the day. They're shadows when darkness appears in firelight, and
c they're reflections when a thing's own light and the light of something else come together around bright, smooth surfaces and produce an appearance that looks the reverse of the way the thing looks from straight ahead.

Theaetetus: Yes, those are two products of divine production—the things themselves and the copies corresponding to each one.

Visitor: And what about human expertise? We say housebuilding makes a house itself and drawing makes a different one, like a human dream made for people who are awake.

d Theaetetus: Of course.

VISITOR: And just the same way in other cases, too, there are pairs of products of human production, that is, the thing itself, we say, and the copy.

THEAETETUS: Now I understand better and I take it that there are two kinds of double production, divine and human in each division. One kind produces things themselves, and the other kind produces things similar to them.

VISITOR: Let's recall that one part of copy-making is likeness-making. The other kind was going to be appearance-making, if falsity appeared to be truly falsity and by nature one of *those that are*. e

THEAETETUS: Yes, it was.

VISITOR: But falsity did turn out that way, so are we going to count likeness-making and appearance-making as indisputably two forms?

THEAETETUS: Yes.

VISITOR: Then let's divide appearance-making in two again. 267

THEAETETUS: How?

VISITOR: Into one sort that's done with tools and one that uses one's own self as the tool of the person making the appearance.

THEAETETUS: What do you mean?

VISITOR: When somebody uses his own body or voice to make something similar to your body or voice, I think the best thing to call this part of appearance-making is "imitating."

THEAETETUS: Yes.

VISITOR: Let's set this part off by calling it imitation, and let's be lazy and let the other part go. We'll leave it to someone else to bring it together b
into a unit and give it a suitable name.

THEAETETUS: All right, let's take the one and let the other go.

VISITOR: But the right thing, Theaetetus, is still to take imitation to have two parts. Think about why.

THEAETETUS: Tell me.

VISITOR: Some imitators know what they're imitating and some don't. And what division is more important than the one between ignorance and knowledge?

THEAETETUS: None.

VISITOR: Wasn't the imitation that we just mentioned the kind that's associated with knowledge? Someone who knew you and your character might imitate you, mightn't he?

THEAETETUS: Of course. c

VISITOR: What about the character of justice and all of virtue taken together? Don't many people who are ignorant of it, but have some beliefs about it, try hard to cause what they believe it is to appear to be present in them. And don't they imitate it in their words and actions as much as they can?

THEAETETUS: Very many people do that.

VISITOR: And are they all unsuccessful at seeming to be just without being just at all? Or is the opposite true?

THEAETETUS: Yes, the opposite.

d VISITOR: I think we have to say that this person, who doesn't know, is a very different imitator from the previous one, who does.

THEAETETUS: Yes.

VISITOR: Where would you get a suitable name for each of them? Isn't it obviously hard to, just because the people who came before us were thoughtless and lazy about dividing kinds into types, and so they never even tried to divide them. That's why we necessarily lack a good supply of names. Still, even though it sounds daring let's distinguish them by
e calling imitation accompanied by belief "belief-mimicry" and imitation accompanied by knowledge "informed mimicry."

THEAETETUS: All right.

VISITOR: Then we need to use the former term, since the sophist isn't one of the people who know but is one of the people who imitate.

THEAETETUS: He certainly is.

VISITOR: Let's examine the belief-mimic the way people examine iron, to see whether it's sound or has a crack in it.

THEAETETUS: All right.

268 VISITOR: Well, it has a big one. One sort of belief-mimic is foolish and thinks he knows the things he only has beliefs about. The other sort has been around a lot of discussions, and so by temperament he's suspicious and fearful that he doesn't know the things that he pretends in front of others to know.

THEAETETUS: There definitely are both types that you've mentioned.

VISITOR: Shall we take one of these to be a sort of sincere imitator and the other to be an insincere one?

THEAETETUS: That seems right.

VISITOR: And are there one or two kinds of insincere ones?

THEAETETUS: You look and see.

b VISITOR: I'm looking, and there clearly appear to be two. I see that one sort can maintain his insincerity in long speeches to a crowd, and the other uses short speeches in private conversation to force the person talking with him to contradict himself.

THEAETETUS: You're absolutely right.

VISITOR: How shall we show up the long-winded sort, as a statesman or as a demagogue?

THEAETETUS: A demagogue.

VISITOR: And what shall we call the other one? Wise, or a sophist?

THEAETETUS: We can't call him wise, since we took him not to know
c anything. But since he imitates the wise man he'll obviously have a name derived from the wise man's name. And now at last I see that we have to call him the person who is really and truly a *sophist*.

VISITOR: Shall we weave his name together from start to finish and tie it up the way we did before?

THEAETETUS: Of course.

VISITOR: Imitation of the contrary-speech-producing, insincere and unknowing sort, of the appearance-making kind of copy-making, the word-juggling part of production that's marked off as human and not divine. 268d
Anyone who says the sophist is of this "blood and family"[30] will be saying, it seems, the complete truth.

THEAETETUS: Absolutely.

30. See *Iliad* vi.211.

# STATESMAN

*This dialogue is a sequel to* Sophist. *Here the unnamed philosopher from Elea continues his project of expounding his own conceptions of the natures of sophistry and statesmanship, as intellectual capacities distinct both from one another and from that of the philosopher. Now, for his account of the statesman, he takes as his discussion partner—the respondent to the questions he asks in developing and displaying his views—Socrates' namesake, a pupil, with Theaetetus, of the visiting geometer Theodorus, from Cyrene, an important Greek city on the North African coast. As in* Sophist, *neither Socrates nor Theodorus takes part in the discussion, except for the brief introductory conversation.*

*The 'statesman'—in Greek the* politikos, *whence the Latinized title* Politicus *by which the dialogue is alternatively known—is understood from the outset as the possessor of the specialist, expert knowledge of how to rule justly and well—to the citizens' best interests—in a 'city' or* polis, *directing all its public institutions and affairs. (It is assumed that such knowledge is not only possible, but that politics should be led by it—assumptions that could be questioned, of course.) In constructing his 'divisions,' the visitor looks simply to the demand for, and the demands of, this knowledge: he is not defining the capacities needed in their work by any actual persons whom we (or Greeks of the time) would ordinarily describe as 'statesmen'. In fact, a central thesis of the visitor is that no current city is ruled by such expert statesmen at all. And since no actual person ruling in a city possesses this knowledge, the best current government could (paradoxically) only be that directed by an imitator—a 'sophist', one who as* Sophist *has explained is aware that he does not* know *the right thing to do, but makes it appear to others that he does; such a government would have good laws and would enforce them, under this 'sophist's' direction, but the knowledge of statesmanship itself would only be weakly reflected in these laws and in the 'sophist's' behavior—it would not actually reside anywhere in the community.*

*The visitor repeatedly makes plain that, in presenting his views on statesmanship, he is not concerned merely with questions of political theory. In fact, his chief concern is to teach us how to improve ourselves in philosophy itself—to become expert in precisely this 'method of division' that he is employing to make the statesman's nature clear. So he pauses in his exposition several times to point up errors being made along the way, and say how to correct them, as well as to indicate special features of the method and the reasons why they are needed. Thus we are treated to excursuses on what it is to divide a class at*

*places where there are real subclasses marked off by their own specific natures, not in some arbitrary and merely conventional way; on which sorts of things require the preliminary study of 'models' in order to understand them fully—and on the precise nature of such a 'model'; on the often neglected but crucially important science of measuring things by reference to 'due measure' and not relatively to given other things exceeding or falling short of them in the relevant respect—length, weight, size, etc. And we get an elaborate and brilliant 'myth' about rule in a former era when gods were personally in charge of human affairs—necessarily different from the statesmanship we are trying to define, since that is an expertise possessed, if at all, by human beings. In their contribution to our understanding of Plato's later metaphysics, these digressions can usefully be compared to the long digression in* Sophist *on the natures of being and not being.*

*Modern readers are often impatient with the visitor's use of lengthy 'divisions' in expounding his views on the nature of statesmanship. Nonetheless, this brilliant dialogue presents a fascinating set of ideas about human affairs—'second thoughts' about politics quite different from the theory of philosopher-kings recommended in* Republic, *and looking forward to the system of laws, and government under them, set out in* Laws. *It richly repays any effort needed to read it.*

*J.M.C.*

SOCRATES: I'm really much indebted to you, Theodorus, for introducing 257
me to Theaetetus, and also to our visitor.

THEODORUS: And perhaps,[1] Socrates, your debt will be three times as great, when they complete both the statesman and the philosopher for you.

SOCRATES: Well, yes and no: shall we say, my dear Theodorus, that we've heard the best arithmetician and geometer putting it like that?

THEODORUS: How do you mean, Socrates? b

SOCRATES: Because you assumed that each of the three were to be assigned equal worth, when in fact they differ in value by more than can be expressed in terms of mathematical proportion.

THEODORUS: Well said, Socrates, by our god Ammon;[2] a just rebuke—you've remembered your arithmetic very well,[3] to bring me up on my mistake like that. As for you, I'll get my own back for this on another
occasion. But turning to our guest—don't you give up at all on obliging c

Translated by C. J. Rowe.

1. Reading *de ge* at a3.

2. Ammon, a great god of the Egyptians, had a famous oracle at Siwah, not far from Theodorus' home city of Cyrene.

3. Reading *panu mnēmonikōs* at b6.

us, but, whether you choose the statesman first or the philosopher, make your choice and go through him in his turn.

Visitor: That, Theodorus, is what we must do, since we have tried our hand once, and[4] we must not desist until we come to the end of what we have in hand. But I have a question: what should I do about Theaetetus here?

Theodorus: In what respect?

Visitor: Should we give him a rest and substitute for him young Socrates here, who trains with him? Or what's your advice?

Theodorus: As you say, make the substitution; since they are young, they'll put up with any sort of exertion more easily if they take a rest.

d [Older] Socrates: What's more, my friend, both of them seem somehow
to have a certain kinship with me. One of them you all say is like me in
258 the way he looks; as for the other, he is called and designated by the same
name as I am, and that produces a certain relatedness. Well, we must always be eager to recognize those akin to us by talking to them. With Theaetetus I myself got together in discussion yesterday, and I have just now heard him[5] answering questions, whereas neither applies in Socrates' case; we must take a look at him too. He'll answer me on another occasion; for now let him answer you.

Visitor: I'll go along with that. Socrates, do you hear what Socrates says?

Young Socrates: Yes.

Visitor: Then do you agree to it?

Young Socrates: Absolutely.

b Visitor: It seems there is no obstacle on your side, and perhaps there should be even less on mine. Well then, after the sophist, it seems to me that the two of us must search for the statesman.[6] Now tell me: should we posit in the case of this person too that he is one of those who possess knowledge,[7] or what assumption should we make?

Young Socrates: That's what we should assume.

Visitor: In that case we must divide the various sorts of knowledge, as we did when we were considering the previous individual?

Young Socrates: Perhaps so.

Visitor: But it's not in the same place, Socrates, that I think I see a cut.

Young Socrates: Why not?

c Visitor: It's in a different place.

Young Socrates: Yes, apparently.

4. Reading *kai* at c3.

5. 'Yesterday' refers to the (fictional) occasion of the *Theaetetus*, 'just now' to that of the *Sophist*.

6. Reading *ton politikon andra* at b3.

7. In Greek, *epistēmē*. 'Knowledge' or 'expert knowledge' in this translation normally indicates the presence of this noun or of words deriving from the same root. The term 'expertise' by itself is reserved for *technē*. Where Plato speaks e.g. of the 'kingly' or 'political' *epistēmē* or *technē*, the translation shifts to 'art,' the traditional rendering.

VISITOR: So in what direction will one discover the path that leads to the statesman? For we must discover it, and after having separated it from the rest we must impress one character on it; and having stamped a single different form on the other turnings we must make our minds think of all sorts of knowledge there are as falling into two classes.[8]

YOUNG SOCRATES: That, I think, is actually for you to do, visitor, not for me.

VISITOR: But, Socrates, it must also be a matter for you, when it becomes d
clear to us what it is.

YOUNG SOCRATES: You're right.

VISITOR: Well then: isn't it the case that arithmetic and some other sorts of expertise that are akin to it don't involve any practical actions, but simply provide knowledge?

YOUNG SOCRATES: That's so.

VISITOR: Whereas for their part the sorts of expertise involved in carpentry and manufacture as a whole have their knowledge as it were naturally bound up with practical actions, and use it to complete those material e
objects they cause to come into being from not having been before?

YOUNG SOCRATES: What of that?

VISITOR: Well, divide all cases of knowledge in this way, calling the one sort practical knowledge, the other purely theoretical.

YOUNG SOCRATES: I grant you these as two classes of that single thing, knowledge, taken as a whole.

VISITOR: Then shall we posit the statesman and king and slave-master, and the manager of a household as well, as one thing, when we refer to them by all these names, or are we to say that they are as many sorts of expertise as the names we use to refer to them? Or rather, let me take this way, and you follow me.

YOUNG SOCRATES: What way is that?

8. 'Class', or occasionally 'real class', are reserved in this translation for *eidos* (as here), or *genos*, which is used synonymously in this role. (In the *Sophist* translation, *eidos* generally appears as 'form' or 'type,' *genos* as 'kind.') What the Visitor and Young Socrates appear to be doing when they 'divide' in each case—as here, with knowledge—is to divide a more generic grouping or 'class' into more specific sub-groups or '(sub-) classes' (the claim being in each case that the 'cut' is made in accordance with actual divisions, existing in things themselves). A third, related, term is *idea*. It can be used to refer to what distinguishes a given class of things from others—its 'character'—but can also substitute for *eidos* and *genos* as 'class'/'real class'. Conversely, *eidos* itself can be used synonymously with *idea* in the sense of 'character'. Other terms that can play something like the role of *eidos*/*genos* as 'class' are *phulon*, literally 'tribe' (260d7), and *phusis* (306e11; cf. 278b2), which more usually serves as the standard term for 'nature'. Puns on *genos* in the two senses of 'family'/'race' and 'class' call for special measures: at 260d6, 266b1, it is 'family or class', at 310b10 ff., 'family-type'. Other related terms used in the translation, like 'category' (as at 263d8) or 'sort' (as in 'sort of expertise'), do not indicate the presence of any of these key Greek terms, but are supplied by the translator, simply to find natural English phrases to fill out elliptical Greek ones.

259 Visitor: This one. If someone who is himself in private practice is capable of advising a doctor in public employment, isn't it necessary for him to be called by the same professional title as the person he advises?

Young Socrates: Yes.

Visitor: Well then, won't we say that the person who is clever at giving advice to a king of a country, although he is himself a private individual, himself has the expert knowledge that the ruler himself ought to have possessed?

Young Socrates: We will.

b Visitor: But the knowledge that belongs to the true king is the knowledge of kingship?

Young Socrates: Yes.

Visitor: And isn't it the case that the person who possesses this, whether he happens to be a ruler or a private citizen, in all circumstances, in virtue of his possession of the expertise itself, will correctly be addressed as an expert in kingship?

Young Socrates: That's fair.

Visitor: Next, a household manager and a slave-master are the same thing.

Young Socrates: Of course.

Visitor: Well then, surely there won't be any difference, so far as ruling is concerned, between the character of a large household, on the one hand, and the bulk of a small city on the other?

Young Socrates: None.

c Visitor: So, in answer to the question we were asking ourselves just now, it's clear that there is one sort of expert knowledge concerned with all these things; whether someone gives this the name of expertise in kingship, or statesmanship, or household management, let's not pick any quarrel with him.

Young Socrates: I agree—why should we?

Visitor: But this much is clear, that the power of any king to maintain his rule has little to do with the use of his hands or his body in general in comparison with the understanding and force of his mind.

Young Socrates: Clearly.

Visitor: Then do you want us to assert that the king is more closely
d related to the theoretical sort of knowledge than to the manual or generally practical sort?

Young Socrates: Of course.

Visitor: In that case we shall put all these things together—the statesman's knowledge and the statesman, the king's knowledge and the king—as one, and regard them as the same?[9]

9. Alternatively: "In that case we shall take all these things together—the statesman's knowledge and the statesman, the king's knowledge and the king—as one, and put them into the same category?"

Young Socrates: Clearly.

Visitor: Well, would we be proceeding in the right order, if after this we divided theoretical knowledge?

Young Socrates: Certainly.

Visitor: So look closely to see if we can detect some break in it.

Young Socrates: Of what sort? Tell me.

Visitor: Of this sort. We agreed, I think, that there is such a thing as an e
art of calculation?

Young Socrates: Yes.

Visitor: And I suppose it belongs absolutely among the theoretical sorts of expertise.

Young Socrates: Quite.

Visitor: Because once it recognizes that there is a difference between numbers, there surely isn't any further job we'll assign to it than judging what it has recognized?

Young Socrates: No, certainly not.

Visitor: And all master-builders too[10]—they don't act as workers themselves, but manage workers.

Young Socrates: Yes.

Visitor: In so far—I suppose—as what the master-builder provides is understanding rather than manual labor.

Young Socrates: Just so.

Visitor: It would be right to say, then, that he has a share in the theoretical 260
sort of knowledge?

Young Socrates: Certainly.

Visitor: But it belongs to him, I think, once he has given his professional judgment, not to be finished or to take his leave, in the way that the expert in calculation took his, but to assign whatever is the appropriate task to each group of workers until they complete what has been assigned to them.

Young Socrates: That's correct.

Visitor: So both all sorts of knowledge like this and all those that go
along with the art of calculation are theoretical, but these two classes of b
knowledge differ from each other in so far as one makes judgments, while the other directs?

Young Socrates: They appear to do so.

Visitor: So if we divided off two parts of theoretical knowledge as a whole, referring to one as directive and the other as making judgments, would we say that it had been divided suitably?

Young Socrates: Yes, at least according to my view.

Visitor: But if people are doing something together, it is enough if they agree with one another.

Young Socrates: Quite.

10. Reading *kai mēn* for *kai gar* at e9.

VISITOR: So for as long as we are sharing in the present task, we should say goodbye to what everybody else may think.

YOUNG SOCRATES: Of course.

c VISITOR: So tell me: in which of these two sorts of expertise should we locate the expert in kingship? In the one concerned with making judgments, as if he were some sort of spectator, or shall we rather locate him as belonging to the directive sort of expertise, seeing that he is master of others?

YOUNG SOCRATES: In the second, of course.

VISITOR: Then we should need to look at directive expertise in its turn, to see if it divides somewhere. And to me it seems that it does so somewhere in this direction: in the way that the expertise of the retail-dealer is distinguished from that of the 'self-seller' or producer who sells
d his own products, so the class of kings appears set apart from the class of heralds.

YOUNG SOCRATES: How so?

VISITOR: The retailer, I think, takes over someone else's products, which have previously been sold, and sells them on, for a second time.

YOUNG SOCRATES: Absolutely.

VISITOR: Well then, the class of heralds takes over directions that have been thought up by someone else, and itself issues them for a second time to another group.

YOUNG SOCRATES: Very true.

VISITOR: So—shall we mix together the expertise of the king with that
e of the interpreter, the person who gives the time to the rowers, the seer, the herald, and many other sorts of expertise related to these, just because they all have the feature of issuing directions? Or do you want us to make up a name in line with the analogy we were using just now, since in fact the class of 'self-directors' happens pretty much to be without a name of its own? Should we divide these things this way, locating the class of kings as belonging to the 'self-directing' sort of expertise, and taking no notice of all the rest, leaving someone else to propose another name for them?
261 For we set up our investigation in order to find the person who rules, not his opposite.

YOUNG SOCRATES: Absolutely.

VISITOR: Well then, since this[11] is at a certain distance from those others, distinguished by difference in relation to kinship, we must in turn divide it too, if we still find some cut yielding to us in it?

YOUNG SOCRATES: Certainly.

VISITOR: And what's more, we seem to have one: follow on and make the cut with me.

YOUNG SOCRATES: Where?

11. I.e., the 'self-directing' sort of expertise.

Visitor: All those in control of others that we can think of as employing directions—we shall find them issuing their directions, won't we, for the sake of something's coming into being? b

Young Socrates: Of course.

Visitor: And it's not at all difficult to separate into two all of those things that come into being.

Young Socrates: How?

Visitor: I imagine that, of all of them taken together, some are inanimate and some are animate.

Young Socrates: Yes.

Visitor: And it's by these very things that we'll cut the part of the theoretical which is directive, if indeed we wish to cut it.

Young Socrates: How?

Visitor: By assigning part of it to the production of inanimate things, c part to that of animate things; and in this way it will all immediately be divided into two.

Young Socrates: I agree absolutely.

Visitor: So then let's leave one of these parts to one side, and take up the other; and then let's divide the whole of it into two parts.

Young Socrates: Which of the two parts do you say we should take up?

Visitor: I suppose it must be the one that issues directions in relation to living creatures. For surely it is not the case that the expert knowledge that belongs to a king is ever something that oversees inanimate things, as if it were the knowledge of the master-builder; it is something nobler, which always has its power among living creatures and in relation to d just these.

Young Socrates: Correct.

Visitor: Now, as one can observe, either the production and rearing of living creatures is done singly, or it is a caring for creatures together[12] in herds.

Young Socrates: Correct.

Visitor: But we'll certainly not find the statesman rearing individual creatures, like some ox-driver or groom, but rather resembling a horse-breeder or cowherd.

Young Socrates: It certainly seems so, now you say it.

Visitor: Well then: when it comes to rearing living creatures, are we to e call[13] the shared rearing of many creatures together a sort of 'herd-rearing' or 'collective rearing'?

Young Socrates: Whichever turns out to fit, in the course of the argument.

Visitor: Well said, Socrates; and if you persevere in not paying serious attention to names, you will be seen to be richer in wisdom as you advance

12. Reading *koinēi* at d4.

13. Reading *onomazōmen* at 2–3.

to old age. But now we must do just as you instruct. Do you see how by
262 showing the collective rearing of herds to be twin in form one will make
what is now being sought in double the field then be sought in half of that?

Young Socrates: I shall try my hardest. It seems to me that there is a different sort of rearing of human beings, and in turn another sort where animals are concerned.

Visitor: Yes, absolutely, you've made a very keen and courageous division! But let's try to avoid *this* happening to us again.

Young Socrates: What sort of thing?

b Visitor: Let's not take off one small part on its own, leaving many large
ones behind, and without reference to real classes; let the part bring a real
class along with it. It's a really fine thing to separate off immediately what
one is searching for from the rest, if one gets it right—as you thought you
had the right division, just before, and hurried the argument on, seeing it
leading to human beings; but in fact, my friend, it's not safe to make thin
cuts; it's safer to go along cutting through the middle of things, and that
way one will be more likely to encounter real classes. This makes all the
c difference in relation to philosophical investigations.

Young Socrates: What do you mean by this, visitor?

Visitor: I must try to tell you still more clearly, Socrates, out of good will towards your natural endowments. In the present circumstances, I have to say, it is impossible to show what I mean with absolute completeness; but I must bring it just a little further forward for the sake of clarity.

Young Socrates: Well then, what sort of thing are you saying we weren't doing right just now in our divisions?

Visitor: This sort of thing: it's as if someone tried to divide the human
d race into two and made the cut in the way that most people here carve
things up, taking the Greek race away as one, separate from all the rest,
and to all the other races together, which are unlimited in number, which
don't mix with one another, and don't share the same language—calling
this collection by the single appellation 'barbarian'. Because of this single
appellation, they expect it to be a single family or class too. Another
example would be if someone thought that he was dividing number into
e two real classes by cutting off the number ten-thousand from all the rest,
separating it off as a single class, and in positing a single name for all the
rest supposed here too that through getting the name this class too came
into existence, a second single one apart from the other. But I imagine the
division would be done better, more by real classes and more into two, if
one cut number by means of even and odd, and the human race in its
turn by means of male and female, and only split off Lydians or Phrygians
or anyone else and ranged them against all the rest when one was at a
263 loss as to how to split in such a way that each of the halves split off was
simultaneously a real class and a part.

Young Socrates: Quite right; but this very thing—how is one to see it more plainly, that class and part are not the same but different from each other?

Visitor: An excellent response, Socrates, but what you demand is no light thing. We have already wandered far away from the discussion we proposed, and you are telling us to wander even more. Well, as for now, let's go back to where we were, which seems the reasonable thing to do; b
and these other things we'll pursue like trackers on another occasion, when we have the time. However, there is one thing you must absolutely guard against, and that is ever to suppose that you have heard from me a plain account of the matter.

Young Socrates: Which?

Visitor: That class and part are different from each other.

Young Socrates: What should I say I have heard from you?

Visitor: That whenever there is a class of something, it is necessarily also a part of whatever thing it is called a class of, but it is not at all necessary that a part is a class. You must always assert, Socrates, that this is what I say rather than the other way round.[14]

Young Socrates: I shall do just that.

Visitor: Tell me, then, about the next thing. c

Young Socrates: What's that?

Visitor: The point from which our digression brought us to where we are now. I think it was pretty much the point at which you were asked how to divide herd-rearing, and you said with great keenness that there were two classes of living creatures, one human, and a second single one consisting of all the rest—the animals—together.

Young Socrates: True.

Visitor: And to me you appeared then to think that in taking away a part you had left behind the rest as in its turn a single class, consisting of all of them, because you had the same name, 'animals', to apply to them all. d

Young Socrates: This too was as you say.

Visitor: And yet, my courageous friend, maybe, if by chance there is some other animal which is rational, as for example the crane seems to be, or some other such creature, and which perhaps distributes names on the same principles as you, it might oppose cranes as one class to all other living creatures and give itself airs, taking all the rest together with human beings and putting them into the same category, which it would call by no other name except—perhaps—'animals'. So let's try to be very wary e
of everything of this sort.

Young Socrates: How?

Visitor: By not dividing the class of living creatures as a whole, in order to lessen the risk of its happening to us.

Young Socrates: Yes, we must certainly avoid it.

Visitor: Yes; and we were going wrong in this way just at that point.

Young Socrates: How so?

14. Alternatively: "You must always assert, Socrates, that this is what I say, rather than that other thing."

Visitor: Of that theoretical knowledge which was directive we had a part, I think, of the class concerned with rearing living creatures, one which was concerned with creatures living in herds. True?

Young Socrates: Yes.

264 Visitor: Well then, living creatures as a whole together had in effect already at that point been divided by the categories of domesticated and wild; for those that have a nature amenable to domestication are called tame, and those who do not[15] are called wild.

Young Socrates: Right.

Visitor: But the knowledge we are hunting had to be and still is concerned with tame things, and must be looked for with reference to herd animals.

Young Socrates: Yes.

b Visitor: Well then, let's not divide in the way we did then, looking at everything, or in a hurry, just in order to get quickly to statesmanship. It has already put us in the proverbial situation.

Young Socrates: What situation is that?

Visitor: That by not quietly getting on with dividing properly we have got to our destination more slowly.

Young Socrates: Yes, visitor, and a fine situation it is!

Visitor: If you say so. In any case, let's go back and try again from the beginning to divide collective rearing; perhaps, as we go through it in detail, the argument itself will be better able to reveal to you what you are so keen to find. Tell me this.

Young Socrates: What?

Visitor: This—I wonder if perhaps you've heard about it from others?
c You certainly haven't yourself any direct acquaintance, I know, with the instances of domesticated fish-rearing in the Nile and in the King's[16] ponds. In ornamental fountains, at any rate, you may perhaps have seen them.

Young Socrates: Absolutely—I've both seen these and heard about the others from many people.

Visitor: And again, examples of goose-rearing and crane-rearing—even if you haven't travelled over the plains of Thessaly, you've certainly heard about these and believe that they exist.

Young Socrates: Of course.

d Visitor: Look, it's for this purpose that I've asked you all this: of the rearing of herd animals, some has to do with creatures living in water, some also with creatures that live on dry land.

Young Socrates: It does.

Visitor: Do you agree, then, that we must split the expert knowledge of collective rearing into two in this way, allocating one of its two parts to each of these, calling one aquatic rearing, the other dry-land rearing?

15. Reading *echonta* for *ʹthelonta* at a3.

16. I.e., the King of Persia.

Young Socrates: I do.

Visitor: And we certainly shan't ask, in this case, to which of the two sorts of expertise kingship belongs; it's quite clear[17] to anyone. e

Young Socrates: Quite.

Visitor: Everybody would divide the dry-land rearing sort of herd-rearing.

Young Socrates: How?

Visitor: By separating it by reference to the winged and what goes on foot.

Young Socrates: Very true.

Visitor: Well then—mustn't we[18] look for statesmanship in relation to what goes on foot? Or don't you think that practically even the simplest of minds supposes so?

Young Socrates: I do.

Visitor: And the expertise to do with the management of creatures that go on foot—we must show it being cut into two, like an even[19] number.

Young Socrates: Clearly.

Visitor: Now it seems that there are two routes to be seen stretching 265
out in the direction of the part towards which our argument has hurried, one of them quicker, dividing a small part off against a large one, while the other more closely observes the principle we were talking about earlier, that one should cut in the middle as much as possible, but is longer. We can go down whichever of the two routes we like.

Young Socrates: What if I were to ask if it is impossible to follow both?

Visitor: An extraordinary suggestion, if you mean both at once; but clearly it is possible to take each in turn.

Young Socrates: Then I opt for taking both, in turn. b

Visitor: That's easy, since the part that remains is short; if we had been at the beginning or in the middle of our journey, the instruction would have been difficult to carry out. As it is, since you think we should take this option, let's go down the longer route first; while we are fresher we'll travel it more easily. Observe the division.

Young Socrates: Tell me what it is.

Visitor: Of tame things that live in herds, we find those that go on foot naturally divided into two.

Young Socrates: By what?

Visitor: By the fact that some of them come into being without horns, some with horns.

Young Socrates: Evidently. c

Visitor: Well then, divide the management of creatures that go on foot by assigning it to each of these two parts, using a descriptive phrase for

17. Reading *gar dē* at e1.

18. Reading *ou peri* at e8.

19. Reading *artion* at e11.

the results of the division. For if you want to give them names, it will be more complicated than necessary.

Young Socrates: How then should it be put?

Visitor: Like this: by saying that when the knowledge that has to do with the management of creatures that go by foot is divided into two, one part is allocated to the horned part of the herd, the other to the hornless part.

d Young Socrates: Let it be put like that; in any case it's sufficiently clear.

Visitor: Now, as for the next step, it's perfectly obvious to us that the king tends a sort of docked herd—of hornless creatures.[20]

Young Socrates: How couldn't it be clear?

Visitor: So by breaking this up let's try to assign what falls to him.

Young Socrates: Yes, certainly.

Visitor: Well, do you want to divide it by the split-hooved and the so-called 'single-hooved', or by interbreeding and non-interbreeding? I think you grasp the point.

Young Socrates: What's that?

e Visitor: That horses and donkeys are naturally such as to breed from one another.

Young Socrates: Yes.

Visitor: Whereas what is still left of the smooth-headed herd of tame creatures is unmixed in breeding, one with another.

Young Socrates: Quite.

Visitor: So: does the statesman, then, seem to take care of an interbreeding or of some non-interbreeding sort?

Young Socrates: Clearly, of the non-mixing sort.

Visitor: This, then, it seems, we must separate into two, as we did in the previous cases.

Young Socrates: Indeed we must.

266 Visitor: Now those creatures that are tame and live in herds have pretty well all now been cut into their pieces, except for two classes. For it is not worth our while to count the class of dogs as among creatures living in herds.

Young Socrates: No indeed. But what are we to use to divide[21] the two classes?

Visitor: Something that is absolutely appropriate for Theaetetus and you to use in your distributions, since it's geometry the two of you engage in.[22]

Young Socrates: What is it?

Visitor: The diagonal, one could say, and then again the diagonal of the diagonal.

Young Socrates: What do you mean?

20. Reading *kolobon tina agelēn akeratōn* at d4.

21. Reading *diairōmen* at a5.

22. See *Theaetetus* 147c ff.

VISITOR: The nature which the family or class of us humans possesses b
surely isn't endowed for the purpose of going from place to place any differently from the diagonal that has the power of two feet?[23]

YOUNG SOCRATES: No.

VISITOR: And what's more the nature of the remaining class has in its turn the power of the diagonal of our power, if indeed it is endowed with two times two feet.

YOUNG SOCRATES: Of course it is—and I actually almost understand what you want to show.

VISITOR: And there's more—do we see, Socrates, that there's something
else resulting in our divisions that would itself have done well as a c
comic turn?

YOUNG SOCRATES: What's that?

VISITOR: That our human class has shared the field and run together with the noblest and also most easy-going class of existing things?[24]

YOUNG SOCRATES: I see it turning out very oddly indeed.

VISITOR: Well, isn't it reasonable to expect the slowest—or sow-est—to come in last?

YOUNG SOCRATES: Yes, I can agree with that.

VISITOR: And don't we notice that the king looks even more ridiculous,
when he continues to run, along with his herd, and has traversed conver-
gent paths, with the man who for his part is best trained of all for the d
easy-going life?[25]

YOUNG SOCRATES: Absolutely right.

VISITOR: Yes, Socrates, and what we said before, in our inquiry about the sophist, is now plainer.[26]

YOUNG SOCRATES: What was that?

VISITOR: That such a method of argument as ours is not more concerned with what is more dignified than with what is not, and neither does it at all despise the smaller more than the greater, but always reaches the truest conclusion by itself.

23. In Greek mathematical parlance, 'having the power of two feet' is the way of expressing the length of the diagonal of a one-foot square (i.e., in modern terms, $\sqrt{2}$); the expression reflects the fact that a square formed on this line will have an area of two square feet. The diagonal of this square will then 'have the power' of four feet—the 'power of the diagonal of our power' in the Visitor's next remark. All this is for the sake of the pun on 'power' and 'feet': we humans are enabled to move by having two feet, while the members of 'the remaining class' from which we are being distinguished—pigs—have four. (On the mathematical use of 'power' see *Theaetetus* 147d–148b and n.)

24. I.e., pigs, as the Visitor makes clear in his next question, by punning on the Greek word for 'pig'.

25. The swineherd.

26. See *Sophist* 227b.

Young Socrates: It seems so.

Visitor: Well then, after this, so that you don't get in before me and ask
e what the shorter way is—the one we spoke of earlier—to the definition of the king, shall I go first and show you the way?

Young Socrates: Very much so.

Visitor: Then I say that in this case one must immediately distribute what goes on foot by opposing the two-footed to the four-footed class, and when one sees the human still sharing the field with the winged alone, one must go on to cut the two-footed herd by means of the non-feathered and the feathered; and when it has been cut, and the expertise of human-herding has then and there been brought into the light, one must lift the expert in statesmanship and kingship like a charioteer into it and instal him there, handing over the reins of the city as belonging to him, and because this expert knowledge is his.

267 Young Socrates: That's well done, and you've paid me the account I asked for as if it were a debt, adding the digression as a kind of interest, making up the sum.

Visitor: Come on, then: let's go back to the beginning and gather together from there to the end our account of the name of the expertise of the statesman.

Young Socrates: Absolutely.

Visitor: Well then: of theoretical knowledge, we had at the beginning
b a directive part; and of this, the section we wanted was by analogy said to be 'self-directing'. Then again, rearing of living creatures, not the smallest of the classes of self-directing knowledge, was split off from it; then a herd-rearing form from rearing of living creatures, and from that, in turn, rearing of what goes on foot; and from that, as the relevant part, was cut off the expertise of rearing the hornless sort. Of this in turn the part must be woven together as not less than triple, if one wants to bring it together into a single name, calling it expert knowledge of rearing of non-interbreed-
c ing creatures. The segment from this, a part relating to a two-footed flock, concerned with rearing of human beings, still left on its own—this very part is now what we were looking for, the same thing we call both kingly and statesmanlike.

Young Socrates: Absolutely.

Visitor: Is it really the case, Socrates, that we have actually done this, as you have just said?

Young Socrates: Done what?

Visitor: Given a completely adequate response to the matter we raised. Or is our search lacking especially in just this respect, that our account of
d the matter has been stated in a certain way, but has not been finished off to complete perfection?

Young Socrates: How do you mean?

Visitor: I shall try now to show, for both of us, still more clearly just what I am thinking of.

Young Socrates: Please go ahead.

Visitor: Well then, of the many sorts of expertise to do with rearing herds that appeared in our view just now, statesmanship was one, and was care of some one sort of herd?

Young Socrates: Yes.

Visitor: And our account defined it not as rearing of horses, or of other animals, but as knowledge of the collective rearing of human beings.

Young Socrates: Just so.

Visitor: Then let us look at the difference between all herdsmen, on the e
one hand, and kings on the other.

Young Socrates: What's that?

Visitor: Let us see if in the case of any other herdsman anyone who has the title of another expertise claims or pretends to share the rearing of the herd with him.

Young Socrates: How do you mean?

Visitor: Like this: that merchants, farmers, millers and bakers, all of them, and gymnastic trainers too, and doctors as a class—all of these, as
you well know, would loudly contend against the herdsmen concerned 268
with things human whom we called statesmen that *they* care for human rearing, not merely for that of human beings in the herd, but for that of the rulers as well.

Young Socrates: Well, would they be right?

Visitor: Perhaps. That we'll consider, but what we know is that with a cowherd no one will dispute about any of these things, but the herdsman is by himself rearer of the herd, by himself its doctor, by himself its
matchmaker, as it were, and sole expert in the midwife's art when it comes b
to the births of offspring and confinements. Again, to the extent that the nature of his charges allows them to partake in play and music, no one else is more capable of comforting them and soothing them with his incantations, performing best, as he does, the music that belongs to his flock with instruments or with unaccompanied voice. And it's the same way with all other herdsmen. True?

Young Socrates: Quite right.

Visitor: So how will our account of the king appear to us right and c
complete, when we posit him as sole herdsman and rearer of the human herd, singling him out on his own from among tens of thousands of others who dispute the title with him?

Young Socrates: There's no way in which it can.

Visitor: Then our fears a little earlier were right, when we suspected that we should prove in fact to be describing some kingly figure, but not yet accurately to have finished the statesman off, until we remove those who crowd round him, pretending to share his herding function with him, and having separated him from them, we reveal him on his own, uncontaminated with anyone else?

Young Socrates: Yes, absolutely right. d

Visitor: Well then, Socrates, this is what we must do, if we are not going to bring disgrace on our argument at its end.

Young Socrates: That is something we must certainly avoid doing at all costs.

Visitor: Then we must travel some other route, starting from another point.

Young Socrates: What route is that?

Visitor: By mixing in, as one might put it, an element of play: we must bring in a large part of a great story, and as for the rest, we must then—
e as in what went before—take away part from part in each case and so arrive at the furthest point of the object of our search. So should we do it?

Young Socrates: Absolutely.

Visitor: In that case, pay complete attention to my story, as children do; you certainly haven't left childish games behind for more than a few years.

Young Socrates: Please go ahead.

Visitor: Then I'll begin. There have occurred in the past, and will occur in the future, many of the things that have been told through the ages; one is the portent relating to the quarrel between Atreus and Thyestes. I imagine you remember hearing what people say happened then.[27]

Young Socrates: You're referring, perhaps, to the sign of the golden lamb.

269 Visitor: Not at all; rather to that of the changing of the setting and rising of the sun and the other stars—it's said that they actually began setting in the region from which they now rise, and rising from the opposite region, and that then after having given witness in favor of Atreus the god changed everything to its present configuration.

Young Socrates: Yes indeed, they do say this as well.

Visitor: And what's more, we've also heard from many about the kingship exercised by Cronus.[28]

b Young Socrates: Yes, from a great many.

Visitor: And what of the report that earlier men were born from the earth and were not reproduced from each other?

Young Socrates: This too is one of the things that have been told through the ages.

Visitor: Well, all these things together are consequences of the same state of affairs, and besides these thousands of others still more astonishing than they; but through the great lapse of time since then some have been obliterated, while others have been reported in a scattered way, each
c separate from one another. But as for the state of affairs that is responsible for all of these things, no one has related it, and we should relate it now; for once it has been described, it will be a fitting contribution towards our exposition of the king.

Young Socrates: I very much like what you say; go on, and leave nothing out.

27. Cf. Euripides, *Orestes* 986 ff.

28. A 'golden age' (cf. Hesiod, *Works and Days* 111–22), when everything necessary for the survival of human beings was provided without their having to work for it.

Visitor: Listen then. This universe the god himself sometimes accompanies, guiding it on its way and helping it move in a circle, while at other times he lets it go, when its circuits have completed the measure of the time allotted to it; then it revolves back in the opposite direction, of its own accord, being a living creature and having had intelligence assigned d
to it by the one who fitted it together in the beginning. This backward movement is inborn in it from necessity, for the following reason.

Young Socrates: What reason, exactly?

Visitor: Remaining permanently in the same state and condition, and being permanently the same, belongs only to the most divine things of all, and by its nature body is not of this order. Now the thing to which we have given the name of 'heavens' and 'cosmos'[29] certainly has a portion of many blessed things from its progenitor, but on the other hand it also has its share of *body*. In consequence it is impossible for it to be altogether e
exempt from change, although as far as is possible, given its capacities, it moves in the same place, in the same way, with a single motion; and this is why it has reverse rotation as its lot, which is the smallest possible variation of its movement. To turn itself by itself forever is, I dare say, impossible for anything except the one who guides all the things which, unlike him, are in movement; and for him to cause movement now in one way, now in the opposite way is not permitted. From all of these considerations, it follows that one must neither say that the cosmos is always itself responsible for its own turning, nor say at all[30] that it is turned by god in a pair of opposed revolutions, nor again that it is turned by 270
some pair of gods whose thoughts are opposed to each other; it is rather what was said just now, which is the sole remaining possibility, that at times it is helped by the guidance of another, divine, cause, acquiring life once more and receiving a restored immortality from its craftsman, while at other times, when it is let go, it goes on its own way under its own power, having been let go at such a time as to travel backwards for many tens of thousands of revolutions because of the very fact that its movement combines the effects of its huge size, perfect balance, and its resting on the smallest of bases.

Young Socrates: It certainly seems that everything you have gone b
through is very reasonable.

Visitor: Then drawing on what's just been said, let's reflect on the state of affairs we said was responsible for all those astonishing things. In fact it's just this very thing.

Young Socrates: What's that?

Visitor: That the movement of the universe is now in the direction of its present rotation, now in the opposite direction.

Young Socrates: How do you mean?

29. Alternatively, 'world-order'; the idea of order is central to the Greek term.

30. Reading *mēth' holon* at e9.

c Visitor: We must suppose that this change is, of the turnings that occur in the heavens, the greatest and the most complete turning of all.

Young Socrates: Yes, it certainly seems so.

Visitor: We must suppose, then, that at that time the greatest changes also occur for us who live within the universe?

Young Socrates: That too seems likely.

Visitor: And don't we recognize that living creatures by their nature have difficulty in tolerating changes that are at once large, great in number, and of all different sorts?

Young Socrates: Certainly we do.

Visitor: Necessarily, then, there occur at that time cases of destruction
d of other living creatures on a very large scale, and humankind itself survives only in small numbers. Many new and astonishing things happen to them, but the greatest is the one I shall describe, one that is in accordance with the retrogradation of the universe, at the time when its turning becomes the opposite of the one that now obtains.

Young Socrates: What kind of thing do you mean?

Visitor: First, the visible age of each and every creature, whatever it was, stopped increasing, and everything that was mortal ceased moving
e in the direction of looking older; instead it changed back in the opposite direction, and grew as it were younger, more tender. The white hairs of the older men became black, and in turn the cheeks of those who had their beards became smooth again, returning each to his past bloom; the bodies of those in their puberty, becoming smoother and smaller each day and night, went back to the form of new-born children, which they came to resemble both in mind and in body, and from then on they proceeded to waste away until they simply disappeared altogether. As for those who
271 died a violent death at that time, the body of the dead person underwent the same effects and quickly dissolved to nothing in a few days.

Young Socrates: But, visitor, how did living creatures come into being in that time? And in what way were they produced from each other?

Visitor: Clearly, Socrates, reproduction from one another was not part of the nature of things then. It was the earth-born race, the one said to have existed once, that existed then, returning to life again from the earth; it was remembered by our first ancestors, who lived in the succeeding
b time but bordered on the ending of the previous period, growing up at the beginning of this one. They became our messengers for the accounts of the earth-born, which are nowadays wrongly disbelieved by many people. For I think we must reflect on what is implied by what we have said. If old men went back to being children, it follows that people should be put together again from the dead, there in the earth, and come back to life; they would be following the reversal of things, with coming-into-being turning round with it to the opposite direction, and since they would
c according to this argument necessarily come into existence as earth-born, they would thus acquire that name and have that account given of them—all those of them, that is, whom god did not take off to another destiny.

Young Socrates: Yes, quite; this does seem to follow on what went before. But as for the life which you say there was in the time of Cronus' power—was it in that period of rotation or in this one? For it clearly turns out that the change affecting the stars and the sun occurs in each period.[31]

Visitor: You have been keeping up with the argument well. As for what you asked, about everything's springing up of its own accord for d
human beings, it belongs least to the period that now obtains; it too belonged to the one before. For then the god began to rule and take care of the rotation itself as a whole, and as for[32] the regions, in their turn, it was just the same, the parts of the world-order having everywhere[33] been divided up by gods ruling over them. As for living things, divine spirits had divided them between themselves, like herdsmen, by kind and by herd, each by himself providing independently for all the needs of those e
he tended, so that none of them was savage, nor did they eat each other, and there was no war or internal dissent at all; and as for all the other things that belong as consequences to such an arrangement, there would be tens of thousands of them to report. But to return to what we have been told about a human life without toil, the origin of the report is something like this. A god tended them, taking charge of them himself, just as now human beings, themselves living creatures, but different and more divine, pasture other kinds of living creatures more lowly than themselves; and given his tendance, they had no political constitutions,

31. Alternatively: "at each of the two turnings." (The word tr. 'period' in the text is elsewhere tr. 'turning,' i.e., reversal of the direction of rotation.) The translation in the text is based on the assumption that in the myth as a whole the Visitor envisages two eras during *both* of which the cosmos rotates, as it now does, from east to west (one era when it is under god's control, one under its own inherent power), separated by a relatively brief period of rotation in the reverse direction (so that then the sun rises in the west and sets in the east). This reverse rotation begins immediately after the god releases control, i.e., at the outset of the time when the cosmos rules itself, and it ends when the cosmos gains sufficient self-possession to return to rotating in the normal, east-to-west direction. On this interpretation, the Visitor has just been describing the 'earth-born' people as existing during the relatively brief period of reverse-rotation, and Young Socrates now asks whether the golden age of Cronus also occurred during that time, or instead in the era that preceded it. The alternative translation fits with a different interpretation of the myth, which is that of most scholars. According to this prevailing interpretation the Visitor envisages, more simply, two alternating eras, one of west-to-east rotation (under god's control) and one of the east-to-west rotation we are familiar with: this latter, for us normal, direction of rotation occupies the *whole* of the time when the cosmos is under self-rule. On this interpretation there is no intervening, brief period of reverse-rotation, so the Visitor's description of the 'earth-born' people has placed them in the era of god's control. Accordingly, Young Socrates is now asking whether the golden age of Cronus existed in that same era, or instead during the era we now live in.

32. Reading *hōs d'au kata* at d4.

33. Reading *pantēi ta* at d5.

272 nor acquired wives and children, for all of them came back to life from
the earth, remembering nothing of the past.[34] While they lacked things of
this sort, they had an abundance of fruits from trees and many other plants,
which grew not through cultivation but because the earth sent them up
of its own accord. For the most part they would feed outdoors, naked and
without bedding; for the blend of the seasons was without painful extremes,
b and they had soft beds from abundant grass that sprang from the earth.
What you are hearing about, then, Socrates, is the life of those who lived
in the time of Cronus; as for this one, which they say is in the time of
Zeus, the present one, you are familiar with it from personal experience.
Would you be able and willing to judge which of the two is the more fortunate?

YOUNG SOCRATES: Not at all.

VISITOR: Then do you want me to make some sort of decision for you?

YOUNG SOCRATES: Absolutely.

VISITOR: Well then, if, with so much leisure available to them, and so
much opportunity to get together in conversation not only with human
c beings but also with animals—if the nurslings of Cronus used all these
advantages to do philosophy, talking both with animals and with each
other, and inquiring from all sorts of creatures whether any one of them
had some capacity of its own that enabled it to see better in some way
than the rest with respect to the gathering of wisdom, the judgment is
easy, that those who lived then were far, far more fortunate than those
who live now. But if they spent their time gorging themselves with food
and drink and exchanging stories with each other and with the animals
d of the sort that[35] even now are told about them, this too, if I may reveal
how it seems to me, at least, is a matter that is easily judged. But however
that may be, let us leave it to one side, until such time as someone appears
who is qualified to inform us in which of these two ways the desires of
men of that time were directed in relation to the different varieties of
knowledge and the need for talk; we must now state the point of our
rousing our story into action, in order to move forward and bring what
follows to its end. When the time of all these things had been completed
e and the hour for change had come, and in particular all the earth-born
race had been used up, each soul having rendered its sum of births, falling
to the earth as seed as many times as had been laid down for each, at that
point the steersman of the universe, let go—as it were—of the bar of the
steering-oars and retired to his observation-post; and as for the cosmos,

34. On the interpretation assumed in the translation (see n. 31 above) these must be a different kind of 'earth-born' people from the previous ones (perhaps they are to be considered as produced from the earth instead as babies: cf. 272e, 274a). On the prevalent interpretation this is a second reference to the same earth-born people as before: we now learn that being born from the earth full grown was characteristic of human life for the whole period of god's control of the cosmos.

35. Reading *muthous hoioi* at c7.

its allotted and innate desire turned it back again in the opposite direction.
So all the gods who ruled over the regions together with the greatest
divinity, seeing immediately what was happening, let go in their turn the
parts of the cosmos that belonged to their charge; and as it turned about 273
and came together with itself, impelled with opposing movements, both
the one that was beginning and the one that was now ending, it produced
a great tremor in itself, which in its turn brought about another destruction
of all sorts of living things. After this, when sufficient time had elapsed,
it began to cease from noise and confusion and attained calm from its
tremors; it set itself in order, into the accustomed course that belongs to b
it, itself taking charge of and mastering both the things within it and itself,
because it remembered so far as it could the teaching of its craftsman and
father. At the beginning it fulfilled his teaching more accurately, but in
the end less keenly; the cause of this was the bodily element in its mixture,
its companion since its origins long in the past, because this element was
marked by a great disorder before it entered into the present world-order.
For from the one who put it together the world possesses all fine things;
from its previous condition, on the other hand, it both has for itself from c
that source everything that is bad and unjust in the heavens, and produces
it in its turn in living things. So while it reared living things in itself in
company with the steersman, it created only slight evils, and great goods;
but in separation from him, during all the time closest to the moment of
his letting go, it manages everything very well, but as time moves on and
forgetfulness increases in it, the condition of its original disharmony also d
takes greater control of it, and, as this time ends, comes to full flower.
Then the goods it mixes in are slight, but the admixture it causes of the
opposite is great, and it reaches the point where it is in danger of destroying
both itself and the things in it. It is for this reason that now the god who
ordered it, seeing it in difficulties, and concerned that it should not, storm-
tossed as it is, be broken apart in confusion and sink into the boundless
sea of unlikeness, takes his position again at its steering-oars, and having e
turned round what had become diseased and been broken apart in the
previous rotation, when the world was left to itself, orders it and by setting
it straight renders it immortal and ageless. What has been described, then,
is the end-point of everything; as for what is relevant to our showing the
nature of the king, it is sufficient if we take up the account from what
went before. When the cosmos had been turned back again on the course
that leads to the sort of coming-into-being which obtains now, the move-
ment of the ages of living creatures once again stopped and produced new
effects which were the opposite of what previously occurred. For those
living creatures that were close to disappearing through smallness began
to increase in size, while those bodies that had just been born from the
earth already gray-haired began to die again and return into the earth.
And everything else changed, imitating and following on the condition of 274
the universe, and in particular, there was a change to the mode of concep-
tion, birth and rearing, which necessarily imitated and kept pace with the

change to everything; for it was no longer possible for a living creature
to grow within the earth under the agency of others' putting it together,
but just as the world-order had been instructed to be master of its own
motion, so too in the same way its parts were instructed themselves to
perform the functions of begetting, birth and rearing so far as possible by
b themselves, under the agency of a similar impulse. We are now at the
point that our account has all along been designed to reach. To go through
the changes that have occurred in relation to the other animals, and from
what causes, would involve a description of considerable length; those
that relate to human beings will be shorter to relate and more to the point.
Since we had been deprived of the god who possessed and pastured us,
and since for their part the majority of animals—all those who had an
aggressive nature—had gone wild, human beings, by themselves weak
c and defenseless, were preyed on by them, and in those first times were
still without resources and without expertise of any sort; their spontaneous
supply of food was no longer available to them, and they did not yet know
how to provide for themselves, having had no shortage to force them to
do so before. As a result of all of this they were in great difficulties. This
is why the gifts from the gods, of which we have ancient reports, have
been given to us, along with an indispensable requirement for teaching
and education: fire from Prometheus, crafts from Hephaestus and his
d fellow craftworker, seeds and plants from others. Everything that has
helped to establish human life has come about from these things, once
care from the gods, as has just been said, ceased to be available to human
beings, and they had to live their lives through their own resources and
take care for themselves, just like the cosmos as a whole, which we imitate
e and follow for all time, now living and growing in this way, now in the
way we did then. As for the matter of our story, let it now be ended, and
we shall put it to use in order to see how great our mistake was when we
gave our account of the expert in kingship and statesmanship in our
preceding argument.

YOUNG SOCRATES: So how do you say we made a mistake, and how great was it?

VISITOR: In one way it was lesser, in another it was very high-minded, and much greater and more extensive than in the other case.

YOUNG SOCRATES: How so?

VISITOR: In that when asked for the king and statesman from the period
of the present mode of rotation and generation we replied with the shep-
275 herd from the opposite period, who cared for the human herd that existed
then, and at that a god instead of a mortal—in that way we went very
greatly astray. But in that we revealed him as ruling over the whole city
together, without specifying in what manner he does so, in this way, by
contrast, what we said was true, but incomplete and unclear, which is
why our mistake was lesser than in the respect just mentioned.

YOUNG SOCRATES: True.

VISITOR: So we should define the manner of his rule over the city; it's in this way that we should expect our discussion of the statesman to reach its completion.

YOUNG SOCRATES: Right.

VISITOR: It was just for these reasons that we introduced our story, in b order that it might demonstrate, in relation to herd-rearing, not only that as things now stand everyone disputes this function with the person we are looking for, but also in order that we might see more plainly that other person himself whom alone, in accordance with the example of shepherds and cowherds, because he has charge of human rearing, it is appropriate to think worthy of this name, and this name alone.[36]

YOUNG SOCRATES: Correct.

VISITOR: But in my view, Socrates, this figure of the divine herdsman is c still greater than that of a king, and the statesmen who belong to our present era are much more like their subjects in their natures and have shared in an education and nurture closer to theirs.

YOUNG SOCRATES: I suppose you must be right.

VISITOR: Yet they will be neither less nor more worth looking for, whether their natures are of the latter or of the former sort.

YOUNG SOCRATES: Quite.

VISITOR: Then let's go back by the following route. The sort of expertise we said was 'self-directing' in the case of living creatures, but which took its care of them not as individuals but in groups, and which we then went d on immediately to call herd-rearing—you remember?[37]

YOUNG SOCRATES: Yes.

VISITOR: Well, in a way we missed in our aim at this expertise; for we did not at all succeed in grasping the statesman along with the rest or name him, but he eluded us in our naming, and we did not notice.

YOUNG SOCRATES: How so?

VISITOR: All the other sorts of herdsmen, I think, share the feature of rearing their several herds, but although the statesman does not we still applied the name to him, when we should have applied to all of them e one of the names that belongs in common to them.

YOUNG SOCRATES: What you say is true, if indeed there is such a name.

VISITOR: And how would—perhaps—'looking after' not have been common to them all, without any specification of it as 'rearing', or any other sort of activity? By calling it some sort of expertise in 'herd-keeping' or 'looking after', or 'caring for', as applying to them all, we could have covered the statesman too as well as the rest, given that this was the requirement our argument indicated.

36. Alternatively: ". . . whom alone, because only he has charge of human rearing in accordance with the example of shepherd and cowherd, it is appropriate to think worthy of this name."

37. See 261d.

276 Young Socrates: Correct. But in what way would the division following this be made?

Visitor: In the same way as we previously divided herd-rearing by footed and wingless, and non-interbreeding and hornless—by dividing herd-keeping too by these same things, I think, we would have included in our account to the same degree both the present sort of kingship and that in the time of Cronus.

Young Socrates: It seems so; but again I ask what step follows this.

b Visitor: It's clear that if we had used the name 'herd-keeping' like this, no one would ever have contended with us on the grounds that there is no such thing as *caring* at all, in the way that it was then justly contended that there was no sort of expertise available that deserved this appellation of 'rearing', but that if there really were such a thing, many people had a prior and better claim to it than any of our kings.

Young Socrates: Correct.

Visitor: But care of the whole human community together—no other sort of expertise would be prepared to say that it had a better
c and prior claim to being *that* than kingly rule, which is over all human beings.

Young Socrates: What you say is correct.

Visitor: But after that, Socrates, do we see that at the very end of our account we again made a large mistake?

Young Socrates: What sort of mistake?

Visitor: It was this, that even if we had been quite convinced that there was some expertise concerned with the rearing of the two-footed herd, we should certainly not for that reason immediately have called it the expertise of the king and statesman, as if that were the end of the matter.

Young Socrates: What should we have done?

Visitor: First of all, as we are saying, we should have altered the name,
d aligning it more with caring for things than with rearing, and then we should have cut this; for it would still offer room for cuts of no small size.

Young Socrates: Where would they be?

Visitor: I imagine, where we would have divided off the divine herdsman, on one side, and the human carer on the other.

Young Socrates: Correct.

Visitor: But again we ought to have cut into two the art of the carer resulting from this apportionment.

Young Socrates: By using what distinction?

Visitor: That between the enforced and the voluntary.

Young Socrates: Why so?

e Visitor: I think we made a mistake before in this way too, by behaving more simple-mindedly than we should have. We put king and tyrant into the same category, when both they themselves and the manner of their rule are very unlike one another.

Young Socrates: True.

Visitor: But now should we set things to rights again, and, as I said, should we divide the expertise of the human carer into two, by using the categories of the enforced and the voluntary?

Young Socrates: Absolutely.

Visitor: And should we perhaps call tyrannical the expertise that relates to subjects who are forced, and the herd-keeping that is voluntary and relates to willing two-footed living things that expertise which belongs to statesmanship, displaying, in his turn, the person who has this expertise and cares for his subjects in this way as being genuinely king and statesman?

Young Socrates: Yes, visitor, and it's likely that in this way our exposi- 277
tion concerning the statesman would reach completion.

Visitor: It would be a fine thing for us, Socrates. But this mustn't be just your view alone; I too have got to share it in common with you. And as it is, according to my view our discussion does not yet seem to have given a complete shape to the king. Just as sculptors sometimes hurry when it is not appropriate to do so and actually lose time by making
additions and increasing the size of the various parts of their work[38] beyond b
what is necessary, so too in our case—I suppose that in order to give a grand as well as a quick demonstration of the mistake in the route we previously took, we thought it was appropriate to the king to give large-scale illustrations. We took upon ourselves an astonishing mass of material in the story we told, so forcing ourselves to use a greater part of it than necessary; thus we have made our exposition longer, and have in every way failed to apply a finish to our story, and our account, just like a
portrait, seems adequate in its superficial outline, but not yet to have c
received its proper clarity, as it were with paints and the mixing together of colors. But it is not painting or any other sort of manual craft, but speech and discourse, that constitute the more fitting medium for exhibiting all living things, for those who are able to follow; for the rest, it will be through manual crafts.

Young Socrates: That much is correct; but show me how you say we have not yet given an adequate account.

Visitor: It's a hard thing, my fine friend, to demonstrate any of the more d
important subjects without using models. It looks as if each of us knows everything in a kind of dreamlike way, and then again is ignorant of everything when as it were awake.

Young Socrates: What do you mean?

Visitor: I do seem rather oddly now to have stirred up the subject of what happens to us in relation to knowledge.

Young Socrates: How so?

Visitor: It has turned out, my dear fellow, that the idea of a 'model' itself in its turn also has need of a model to demonstrate it.

38. Reading *tōi ergōi* at a7.

e Young Socrates: How so? Explain, and don't hold back for *my* sake.

Visitor: Explain I must, in view of your own readiness to follow. I suppose we recognize that when children are just acquiring skill in reading and writing—

Young Socrates: Recognize what?

Visitor: That they distinguish each of the individual letters well enough in the shortest and easiest syllables, and come to be capable of indicating what is true in relation to them.

278 Young Socrates: Of course.

Visitor: But then once again they make mistakes about these very same letters in other syllables, and think and say what is false.

Young Socrates: Absolutely.

Visitor: Well then, isn't this the easiest and best way of leading them on to the things they're not yet recognizing?

Young Socrates: What way?

Visitor: To take them first back to those cases in which they were getting these same things right, and having done that, to put these beside what
b they're not yet recognizing. By comparing them, we demonstrate that there is the same kind of thing with similar features in both combinations, until the things that they are getting right have been shown set beside all the ones that they don't know; once the things in question have been shown like this, and so become models, they bring it about that each of all the individual letters is called both different, on the basis that it is different
c from the others, and the same, on the basis that it is always the same as and identical to itself, in all syllables.

Young Socrates: Absolutely right.

Visitor: Well then, have we grasped this point adequately, that we come to be using a *model* when a given thing, which is the same in something different and distinct, is correctly identified there, and having been brought together with the original thing, brings about a single true judgment about each separately and both together?[39]

Young Socrates: It seems so.

Visitor: Then would we be surprised if our minds by their nature experi-
d enced this same thing in relation to the individual 'letters' of everything, now, in some cases, holding a settled view with the aid of truth in relation to each separate thing, now, in others, being all at sea in relation to all of them—somehow or other getting the constituents of the combinations themselves right, but once again not knowing these same things when they are transferred into the long 'syllables' of things and the ones that are not easy?

Young Socrates: There would be absolutely nothing surprising in it.

e Visitor: Right, my friend: how could anyone begin from false belief and get to even a small part of the truth, and so acquire wisdom?

Young Socrates: I dare say it's impossible.

39. Reading *kai sunamphō* at c7.

Visitor: Well, if that's the way it is, the two of us would not at all be in the wrong in having first attempted to see the nature of models as a whole in the specific case of a further insignificant model, with the intention then of bringing to the case of the king, which is of the greatest importance, something of the same form from less significant things somewhere, in an attempt once more through the use of a model to recognize in an expert, systematic way what looking after people in the city is, so that it may be present to us in our waking state instead of in a dream?

Young Socrates: Absolutely right.

Visitor: Then we must take up once again what we were saying before,[40] 279
to the effect that since tens of thousands of people dispute the role of caring for cities with the kingly class, what we have to do is to separate all these off and leave the king on his own; and it was just for this purpose that we said we needed a model.

Young Socrates: Very much so.

Visitor: So what model, involving the same activities as statesmanship, on a very small scale, could one compare with it, and so discover in a
satisfactory way what we are looking for? By Zeus, Socrates, what do you b
think? If there isn't anything else to hand, well, what about weaving? Do you want us to choose that? Not all of it, if you agree, since perhaps the weaving of cloth from wool will suffice; maybe it is this part of it, if we choose it, which would provide the testimony we want.

Young Socrates: I've certainly no objection.

Visitor: Why then don't we now do the very same thing with weaving
that we did in what preceded, dividing each thing by cutting it into parts, c
and then cutting them? We'll get back to what is useful in the present context after covering everything as briefly and quickly as we can.

Young Socrates: What do you mean?

Visitor: I shall make my answer to you by just going through it.

Young Socrates: An excellent suggestion.

Visitor: Well then: all the things we make and acquire are either for the sake of our doing something, or they prevent something's happening to
us. Of preventives, some are charms, whether divine or human, warding d
things off, others forms of defense. Of forms of defense some are ways of arming for war, others forms of protection. Of forms of protection some are screens, others means of warding off cold and hot weather. Of the latter type of protectives some are shelters, others coverings; of coverings one sort consists of things spread under, a different sort of things put round. Of things put round, some are cut out in one piece, while a different
sort are compound; of the compound some are perforated, others bound e
together without perforation; of the unperforated some are made of the 'sinews' of things growing from the earth, others of hair. Of those made of hair, some are stuck together by means of water and earth, others are bound together with themselves. It is to these preventives and coverings

40. See 268c1, and also 267e ff., 275b, 276b.

manufactured from materials that are being bound together with themselves that we give the name 'clothes'; as for the expertise that especially
280 has charge of clothes—just as before we gave the name of 'statesmanship'
to the sort of expertise that especially had charge of the state, so too now shall we call this sort 'the art of clothes-making', from the thing itself? And shall we say that weaving too, in so far as it represented the largest part of the manufacture of clothes, does not differ at all, except in name, from this art of clothes-making, just as in that other case we said that the art of kingship did not differ from that of statesmanship?[41]

YOUNG SOCRATES: Yes; absolutely correct.

VISITOR: As for what comes next, let's reflect that someone might perhaps
b suppose that weaving had been adequately described when put like this,
being unable to grasp that it had not yet been divided off from those cooperative arts that border on it, while it had been parcelled off from many other related ones.

YOUNG SOCRATES: Tell me—which related ones?

VISITOR: You didn't follow what's been said, it seems; so it looks as if we must go back again, starting from the end. If you grasp the kinship in this case, we cut off one 'related' expertise from weaving just now, separating off the putting together of blankets by means of the distinction between putting round and putting under.

YOUNG SOCRATES: I understand.

c VISITOR: What's more, we took away all craftwork out of flax, esparto,
and what we just now by analogy called 'sinews' of plants; again we divided off both the art of felting and the sort of putting together that uses perforation and sewing, of which the largest is the art of cobbling.

YOUNG SOCRATES: Absolutely.

VISITOR: Still further, working with skins, which looks after coverings cut in a single piece, and those sorts of activities that look after shelters, all those involved in building and carpentry in general and, in other sorts
d of expertise, contriving shelter from inflowing water—all of these we took
away. Also, all those sorts of expertise in forms of protection that offer preventive products in relation to thefts and violent acts, and those that have to do with carrying out the work of lid-making, and fixings to doorways, which are assigned as parts of the art of joinery. And we cut away the art of arms-manufacture, a segment of that great and varied capacity which is defense-production. Then again our first and immediate move
e was to divide off the whole of the art of magic which is concerned with
protective charms, and we have left behind—as we might suppose—the very expertise we looked for, which protects us against cold weather, productive of a woollen defense, and called by the name of weaving.

YOUNG SOCRATES: Yes, that seems to be so.

41. See 258e ff.

Visitor: But put like this, my boy, it is not yet complete. The person who puts his hand first to the production of clothes seems to do the 281
opposite of weaving.

Young Socrates: How so?

Visitor: The business of weaving, I suppose, is a sort of intertwining.

Young Socrates: Yes.

Visitor: But in fact what I'm talking about is a matter of breaking apart things that are combined or matted together.

Young Socrates: What is it you're referring to?

Visitor: The function of the art of the carder. Or shall we dare to call the art of carding the art of weaving, and treat the carder as if he were a weaver?

Young Socrates: Certainly not.

Visitor: And then too if someone calls the art of manufacturing warp and woof 'weaving', he is using a name that is not only odd but false. b

Young Socrates: Quite.

Visitor: And what about these cases? Are we to put down the whole of the art of fulling, and clothes-mending, as being no sort of care for clothes, nor as any sort of looking after them, or shall we refer to all of these too as arts of weaving?

Young Socrates: Certainly not.

Visitor: Yet all of these will dispute the role of looking after and producing clothes with the capacity which is the art of weaving, conceding a very large part to it, but assigning large shares to themselves too.

Young Socrates: Certainly. c

Visitor: Then again, in addition to these, we must suppose that the sorts of expertise responsible for making the tools through which the products of weaving are completed will also lay claim to being at least a contributory cause of every woven article.

Young Socrates: Quite correct.

Visitor: So will our account of that part of the art of weaving that we selected be sufficiently definite, if we proceed to set it down as finest and greatest of all those sorts of care that exist in relation to woollen clothing? d
Or would we be saying something true, but not clear or complete, until such time as we remove all of these too from around it?

Young Socrates: Correct.

Visitor: Then after this we must do what we're saying we should do, in order that our account may proceed in due order.

Young Socrates: Quite.

Visitor: Well then, let's look at two sorts of expertise that there are in relation to all the things that people do.

Young Socrates: Which are they?

Visitor: One which is a contributory cause of production, one which is itself a cause.

Young Socrates: How so?

e VISITOR: Those which do not make the thing itself, but which provide tools for those that do—tools which, if they were not present, what has been assigned to each expertise would never be accomplished: these are what I mean by contributory causes, while those that bring the thing itself to completion are causes.

YOUNG SOCRATES: That seems to make sense.

VISITOR: Then as a next step shall we call contributory causes all those that are concerned with spindles and shuttles and whatever other tools share in the process of production in relation to garments, calling those that look after and make garments themselves causes?

YOUNG SOCRATES: Quite correct.

282 VISITOR: Then among the causes, washing and mending and the whole business of looking after clothes in these sorts of ways—it's perfectly reasonable to encompass this part of the extensive field covered by the art of preparation by calling it all 'the art of the fuller'.

YOUNG SOCRATES: Right.

VISITOR: Again, carding and spinning and everything relating to the making of clothes itself—which is the thing whose parts we're talking about—all constitute a single expertise among those everybody recognizes, namely wool-working.

YOUNG SOCRATES: Of course.

b VISITOR: Next, there are two segments of wool-working, and each of these is a part of two sorts of expertise at once.

YOUNG SOCRATES: How so?

VISITOR: What has to do with carding, and half of the art of the shuttle, and all those activities that set apart from each other things that are together—all of this we can, I suppose, declare as one and as belonging to wool-working itself? And there were, we agreed, two great sorts of expertise in every sphere, that of combination and that of separation.[42]

YOUNG SOCRATES: Yes.

VISITOR: Well then, it's to the art of separation that belong that of carding
c and all the things just mentioned; for separation in the case of wool and the warp, which happens in different ways, in the first case through the shuttle, in the second through use of the hands, has acquired as many names as we referred to a moment ago.

YOUNG SOCRATES: Absolutely.

VISITOR: Then again, by contrast, let's take a part that is simultaneously a part of combination and of wool-working and takes place in the latter; and whatever parts of separation there were here, let's let all of them go, cutting wool-working into two by means of the cut between separation and combination.

YOUNG SOCRATES: Count it as divided.

42. See perhaps *Sophist* 226b ff.

Visitor: Then in its turn, Socrates, you should divide the part that is d
simultaneously combination and wool-working, if indeed we are going to capture the aforesaid art of weaving.

Young Socrates: Then I must.

Visitor: Indeed you must: and let's say that part of it is twisting, part intertwining.

Young Socrates: Do I understand correctly? By twisting, you seem to me to be talking about what relates to the manufacture of the warp.

Visitor: Not only of the warp, but of the woof too; or are we going to find some origin for the woof which doesn't involve twisting?

Young Socrates: Certainly not.

Visitor: Well, define each of these two things too; perhaps you might e
find defining them timely.

Young Socrates: Define them how?

Visitor: Like this: among the products of carding, when its material is drawn out to a certain length and has acquired breadth, do we say that there's a 'flock' of wool?

Young Socrates: Yes.

Visitor: Of this, then, the yarn that has been twisted by the spindle and been made firm you'll call the warp, and the expertise that guides its production 'warp-spinning'.

Young Socrates: Correct.

Visitor: But those threads that in their turn get a loose twisting, and have a softness appropriate to the twining in of the warp, but also to what is needed for drawing out in the dressing process, you'll call these—the products of the spinning—the woof, and the expertise that is set over their
production—let's call it 'woof-spinning'.[43] 283

Young Socrates: Quite correct.

Visitor: And as for the part of weaving that we put forward for investigation, I suppose that's now clear to anyone. When the part of combination which is contained in wool-working produces something intertwined, by the regular intertwining of woof and warp, the whole product of the intertwining we refer to as a piece of woollen clothing, and we refer to the expertise that is over this as weaving.

Young Socrates: Quite correct.

Visitor: Good; so why ever, then, didn't we immediately reply that b
weaving was an intertwining of woof and warp, instead of going round in a circle defining a whole collection of things to no purpose?

Young Socrates: To me at least, visitor, nothing of what we have said seemed to have been said to no purpose.

Visitor: And that isn't at all surprising, I may say; but perhaps, my dear fellow, it might seem so. So against such a malady, in case it should come

43. Reading *technēn krokonētikēn* at 282e14–283a1.

c upon you later (that wouldn't be at all surprising), listen to a point which it's appropriate to make in all cases like this.

YOUNG SOCRATES: Do make it.

VISITOR: First, then, let's look at excess and deficiency in general, so that we may distribute praise and censure proportionately on each occasion, when things are said at greater length than necessary and when the opposite occurs in discussions like the present one.

YOUNG SOCRATES: That's what we must do, then.

VISITOR: If we talked about these very things, I think we'd be proceeding correctly.

YOUNG SOCRATES: What things?

d VISITOR: About length and brevity, and excess and deficiency in general. I suppose the art of measurement relates to all of these.

YOUNG SOCRATES: Yes.

VISITOR: Then let's divide it into two parts; that's what we need towards our present objective.

YOUNG SOCRATES: Please tell me how we should divide it.

VISITOR: This way: one part will relate to the association of greatness and smallness with each other, the other to what coming into being necessarily is.[44]

YOUNG SOCRATES: What do you mean?

VISITOR: Does it not seem to you that by its nature the greater has to be said to be greater than nothing other than the less, and the less in its turn

e less than the greater, and than nothing else?

YOUNG SOCRATES: It does.

VISITOR: What about this: shan't we also say that there really is such a thing as what exceeds what is in due measure, and everything of that sort, in what we say or indeed in what we do? Isn't it just in that respect that those of us who are bad and those who are good[45] most differ?

YOUNG SOCRATES: It seems so.

VISITOR: In that case we must lay it down that the great and the small exist and are objects of judgment in these twin ways. It is not as we said just before, that we must suppose them to exist only in relation to each other, but rather as we have now said, that we should speak of their existing in one way in relation to each other, and in another in relation to what is in due measure. Do we want to know why?

YOUNG SOCRATES: Of course.

44. The Greek here is obscure. The Visitor will immediately explain—in d11–e1—the first of the two 'parts' of the expertise of measurement; the second emerges gradually at 284a5–b2, e2–8. See also 284c1 and d6, 'the coming into being of what is in due measure', and the reference at 285a1–2 to 'an art of measurement relating to everything that comes into being'.

45. Reading *hoi agathoi* at e6.

VISITOR: If someone will admit the existence of the greater and everything 284
of the sort in relation to nothing other than the less, it will never be in relation to what is in due measure—you agree?

YOUNG SOCRATES: That's so.

VISITOR: Well, with this account of things we shall destroy—shan't we?—both the various sorts of expertise themselves and their products, and in particular we shall make the one we're looking for now, statesmanship, disappear, and the one we said was weaving. For I imagine all such sorts of expertise guard against what is more and less than what is in due measure, not as something which is not, but as something which is and is troublesome in relation to what they do. It is by preserving measure in
this way that they produce all the good and fine things they do produce. b

YOUNG SOCRATES: Of course.

VISITOR: If, then, we make the art of statesmanship disappear, our search after that for the knowledge of kingship will lack any way forward?

YOUNG SOCRATES: Very much so.

VISITOR: Is it the case then that just as with the sophist we compelled what is not into being as well as what is, when our argument escaped us down that route,[46] so now we must compel the more and less, in their
turn, to become measurable not only in relation to each other but also in c
relation to the coming into being of what is in due measure? For if this has not been agreed, it is certainly not possible for either the statesman or anyone else who possesses knowledge of practical subjects to acquire an undisputed existence.

YOUNG SOCRATES: Then now too we must do the same as much as we can.

VISITOR: This task, Socrates, is even greater than the former one—and we remember what the length of *that* was. Still, it's very definitely fair to propose the following hypothesis about the subject in question.

YOUNG SOCRATES: What's that?

VISITOR: That at some time we shall need what I referred to just now[47] d
for the sort of demonstration that would be commensurate with the precise truth itself. But so far as concerns what is presently being shown, quite adequately for our immediate purposes, the argument we are using seems to me to come to our aid in magnificent fashion. Namely, we should surely suppose that it is similarly the case that all the various sorts of expertise exist, and at the same time that greater and less are measured not only in relation to each other but also in relation to the coming into being of what is in due measure. For if the latter is the case, then so is the former, and also if it is the case that the sorts of expertise exist, the other is the case too. But if one or the other is not the case, then neither of them will ever be.

YOUNG SOCRATES: This much is right; but what's the next move after this? e

46. I.e., in the *Sophist*.

47. I.e., probably, a way of 'compelling the more and the less . . . to become measurable . . . in relation to the coming into being of what is in due measure' (284b–c).

Visitor: It's clear that we would divide the art of measurement, cutting it in two in just the way we said, positing as one part of it all those sorts of expertise that measure the number, lengths, depths, breadths and speeds of things in relation to what is opposed to them, and as the other, all those that measure in relation to what is in due measure, what is fitting, the right moment, what is as it ought to be—everything that removes itself from the extremes to the middle.

Young Socrates: Each of the two sections you refer to is indeed a large one, and very different from the other.

Visitor: Yes, Socrates; and what many sophisticated people sometimes
285 say, supposing themselves to be expressing something clever, to the effect
that there is in fact an art of measurement relating to everything that comes
into being—that's actually the very thing we have just said. For it is indeed
the case, in a certain way, that all the products of the various sorts of
expertise share in measurement. But because of their not being accustomed
to carrying on their investigations by dividing according to real classes,
the people in question throw these things together at once, despite the
degree of difference between them, thinking them alike—and then again
they also do the opposite of this by dividing other things not according
b to parts, when the rule is that when one perceives first the community
between the members of a group of many things, one should not desist
until one sees in it all those differences that are located in classes, and
conversely, with the various unlikenesses, when they are seen in multi-
tudes, one should be incapable of pulling a face and stopping before
one has penned all the related things within one likeness and actually
surrounded them in some real class. So let this be enough for us to say
about these things, and about modes of defect and excess; and let's just
c keep hold of the fact that two distinct classes of measurement have been
discovered in relation to them, and remember what we say they are.

Young Socrates: We'll remember.

Visitor: Well then, after this point, let's admit another one that relates both to the very things we are inquiring into and to the whole business of discussions of this sort.

Young Socrates: What's that?

Visitor: What if someone put the following question about our pupils
sitting together learning their letters. When one of them is asked what
letters make up some word or other, are we to say that for him on that
d occasion the inquiry takes place more for the sake of the single question
set before him, or for the sake of his becoming more able to answer all
questions relating to letters?

Young Socrates: Clearly for the sake of his being able to answer all.

Visitor: What then about our inquiry now about the statesman? Has it been set before us more for the sake of that very thing, or for the sake of our becoming better dialecticians in relation to all subjects?

Young Socrates: That's clear too—for the sake of our becoming better dialecticians generally.

Visitor: I certainly don't suppose that anyone with any sense would
want to hunt down the definition of *weaving* for the sake of weaving itself.
But I think the majority of people fail to recognize that for some of the
things there are, there are certain perceptible likenesses which are there e
to be easily understood, and which it is not at all hard to point out when one
wants to make an easy demonstration, involving no trouble and without
recourse to verbal means, to someone who asks for an account of one of
these things. Conversely, for those things that are greatest and most valu-
able, there is no image at all which has been worked in plain view for the 286
use of mankind, the showing of which will enable the person who wants
to satisfy the mind of an inquirer to satisfy it adequately, just by fitting it
to one of the senses. That is why one must practice at being able to give
and receive an account of each thing; for the things that are without body,
which are finest and greatest, are shown clearly only by verbal means and
by nothing else, and everything that is now being said is for the sake of
these things. But practice in everything is easier in smaller things, rather b
than in relation to the greater.

Young Socrates: Very well said.

Visitor: Well then, let's remind ourselves of the reasons why we've said
all this on these subjects.

Young Socrates: Why did we say it all?

Visitor: Not least because of the difficulty we found in accepting the
length of our talk about weaving—and about the reversal of the universe,
and about the being of the non-being which is the sphere of the sophist;
we reflected that it had a rather great length, and in all these cases we
rebuked ourselves, out of fear that what we were saying would turn out c
to be superfluous as well as long. So, the thing for you to say is that the
foregoing was for the sake of all those cases, in order that we shan't suffer
any of this sort of misgiving on any future occasion.

Young Socrates: I shall do as you say. Tell me what comes next.

Visitor: Well, I say that you and I must be careful to remember what
we have now said, and to distribute censure and praise of both shortness
and length, whatever subjects we happen to be talking about on each
occasion, by judging lengths not in relation to each other but, in accordance
with the part of the art of measurement we previously said we must d
remember, in relation to what is fitting.

Young Socrates: Correct.

Visitor: Well, that's right, but we mustn't refer *everything* to this. For
one thing, we shan't have any need for a length that fits in relation to
pleasure, except perhaps as an incidental consideration. And again, as for
what contributes towards the inquiry into the subject set before us, what
we have said commits us to making a second and not a first priority of
the question how we might find it most easily and quickly, and to give
by far the greatest and primary value to the pursuit itself of the ability to
divide by classes. In particular, if an account is very long but renders the e
hearer better at discovering things, our business is to take this one seriously

and not feel at all irritated at its length, and similarly if a shorter one, in
its turn, has the same effect. Then again, over and above this, if in relation
to such discussions someone finds fault with the length of what is said
and will not put up with going round in circles, we must not let such a
287 person go just like that[48] without a backward glance—with his having
made the simple complaint that what has been said has taken a long time.
We should think it right that he should also demonstrate, in addition, that
if it had been shorter it would make the partners in the discussion better
dialecticians and better at discovering how to display in words the things
there are. We shall take no notice at all of the other sorts of censure and
praise, relating to some other criteria, nor even seem to hear such things
at all when they are said. Now enough of these things, if I have your
b agreement too; let's go back again to the statesman, and bring the model
of weaving, which we talked about before, to bear on it.

YOUNG SOCRATES: Well said—let's do what you say.

VISITOR: Well then, the king has been separated off from the many sorts of expertise that share his field—or rather from all of them concerned with herds; there remain, we are saying, those sorts of expertise in the city itself that are contributory causes and those that are causes, which we must first divide from each other.

YOUNG SOCRATES: Correct.

VISITOR: So do you recognize that it is difficult to cut them into two?
c The cause, I think, will become more evident if we proceed.

YOUNG SOCRATES: Well, then that's what we should do.

VISITOR: Then let's divide them limb by limb, like a sacrificial animal, since we can't do it into two. For we must always cut into the nearest number so far as we can.

YOUNG SOCRATES: So how are we to do it in this case?

VISITOR: Just as before: the sorts of expertise that provided tools relating to weaving—all of these, of course, we put down then as contributory causes.

YOUNG SOCRATES: Yes.

d VISITOR: We must do the same thing now too, but to a still greater degree
than we did then. For we must put down as being contributory causes all
the sorts of expertise that produce any tool in the city, whether small or
large. Without these there would never come to be a city, nor statesmanship,
but on the other hand we shan't, I think, put down any of them as the
product of the expertise of the king.

YOUNG SOCRATES: No, we shan't.

VISITOR: And yet we're trying to do a difficult thing in separating this
class of things from the rest; in fact it is possible for someone to treat
anything you like as a tool of *something* and seem to have said something
e credible. Nevertheless, among the things people possess in a city, let's
treat the following as being of a different sort.

YOUNG SOCRATES: Different in what way?

48. Reading *panu* at e6.

VISITOR: Because it does not have the same capacity that tools have. For it is not put together with the purpose of causing the coming into being of something, as a tool is, but for the sake of preserving what craftsmen have produced.

YOUNG SOCRATES: What do you mean?

VISITOR: That varied class of things which is worked for things liquid and solid, and for things that are prepared on the fire and things that are not—what we refer to with the single name of 'vessel': a common class, and one that, I think, simply does not belong at all to the sort of expert 288 knowledge we are looking for.

YOUNG SOCRATES: Certainly not.

VISITOR: We must then observe a third very extensive class of things that people possess, different from these others, which is found on land and on water, moves about a lot and is fixed, and is accorded high value and none, but has a single name, because it is all for the sake of some supporting or other, always being a seat for something.

YOUNG SOCRATES: What do you mean?

VISITOR: I suppose we call it by the name of 'vehicle'; not at all a product of the art of statesmanship, but much more of those of carpentry, pottery, and bronze-working.

YOUNG SOCRATES: I see.

VISITOR: And what is fourth? Should we say that it is something different b from these, something that includes the larger part of the things we mentioned before, all clothing, most armor, and walls, all those encirclements made out of earth, or out of stone, and tens of thousands of other things? Since all of them together are worked for the purpose of defending, it would be most apposite to call the whole class that of 'defense', and it would be thought to be a product much more of the expertise of the builder and the weaver, most of it, more correctly than it would be thought to belong to that of the statesman.

YOUNG SOCRATES: Absolutely.

VISITOR: Would we want to put down as a fifth class things to do with c decoration, painting, and those representations that are completed by the use of painting, and of music, which have been executed solely to give us pleasures, and which would appropriately be embraced by a single name?

YOUNG SOCRATES: What name?

VISITOR: I think we talk about something we call a 'plaything'.

YOUNG SOCRATES: Of course.

VISITOR: Well, this one name will be fittingly given to all of them; for not one of them is for the sake of a serious purpose, but all are done for amusement.

YOUNG SOCRATES: This too I pretty well understand. d

VISITOR: And what provides materials for all these things, from which and in which all of the sorts of expertise that have now been mentioned work, a varied class that is itself the offspring of many other sorts of expertise—shall we not put it down as a sixth?

Young Socrates: What exactly are you referring to?

Visitor: Gold and silver, and everything that is mined, and all that the
art of tree-felling and any lopping cuts and provides for the art of the
carpenter and the basket-weaver—and again the art of stripping off the
e outer covering of plants, and the one that removes skins from bodies of
living things, the art of the skinner; and all the sorts of expertise there are
in relation to such things, which by producing cork, and papyrus, and
materials for bindings make possible the working up of classes of composite
things from classes of things that are not put together. Let us call[49] it all
one thing, the first-born and incomposite possession of mankind, which
is in no way a product of the knowledge of kingship.

Young Socrates: Right.

Visitor: Then again that sort of possession that consists in nutrition, and
all those things which when they are blended into the body, their own
289 parts with parts of the body, have a capacity for promoting its care, we
must say is a seventh, calling it all together 'nurture', unless we have some
more attractive term to propose. And if we place it under the arts of the
farmer, the hunter, the trainer in the gymnasium, the doctor and the cook,
we shall be assigning it more correctly than if we give it to the art of
the statesman.

Young Socrates: Of course.

Visitor: Well then, we have, I think, pretty well dealt, in these seven
classes, with all the things that have to do with possessions, with the
exception of tame living creatures. Look at our list: it would be most
b appropriate if we put down the 'first-born' class of things at the beginning,
and after this 'tool', 'vessel', 'vehicle', 'defense', 'plaything', 'nourishment'.
If anything of no great importance has escaped us, we leave it to one side,[50]
because it is capable of fitting into one or other of these, for example the
class consisting of currency, seals, and any sort of engraving. For these do
not have any great shared class among them, but if some of them are
dragged off into decoration, others into tools, it will be forcibly done, but
nevertheless they'll wholly agree to it. As for what relates to possession
c of tame living creatures, apart from slaves, the art of herd-rearing which
we divided into its parts before will clearly be seen to have caught them all.

Young Socrates: Absolutely.

Visitor: Then what remains is the class of slaves and all those people who are subordinate to others, among whom, I strongly suspect, those who dispute with the king about the 'woven fabric' itself will come into view, just as in the case of weaving we found those concerned with spinning and carding and all the other things we mentioned disputing with the weavers over their product.[51] All the others, who have been described as

49. Reading *prosagoreuōmen* at e4.

50. Reading *thremma. paraleipomen de* at b2.

51. Cf. 281b.

'contributory causes', have been disposed of along with the products we
have just listed, as each was separated off from the practical activity which d
is the sphere of the art of kingship and statesmanship.

Young Socrates: So it seems, at any rate.

Visitor: Come along, then: let's get up close to those people that are left
and take a look at them, so that we may get a firmer knowledge of them.

Young Socrates: That's what we should do.

Visitor: Well, those who are subordinate to the greatest degree, looked at
from our present perspective, we find possessing a function and condition
which are the opposite of what we suspected just now.

Young Socrates: Who are they?

Visitor: Those who are bought, and acquired as possessions by this
means; people whom we can indisputably call slaves, and who least pre- e
tend to kingly expertise.

Young Socrates: Quite.

Visitor: What then of all those among free men who voluntarily place
themselves in the service of those we have been discussing, conveying
their products—the products of farming and the other sorts of expertise—
between them, and establishing equality between these products; some in
market-places, others moving from one city to another, whether by sea or
by land, exchanging currency both for everything else and for itself—
people to whom we give the names of 'money-changers', 'merchants', 290
'ship-owners', and 'retailers': surely they won't lay claim at all to the art
of statesmanship?

Young Socrates: It may be, perhaps, that they will—to the sort that has
to do with commercial matters.

Visitor: But those we see placing themselves with complete readiness
at the service of all, for hire, as day-laborers—these we shall never find
pretending to kingly expertise.

Young Socrates: Quite so.

Visitor: What in that case are we to say about those who perform services
of the following sorts for us whenever we need them?

Young Socrates: What services do you mean, and who is it you're
talking about?

Visitor: Among others, the tribe of heralds, and all those who become b
accomplished at writing by having repeatedly given their services in this
respect, and certain others who are very clever at working through many
different tasks relating to public offices: what shall we call these?

Young Socrates: What you called them just now—subordinates, and
not themselves rulers in cities.

Visitor: But I certainly wasn't dreaming, I think, when I said that some-
where here there would appear those who particularly lay claim to the
art of statesmanship. And yet it would seem very odd indeed to look for
them in some portion of the subordinate arts. c

Young Socrates: Yes, quite.

VISITOR: Then let's get still closer to those we haven't yet cross-examined. There are those who have a part of a subordinate sort of expert knowledge in relation to divination; for they are, I believe, considered to be interpreters from gods to men.

YOUNG SOCRATES: Yes.

VISITOR: And then too the class of priests, in its turn, has—as custom
tells us—expert knowledge about the giving through sacrifices of gifts
d from us to the gods which are pleasing to them, and about asking from
them through prayers for the acquisition of good things for us. I imagine
that both of these things are parts of a subordinate art.

YOUNG SOCRATES: It appears so, at any rate.

VISITOR: Well now, it seems to me that at this point we are, as it were,
getting close to some sort of trail leading to our destination. For the type of
priests and seers is filled full of self-importance and gets a lofty reputation
because of the magnitude of what they undertake, so that in Egypt it is
e not even permitted for a king to hold office without also exercising that
of priest. If in fact he happens to have acceded to power at the beginning
by force from another class, it is later necessary for him to be initiated into
the class of priests. And again among the Greeks too, in many places, it
is to the greatest offices that one would find being assigned the performance
of the greatest of the sacrifices in relation to such things. And in fact what
I'm saying receives the clearest illustration in your case; for they say that
the most solemn and ancestral of the ancient sacrifices are assigned here
to the person who becomes king by lot.[52]

YOUNG SOCRATES: Most certainly.

291 VISITOR: Well then, we must look both at these king-priests by lot, and
their subordinates, and also at a certain other very large crowd of people
which has just become visible to us,[53] now that the previous ones have
been separated off.

YOUNG SOCRATES: But who are the people you mean?

VISITOR: Some very odd people indeed.

YOUNG SOCRATES: How, exactly?

VISITOR: It's a class mixed out of all sorts, or so it seems to me as I look
b at it just now. For many of the men resemble lions and centaurs and other
such things, and very many resemble satyrs and those animals that are
weak but versatile; and they quickly exchange their shapes and capacity
for action for each other's. And yet *now*, Socrates, I think I have identified
the men in question.

YOUNG SOCRATES: Please explain; you seem to have something odd in view.

VISITOR: Yes; it's a universal experience that not recognizing something makes it odd. And this is exactly what happened to me just now: at the

52. At Athens, one of the 'archons' or chief magistrates had the title of King Archon.

53. Reading *katadēlos hēmin* at a3.

moment when I first saw the chorus of those concerned with the affairs c
of cities I failed to recognize them.

Young Socrates: What chorus?

Visitor: That of the greatest magician of all the sophists, and the most versed in their expertise. Although removing him from among those who really are in possession of the art of statesmanship and kingship is a very difficult thing to do, remove him we must if we are going to see plainly what we are looking for.

Young Socrates: We must certainly not let this slip.

Visitor: Certainly not, if you ask my view. So tell me this.

Young Socrates: What?

Visitor: We recognize monarchy, don't we, as one of the varieties of d
rule in cities?

Young Socrates: Yes.

Visitor: After monarchy one would, I think, list the holding of power by the few.

Young Socrates: Of course.

Visitor: And isn't a third type of constitution rule by the mass of the people, called by the name of 'democracy'?

Young Socrates: Most certainly.

Visitor: So there are three of them—but don't they in a certain way become five, giving birth from among them to two other names in addition to themselves?

Young Socrates: What are these?

Visitor: I think that as things are people refer to the aspects of force e
and consent, poverty and wealth, and law and lawlessness as they occur in them, and use these to divide each of the first two types into two. So they call monarchy by two names, on the grounds that it exhibits two forms, the one 'tyrannical', the other 'kingly' monarchy.

Young Socrates: Of course.

Visitor: And any city which has come to be controlled by a few people they call by the names of 'aristocracy' and 'oligarchy'.

Young Socrates: Most certainly.

Visitor: With democracy, on the other hand, whether in fact it's by force
or with their consent that the mass rules over those who possess the wealth, 292
and whether by accurately preserving the laws or not, in all these cases no one is in the habit of changing its name.

Young Socrates: True.

Visitor: What then? Do we suppose that any of these constitutions is correct, when it is defined by these criteria—one, few and many, wealth and poverty, force and consent, and whether it turns out to be accompanied by written laws or without laws?

Young Socrates: Why, what actually prevents it?

Visitor: Look at it more clearly, following this way. b

Young Socrates: Which?

Visitor: Shall we abide by what we said when we first began, or shall we be in discord with it?

Young Socrates: What was that?

Visitor: We said, I think, that kingly rule was one of the sorts of expert knowledge.

Young Socrates: Yes.

Visitor: And not just one of them all, but we chose out from the rest particularly one that was concerned in a sense with making judgments and controlling.

Young Socrates: Yes.

c Visitor: And then from the controlling sort, we took one that was set over inanimate products, and one set over living creatures; and it's by splitting things up in just this way that we have been progressing all the time to the point where we are now. We haven't forgotten that it's knowledge, but as for what sort of knowledge it is, we're not yet able to give a sufficiently accurate answer.

Young Socrates: Your account is correct.

Visitor: Then do we see just this very point, that the criterion in the things in question must not be few, nor many, nor consent nor the lack of it, nor poverty nor wealth, but some sort of knowledge, if indeed we are going to be consistent with what we said before?

d Young Socrates: But *that* we can't possibly fail to do.

Visitor: Necessarily, then, we must now consider in which, if any, of these types of rule expert knowledge about ruling human beings turns out to occur—practically the most difficult and the most important thing of which to acquire knowledge. For we must catch sight of it, in order to consider which people we must remove from the wise king's company, who pretend to possess of the art of statesmanship, and persuade many people that they do, but in fact do not have it at all.

Young Socrates: Yes, we must indeed do this, as our argument has already told us.

e Visitor: Well, does it seem that a mass of people in the city are capable of acquiring this expertise?

Young Socrates: How could they?

Visitor: But in a city of a thousand men, is it possible for a hundred or so, or again fifty, to acquire it adequately?

Young Socrates: In that case, it would be quite the easiest of all the sorts of expertise there are; for we know that among a thousand men there would never be so many top *petteia*-players[54] in relation to those among the rest of the Greeks, let alone kings. For it is that man who actually possesses the expert knowledge of kingship, whether he rules or not, who
293 must in any case be called an expert in kingship, according to what we said before.[55]

54. *Petteia* was a board game, resembling draughts or checkers.

55. 259b.

VISITOR: You've remembered well. As a consequence of this, I think, we must look for correct rule in relation to some one person, or two, or altogether few—when it *is* correct.

YOUNG SOCRATES: We certainly must.

VISITOR: Yes, but these people, whether they rule over willing or unwilling subjects, whether according to written laws or without them, and whether they rule as rich men or poor, we must suppose—as is now our
view—to be carrying out whatever sort of rule they do on the basis of b
expertise. Doctors provide the clearest parallel. We believe in them whether they cure us with our consent or without it, by cutting or burning or applying some other painful treatment, and whether they do so according to written rules or apart from written rules, and whether as poor men or rich. In all these cases we are no less inclined at all to say they are doctors, so long as they are in charge of us on the basis of expertise, purging or otherwise reducing us, or else building us up—it is no matter, if only each and every one of those who care for our bodies acts for our bodies' good,
making them better than they were, and so preserves what is in their care. c
It's in this way, as I think, and in no other that we'll lay down the criterion of medicine and of any other sort of rule whatsoever; it is the only correct criterion.

YOUNG SOCRATES: Yes, just so.

VISITOR: It must then be the case, it seems, that of constitutions too the one that is correct in comparison with the rest, and alone a constitution, is the one in which the rulers would be found truly possessing expert knowledge, and not merely seeming to do so, whether they rule according
to laws or without laws, over willing or unwilling subjects, and whether the d
rulers are poor or wealthy—there is no principle of correctness according to which any of these must be taken into any account at all.

YOUNG SOCRATES: Right.

VISITOR: And whether they purge the city for its benefit by putting some people to death or else by exiling them, or whether again they make it smaller by sending out colonies somewhere like swarms of bees, or build it up by introducing people from somewhere outside and making them citizens—so long as they act to preserve it on the basis of expert knowledge
and what is just, making it better than it was so far as they can, *this* is the e
constitution which alone we must say is correct, under these conditions and in accordance with criteria of this sort. All the others that we generally say are constitutions we must say are not genuine, and not really constitutions at all, but imitations of this one; those we say are 'law-abiding' have imitated[56] it for the better, the others for the worse.

YOUNG SOCRATES: The rest of it, visitor, seems to have been said in due measure; but that ideal rule may exist even without laws was something harder for a hearer to accept.

56. Retaining *memimēsthai* at e5.

Visitor: You got in just a little before me with your question, Socrates.
294 For I was about to ask you whether you accept all of this, or whether in fact you find any of the things we have said difficult to take. But as it is it's already apparent that we'll want a discussion of this matter of the correctness of those who rule without laws.

Young Socrates: Quite.

Visitor: Now in a certain sense[57] it is clear that the art of the legislator belongs to that of the king; but the best thing is not that the laws should prevail, but rather the kingly man who possesses wisdom. Do you know why?

Young Socrates: What then is the reason?

b Visitor: That law could never accurately embrace what is best and most just for all at the same time, and so prescribe what is best. For the dissimilarities between human beings and their actions, and the fact that practically nothing in human affairs ever remains stable, prevent any sort of expertise whatsoever from making any simple decision in any sphere that covers all cases and will last for all time. I suppose this is something we agree about?

Young Socrates: Certainly.

c Visitor: But we see law bending itself more or less towards this very thing; it resembles some self-willed and ignorant person, who allows no one to do anything contrary to what he orders, nor to ask any questions about it, not even if, after all, something new turns out for someone which is better, contrary to the prescription which he himself has laid down.

Young Socrates: True; the law does absolutely as you have just said with regard to each and every one of us.

Visitor: Then it is impossible for what is perpetually simple to be useful in relation to what is never simple?

Young Socrates: Very likely.

d Visitor: Why then is it ever necessary to make laws, given that law is not something completely correct? We must find out the cause of this.

Young Socrates: Certainly.

Visitor: Now with you, too, people train in groups in the way they do in other cities, whether for running or for anything else, for competitive purposes?

Young Socrates: Yes, very frequently.

Visitor: Well, now let's recall to mind the instructions that expert trainers give when they're in charge of people in such circumstances.

Young Socrates: What are you thinking of?

Visitor: That they don't suppose there is room for them to make their prescriptions piece by piece to suit each individual, giving the instruction
e appropriate to the physical condition of each; they regard it as necessary to make rougher prescriptions about what will bring physical benefit, as suits the majority of cases and a large number of people.

Young Socrates: Right.

57. Reading *mentoi tina* at a6.

Visitor: And it's just for this reason that, as it is, they give equally heavy exercises to the group as a whole, starting them off together and stopping them together in their running, wrestling, and the rest of their physical exercises.

Young Socrates: That's so.

Visitor: Then let's suppose the same about the legislator too, the person who will direct his herds in relation to justice and their contracts with one 295
another: he will never be capable, in prescribing for everyone together, of assigning accurately to each individual what is appropriate for him.

Young Socrates: What you say certainly sounds reasonable.

Visitor: Instead he will, I think, set down the law for each and every one according to the principle of 'for the majority of people, for the majority of cases, and roughly, somehow, like this', whether expressing it in writing or in unwritten form, legislating by means of ancestral customs.

Young Socrates: Correct.

Visitor: Yes, it certainly is. For how would anyone ever be capable, Socrates, of sitting beside each individual perpetually throughout his life b
and accurately prescribing what is appropriate to him? Since in my view, if he were capable of this, any one of those who had really acquired the expert knowledge of kingship would hardly put obstacles in his own way by writing down these laws we talked about.

Young Socrates: It certainly follows from what we have now said, visitor.

Visitor: Yes, but more, my good friend, from the things that are going to be said.

Young Socrates: And what are they?

Visitor: Things like the following. Are we to say—that is, between us—that if a doctor, or else some gymnastic trainer, were going to be out of c
the country and away from his charges for what he thought would be a long time, and thought that the people being trained, or his patients, would not remember the instructions he had given them, he would want to write down reminders for them—or what are we to say?

Young Socrates: As you suggested.

Visitor: But what if he came back unexpectedly, having been away for less time than he thought he would be? Do you think he wouldn't propose other prescriptions, contrary to the ones he had written down, when things d
turned out to be different, and better, for his patients because of winds or else some other of the things that come from Zeus which had come about contrary to expectation, in some way differently from the usual pattern? Would he obstinately think that neither he nor the patient should step outside those ancient laws that had once been laid down—he himself by giving other instructions, the patient by daring to do different things contrary to what was written down—on the grounds that these were the rules of the art of medicine and of health, and that things that happened differently were unhealthy and not part of his expertise? Or would all such things, if they happened in the context of truly expert knowledge,

e cause altogether the greatest ridicule, in all spheres, for acts of legislation of this sort?

Young Socrates: Absolutely right.

Visitor: And as for the person who has written down what is just and unjust, fine and shameful, good and bad, or has laid down unwritten laws on these subjects, for all those herds of human beings that graze, city by city, according to the laws of those who wrote them down in each case—if the person who wrote them on the basis of expertise, or someone else
296 resembling him, arrives, is it really not to be permitted to him to give different instructions contrary to these? Or wouldn't this prohibition appear in truth no less ridiculous than the other one?

Young Socrates: Of course.

Visitor: Well then, do you know what the majority of people say in such a case?

Young Socrates: It doesn't come to mind for the moment, just like that.

Visitor: Well, it sounds fine enough. What they say is that if someone recognizes laws that are better, contrary to those established by people before him, then he must introduce them by persuading his city to accept them in each case, but not otherwise.

Young Socrates: Well then? Is that not a correct view?

b Visitor: Perhaps. But first things first: if someone forces through what is better without the use of persuasion, tell me, what will be the name to give to the use of force in this case? No—not yet; answer me first in relation to the previous cases.

Young Socrates: What do you mean?

Visitor: If then—to continue with our example—someone does not persuade his patient, but has a correct grasp of the relevant expertise, and forces child, or man, or woman, to do what is better, contrary to what has been written down, what will be the name to give to this use of force? Surely anything rather than what we called an unhealthy mistake contrary
c to the expertise in question? And the last thing the person who was the object of such force can correctly say about such a thing is that he had unhealthy things done to him by the doctors who used force on him, things that did not belong to their expertise?

Young Socrates: What you say is very true.

Visitor: And what do we really suppose to be the sort of mistake we're talking about, the one in contravention of the expertise of the statesman? Isn't it what is shameful, what is bad,[58] and unjust?

Young Socrates: I agree, absolutely.

Visitor: Then those who have been forced, contrary to what has been written down and to ancestral custom, to do different things that are more
d just, better and finer than the things they did before—tell me, if people in this kind of situation for their part censure this kind of use of force, isn't it true that, if their censure isn't to be the most laughable of all, they must

58. Reading *kai to* at c5.

say anything on each occasion rather than that those who have been forced have had shameful, unjust and bad things done to them by those who did the forcing?

YOUNG SOCRATES: What you say is very true.

VISITOR: But are the things forced on them just, if the person who did the forcing is rich, and unjust if he happens to be poor? Or if, whether by using persuasion or not, whether as a rich or a poor man, or according to
written law or contrary to it, he does what is not to the benefit of the e
citizens[59] or what is to their benefit, must that be the criterion, and must it have to do with these things—the truest criterion of correct government of a city, the one according to which the wise and good man will govern the interests of the ruled? Just as a steersman, always watching out for
what is to the benefit of the ship and the sailors, preserves his fellow sailors 297
not by putting things down in writing but offering his expertise as law, so too in this same manner a constitution would be correct, would it not, if it issued from those who are able to rule in this way, offering the strength of their expertise as more powerful than the laws? And there is no mistake,
is there, for wise rulers, whatever they do, provided that they watch for b
one great thing, that by always distributing to those in the city what is most just, as judged by the intelligent application of their expertise, they are able both to preserve them and so far as they can to bring it about that they are better than they were?

YOUNG SOCRATES: It is certainly not possible to contradict what has just been said.

VISITOR: And neither should one contradict those other things we said.

YOUNG SOCRATES: What are you referring to?

VISITOR: That a mass of any people whatsoever would never be able to acquire this sort of expert knowledge and so govern a city with intelligence;
and that we must look for that one constitution, the correct one, in relation c
to a small element in the population, few in number, or even a single individual, putting down the other constitutions as imitations, as was said a little earlier, some of them imitating this one for the better, the others for the worse.

YOUNG SOCRATES: What do you mean by this? What are you saying? For I did not understand the point about imitations when it was made just now[60] either.

VISITOR: And it's no small matter, if one stirs up this subject and then proceeds to leave it where it is instead of going through it and showing
the mistake that now occurs in relation to it. d

YOUNG SOCRATES: What mistake is that?

VISITOR: This sort of thing we must hunt for, since it is not altogether what we are used to or easy to see; but all the same let's try to get hold

59. Retaining *mē sumphora ē* at e1.

60. Reading *arti rhēthen* at c5. The reference is to 293e.

of it. Tell me: given that this constitution we have talked about is on our view the only correct one, do you recognize that the others ought to employ the written documents that belong to this one, and save themselves in that way, doing what is now praised, although it is not the most correct thing to do?

YOUNG SOCRATES: What are you referring to?

VISITOR: The principle that no one in the city should dare to do anything
e contrary to the laws, and that the person who dares to do so should be punished by death and all the worst punishments. This is very correct and fine as a second choice, when one changes the principle we discussed just now,[61] which is our first choice; but let us go over the way in which what we have called 'second-best' has come about. Do you agree?

YOUNG SOCRATES: Absolutely.

VISITOR: Well then, let's go back to the likenesses to which we must always compare our kingly rulers.

YOUNG SOCRATES: Which likenesses?

VISITOR: The noble steersman and the doctor who is 'worth many others'.[62] Let us look at the matter by fashioning a kind of figure, using these as material.

YOUNG SOCRATES: A figure of what kind?

298 VISITOR: Of the following sort: let's suppose that we all thought of them as doing the most terrible things to us. For the one as much as the other saves whichever of us he wishes to save; and whichever of us they wish to mutilate, they do it by cutting and burning us and directing us to pay them expenses as if they were taxes, of which they spend little or none
b on the patient, while they themselves and their household use the rest; and the final step is for them to take money from relatives or some enemies of the patient as pay for killing him. And steersmen, in their turn, bring about thousands of other things of a similar sort, leaving people stranded on voyages because of some conspiracy or other, causing shipwrecks on the seas and throwing people overboard, and doing other malicious things. Let's suppose then that we thought this, and came to a conclusion about
c them in a sort of council, no longer to allow either of these sorts of expertise to have autonomous control either of slaves or of free men, but to call together an assembly with ourselves as members, consisting either of the people all together or only of the rich. The rule would be that both laymen and craftsmen other than steersmen and doctors would be permitted to contribute an opinion, whether about sailing or about diseases, as to the basis on which drugs and the tools of the doctor's art should be used on
d patients, and even how to employ ships themselves, and the tools of the sailor's art for operating them, for facing not only the dangers affecting the voyage itself from winds and sea, but encounters with pirates, and

61. Cf. 293c–d.

62. *Iliad* xi.514.

perhaps, if it should turn out to be necessary, for fighting a sea battle with
long ships against others of the same type. And once there was a record,
on *kurbeis*[63] or blocks of stone of some sort, of what the majority had
decided, whether with the advice of some doctors and steersmen or of
those who had no specialized knowledge of medicine or steersmanship, e
then all our sailing and caring for patients for all future time would have
to be done according to this, along with certain other rules established as
unwritten ancestral customs.

YOUNG SOCRATES: What you've described is distinctly odd.

VISITOR: Yes—and let's suppose that a further conclusion was that we should set up officers annually who belong to the mass of people, whether from the rich or from the whole people, whoever has office assigned to him by lot; and that those who take office should execute it by steering the ships and healing patients according to the written rules.

YOUNG SOCRATES: This is even harder to take.

VISITOR: Then consider too what follows after this. When the year ends
for each and every one of the officers, there will be a requirement to set
up courts, either of the rich on the basis of preselection or again those 299
chosen by lot from the whole people together, and to bring before these
judges those who have held office, in order to examine their conduct.
Anyone who wishes will be permitted to charge an officer that he failed
to steer the ships during the year according to the written rules or according
to the ancient customs of our ancestors. There will be these same require-
ments also in the case of those healing the sick, and for any officers con-
demned by the vote, the judges will have to assess what penalty they
should suffer or what financial restitution they should make.

YOUNG SOCRATES: Well, anyone who willingly and voluntarily undertakes
to hold office under such conditions would fully deserve to suffer any b
penalty whatever and to pay back any amount.

VISITOR: And further still it will be necessary to establish a law against
all the following things. Suppose anyone is found inquiring into steersman-
ship and seafaring, or health and truth in the doctor's art, in relation to
winds and heat and cold, above and beyond the written rules, and making
clever speculations of any kind in relation to such things. In the first place
one must not call him an expert doctor or an expert steersman, but a star-
gazer, some babbling sophist. The next provision will be that anyone who
wishes from among those permitted to do so shall indict him and bring
him before some court or other as corrupting other people younger than c
himself and inducing them to engage in the arts of the steersman and the
doctor not in accordance with the laws, but instead by taking autonomous
control of ships and patients. If he is found guilty of persuading anyone,
whether young or old, contrary to the laws and the written rules, the most
extreme penalties shall be imposed on him. For (so the law will say) there
must be nothing wiser than the laws; no one is ignorant about what belongs

63. Revolving columns on which the laws were traditionally inscribed at Athens.

to the art of the doctor, or about health, or what belongs to the art of the
d steersman, or seafaring, since it is possible for anyone who wishes to understand things that are written down and things established as ancestral customs. Suppose then these things came about, Socrates, in the way we say, both in relation to these sorts of expert knowledge, and to generalship, and all the art of hunting, of whatever kind; to painting, or any part whatever of all the art of imitation; to carpentry, the whole of tool-making, of whatever kind, or again farming and the whole of the expertise that deals with plants. Or again, suppose we imagined a sort of horse-rearing
e that took place according to written rules, or all of herd-keeping, or the art of divination, or every part included in the art of the subordinate, or *petteia*, or all the science of numbers, whether perhaps dealing with them on their own, or in two dimensions, or in solids, or in speeds. If all of these were practiced in this way, and they were done on the basis of written rules and not on the basis of expertise, what on earth would be the result?

YOUNG SOCRATES: It's clear both that we should see all the various sorts of expertise completely destroyed, and that they would never be restored, either, because of this law prohibiting inquiry; so that life, which even
300 now is difficult, in such a time would be altogether unliveable.

VISITOR: But what about the following consideration? Suppose we required each of the things mentioned to be done according to written rules, and we required the person elected or appointed to office by lot, on the basis of chance, to oversee these written rules of ours: what then if this person were to take no notice of what is written down, in order either to profit in some way or to do some personal favor, and were to take it upon himself to do different things, contrary to these, when he possesses no knowledge? Would this not be an evil still greater than the previous one?

YOUNG SOCRATES: Yes, very true.[64]

b VISITOR: Yes, for if, I imagine, contrary to the laws that have been established on the basis of much experiment, with some advisers or other having given advice on each subject in an attractive way, and having persuaded the majority to pass them—if someone were brazen enough to act contrary to these, he would be committing a mistake many times greater than the other, and would overturn all expert activity to a still greater degree than do the written rules.

YOUNG SOCRATES: Yes—how would he not?

VISITOR: For these reasons, then, the second-best method of proceeding,
c for those who establish laws and written rules about anything whatever, is to allow neither individual nor mass ever to do anything contrary to these—anything whatsoever.

YOUNG SOCRATES: Correct.

64. Reading *alēthestata ge* at a8.

Visitor: Well, imitations of the truth of each and every thing would be these, wouldn't they—the things issuing from those who know which have been written down so far as they can be?[65]

Young Socrates: Of course.

Visitor: Now we said—if we remember—that the knowledgeable person, the one who really possesses the art of statesmanship, would do many things in relation to his own activity by using his expertise, without taking any notice of the written laws, when other things appear to him to be d
better, contrary to those that have been written down by him and given as orders to people who are not currently with him.

Young Socrates: Yes, that's what we said.

Visitor: Well, any individual whatever or any large collection of people whatever, for whom there are actually written laws established, who undertake to do anything at all that is different, contrary to these, on the grounds that it is better, will be doing, won't they, the same thing as that true expert, so far as they can?

Young Socrates: Absolutely.

Visitor: Well then, if they were to do such a thing without having expert knowledge, they would be undertaking to imitate what is true, but would e
imitate it altogether badly; but if they did it on the basis of expertise, this is no longer imitation but that very thing that is most truly what it sets out to be?

Young Socrates: I agree completely—I think.

Visitor: But it is established as agreed between us—we agreed to it before, at any rate—that no large collection of people is capable of acquiring any sort of expertise whatever.[66]

Young Socrates: Yes, it remains agreed.

Visitor: Then if some sort of kingly expertise exists, neither the collection of people that consists of the rich, nor all the people together, could ever acquire this expert knowledge of statesmanship.

Young Socrates: How could they?

Visitor: The requirement, then, as it seems, for all constitutions of this sort, if they are going to produce a good imitation of that true constitution of one man ruling with expertise, so far as they can, is that—given that 301
they have their laws—they must never do anything contrary to what is written or to ancestral customs.

Young Socrates: Very well said.

Visitor: In that case, when the rich imitate it, then we shall call such a constitution an 'aristocracy'; when they take no notice of the laws, we shall call it an 'oligarchy'.

Young Socrates: Possibly.

65. Alternatively: "Well, wouldn't those laws—written with the advice of people who know so far as is possible—be imitations of the truth on each subject?"

66. See 292e.

b VISITOR: And, in turn, when one person rules according to laws, so imitating the person with expert knowledge, we shall call him a king, not distinguishing by name the one ruling on his own with expert knowledge or the one doing so on the basis of opinion, according to laws.

YOUNG SOCRATES: Possibly we shall.

VISITOR: Well then, if in fact some one person rules who really possesses expert knowledge, in every case he will be called by the same name of king and not by any other one. As a result of this the five names of what are now called constitutions have become only one.

YOUNG SOCRATES: It seems so, at any rate.

VISITOR: And what of the case when some one ruler acts neither according
c to laws nor according to customs, but pretends to act like the person with
expert knowledge, saying that after all one must do what is contrary to what has been written down if it is *best*, and there is some desire or other combined with ignorance controlling this imitation? Surely in those circumstances we must call every such person a tyrant?

YOUNG SOCRATES: Of course.

VISITOR: Then it is in this way that the tyrant has come about, we say, and the king, and oligarchy, and aristocracy, and democracy—because people found themselves unable to put up with the idea of that single individual of ours as monarch, and refused to believe that there would
d ever come to be anyone who deserved to rule in such a way, so as to be
willing and able to rule with virtue and expert knowledge, distributing what is just and right correctly to all. They think that a person in such a position always mutilates, kills and generally maltreats whichever of us he wishes; although if there were to come to be someone of the sort we are describing, he would be prized and would govern a constitution that would alone be correct in the strict sense, steering it through in happiness.

YOUNG SOCRATES: Quite.

VISITOR: But as things are, when—as we say—a king does not come to be
e in cities as a king-bee is born in a hive, one individual immediately superior
in body and mind, it is necessary—so it seems—for people to come together and write things down, chasing after the traces of the truest constitution.

YOUNG SOCRATES: Possibly.

VISITOR: Do we wonder, then, Socrates, at all the evils that turn out to occur in such constitutions, and all those that will turn out for them, when a foundation of this sort underlies them, one of carrying out their functions
302 according to written rules and customs without knowledge—which if used
by another expertise would manifestly destroy everything that comes about through it? Or should we rather wonder at something else, namely at how strong a thing a city is by its nature? For in fact cities have suffered such things now for time without limit, but nevertheless some particular ones among them are enduring and are not overturned. Yet many from time to time sink like[67] ships, and perish, and have perished, and will perish

67. Reading *eniote kathaper* at a6.

in the future through the depravity of their steersmen and sailors, who
have acquired the greatest ignorance about the greatest things—although b
they have no understanding at all about what belongs to the art of statesmanship, they think they have completely acquired this sort of expert knowledge, most clearly of them all.

Young Socrates: Very true.

Visitor: So which of these 'incorrect' constitutions is least difficult to live with, given that they are all difficult, and which the heaviest to bear? Should we take a brief look at this, although a discussion of it will be a side-issue in relation to the subject now set before us? And yet, at any rate in general, perhaps everything that all of us do is for the sake of this sort of thing.

Young Socrates: We should certainly look at it.

Visitor: Well then, what you should say is that, if there are three sorts c
of constitution, the same one is at the same time exceptionally difficult and easiest.

Young Socrates: What are you saying?

Visitor: Just this: monarchy, I'm saying, rule by a few and rule by many—there were these three sorts of constitution we were talking about at the beginning of the discussion with which we have now been deluged.

Young Socrates: Yes, there were.

Visitor: Well then, let's divide these, each single one into two, and make six, separating off the correct one from these on its own, as a seventh.

Young Socrates: How so?

Visitor: Out of monarchy let's make kingly and tyrannical rule; out of d
the sort that doesn't involve many, we said there was[68] the auspiciously named aristocracy, and oligarchy, while out of the sort that does involve many, there was democracy, which we then called single and put it down as such, but now in turn we must put this too down as double.

Young Socrates: How, then? And dividing it by what criterion?

Visitor: By one that is no different from the other cases, even if *its* name, e
'democracy', is now double; but certainly ruling according to laws and contrary to laws belongs both to this and to the others.

Young Socrates: Yes, it does.

Visitor: Well, at the time when we were looking for the correct constitution, this cut was not useful, as we demonstrated in what we said before; but since we have now set that correct constitution to one side, and have put down the rest as necessary, in the case of these, certainly, the criterion of contrary to and abiding by laws cuts each of them in two.

Young Socrates: It seems so, given what has now been said.

Visitor: Well then, when monarchy is yoked in good written rules, which we call laws, it is best of all six; but if it is without laws, it is difficult and heaviest to live with.

Young Socrates: Possibly. 303

68. Reading *ephamen einai* at d2.

VISITOR: And as for the rule of those who are not many, just as few is in the middle between one and a large number, let's suppose it to be middling in both ways; while that of the mass, in its turn, we may suppose to be weak in all respects and capable of nothing of any importance either for good or for bad as judged in relation to the others, because under it offices are distributed in small portions among many people. For this reason, if all the types of constitution are law-abiding, it turns out to be
b the worst of them, but if all are contrary to law, the best; and if all are uncontrolled, living in a democracy takes the prize, but if they are ordered, life in it is least liveable, and in first place and best by far will be life in the first, except for the seventh. For of all of them, *that* one we must separate out from the other constitutions, like a god from men.

YOUNG SOCRATES: This seems both to follow, and to be, as you say; and we must do as you suggest.

c VISITOR: So then we must also remove those who participate in all these constitutions, except for the one based on knowledge, as being, not statesmen, but experts in faction; we must say that, as presiding over insubstantial images, on the largest scale, they are themselves of the same sort, and that as the greatest imitators and magicians they turn out the be the greatest sophists among sophists.[69]

YOUNG SOCRATES: This term 'sophist' looks as if it has been only too correctly turned round against the so-called experts in statesmanship.

VISITOR: So: this is our play, as it were—as we said just now that there
d was some band of centaurs and satyrs in view, one that we had to set apart from the expertise of the statesman; and now it has been set apart, as we have seen, with great difficulty.

YOUNG SOCRATES: It appears so.

VISITOR: Yes, but there is something else remaining that is still more difficult than this, by reason of its being both more akin to the kingly class, and closer to it, and harder to understand; and we seem to me to be in a situation similar to that of those who refine gold.

YOUNG SOCRATES: How so?

VISITOR: I imagine that these craftsmen also begin by separating out earth, and stones, and many different things; and after these, there remain
e commingled with the gold those things that are akin to it, precious things and only removable with the use of fire: copper, silver, and sometimes adamant, the removal of which through repeated smelting and testing leaves the 'unalloyed' gold that people talk about there for us to see, itself alone by itself.

YOUNG SOCRATES: Yes, they certainly do say these things happen in this way.

VISITOR: Well, it seems that in the same way we have now separated off those things that are different from the expert knowledge of statesmanship, and those that are alien and hostile to it, and that there remain those that

69. See 291c.

are precious and related to it. Among these, I think, are generalship, the art of the judge, and that part of rhetoric which in partnership with kingship 304
persuades people of what is just and so helps in steering through the business of cities. As for these, in what way will one most easily portion them off and show, stripped and alone by himself, that person we are looking for?

YOUNG SOCRATES: It's clear that we must try to do this somehow.

VISITOR: Well, if it depends on our trying, we'll find him; music will help us reveal him. Answer me this.

YOUNG SOCRATES: What?

VISITOR: I imagine we recognize such a thing as the learning of music, b
and in general of the sorts of expert knowledge involving work with the hands?

YOUNG SOCRATES: We do.

VISITOR: And what of this—the matter of whether we should learn any one of these or not? Shall we say that this too, in its turn, is a sort of knowledge, concerned with these very things, or what shall we say?

YOUNG SOCRATES: Yes, we'll say that it is.

VISITOR: Then shall we agree that this sort of knowledge is distinct from those?

YOUNG SOCRATES: Yes.

VISITOR: And shall we agree that no one of them should control any other, or that the others should control this one, or that this one should c
manage and control all the others together?

YOUNG SOCRATES: This one should control them.

VISITOR: In that case you, at any rate, declare it to be your opinion that the one that decides whether one should learn or not should be in control, so far as we are concerned, over the one that is the object of learning and does the teaching?

YOUNG SOCRATES: Very much so.

VISITOR: And also, in that case, that the one which decides whether one should persuade or not should control the one which is capable of persuading?

YOUNG SOCRATES: Of course.

VISITOR: Well then: to which sort of expert knowledge shall we assign what is capable of persuading mass and crowd, through the telling of d
stories, and not through teaching?

YOUNG SOCRATES: This too is clear, I think: it must be given to rhetoric.

VISITOR: And the matter of whether to do through persuasion whatever it may be in relation to some people or other, or else by the use of some sort of force, or indeed to do nothing at all: to what sort of expert knowledge shall we attach this?

YOUNG SOCRATES: To the one that controls the art of persuasion and speaking.

VISITOR: This would be none other, I think, than the capacity of the statesman.

YOUNG SOCRATES: Very well said.

VISITOR: This matter of rhetoric too seems to have been separated quickly
e from statesmanship, as a distinct class, but subordinate to it.

YOUNG SOCRATES: Yes.

VISITOR: What should we think about the following sort of capacity, in its turn?

YOUNG SOCRATES: Which one?

VISITOR: The one that decides how to make war against each group of people against whom we choose to make war. The question is whether we shall say that this is or is not a matter of expertise.

YOUNG SOCRATES: And how could we suppose it not to involve expertise: that capacity which is exercised by generalship and all activity concerned with war?

VISITOR: And are we to understand as different from this the expertise that is able and knows how to reach a considered decision about whether we should make war, or whether we should withdraw in friendly fashion? Or are we to take it to be the same as this one?

YOUNG SOCRATES: Anyone who was following what was said before must suppose that it is distinct.

305 VISITOR: Shall we then declare our view that it controls it, if in fact we are going to take things in line with what we said before?

YOUNG SOCRATES: I say yes.

VISITOR: Then what mistress will we even try to propose for so terrifying and important an expertise, the whole of that concerned with war, except the true art of kingship?

YOUNG SOCRATES: No other.

VISITOR: In that case we shall not set down the expert knowledge of generals as statesmanship, since it is subordinate.

YOUNG SOCRATES: It seems unlikely that we shall.

b VISITOR: Come on then; let's look at the capacity that belongs to those judges who judge correctly.

YOUNG SOCRATES: Absolutely.

VISITOR: Well then, does its capacity extend to anything more than taking over from the legislator-king all those things that are established as lawful in relation to contracts, and judging by reference to these the things that have been prescribed as just and unjust, providing its own individual excellence by virtue of the fact that it would not be willing to decide the
c complaints of one citizen against another contrary to the prescription of the legislator through being overcome by presents of some sort, or fears, or feelings of compassion, or again by any enmity or friendship?

YOUNG SOCRATES: No, the function of this capacity extends, roughly speaking, to what you have said.

VISITOR: In that case we discover the power of judges too not to be that belonging to the king, but to be a guardian of the laws and a subordinate of that other capacity.

YOUNG SOCRATES: It seems so, at any rate.

Visitor: If then one looks at all the sorts of expert knowledge that have been discussed, it must be observed that none of them has been declared to be statesmanship. For what is really kingship must not itself perform d
practical tasks, but control those with the capacity to perform them, because it knows when it is the right time to begin and set in motion the most important things in cities, and when it is the wrong time; and the others must do what has been prescribed for them.

Young Socrates: Correct.

Visitor: For this reason, then, the sorts of expertise we have just examined control neither each other nor themselves, but each is concerned with some individual practical activity of its own, and in accordance with the individual nature of the activities in question has appropriately acquired a name that is individual to it.

Young Socrates: That seems so, at any rate. e

Visitor: Whereas the one that controls all of these, and the laws, and cares for every aspect of things in the city, weaving everything together in the most correct way—this, embracing its capacity with the appellation belonging to the whole,[70] we would, it seems, most appropriately call statesmanship.

Young Socrates: Yes, absolutely.

Visitor: At this point we'll want, won't we, to pursue it further by reference to the model of the art of weaving, now that all the classes of things in the city have become clear to us?

Young Socrates: Yes, very much so.

Visitor: Then it seems that we should discuss the intertwining that 306
belongs to kingship—of what kind it is, and in what way it intertwines to render us what sort of fabric.

Young Socrates: Clearly.

Visitor: What it seems we have to deal with, in that case, is certainly a difficult thing to show.

Young Socrates: But in any case we have to discuss it.

Visitor: To say that part of virtue is in a certain sense different in kind from virtue provides an all too easy target for those expert in disputing statements, if we view things in relation to what the majority of people think.

Young Socrates: I don't understand.

Visitor: I'll put it again, like this. I imagine you think that courage, for us, constitutes one part of virtue. b

Young Socrates: Certainly.

Visitor: And also that moderation is something distinct from courage, but at the same time that this too is one part of what the other is part of.

Young Socrates: Yes.

Visitor: Well, we must take our courage in our hands and declare something astonishing in relation to these two.

70. That is, the appellation *polis* or 'city' gives rise to that of 'statesmanship', *politikē*.

Young Socrates: What?

Visitor: That, in some sort of way, they are extremely hostile to each other and occupy opposed positions in many things.[71]

Young Socrates: What do you mean?

Visitor: Not in any way the sort of thing people are used to saying. For
c certainly, I imagine, all the parts of virtue are said to be amicably disposed towards each other, if anything is.

Young Socrates: Yes.

Visitor: Then should we look, with extremely close attention, to see whether this is unqualifiedly the case, or whether emphatically some aspects of them admit of dissent in some respect with what is related to them?

Young Socrates: Yes; please say how we should do so.

Visitor: We should look at the matter in relation to all those things that we call fine, but then go on to place them in two classes which are opposed to each other.

Young Socrates: Put it still more clearly.

d Visitor: Sharpness and speed, whether in bodies, or in minds, or in the movement of the voice,[72] whether belonging to the things themselves or as represented in images of them—all those imitations that music, and painting too, provide: have you ever either praised any of these yourself, or been present to hear someone else praising them?

Young Socrates: Of course.

Visitor: And do you remember how they do it in every one of such cases?

Young Socrates: I don't at all.

Visitor: Then would I be able, I wonder, to show it to you in words just as I have it before my mind?

e Young Socrates: Why not?

Visitor: You seem to think this kind of thing easy; but in any case let's consider it in the two opposite sorts of case. Often, and in many activities, whenever we admire speed and vigour and sharpness, of mind and body, and again of voice, we speak in praise of it by using a single appellation, that of 'courage'.[73]

Young Socrates: How so?

Visitor: I think we say 'sharp and courageous'—that's a first example; and 'fast and courageous', and similarly with 'vigorous'. In every case it's by applying the name I'm talking about in common to all these sorts of thing that we praise them.

Young Socrates: Yes.

307 Visitor: But again—in many activities, don't we often praise the class of things that happen gently?

71. Reading *echthra . . . echeton* at b10.

72. The word translated 'sharpness' can also refer to high pitch in sound.

73. Greek *andreia*, literally 'manliness'. Bearing the literal meaning in mind helps to make more intelligible some of the applications of 'courage' suggested here and below.

Young Socrates: Yes, very much so.

Visitor: Well then, don't we express this by saying the opposite of what we say of the other things?

Young Socrates: How?

Visitor: In that, I think, we say on each occasion that they are 'quiet and moderate', admiring things done in the mind, and in the sphere of actions themselves, that are slow and soft, and also things the voice does that turn out smooth and deep—and all rhythmic movement, and the
whole of music when it employs slowness at the right time. We apply to b
them all the name, not of courage, but of orderliness.

Young Socrates: Very true.

Visitor: And when, conversely, both of these sets of qualities occur at the wrong time, we change round and censure each of them, assigning them to opposite effect by the names we use.

Young Socrates: How?

Visitor: By calling them 'excessive and manic' when they turn out
sharper than is timely, and appear too fast and hard, and calling things c
that are too deep and slow and soft 'cowardly and lethargic'. It's pretty much a general rule that we find that these qualities, and the moderate type as a whole, and the 'courage' of the opposite qualities do not mix with each other in the relevant activities, as if they were sorts of thing that had a warring stance allotted to them. Moreover we shall see that those who possess them in their souls are at odds with each other, if we go looking for them.

Young Socrates: Where do you mean us to look?

Visitor: Both in all the spheres we mentioned just now, and no doubt d
in many others. For I think because of their affinity to either set of qualities, they praise some things as belonging to their own kin, and censure those of their opponents as alien, engaging in a great deal of hostility towards each other, about a great many things.

Young Socrates: Very likely.

Visitor: Well, this disagreement, of these classes of people, is a sort of play; but in relation to the most important things, it turns out to be a disease which is the most hateful of all for cities.

Young Socrates: In relation to what, do you mean?

Visitor: In relation to the organization of life as a whole. For those who e
are especially orderly are always ready to live the quiet life, carrying on their private business on their own by themselves. They both associate with everyone in their own city on this basis, and similarly with cities outside their own, being ready to preserve peace of some sort in any way they can. As a result of this passion of theirs, which is less timely than it should be, when they do what they want nobody notices that they are being unwarlike and making the young men the same, and that they are perpetually at the mercy of those who attack them. The consequence is
that within a few years they themselves, their children, and the whole city 308
together often become slaves instead of free men before they have noticed it.

Young Socrates: What you describe is a painful and terrifying thing to go through.

Visitor: But what about those who incline more towards courage? Isn't it the case that they are always drawing their cities into some war or other because of their desire for a life of this sort, which is more vigorous than it should be, and that they make enemies of people who are both numerous and powerful, and so either completely destroy their own fatherlands, or else make them slaves and subjects of their enemies?

b Young Socrates: This too is true.

Visitor: How then can we deny that in these things both of these classes of people always admit of much hostility and dissent between them, even to the greatest degree?

Young Socrates: There's no way we shall deny it.

Visitor: Then we have found, haven't we, what we were originally looking into, that parts of virtue of no small importance are by nature at odds with each other, and moreover cause those who possess them to be in this same condition?

Young Socrates: Very likely they do.

Visitor: Then let's take the following point in its turn.

Young Socrates: What's that?

c Visitor: Whether, I suppose, any of the sorts of expert knowledge that involve putting things together voluntarily puts together any at all of the things it produces, even of the lowliest kind, out of bad and good things, or whether every sort of expert knowledge everywhere throws away the bad so far as it can, and takes what is suitable and good[74], bringing all of this—both like and unlike—together into one, and so producing some single kind of thing with a single capacity.

Young Socrates: Of course.

d Visitor: In that case, neither will what we have decided is by nature truly the art of statesmanship ever voluntarily put together a city out of good and bad human beings. It's quite clear that it will first put them to the test in play, and after the test it will in turn hand them over to those with the capacity to educate them and serve it towards this particular end. It will itself lay down prescriptions for the educators and direct them, in the same way that weaving follows along with the carders, and those who prepare the other things it needs for its own work, prescribing for and
e directing them, giving indications to each group to finish their products in whatever way it thinks suitable for its own interweaving.

Young Socrates: Yes, absolutely.

Visitor: In just this very way, it seems to me, the art of kingship—since it is this that itself possesses the capacity belonging to the directing art—will not permit the educators and tutors, who function according to law, to do anything in the exercise of their role that will not ultimately result in some disposition which is appropriate to its own mixing role. It calls

74. Reading *kai ta chrēsta* at c5.

on them to teach these things alone; and those of their pupils that are unable to share in a disposition that is courageous and moderate, and whatever else belongs to the sphere of virtue, but are thrust forcibly away 309
by an evil nature into godlessness, excess and injustice, it throws out by killing them, sending them into exile, and punishing them with the most extreme forms of dishonor.

Young Socrates: At least it is put something like that.

Visitor: And again those who wallow in great ignorance and baseness it brings under the yoke of the class of slaves.

Young Socrates: Quite correct.

Visitor: Then as for the others, whose natures are capable of becoming composed and stable in the direction of nobility, if they acquire education, b
and, with the help of expertise, of admitting commingling with each other—of these, it tries to bind together and intertwine the ones who strain more towards courage, its view being that their firm disposition is as it were like the warp, and the ones who incline towards the moderate, who produce an ample, soft, and—to continue the image—wooflike thread, two natures with opposite tendencies; and it does so in something like the following way.

Young Socrates: What way is that?

Visitor: First, by fitting together that part of their soul that is eternal c
with a divine bond, in accordance with its kinship with the divine, and after the divine, in turn fitting together their mortal aspect with human bonds.

Young Socrates: Again, what do you mean by this?

Visitor: I call divine, when it comes to be in souls,[75] that opinion about what is fine, just and good, and the opposites of these, which is really true and is guaranteed; it belongs to the class of the more than human.

Young Socrates: That's certainly a fitting view to take.

Visitor: Then do we recognize that it belongs to the statesman and the d
good legislator alone to be capable of bringing this very thing about, by means of the music that belongs to the art of kingship, in those who have had their correct share of education—the people we were speaking of just now?

Young Socrates: That's certainly reasonable.

Visitor: Yes, and let's never call anyone who is incapable of doing this sort of thing by the names we are now investigating.

Young Socrates: Quite correct.

Visitor: Well then—is a 'courageous' soul that grasps this sort of truth e
not tamed, and wouldn't it be especially willing, as a result, to share in what is just, whereas if it fails to get a share of it, doesn't it rather slide away[76] towards becoming like some kind of beast?

Young Socrates: Quite.

75. Reading *en tais psuchais* at c7.

76. Reading *apoklinei* at e2.

Visitor: And what of the case of the 'moderate' sort of nature? If it gets a share of these opinions, doesn't it become genuinely moderate and wise, so far as wisdom goes in the context of life in a city, while if it fails to get a portion of the things we're talking about, doesn't it very appropriately acquire a disgraceful reputation, for simplemindedness?

Young Socrates: Absolutely.

Visitor: And let's not say, shall we, that this sort of interweaving and bonding, in the case of vicious men in relation to each other and good men in relation to the vicious, ever turns out to be lasting, nor that any sort of expert knowledge would ever seriously use it in relation to people like this?

Young Socrates: No; how would it?

310 Visitor: What I propose we should say is that it only takes root, through laws, in those dispositions that were both born noble in the first place and have been nurtured in accordance with their nature; and that it is for these that this remedy exists, by virtue of expertise. As we said, this bonding together is more divine, uniting parts of virtue that are by nature[77] unlike each other, and tend in opposite directions.

Young Socrates: Very true.

Visitor: Yes, and the remaining bonds, which are human, once this divine one exists, are perhaps not difficult at all either to understand, or to effect once one has understood them.

b Young Socrates: How then, and what are they?

Visitor: Those that consist in intermarriages and the sharing of children,[78] and in those matters relating to private giving-away in marriage. For most people, in the way they handle these things, do not bind themselves together correctly with respect to the procreation of children.

Young Socrates: Why so?

Visitor: Is there any reason why anyone should seriously concern themselves with censuring the pursuit of wealth and forms of influence in such contexts, as if it were worth discussing?

Young Socrates: None.

Visitor: No; it would be more appropriate for us to discuss those people
c who pay attention to family-types, and ask whether they are acting erroneously in some way.

Young Socrates: Yes, that's reasonable.

Visitor: Well, they act out of entirely the wrong sort of consideration: they go for what is immediately easiest, welcoming those who are much like them, and not liking those who are unlike them, assigning the largest part of their decisions to their feelings of antipathy.

Young Socrates: How?

Visitor: The moderate, I think, look out for people with the disposition they themselves possess, and so far as they can they both marry from

77. Reading *phusei* at a5.

78. I.e., between families, through marriage.

among these and marry off the daughters they are giving away back to d
people of this sort.[79] The type related to courage does just the same thing, seeking after the nature that belongs to itself, when both types ought to do completely the opposite of this.

Young Socrates: How, and why?

Visitor: Because it is in the nature of courage that when it is reproduced over many generations without being mixed with a moderate nature, it comes to a peak of power at first, but in the end it bursts out completely in fits of madness.

Young Socrates: That's likely.

Visitor: And in its turn the soul that is too full of reserve and has no
admixture of courageous initiative, and is reproduced over many genera- e
tions in this way, by nature grows more sluggish than is timely and then in the end is completely crippled.

Young Socrates: It's likely that this too turns out as you say.

Visitor: It was these bonds that I meant when I said that there was no difficulty at all in tying them together once the situation existed in which both types had a single opinion about what was fine and good. For this is the single and complete task of kingly weaving-together, never to allow moderate dispositions to stand away from the courageous. Rather, by working them closely into each other as if with a shuttle, through sharing of opinions, through honors, dishonor, esteem, and the giving of pledges
to one another, it draws together a smooth and 'fine-woven' fabric out of 311
them, as the expression is, and always entrusts offices in cities to these in common.

Young Socrates: How?

Visitor: By choosing the person who has both qualities to put in charge wherever there turns out to be a need for a single officer, and by mixing together a part of each of these groups where there is a need for more than one. For the dispositions of moderate people when in office are markedly cautious, just, and conservative, but they lack bite, and a certain sharp and practical keenness.

Young Socrates: This too certainly seems to be the case.

Visitor: And the dispositions of the courageous, in their turn, are inferior b
to the others in relation to justice and caution, but have an exceptional degree of keenness when it comes to action. Everything in cities cannot go well, either on the private or on the public level, unless both of these groups are there to give their help.

Young Socrates: Quite.

Visitor: Then let us say that this marks the completion of the fabric which is the product of the art of statesmanship: the weaving together, with regular intertwining, of the dispositions of brave and moderate peo-
ple—when the expertise belonging to the king brings their life together in c
agreement and friendship and makes it common between them, completing

79. Reading *toioutous* at d1.

311c the most magnificent and best of all fabrics and covering with it all the other inhabitants of cities, both slave and free; and holds them together with this twining and rules and directs without, so far as it belongs to a city to be happy, falling short of that in any respect.

[OLDER] SOCRATES:[80] Another most excellent portrait, visitor, this one that you have completed for us, of the man who possesses the art of kingship: the statesman.

80. The final words are attributed by many editors to the younger Socrates, but they seem perhaps a little authoritative for him, and it was after all old Socrates himself who set up the whole discussion in the beginning—both in the *Sophist* and in the *Statesman*.

# PARMENIDES

*The great philosopher Parmenides is the central figure of this dialogue. He, not Socrates, directs the philosophical discussion—if Plato has a 'spokesman' here, it is Parmenides. Socrates is portrayed as a very bright and promising young philosopher—he is virtually a teenager, only just beginning his career in the subject—who needs to think a lot harder and longer before he will have an adequate grasp of the nature of reality: this Socrates is a budding metaphysician, not the purely ethical thinker of* Apology *and other 'Socratic' dialogues.*

*Accompanied by his disciple Zeno (originator of Zeno's paradoxes), Parmenides has come on a visit to Athens. At Pythodorus' house, after Zeno has read out his book (now lost) attacking the intelligibility of any 'plurality' of real things, Socrates questions Zeno and is then questioned by Parmenides about his own conception of reality as consisting of nonphysical, nonperceptible 'Forms' in which perceptible, physical entities 'participate'. Parmenides raises six difficulties that Socrates' view entails, including the celebrated 'third man' argument to which twentieth-century analytical philosophers have paid much attention. Concluding the first part of the dialogue, he explains the method of analysis which Socrates must now use in order to resolve them—Socrates' efforts to articulate a theory of Forms have been premature. One must consider systematically not just the consequences of any hypothesis, but also those of its denial, and the method involves other complexities as well: one must systematically consider eight different trains of consequences, in order to decide finally what the right way of putting one's thesis will be. In the second part of the dialogue, occupying more than two-thirds of its total length, Parmenides demonstrates this new method, using as his respondent not Socrates but one of the other young men present, Aristotle. (In choosing this name, Plato may have been alluding to the philosopher Aristotle, who began his own metaphysical work as a member of Plato's Academy.) Considering the 'hypothesis' of 'one being', he works out a series of eight conflicting 'deductions' (plus a ninth, 155e–157b, added as an appendix to the first two) as to its metaphysically significant properties—its being, unity, sameness and difference, similarity and dissimilarity, motion and rest, place, time, and so on. It is left to Socrates, and to the reader, to infer just what use to make of these deductions in determining how best to formulate an adequate theory of Forms. Since the theory that Socrates presented at the beginning of the dialogue is plainly the one developed in* Symposium, Phaedo, *and* Republic, *this dialogue seems to be implying that that theory of Forms needs refurbishing and that, in demonstrating his method,*

*Parmenides has shown us how to do that.* Parmenides *thus points forward to* Sophist, Statesman, *and* Philebus, *where Forms are further rethought.*

*The meeting of Socrates with the Eleatic philosophers (an invention of Plato's) is reported in a way unparalleled in the other dialogues. The narrator, Cephalus—a different Cephalus from the one in whose house the* Republic's *conversation takes place—speaks directly to the reader (as Socrates himself does in* Republic*), telling of his visit to Athens from his home in Clazomenae, accompanied by a group of Clazomenian philosophers. (Clazomenae was famous as the birthplace of the pre-Socratic 'physical' philosopher Anaxagoras.) They have come specially to hear Antiphon, in fact Plato's younger half brother, recite from memory the record of this conversation: he had heard it from Pythodorus. Cephalus now reports what Antiphon said, in himself reporting what Pythodorus had told him the various speakers on the original occasion had said to one another: four levels of conversation, counting the one Cephalus is having now with an undetermined group—us, the readers. The effect is twofold: to emphasize the extraordinary philosophical value of this conversation and to put us hearers at a great intellectual distance from it—as if to say that we could barely be expected to assimilate and learn properly from it. The situation in* Symposium *is in some ways comparable—except that the meeting there is reported at only two removes and its fame apparently extends only to those with a personal interest in Socrates (one intimate of Socrates has just reported it to a second and is now reporting it to another friend).* This *conversation is marked as having truly universal significance.*

*J.M.C.*

## Cephalus

126 When we arrived in Athens from home in Clazomenae, we ran into Adeimantus and Glaucon in the marketplace. Adeimantus took me by the hand and said, "Welcome, Cephalus. If there is anything you want here that we can do for you, please tell us."

"In fact that's the very reason I'm here," I replied, "to ask a favor of you."

"Tell us what you want," he said.

b And I replied, "Your half brother on your mother's side – what was his name? I've forgotten. He would have been a child when I came here from Clazomenae to stay before – and that's a long time ago now. I think his father's name was Pyrilampes."

"It was, indeed," he said.

"And his?"

"Antiphon. But why do you ask?"

"These men are fellow citizens of mine," I said, "keen philosophers, and they have heard that this Antiphon met many times with a friend of Zeno's

Translated by Mary Louise Gill and Paul Ryan.

called Pythodorus and can recite from memory the discussion that Socrates c
and Zeno and Parmenides once had, since he heard it often from Pythodorus."

"That's true," he said.

"Well, we want to hear that discussion," I replied.

"Nothing hard about that," he said. "When Antiphon was a young man, he practiced it to perfection, although these days, just like the grandfather he's named for, he devotes most of his time to horses. But if that's what's called for, let's go to his house. He left here to go home just a short time ago, but he lives close by in Melite."

After this exchange, we set off walking and found Antiphon at home 127
engaging a smith to work on a bit of some kind. When he had finished with the smith, and his brothers told him why we were there, he recognized me from my earlier visit and greeted me. We asked him to go through the discussion, and he balked at first – it was, he said, a lot of work. But finally he narrated it in detail.

Antiphon said that Pythodorus said that Zeno and Parmenides once
came to the Great Panathenaea. Parmenides was already quite venerable, b
very gray but of distinguished appearance, about sixty-five years old. Zeno was at that time close to forty, a tall, handsome man who had been, as rumor had it, the object of Parmenides' affections when he was a boy.
Antiphon said that the two of them were staying with Pythodorus, outside c
the city wall in the Potters' Quarter, and that Socrates had come there, along with a number of others, because they were eager to hear Zeno read his book, which he and Parmenides had just brought to Athens for the first time. Socrates was then quite young.

Zeno was reading to them in person; Parmenides happened to be out.
Very little remained to be read when Pythodorus, as he related it, came d
in, and with him Parmenides and Aristotle – the man who later became one of the Thirty. They listened to a little of the book at the very end. But not Pythodorus himself; he had heard Zeno read it before.

Then Socrates, after he had heard it, asked Zeno to read the first hypothe-
sis of the first argument again; and when he had read it, Socrates said, e
"Zeno, what do you mean by this: if things[1] are many, they must then be both like and unlike, but that is impossible, because unlike things can't be like or like things unlike? That's what you say, isn't it?"

"It is," said Zeno.

"If it's impossible for unlike things to be like and like things unlike, isn't it then also impossible for them to be many? Because, if they were many, they would have incompatible properties. Is this the point of your arguments – simply to maintain, in opposition to everything that is commonly said, that things are not many? And do you suppose that each of your arguments is proof for this position, so that you think you give as

1. Lit., "the things that are."

many proofs that things are not many as your book has arguments? Is
128 that what you're saying – or do I misunderstand?"

"No," Zeno replied. "On the contrary, you grasp the general point of the book splendidly."

"Parmenides," Socrates said, "I understand that Zeno wants to be on intimate terms with you not only in friendship but also in his book. He has, in a way, written the same thing as you, but by changing it round he tries to fool us into thinking he is saying something different. You say in
b your poem that the all is one, and you give splendid and excellent proofs for that; he, for his part, says that it is not many and gives a vast array of very grand proofs of his own. So, with one of you saying 'one,' and the other 'not many,' and with each of you speaking in a way that suggests that you've said nothing the same – although you mean practically the same thing – what you've said you appear to have said over the heads of the rest of us."

"Yes, Socrates," said Zeno. "Still, you haven't completely discerned the truth about my book, even though you chase down its arguments and
c follow their spoor as keenly as a young Spartan hound. First of all, you have missed this point: the book doesn't at all preen itself on having been written with the intent you described, while disguising it from people, as if that were some great accomplishment. You have mentioned something that happened accidentally. The truth is that the book comes to the defense of Parmenides' argument against those who try to make fun of it by
d claiming that, if it[2] is one, many absurdities and self-contradictions result from that argument. Accordingly, my book speaks against those who assert the many and pays them back in kind with something for good measure, since it aims to make clear that their hypothesis, if it is many,[3] would, if someone examined the matter thoroughly, suffer consequences even more absurd than those suffered by the hypothesis of its being one. In that competitive spirit, then, I wrote the book when I was a young man. Someone made an unauthorized copy, so I didn't even have a chance to decide
e for myself whether or not it should see the light. So in this respect you missed the point, Socrates: you think it was written not out of a young man's competitiveness, but out of a mature man's vainglory. Still, as I said, your portrayal was not bad."

"I take your point," Socrates said, "and I believe it was as you say. But
129 tell me this: don't you acknowledge that there is a form, itself by itself,[4]

2. I.e., the all (cf. 128a8–b1).

3. In English we normally speak of a hypothesis *that* something is the case. Instead, Zeno here, and later Socrates and Parmenides, regularly place the content of a hypothesis within an "if" clause, ready for us to draw out its implications and consequences: e.g., "if the all is one, then . . . ," or "if the all is many, then. . . ."

4. According to the usage of this dialogue, something is "itself by itself," first, if it is separate from other things or is considered on its own, apart from other things. When the phrase is construed in this way, "by itself" means "apart, on its own." Second,

of likeness, and another form, opposite to this, which is what unlike is? Don't you and I and the other things we call 'many' get a share of those two entities? And don't things that get a share of likeness come to be like in that way and to the extent that they get a share, whereas things that get a share of unlikeness come to be unlike, and things that get a share of both come to be both? And even if all things get a share of both, though they are opposites, and by partaking of them are both like and unlike themselves, what's astonishing about that?

"If someone showed that the likes themselves come to be unlike or the b
unlikes like – that, I think, would be a marvel; but if he shows that things that partake of both of these have both properties, there seems to me nothing strange about that, Zeno – not even if someone shows that all things are one by partaking of oneness,[5] and that these same things are many by partaking also of multitude. But if he should demonstrate this thing itself, what one is, to be many, or, conversely, the many to be one – at this I'll be astonished.

"And it's the same with all the others: if he could show that the kinds c
and forms[6] themselves have in themselves these opposite properties, that would call for astonishment. But if someone should demonstrate that I am one thing and many, what's astonishing about that? He will say, when he wants to show that I'm many, that my right side is different from my left, and my front from my back, and likewise with my upper and lower parts – since I take it I do partake of multitude. But when he wants to show that I'm one, he will say I'm one person among the seven of us, d
because I also partake of oneness. Thus he shows that both are true.

"So if – in the case of stones and sticks and such things – someone tries to show that the same thing is many and one, we'll say that he is demonstrating *something* to be many and one, not the one to be many or the many one – and we'll say that he is saying nothing astonishing, but just what all of us would agree to. But if someone first distinguishes as separate the forms, themselves by themselves, of the things I was talking about a moment ago – for example, likeness and unlikeness, multitude and oneness, rest and motion, and everything of that sort – and then shows e
that in themselves they can mix together and separate, I for my part," he said, "would be utterly amazed, Zeno. I think these issues have been

---

something is "itself by itself," if it is itself responsible for its own proper being, independently of other things. When the phrase is understood in this way, "by itself" means "in virtue of, or because of, itself." Both of these meanings should be kept in mind whenever this phrase recurs in the translation.

5. In this dialogue Plato uses the expression *to hen* in several ways. It is variously translated as "the one," "oneness," and "one" depending on the context.

6. In this dialogue Plato uses three different abstract expressions to specify these entities, two of which occur here: *genos* (a term restricted to the part of the dialogue preceding the "Deductions"), rendered as "kind," and *eidos*, rendered as "form." Later he will use a third term, *idea*, rendered as "character."

handled with great vigor in your book; but I would, as I say, be much
more impressed if someone were able to display this same difficulty,
which you and Parmenides went through in the case of visible things, also
130 similarly entwined in multifarious ways in the forms themselves – in things
that are grasped by reasoning."

Pythodorus said that, while Socrates was saying all this, he himself kept
from moment to moment expecting Parmenides and Zeno to get annoyed;
but they both paid close attention to Socrates and often glanced at each
other and smiled, as though they admired him. In fact, what Parmenides
said when Socrates had finished confirmed this impression. "Socrates," he
b said, "you are much to be admired for your keenness for argument! Tell
me. Have you yourself distinguished as separate, in the way you mention,
certain forms themselves, and also as separate the things that partake of
them? And do you think that likeness itself is something, separate from
the likeness we have? And one and many and all the things you heard
Zeno read about a while ago?"

"I do indeed," Socrates answered.

"And what about these?" asked Parmenides. "Is there a form, itself by
itself, of just, and beautiful, and good, and everything of that sort?"

"Yes," he said.

c "What about a form of human being, separate from us and all those like
us? Is there a form itself of human being, or fire, or water?"

Socrates said, "Parmenides, I've often found myself in doubt whether I
should talk about those in the same way as the others or differently."

"And what about these, Socrates? Things that might seem absurd, like hair
and mud and dirt, or anything else totally undignified and worthless? Are
d you doubtful whether or not you should say that a form is separate for each
of these, too, which in turn is other than anything we touch with our hands?"

"Not at all," Socrates answered. "On the contrary, these things are in
fact just what we see. Surely it's too outlandish to think there is a form
for them. Not that the thought that the same thing might hold in all cases
hasn't troubled me from time to time. Then, when I get bogged down in
that, I hurry away, afraid that I may fall into some pit of nonsense and
come to harm; but when I arrive back in the vicinity of the things we agreed
a moment ago have forms, I linger there and occupy myself with them."

e "That's because you are still young, Socrates," said Parmenides, "and
philosophy has not yet gripped you as, in my opinion, it will in the future,
once you begin to consider none of the cases beneath your notice. Now,
though, you still care about what people think, because of your youth.

"But tell me this: is it your view that, as you say, there are certain forms
from which these other things, by getting a share of them, derive their
131 names – as, for instance, they come to be like by getting a share of likeness,
large by getting a share of largeness, and just and beautiful by getting a
share of justice and beauty?"

"It certainly is," Socrates replied.

"So does each thing that gets a share get as its share the form as a whole or a part of it? Or could there be some other means of getting a share apart from these two?"

"How could there be?" he said.

"Do you think, then, that the form as a whole – one thing – is in each of the many? Or what do you think?"

"What's to prevent its being one,[7] Parmenides?" said Socrates.

"So, being one and the same, it will be at the same time, as a whole, in things that are many and separate; and thus it would be separate from itself." b

"No it wouldn't," Socrates said. "Not if it's like one and the same day. That is in many places at the same time and is none the less not separate from itself. If it's like that, each of the forms might be, at the same time, one and the same in all."

"Socrates," he said, "how neatly you make one and the same thing be in many places at the same time! It's as if you were to cover many people with a sail, and then say that one thing as a whole is over many. Or isn't that the sort of thing you mean to say?"

"Perhaps," he replied. c

"In that case would the sail be, as a whole, over each person, or would a part of it be over one person and another part over another?"

"A part."

"So the forms themselves are divisible, Socrates," he said, "and things that partake of them would partake of a part; no longer would a whole form, but only a part of it, be in each thing."

"It does appear that way."

"Then are you willing to say, Socrates, that our one form is really divided? Will it still be one?"

"Not at all," he replied.

"No," said Parmenides. "For suppose you are going to divide largeness itself. If each of the many large things is to be large by a part of largeness d smaller than largeness itself, won't that appear unreasonable?"

"It certainly will," he replied.

"What about this? Will each thing that has received a small part of the equal have something by which to be equal to anything, when its portion is less than the equal itself?"

"That's impossible."

"Well, suppose one of us is going to have a part of the small. The small will be larger than that part of it, since the part is a part of it: so the small itself will be larger! And that to which the part subtracted is added will e be smaller, not larger, than it was before."

"That surely couldn't happen," he said.

7. Removing the brackets in a10–11.

"Socrates, in what way, then, will the other things get a share of your forms, if they can do so neither by getting parts nor by getting wholes?"

"By Zeus!" Socrates exclaimed. "It strikes me that's not at all easy to determine!"

"And what do you think about the following?"

"What's that?"

132 "I suppose you think each form is one on the following ground: whenever some number of things seem to you to be large, perhaps there seems to be some one character, the same as you look at them all, and from that you conclude that the large is one."

"That's true," he said.

"What about the large itself and the other large things? If you look at them all in the same way with the mind's eye, again won't some one thing appear large, by which all these appear large?"[8]

"It seems so."

"So another form of largeness will make its appearance, which has emerged alongside largeness itself and the things that partake of it, and
b in turn another over all these, by which all of them will be large. Each of your forms will no longer be one, but unlimited in multitude."

"But, Parmenides, maybe each of these forms is a thought,"[9] Socrates said, "and properly occurs only in minds. In this way each of them might be one and no longer face the difficulties mentioned just now."

"What do you mean?" he asked. "Is each of the thoughts one, but a thought of nothing?"

"No, that's impossible," he said.

"Of something, rather?"

"Yes."

c "Of something that is, or of something that is not?"

"Of something that is."

"Isn't it of some one thing, which that thought thinks is over all the instances, being some one character?"

"Yes."

"Then won't this thing that is thought to be one, being always the same over all the instances, be a form?"

"That, too, appears necessary."

"And what about this?" said Parmenides. "Given your claim that other things partake of forms, won't you necessarily think either that each thing is composed of thoughts and all things think, or that, although they are thoughts, they are unthinking?"[10]

"That isn't reasonable either, Parmenides," he said. "No, what appears
d most likely to me is this: these forms are like patterns set in nature, and

8. Alternatively: "If you look at them all in the same way with the mind's eye, won't some one large again appear, by which all these appear large?"

9. Alternatively: "But, Parmenides, maybe each of the forms is a thought of these things."

10. Alternatively: "or that, although they are thoughts, they are not thought?"

other things resemble them and are likenesses; and this partaking of the forms is, for the other things, simply being modeled on them."

"If something resembles the form," he said, "can that form not be like what has been modeled on it, to the extent that the thing has been made like it? Or is there any way for something like to be like what is not like it?"

"There is not."

"And isn't there a compelling necessity for that which is like to partake
of the same one form as what is like it?"[11] e

"There is."

"But if like things are like by partaking of something, won't that be the form itself?"

"Undoubtedly."

"Therefore nothing can be like the form, nor can the form be like anything else. Otherwise, alongside the form another form will always make its
appearance, and if that form is like anything, yet another; and if the form 133
proves to be like what partakes of it, a fresh form will never cease emerging."

"That's very true."

"So other things don't get a share of the forms by likeness; we must seek some other means by which they get a share."

"So it seems."

"Then do you see, Socrates," he said, "how great the difficulty is if one marks things off as forms, themselves by themselves?"

"Quite clearly."

"I assure you," he said, "that you do not yet, if I may put it so, have
an inkling of how great the difficulty is if you are going to posit one form b
in each case every time you make a distinction among things."

"How so?" he asked.

"There are many other reasons," Parmenides said, "but the main one is this: suppose someone were to say that if the forms are such as we claim they must be, they cannot even be known. If anyone should raise that objection, you wouldn't be able to show him that he is wrong, unless the objector happened to be widely experienced and not ungifted, and consented to pay attention while in your effort to show him you dealt with many distant considerations. Otherwise, the person who insists that
they are necessarily unknowable would remain unconvinced." c

"Why is that, Parmenides?" Socrates asked.

"Because I think that you, Socrates, and anyone else who posits that there is for each thing some being, itself by itself, would agree, to begin with, that none of those beings is in us."

"Yes – how could it still be itself by itself?" replied Socrates.

"Very good," said Parmenides. "And so all the characters that are what they are in relation to each other have their being in relation to themselves
but not in relation to things that belong to us. And whether one posits the d

11. Removing the brackets in e1.

latter as likenesses or in some other way, it is by partaking of them that we come to be called by their various names. These things that belong to us, although they have the same names as the forms, are in their turn what they are in relation to themselves but not in relation to the forms; and all the things named in this way are *of* themselves but not *of* the forms."

"What do you mean?" Socrates asked.

"Take an example," said Parmenides. "If one of us is somebody's master or somebody's slave, he is surely not a slave of master itself – of what a
e master is – nor is the master a master of slave itself – of what a slave is. On the contrary, being a human being, he is a master or slave of a human being. Mastery itself, on the other hand, is what it is of slavery itself; and, in the same way, slavery itself is slavery of mastery itself. Things in us do not have their power in relation to forms, nor do they have theirs in relation to us; but, I repeat, forms are what they are *of* themselves and in relation
134 to themselves, and things that belong to us are, in the same way, what they are in relation to themselves. You do understand what I mean?"

"Certainly," Socrates said, "I understand."

"So too," he said, "knowledge itself, what knowledge is, would be knowledge of that truth itself, which is what truth is?"

"Certainly."

"Furthermore, each particular knowledge, what it is, would be knowledge of some particular thing, of what that thing is. Isn't that so?"

"Yes."

"But wouldn't knowledge that belongs to us be of the truth that belongs to our world? And wouldn't it follow that each particular knowledge that
b belongs to us is in turn knowledge of some particular thing in our world?"

"Necessarily."

"But, as you agree, we neither have the forms themselves nor can they belong to us."

"Yes, you're quite right."

"And surely the kinds themselves, what each of them is, are known by the form of knowledge itself?"

"Yes."

"The very thing that we don't have."

"No, we don't."

"So none of the forms is known by us, because we don't partake of knowledge itself."

"It seems not."

"Then the beautiful itself, what it is, cannot be known by us, nor can the
c good, nor, indeed, can any of the things we take to be characters themselves."

"It looks that way."

"Here's something even more shocking than that."

"What's that?"

"Surely you would say that if in fact there is knowledge – a kind itself – it is much more precise than is knowledge that belongs to us. And the same goes for beauty and all the others."

"Yes."

"Well, whatever else partakes of knowledge itself, wouldn't you say that god more than anyone else has this most precise knowledge?"

"Necessarily."

"Tell me, will god, having knowledge itself, then be able to know things d
that belong to our world?"

"Yes, why not?"

"Because we have agreed, Socrates," Parmenides said, "that those forms do not have their power in relation to things in our world, and things in our world do not have theirs in relation to forms, but that things in each group have their power in relation to themselves."

"Yes, we did agree on that."

"Well then, if this most precise mastery and this most precise knowledge
belong to the divine, the gods' mastery could never master us, nor could
their knowledge know us or anything that belongs to us. No, just as we e
do not govern them by our governance and know nothing of the divine
by our knowledge, so they in their turn are, for the same reason, neither
our masters nor, being gods, do they know human affairs."

"If god is to be stripped of knowing," he said, "our argument may be getting too bizarre."

"And yet, Socrates," said Parmenides, "the forms inevitably involve
these objections and a host of others besides – if there are those characters 135
for things, and a person is to mark off each form as 'something itself.' As
a result, whoever hears about them is doubtful and objects that they do
not exist, and that, even if they *do*, they must by strict necessity be unknow-
able to human nature; and in saying this he seems to have a point; and,
as we said, he is extraordinarily hard to win over. Only a very gifted man
can come to know that for each thing there is some kind, a being itself by b
itself; but only a prodigy more remarkable still will discover that and be
able to teach someone else who has sifted all these difficulties thoroughly
and critically for himself."

"I agree with you, Parmenides," Socrates said. "That's very much what I think too."

"Yet on the other hand, Socrates," said Parmenides, "if someone, having
an eye on all the difficulties we have just brought up and others of the
same sort, won't allow that there are forms for things and won't mark off
a form for each one, he won't have anywhere to turn his thought, since
he doesn't allow that for each thing there is a character that is always the c
same. In this way he will destroy the power of dialectic[12] entirely. But I
think you are only too well aware of that."

"What you say is true," Socrates said.

"What then will you do about philosophy? Where will you turn, while these difficulties remain unresolved?"

12. The Greek word is *dialegesthai*, which could instead be translated as "discourse," or untechnically as "conversation."

"I don't think I have anything clearly in view, at least not at present."

"Socrates, that's because you are trying to mark off something beautiful, and just, and good, and each one of the forms, too soon," he said, "before
d you have been properly trained. I noticed that the other day too, as I listened to you conversing with Aristotle here. The impulse you bring to argument is noble and divine, make no mistake about it. But while you are still young, put your back into it and get more training through something people think useless – what the crowd call idle talk. Otherwise, the truth will escape you."

"What manner of training is that, Parmenides?" he asked.

"The manner is just what you heard from Zeno," he said. "Except I was
e also impressed by something you had to say to him: you didn't allow him to remain among visible things and observe their wandering between opposites. You asked him to observe it instead among those things that one might above all grasp by means of reason and might think to be forms."

"I did that," he said, "because I think that here, among visible things, it's not at all hard to show that things are both like and unlike and anything else you please."

"And you are quite right," he said. "But you must do the following in addition to that: if you want to be trained more thoroughly, you must not
136 only hypothesize, if each thing is, and examine the consequences of that hypothesis; you must also hypothesize, if that same thing is not."

"What do you mean?" he asked.

"If you like," said Parmenides, "take as an example this hypothesis that Zeno entertained: if many are,[13] what must the consequences be both for the many themselves in relation to themselves and in relation to the one, and for the one in relation to itself and in relation to the many? And, in turn, on the hypothesis, if many are not, you must again examine what the consequences will be both for the one and for the many in relation
b to themselves and in relation to each other. And again, in turn, if you hypothesize, if likeness is or if it is not, you must examine what the consequences will be on each hypothesis, both for the things hypothesized themselves and for the others, both in relation to themselves and in relation to each other. And the same method applies to unlike, to motion, to rest, to generation and destruction, and to being itself and not-being. And, in a word, concerning whatever you might ever hypothesize as being or as not being or as having any other property, you must examine the
c consequences for the thing you hypothesize in relation to itself and in relation to each one of the others, whichever you select, and in relation to several of them and to all of them in the same way; and, in turn, you must examine the others, both in relation to themselves and in relation to whatever other thing you select on each occasion, whether what you hypothesize you hypothesize as being or as not being. All this you must

13. Alternatively: "if [things] are many," or "if there are many."

do if, after completing your training, you are to achieve a full view of the truth."

"Scarcely manageable, Parmenides, this task you describe! And besides, I don't quite understand," he said. "To help me understand more fully, why don't you hypothesize something and go through the exercise for me yourself?"

"For a man my age that's a big assignment, Socrates," he said. d

"Well then," said Socrates, "you, Zeno – why don't you go through it for us?"

And Antiphon said that Zeno laughed and said, "Let's beg Parmenides
to do it himself, Socrates. What he's proposing won't be easy, I'm afraid.
Or don't you recognize what a big assignment it is? Indeed, if there were
more of us here, it wouldn't be right to ask him – it's not fitting, especially
for a man his age, to engage in such a discussion in front of a crowd.
Ordinary people don't know that without this comprehensive and circu- e
itous treatment we cannot hit upon the truth and gain insight. And so,
Parmenides, I join with Socrates in begging you, so that I too may become
your pupil again after all this time."

When Zeno had finished speaking, Antiphon said that Pythodorus said
that he too, along with Aristotle and the others, begged Parmenides not
to refuse, but to give a demonstration of what he was recommending. In
the end Parmenides said: "I am obliged to go along with you. And yet I
feel like the horse in the poem of Ibycus.[14] Ibycus compares himself to a
horse – a champion but no longer young, on the point of drawing a chariot 137
in a race and trembling at what experience tells him is about to happen –
and says that he himself, old man that he is, is being forced against his
will to compete in Love's game. I too, when I think back, feel a good deal
of anxiety as to how at my age I am to make my way across such a vast
and formidable sea of words. Even so, I'll do it, since it is right for me to
oblige you; and besides, we are, as Zeno says, by ourselves.

"Well then, at what point shall we start? What shall we hypothesize b
first? I know: since we have in fact decided to play this strenuous game,
is it all right with you if I begin with myself and my own hypothesis?
Shall I hypothesize about the one itself and consider what the consequences
must be, if it is one or if it is not one?"

"By all means," said Zeno.

"Then who will answer my questions?" he asked. "The youngest, surely? For he would give the least trouble and would be the most likely to say what he thinks. At the same time his answer would allow me a breathing space."

"I'm ready to play this role for you, Parmenides," Aristotle said. "Because c
you mean me when you say the youngest. Ask away – you can count on
me to answer."

14. Ibycus frg. 6 (Page 1962). Ibycus of Rhegium (sixth century B.C.) was best known for his love poems.

"Very good," he said. "If it is one,[15] the one would not be many, would it?"—"No, how could it?"—"Then there cannot be a part of it nor can it be a whole."—"Why?"—"A part is surely part of a whole."—"Yes."—"But what is the whole? Wouldn't that from which no part is missing be a whole?"—"Certainly."—"In both cases, then, the one would be composed of parts, both if it is a whole and if it has parts."—"Necessarily."—"So in
d both cases the one would thus be many rather than one."—"True."—"Yet it must be not many but one."—"It must."—"Therefore, if the one is to be one, it will neither be a whole nor have parts."—"No, it won't."

"Well, then, if it doesn't have a part, it could have neither a beginning nor an end nor a middle; for those would in fact be parts of it."—"That's right."—"Furthermore, end and beginning are limits of each thing."—"Doubtless."—"So the one is unlimited if it has neither beginning nor end."—"Unlimited."—"So it is also without shape; for it partakes of neither
e round nor straight."—"How so?"—"Round is surely that whose extremities are equidistant in every direction from the middle."—"Yes."—"Furthermore, straight is that whose middle stands in the way of the two extremities."—"Just so."—"So the one would have parts and be many if it partook of either a straight or a curved shape."—"Of course."—"There-
138 fore it is neither straight nor curved, since in fact it doesn't have parts."—"That's right."

"Furthermore, being like that, it would be nowhere, because it could be neither in another nor in itself."—"How is that?"—"If it were in another, it would surely be contained all around by the thing it was in and would touch it in many places with many parts; but since it is one and without parts and does not partake of circularity, it cannot possibly touch in many places all around."—"It can't."—"Yet, on the other hand, if it were in itself, its container would be none other than itself, if in fact it were in itself; for
b a thing can't be in something that doesn't contain it."—"No, it can't."—"So the container itself would be one thing, and the thing contained something else, since the same thing will not, as a whole at any rate, undergo and do both at once. And in that case the one would be no longer one but two."—"Yes, you're quite right."—"Therefore, the one is not anywhere, if it is neither in itself nor in another."—"It isn't."

"Then consider whether, since it is as we have said, it can be at rest or in motion."—"Yes, why not?"—"Because if it moves, it would either move
c spatially or be altered, since these are the only motions."—"Yes."—"But the one surely can't be altered from itself and still be one."—"It can't."—"Then it doesn't move by alteration at least."—"Apparently not."—"But by moving spatially?"—"Perhaps."—"And if the one moved spatially, it surely would either spin in a circle in the same location or change from one place to another."—"Necessarily."—"Well then, if it spins in a circle, it must be poised on its middle and have other parts of itself that move

15. The hypothesis could also be rendered "if one is." But cf. Parmenides' statement above at 137b.

round the middle. But how will a thing that has nothing to do with middle
or parts manage to be moved in a circle round its middle?"—"Not at d
all."—"But by changing places does it come to be here at one time, there
at another, and move in this way?"—"If in fact it moves at all."—"Wasn't
it shown that it cannot be anywhere in anything?"—"Yes."—"Then is it
not even more impossible for it to *come* to be?"—"I don't see why."—"If
something comes to be in something, isn't it necessary that it not yet be
in that thing – since it is still coming to be in it – and that it no longer be
entirely outside it, if in fact it is already coming to be in it?"—"Necessar-
ily."—"So if anything is to undergo this, only that which has parts could e
do so, because some of it would already be in that thing, while some, at
the same time, would be outside. But a thing that doesn't have parts will
not by any means be able to be, at the same time, neither wholly inside nor
wholly outside something."—"True."—"But isn't it much more impossible
still for a thing that has no parts and is not a whole to come to be in
something somewhere, if it does so neither part by part nor as a whole?"—
"Apparently."—"Therefore it doesn't change places by going somewhere
and coming to be in something, nor does it move by spinning in the same 139
location or by being altered."—"It seems not."—"The one, therefore, is
unmoved by every sort of motion."—"Unmoved."

"Yet, on the other hand, we also say that it cannot be in anything."—
"Yes, we do."—"Then it is also never in the *same* thing."—"Why?"—
"Because it would then be *in* that – in that same thing it is in."—"Of
course."—"But it was impossible for it to be either in itself or in another."—
"Yes, you're quite right."—"So the one is never in the same thing."—"It
seems not."—"But what is never in the same thing neither enjoys repose b
nor is at rest."—"No, it cannot."—"Therefore the one, as it seems, is neither
at rest nor in motion."—"It certainly does appear not."

"Furthermore, it won't be the same as another thing or itself; nor, again,
could it be different from itself or another thing."—"Why is that?"—"If it
were different from itself, it would surely be different from one, and would
not be one."—"True."—"On the other hand, if it were the same as another,
it would be that thing, and not itself. So in this way, too, it would not be c
just what it is – one – but would be different from one."—"Yes, you're
quite right."—"Therefore, it won't be the same as another or different from
itself."—"No, it won't."

"And it won't be different from another, as long as it is one; for it is not proper to one to be different from something, but proper to different-from-another alone, and to nothing else."—"That's right."—"Therefore it won't be different by being one. Or do you think it will?"—"No indeed."—"Yet if it isn't different by being one, it will not be so by itself; and if it isn't so by itself, it will not itself be so. And if it is itself in no way different, it will be different from nothing."—"That's right."

"Nor will it be the same as itself."—"Why not?"—"The nature of the d
one is not, of course, also that of the same."—"Why?"—"Because it is not
the case that, whenever a thing comes to be the same as something, it

comes to be one."—"But why?"—"If it comes to be the same as the many,
it must come to be many, not one."—"True."—"But if the one and the
same in no way differ, whenever something came to be the same, it would
always come to be one; and whenever it came to be one, it would always
e come to be the same."—"Certainly."—"Therefore, if the one is to be the
same as itself, it won't be one with itself; and thus it will be one and not
one. But this surely is impossible. Therefore the one can't be either different
from another or the same as itself."—"It can't."—"Thus the one could
neither be different from nor the same as itself or another."—"Yes, you're
quite right."

"Furthermore, it will be neither like nor unlike anything, either itself or
another."—"Why?"—"Because whatever has a property the same is surely
like."—"Yes."—"But it was shown that the same is separate in its nature
140 from the one."—"Yes, it was."—"But if the one has any property apart
from being one, it would be more than one; and that is impossible."—
"Yes."—"Therefore, the one can in no way have a property the same as
another or itself."—"Apparently not."—"So it cannot be like another or
itself either."—"It seems not."

"Nor does the one have the property of being different; for in this way
too it would be more than one."—"Yes, it would be more."—"Surely that
which has a property different from itself or another would be unlike itself
b or another, if in fact what has a property the same is like."—"That's
right."—"But the one, as it seems, since it in no way has a property different,
is in no way unlike itself or another thing."—"Yes, you're quite right."—
"Therefore the one could be neither like nor unlike another or itself."—
"Apparently not."

"Furthermore, being like that, it will be neither equal nor unequal to
itself or another."—"How?"—"If it is equal, it will be of the same measures
as that to which it is equal."—"Yes."—"But surely if it is greater or less,
c it will, in the case of things with which it is commensurate, have more
measures than those that are less, and fewer than those that are greater."—
"Yes."—"And in the case of things with which it is not commensurate, it
will be of smaller measures in the one case, and of larger measures in the
other."—"No doubt."—"Well, if a thing doesn't partake of the same, it
can't be of the same measures or of the same anything else at all, can it?"—
"It can't."—"So it couldn't be equal to itself or another, if it is not of the
same measures."—"It certainly appears not."—"Yet if it is, on the other
d hand, of more measures or fewer, it would have as many parts as measures;
and thus, again, it will be no longer one, but just as many as are its
measures."—"That's right."—"And if it were of one measure, it would
prove to be equal to its measure; but it was shown that it couldn't be equal
to anything."—"Yes, it was."—"Therefore, since it doesn't partake of one
measure or many or few, and since it doesn't partake of the same at all,
it will, as it seems, never be equal to itself or another; nor again will it be
greater or less than itself or another."—"That's absolutely so."

e "What about this? Do you think that the one can be older or younger
than, or the same age as, anything?"—"Yes, why not?"—"Because if it is

the same age as itself or another, it will surely partake of likeness and of equality of time, of which – likeness and equality – we said the one has no share."—"Yes, we did say that."—"And we also said that it does not partake of unlikeness and inequality."—"Of course."—"Then, being like
that, how will it be able to be older or younger than, or the same age as, 141
anything?"—"In no way."—"Therefore, the one could not be younger or older than, or the same age as, itself or another."—"Apparently not."

"So if it is like that, the one could not even be in time at all, could it? Or isn't it necessary, if something is in time, that it always come to be older than itself?"—"Necessarily."—"Isn't the older always older than a
younger?"—"To be sure."—"Therefore, that which comes to be older than b
itself comes to be, at the same time, younger than itself, if in fact it is to have something it comes to be older than."—"What do you mean?"—"I mean this: there is no need for a thing to come to be different from a thing that is already different; it must, rather, already be different from what is already different, have come to be different from what has come to be different, and be going to be different from what is going to be different; but it must not have come to be, be going to be, or be different from what comes to be different: it must come to be different, and nothing else."—
"Yes, that's necessary."—"But surely older is a difference from younger c
and from nothing else."—"Yes, it is."—"So that which comes to be older than itself must also, at the same time, come to be younger than itself."—"So it seems."—"But it must also not come to be for more or less time than itself; it must come to be and be and have come to be and be going to be for a time equal to itself."—"Yes, that too is necessary."—"Therefore it is necessary, as it seems, that each thing that is in time and partakes of
time be the same age as itself and, at the same time, come to be both older d
and younger than itself."—"It looks that way."—"But the one surely had no share of any of that."—"No, it didn't."—"Therefore, it has no share of time, nor is it *in* any time."—"It certainly isn't, as the argument proves."

"Now, don't you think that 'was' and 'has come to be' and 'was coming
to be' signify partaking of time past?"—"By all means."—"And again that e
'will be' and 'will come to be' and 'will be coming to be' signify partaking of time hereafter?"—"Yes."—"And that 'is' and 'comes to be' signify partaking of time now present?"—"Of course."—"Therefore, if the one partakes of no time at all, it is not the case that it has at one time come to be, was coming to be, or was; or has now come to be, comes to be, or is; or will hereafter come to be, will be coming to be, or will be."—"Very true."—"Could something partake of being except in one of those ways?"—"It couldn't."—"Therefore the one in no way partakes of being."—"It seems not."—"Therefore the one in no way is."—"Apparently not."—"Therefore neither *is* it in such a way as to be one, because it would then, by being and partaking of being, be. But, as it seems, the one neither is one nor is,
if we are obliged to trust this argument."—"It looks that way." 142

"If something is not, could anything belong *to* this thing that is not, or be *of* it?"—"How could it?"—"Therefore, no name belongs to it, nor is there an account or any knowledge or perception or opinion of it."—

"Apparently not."—"Therefore it is not named or spoken of, nor is it the object of opinion or knowledge, nor does anything that is perceive it."—"It seems not."—"Is it possible that these things are so for the one?"—"I certainly don't think so."

b "Do you want to return to the hypothesis from the beginning, in the hope that another kind of result may come to light as we go back over it?"—"I do indeed."—"If one is, we are saying, aren't we, that we must agree on the consequences for it, whatever they happen to be?"—"Yes."—"Consider from the beginning: if one is, can it *be*, but not partake of being?"—"It cannot."—"So there would also be the being of the one, and that is not the same as the one. For if it were, it couldn't be the being of
c the one, nor could the one partake of it. On the contrary, saying that one is would be like saying that one is one. But this time that is not the hypothesis, namely, what the consequences must be, if one is one, but if one is. Isn't that so?"—"Of course."—"Is that because 'is' signifies something other than 'one'?"—"Necessarily."—"So whenever someone, being brief, says 'one is,' would this simply mean that the one partakes of being?"—"Certainly."

"Let's again say what the consequences will be, if one is. Consider
d whether this hypothesis must not signify that the one is such as to have parts."—"How so?"—"In this way: if we state the 'is' of the one that is, and the 'one' of that which is one, and if being and oneness are not the same, but both belong to that same thing that we hypothesized, namely, the one that is, must it not itself, since it is one being, be a whole, and the parts of this whole be oneness and being?"—"Necessarily."—"Shall we call each of these two parts a part only, or must the part be called part of the whole?"—"Of the whole."—"Therefore whatever is one both is a whole and has a part."—"Certainly."

"Now, what about each of these two parts of the one that is, oneness
e and being? Is oneness ever absent from the being part or being from the oneness part?"—"That couldn't be."—"So again, each of the two parts possesses oneness and being; and the part, in its turn, is composed of at least two parts; and in this way always, for the same reason, whatever part turns up always possesses these two parts, since oneness always possesses being and being always possesses oneness. So, since it always
143 proves to be two, it must never be one."—"Absolutely."—"So, in this way, wouldn't the one that is be unlimited in multitude?"—"So it seems."

"Come, let's proceed further in the following way."—"How?"—"Do we say that the one partakes of being, and hence is?"—"Yes."—"And for this reason the one that is was shown to be many."—"Just so."—"And what about the one itself, which we say partakes of being? If we grasp it in thought alone by itself, without that of which we say it partakes, will it appear to be only one, or will this same thing also appear to be many?"—
b "One, I should think."—"Let's see. Must not its being be something and it itself something different, if in fact the one is not being but, as one,

partakes of being?"—"Necessarily."—"So if being is something and the one is something different, it is not by its being one that the one is different from being, nor by its being being that being is other than the one. On the contrary, they are different from each other by difference and otherness."—"Of course."—"And so difference is not the same as oneness or being."—"Obviously not."

"Now, if we select from them, say, being and difference, or being and c
oneness, or oneness and difference, do we not in each selection choose a certain pair that is correctly called 'both'?"—"How so?"—"As follows: we can say 'being'?"—"We can."—"And, again, we can say 'one'?"—"That too."—"So hasn't each of the pair been mentioned?"—"Yes."—"What about when I say 'being and oneness'? Haven't both been mentioned?"—"Certainly."—"And if I say 'being and difference' or 'difference and oneness,' and so on – in each case don't I speak of both?"—"Yes."—"Can things d
that are correctly called 'both' be both, but not two?"—"They cannot."—"If there are two things, is there any way for each member of the pair not to be one?"—"Not at all."—"Therefore, since in fact each pair taken together turns out to be two, each member would be one."—"Apparently."—"And if each of them is one, when any one is added to any couple, doesn't the total prove to be three?"—"Yes."—"And isn't three odd, and two even?"—"Doubtless."

"What about this? Since there are two, must there not also be twice, and e
since there are three, thrice, if in fact two is two times one and three is three times one?"—"Necessarily."—"Since there are two and twice, must there not be two times two? And since there are three and thrice, must there not be three times three?"—"Doubtless."—"And again: if there are three and they are two times, and if there are two and they are three times, must there not be two times three and three times two?"—"There certainly must."—"Therefore, there would be even times even, odd times odd, odd 144
times even, and even times odd."—"That's so."—"Then if that is so, do you think there is any number that need not be?"—"In no way at all."—"Therefore, if one is, there must also be number."—"Necessarily."—"But if there is number, there would be many, and an unlimited multitude of beings. Or doesn't number, unlimited in multitude, also prove to partake of being?"—"It certainly does."—"So if all number partakes of being, each part of number would also partake of it?"—"Yes."

"So has being been distributed to all things, which are many, and is it b
missing from none of the beings, neither the smallest nor the largest? Or is it unreasonable even to ask that question? How could being be missing from any of the beings?"—"In no way."—"So being is chopped up into beings of all kinds, from the smallest to the largest possible, and is the most divided thing of all; and the parts of being are countless."—"Quite c
so."—"Therefore its parts are the most numerous of things."—"The most numerous indeed."

"Now, is there any of them that is part of being, yet not one part?"—"How could that happen?"—"I take it, on the contrary, that if in fact it *is*,

it must always, as long as it is, be some one thing; it cannot be nothing."—
"Necessarily."—"So oneness is attached to every part of being and is not
absent from a smaller or a larger, or any other, part."—"Just so."—"So,
d being one, is it, as a whole, in many places at the same time? Look at this
carefully."—"I am – and I see that it's impossible."—"Therefore as divided,
if in fact not as a whole; for surely it will be present to all the parts of
being at the same time only as divided."—"Yes."—"Furthermore, a divided
thing certainly must be as numerous as its parts."—"Necessarily."—"So
we were not speaking truly just now, when we said that being had been
distributed into the most numerous parts. It is not distributed into more
e parts than oneness, but, as it seems, into parts equal to oneness, since
neither is being absent from oneness, nor is oneness absent from being.
On the contrary, being two, they are always equal throughout all things."—
"It appears absolutely so."—"Therefore, the one itself, chopped up by
being, is many and unlimited in multitude."—"Apparently."—"So not
only is it the case that the one being is many, but also the one itself,
completely distributed by being, must be many."—"Absolutely."

"Furthermore, because the parts are parts of a whole, the one, as the
145 whole, would be limited. Or aren't the parts contained by the whole?"—
"Necessarily."—"But surely that which contains would be a limit."—
"Doubtless."—"So the one that is is surely both one and many, a whole
and parts, and limited and unlimited in multitude."—"Apparently."

"So, since in fact it is limited, does it not also have extremities?"—
"Necessarily."—"And again: if it is a whole, would it not have a beginning,
a middle, and an end? Or can anything be a whole without those three?
And if any one of them is missing from something, will it still consent to
be a whole?"—"It won't."—"The one, as it seems, would indeed have
b a beginning, an end, and a middle."—"It would."—"But the middle is
equidistant from the extremities – otherwise, it wouldn't be a middle."—
"No, it wouldn't."—"Since the one is like that, it would partake of some
shape, as it seems, either straight or round, or some shape mixed from
both."—"Yes, it would partake of a shape."

"Since it is so, won't it be both in itself and in another?"—"How so?"—
"Each of the parts is surely in the whole, and none outside the whole."—
c "Just so."—"And are all the parts contained by the whole?"—"Yes."—
"Furthermore, the one is all the parts of itself, and not any more or less
than all."—"No, it isn't."—"The one is also the whole, is it not?"—"Doubt-
less."—"So if all its parts are actually in a whole, and the one is both all
the parts and the whole itself, and all the parts are contained by the whole,
the one would be contained by the one; and thus the one itself would,
then, be in itself."—"Apparently."

d "Yet, on the other hand, the whole is not in the parts, either in all or in
some one. For if it were in all, it would also have to be in one, because if
it were not in some one, it certainly could not be in all. And if this one is
among them all, but the whole is not in it, how will the whole still be in
all?"—"In no way."—"Nor is it in some of the parts: for if the whole were

in some, the greater would be in the less, which is impossible."—"Yes,
impossible."—"But if the whole is not in some or one or all the parts, must
it not be in something different or be nowhere at all?"—"Necessarily."— e
"If it were nowhere, it would be nothing; but since it is a whole, and is
not in itself, it must be in another. Isn't that so?"—"Certainly."—"So the
one, insofar as it is a whole, is in another; but insofar as it is all the parts,
it is in itself. And thus the one must be both in itself and in a different
thing."—"Necessarily."

"Since that is the one's natural state, must it not be both in motion and
at rest?"—"How?"—"It is surely at rest, if in fact it is in itself. For being 146
in one thing and not stirring from that, it would be in the same thing,
namely, itself."—"Yes, it is."—"And that which is always in the same
thing must, of course, always be at rest."—"Certainly."—"What about
this? Must not that which is always in a different thing be, on the contrary,
never in the same thing? And since it is never in the same thing, also not
at rest? And since not at rest, in motion?"—"Just so."—"Therefore the one,
since it is itself always both in itself and in a different thing, must always
be both in motion and at rest."—"Apparently."

"Furthermore, it must be the same as itself and different from itself, b
and, likewise, the same as and different from the others, if in fact it has
the aforesaid properties."—"How so?"—"Everything is surely related to
everything as follows: either it is the same or different; or, if it is not the
same or different, it would be related as part to whole or as whole to
part."—"Apparently."

"Is the one itself part of itself?"—"In no way."—"So neither could it be
a whole in relation to itself as part of itself, because then it would be a
part in relation to itself."—"No, it could not."—"But is the one different c
from one?"—"No indeed."—"So it couldn't be different from itself."—
"Certainly not."—"So if it is neither different nor whole nor part in relation
to itself, must it not then be the same as itself?"—"Necessarily."

"What about this? Must not that which is in something different from
itself – the self that is in the same thing as itself – be different from itself,
if in fact it is also to be in something different?"—"It seems so to me."—
"In fact the one was shown to be so, since it is, at the same time, both in
itself and in a different thing."—"Yes, it was."—"So in this way the one,
as it seems, would be different from itself."—"So it seems." d

"Now, if anything is different from something, won't it be different from
something that is different?"—"Necessarily."—"Aren't all the things that
are not-one different from the one, and the one from the things not-one?"—
"Doubtless."—"Therefore the one would be different from the oth-
ers."—"Different."

"Consider this: aren't the same itself and the different opposite to each
other?"—"Doubtless."—"Then will the same ever consent to be in the
different, or the different in the same?"—"It won't."—"So if the different
is never to be in the same, there is no being that the different is in for any
time; for if it were in anything for any time whatsoever, for that time the e

different would be in the same. Isn't that so?"—"Just so."—"But since it
is never in the same, the different would never be in any being."—"True."—
"So the different wouldn't be in the things not-one or in the one."—"Yes,
you're quite right."—"So not by the different would the one be different
from the things not-one or they different from it."—"No, it wouldn't."—
"Nor by themselves would they be different from each other, if they don't
147 partake of the different."—"Obviously not."—"But if they aren't different
by themselves or by the different, wouldn't they in fact entirely avoid
being different from each other?"—"They would."—"But neither do the
things not-one partake of the one; otherwise they would not be not-one, but
somehow one."—"True."—"So the things not-one could not be a number
either; for in that case, too, they would not be absolutely not-one, since
they would at least have number."—"Yes, you're quite right."—"And
again: are the things not-one parts of the one? Or would the things not-
one in that case, too, partake of the one?"—"They would."—"So if it is in
b every way one, and they are in every way not-one, the one would be
neither a part of the things not-one nor a whole with them as parts; and,
in turn, the things not-one would be neither parts of the one nor wholes
in relation to the one as part."—"No, they wouldn't."—"But in fact we
said that things that are neither parts nor wholes nor different from each
other will be the same as each other."—"Yes, we did."—"So are we to say
that the one, since it is so related to the things not-one, is the same as they
are?"—"Let's say so."—"Therefore the one, as it seems, is both different
from the others and itself, and the same as the others and itself."—"It
certainly looks that way from our argument."

c "Would the one then also be both like and unlike itself and the others?"—
"Perhaps."—"At any rate, since it was shown to be different from the
others, the others would surely also be different from it."—"To be sure."—
"Wouldn't it be different from the others just as they are different from
it, and neither more nor less?"—"Yes, why not?"—"So if neither more nor
less, in like degree."—"Yes."—"Accordingly, insofar as it has the property
of being different from the others and they, likewise, have the property
of being different from it, in this way the one would have a property the
same as the others, and they would have a property the same as it."—
"What do you mean?"

d "As follows: don't you apply to something each name you use?"—"I
do."—"Now, could you use the same name either more than once or
once?"—"I could."—"So if you use it once, do you call by name that thing
whose name it is, but not that thing, if you use it many times? Or whether
you utter the same name once or many times, do you quite necessarily
always also speak of the same thing?"—"To be sure."—"Now 'different'
e in particular is a name for something, isn't it?"—"Certainly."—"So when
you utter it, whether once or many times, you don't apply it to another
thing or name something other than that thing whose name it is."—"Neces-
sarily."—"Whenever we say 'the others are different from the one' and
'the one is different from the others,' although we use 'different' twice,

we don't apply it to another nature, but always to that nature whose name
it is."—"Of course."—"So insofar as the one is different from the others,
and the others from the one, on the basis of having the property difference 148
itself, the one would have a property not other, but the same as the others.
And that which has a property the same is surely like, isn't it?"—"Yes."—
"Indeed, insofar as the one has the property of being different from the
others, owing to that property itself it would be altogether like them all,
because it is altogether different from them all."—"So it seems."

"Yet, on the other hand, the like is opposite to the unlike."—"Yes."—
"Isn't the different also opposite to the same?"—"That too."—"But this
was shown as well: that the one is the same as the others."—"Yes, it b
was."—"And being the same as the others is the property opposite to
being different from the others."—"Certainly."—"Insofar as the one is
different, it was shown to be like."—"Yes."—"So insofar as it is the same,
it will be unlike, owing to the property opposite to that which makes it
like. And surely the different made it like?"—"Yes."—"So the same will
make it unlike; otherwise it won't be opposite to the different."—"So it c
seems."—"Therefore the one will be like and unlike the others – insofar
as it is different, like, and insofar as it is the same, unlike."—"Yes, it admits
of this argument too, as it seems."

"It also admits of the following."—"What is that?"—"Insofar as it has
a property the same, it has a property that is not of another kind; and if
it has a property that is not of another kind, it is not unlike; and if not
unlike, it is like. But insofar as it has a property other, it has a property
that is of another kind; and if it has a property that is of another kind, it
is unlike."—"That's true."—"So because the one is the same as the others
and because it is different, on both grounds and either, it would be both d
like and unlike the others."—"Certainly."

"So, in the same way, it will be like and unlike itself as well. Since in
fact it was shown to be both different from itself and the same as itself,
on both grounds and either, won't it be shown to be both like and unlike
itself?"—"Necessarily."

"And what about this? Consider the question whether the one touches
or does not touch itself and the others."—"Very well."—"Surely the one
was shown to be in itself as a whole."—"That's right."—"Isn't the one
also in the others?"—"Yes."—"Then insofar as it is in the others, it would e
touch the others; but insofar as it is in itself, it would be kept from touching
the others, and being in itself, would touch itself."—"Apparently."—"Thus
the one would touch itself and the others."—"It would."

"And again, in this way: must not everything that is to touch something
lie next to that which it is to touch, occupying the position adjacent to that
occupied by what it touches?"—"Necessarily."—"So, too, the one, if it is
to touch itself, must lie directly adjacent to itself, occupying a place next
to that in which it itself is."—"Yes, it must."—"Now if the one were two
it could do that and turn out to be in two places at the same time; but 149
won't it refuse as long as it is one?"—"Yes, you're quite right."—"So the

same necessity that keeps the one from being two keeps it from touching
itself."—"The same."

"But it won't touch the others either."—"Why?"—"Because, we say, that
which is to touch must, while being separate, be next to what it is to touch,
and there must be no third thing between them."—"True."—"So there
must be at least two things if there is to be contact."—"There must."—
"But if to the two items a third is added in a row, they themselves will
b be three, their contacts two."—"Yes."—"And thus whenever one item is
added, one contact is also added, and it follows that the contacts are always
fewer by one than the multitude of the numbers. For in regard to the
number being greater than the contacts, every later number exceeds all
the contacts by an amount equal to that by which the first two exceeded
c their contacts, since thereafter one is added to the number and, at the same
time, one contact to the contacts."—"That's right."—"So however many
the things are in number, the contacts are always fewer than they are by
one."—"True."—"But if there is only one, and not two, there could not
be contact."—"Obviously not."—"Certainly the things other than the one,
we say, are not one and do not partake of it, if in fact they are other."—
"No, they don't."—"So number is not in the others, if one is not in them."—
"Obviously not."—"So the others are neither one nor two, nor do they
d have a name of any other number."—"No."—"So the one alone is one,
and there could not be two."—"Apparently not."—"So there is no contact,
since there aren't two items."—"There isn't."—"Therefore, the one doesn't
touch the others nor do the others touch the one, since in fact there is no
contact."—"Yes, you're quite right."—"Thus, to sum up, the one both
touches and does not touch the others and itself."—"So it seems."

"Is it then both equal and unequal to itself and the others?"—"How
e so?"—"If the one were greater or less than the others, or they in turn
greater or less than it, they wouldn't be in any way greater or less than
each other by the one being one and the others being other than one –
that is, by their own being – would they? But if they each had equality in
addition to their own being, they would be equal to each other. And if
the others had largeness and the one had smallness, or vice versa, which-
ever form had largeness attached would be greater, and whichever had
smallness attached would be less?"—"Necessarily."

"Then aren't there these two forms, largeness and smallness? For cer-
tainly, if there weren't, they couldn't be opposite to each other and couldn't
150 occur in things that are."—"No. How could they?"—"So if smallness occurs
in the one, it would be either in the whole of it or in part of it."—"Necessar-
ily."—"What if it were to occur in the whole? Wouldn't it be in the one
either by being stretched equally throughout the whole of it, or by contain-
ing it?"—"Quite clearly."—"Wouldn't smallness, then, if it were in the
one equally throughout, be equal to it, but if it contained the one, be
larger?"—"Doubtless."—"So can smallness be equal to or larger than some-
b thing, and do the jobs of largeness and equality, but not its own?"—"It

can't."—"So smallness could not be in the one as a whole; but if in fact it is in the one, it would be in a part."—"Yes."—"But, again, not in all the part. Otherwise, it will do exactly the same thing as it did in relation to the whole: it will be equal to or larger than whatever part it is in."—"Necessarily."—"Therefore smallness will never be in any being, since it occurs neither in a part nor in a whole. Nor will anything be small except smallness itself."—"It seems not."

"So largeness won't be in the one either. For if it were, something else, apart from largeness itself, would be larger than something, namely, that c
which the largeness is in – and that too, although there is for it no small thing, which it must exceed, if in fact it is large. But this is impossible, since smallness is nowhere in anything."—"True."

"But largeness itself is not greater than anything other than smallness itself, nor is smallness less than anything other than largeness itself."—"No, they aren't."—"So the others aren't greater than the one, nor are they less, because they have neither largeness nor smallness. Nor do these two themselves – largeness and smallness – have, in relation to the one, their d
power of exceeding and being exceeded; they have it, rather, in relation to each other. Nor could the one, in its turn, be greater or less than these two or the others, since it has neither largeness nor smallness."—"It certainly appears not."—"So if the one is neither greater nor less than the others, it must neither exceed them nor be exceeded by them?"—"Necessarily."—"Now, it is quite necessary that something that neither exceeds nor is exceeded be equally matched, and if equally matched, equal."—"No doubt."

"Furthermore, the one would also itself be so in relation to itself: having e
neither largeness nor smallness in itself, it would neither be exceeded by nor exceed itself, but, being equally matched, would be equal to itself."—"Of course."—"Therefore the one would be equal to itself and the others."—"Apparently."

"And yet, since it is in itself, it would also be around itself on the outside, and as container it would be greater than itself, but as contained it would 151
be less. And thus the one would be greater and less than itself."—"Yes, it would be."

"Isn't this necessary too, that there be nothing outside the one and the others?"—"No doubt."—"But surely what is must always be somewhere."—"Yes."—"Then won't that which is in something be in something greater as something less? For there is no other way that something could be in something else."—"No, there isn't."—"Since there is nothing else apart from the others and the one, and since they must be in something, must they not in fact be in each other – the others in the one and the one b
in the others – or else be nowhere?"—"Apparently."—"So, on the one hand, because the one is in the others, the others would be greater than the one, since they contain it, and the one would be less than the others, since it is contained. On the other hand, because the others are in the one,

by the same argument the one would be greater than the others and they
less than it."—"So it seems."—"Therefore the one is both equal to, and
greater and less than, itself and the others."—"Apparently."

"And if in fact it is greater and less and equal, it would be of measures
c equal to, and more and fewer than, itself and the others; and since of
measures, also of parts."—"Doubtless."—"So, since it is of equal and more
and fewer measures, it would also be fewer and more than itself and the
others in number, and, correspondingly, equal to itself and the others."—
"How so?"—"It would surely be of more measures than those things it is
greater than, and of as many parts as measures; and likewise it would
be of fewer measures and parts than those things it is less than; and
correspondingly for the things it is equal to."—"Just so."—"Since it is,
d then, greater and less than, and equal to, itself, would it not be of measures
more and fewer than, and equal to, itself? And since of measures, also of
parts?"—"Doubtless."—"So, since it is of parts equal to itself, it would be
equal to itself in multitude, but since it is of more and fewer parts, it would
be more and fewer than itself in number."—"Apparently."—"Now won't
the one be related in the same way also to the others? Because it appears
larger than they, it must also be more than they are in number; and because
it appears smaller, fewer; and because it appears equal in largeness, it
must also be equal to the others in multitude."—"Necessarily."—"Thus,
e in turn, as it seems, the one will be equal to, and more and fewer than,
itself and the others in number."—"It will."

"Does the one also partake of time? And, in partaking of time, is it and
does it come to be both younger and older than, and neither younger nor
older than, itself and the others?"—"How so?"—"If in fact one is, being
surely belongs to it."—"Yes."—"But is *to be* simply partaking of being
152 with time present, just as *was* is communion with being together with time
past, and, in turn, *will be* is communion with being together with time
future?"—"Yes, it is."—"So the one partakes of time, if in fact it partakes
of being."—"Certainly."

"Of time advancing?"—"Yes."—"So the one always comes to be older
than itself, if in fact it goes forward in step with time."—"Necessarily."—
"Do we recall that the older comes to be older than something that comes
to be younger?"—"We do."—"So, since the one comes to be older than
itself, wouldn't it come to be older than a self that comes to be younger?"—
b "Necessarily."—"Thus it indeed comes to be both younger and older than
itself."—"Yes."

"But it *is* older, isn't it, whenever, in coming to be, it is at the now time,
between *was* and *will be*? For as it proceeds from the past to the future, it
certainly won't jump over the now."—"No, it won't."—"Doesn't it stop
c coming to be older when it encounters the now? It doesn't come to be,
but is then already older, isn't it? For if it were going forward, it could
never be grasped by the now. A thing going forward is able to lay hold
of both the now and the later – releasing the now and reaching for the

later, while coming to be between the two, the later and the now."—
"True."—"But if nothing that comes to be can sidestep the now, whenever
a thing *is* at this point, it always stops its coming-to-be and then is whatever d
it may have come to be."—"Apparently."—"So, too, the one: whenever,
in coming to be older, it encounters the now, it stops its coming-to-be and
is then older."—"Of course."—"So it also is older than that very thing it
was coming to be older than – and wasn't it coming to be older than
itself?"—"Yes."—"And the older is older than a younger?"—"It is."—"So
the one is then also younger than itself, whenever, in its coming-to-be
older, it encounters the now."—"Necessarily."—"Yet the now is always
present to the one throughout its being; for the one always is now, when- e
ever it is."—"No doubt."—"Therefore the one always both is and comes
to be older and younger than itself."—"So it seems."

"Is it or does it come to be for more time than itself or an equal time?"—
"An equal."—"But if it comes to be or is for an equal time, it is the same
age."—"Doubtless."—"And that which is the same age is neither older
nor younger."—"No, it isn't."—"So the one, since it comes to be and is
for a time equal to itself, neither is nor comes to be younger or older than
itself."—"I think not."

"And again: what of the others?"—"I can't say."— "This much, surely, 153
you can say: things other than the one, if in fact they are different things
and not *a* different thing, are more than one. A different thing would be
one, but different things are more than one and would have multitude."—
"Yes, they would."—"And, being a multitude, they would partake of a
greater number than the one."—"Doubtless."—"Now, shall we say in
connection with number that things that are more or things that are less
come to be and have come to be earlier?"—"Things that are less."—"So,
the least thing first; and this is the one. Isn't that so?"—"Yes."—"So of all b
the things that have number the one has come to be first. And the others,
too, all have number, if in fact they are others and not an other."—"Yes,
they do."—"But that which has come to be first, I take it, has come to be
earlier, and the others later; and things that have come to be later are
younger than what has come to be earlier. Thus the others would be
younger than the one, and the one older than they."—"Yes, it would."

"What about the following? Could the one have come to be in a way
contrary to its own nature, or is that impossible?"—"Impossible."—"Yet c
the one was shown to have parts, and if parts, a beginning, an end, and
a middle."—"Yes."—"Well, in the case of all things – the one itself and
each of the others – doesn't a beginning come to be first, and after the
beginning all the others up to the end?"—"To be sure."—"Furthermore,
we shall say that all these others are parts of some one whole, but that it
itself has come to be one and whole at the same time as the end."—"Yes,
we shall."—"An end, I take it, comes to be last, and the one naturally d
comes to be at the same time as it. And so if in fact the one itself must
not come to be contrary to nature, it would naturally come to be later

than the others, since it has come to be at the same time as the end."—
"Apparently."—"Therefore the one is younger than the others, and the
others are older than it."—"That, in turn, appears to me to be so."

"But again: must not a beginning or any other part of the one or of
anything else, if in fact it is a part and not parts, be one, since it is *a*
part?"—"Necessarily."—"Accordingly, the one would come to be at the
e same time as the first part that comes to be, and at the same time as the
second; and it is absent from none of the others that come to be – no matter
what is added to what – until, upon arriving at the last part, it comes to
be one whole, having been absent at the coming-to-be of neither the middle
nor the first nor the last nor any other part."—"True."—"Therefore the
one is the same age as all the others. And so, unless the one itself is
naturally contrary to nature, it would have come to be neither earlier nor
154 later than the others, but at the same time. And according to this argument
the one would be neither older nor younger than the others, nor the others
older or younger than it. But according to our previous argument, it was
both older and younger than they, and likewise they were both older and
younger than it."—"Of course."

"That's how it is and has come to be. But what about its coming-to-be
both older and younger, and neither older nor younger, than the others
and they than it? Is the case with coming-to-be just as it is with being, or
b is it different?"—"I can't say."—"But I can say this much, at least: if
something is indeed older than another thing, it could not come to be still
older by an amount greater than the original difference in age. Nor, in
turn, could the younger come to be still younger. For equals added to
unequals, in time or anything else at all, always make them differ by an
amount equal to that by which they differed at first."—"No doubt."—"So
c what is older or younger could never come to be older or younger than
what is older or younger, if in fact they always differ in age by an equal
amount. On the contrary, something is and has come to be older, and
something younger, but they do not come to be so."—"True."—"So also
the one, since it is older or younger, never comes to be older or younger than
the others that are older or younger than it."—"Yes, you're quite right."

"But consider whether it comes to be older and younger in this way."—
"In what way?"—"In the way that the one was shown to be older than
the others and they older than it."—"What of that?"—"When the one is
d older than the others, it has surely come to be for more time than they."—
"Yes."—"Go back and consider: if we add an equal time to more and less
time, will the more differ from the less by an equal or a smaller fraction?"[16]—
"A smaller."—"So the one's difference in age in relation to the others will
not be in the future just what it was at first. On the contrary, by getting
an increment of time equal to the others, it will differ from them in age
always less than it did before. Isn't that so?"—"Yes."—"Wouldn't that
e which differs from anything in age less than before come to be younger

16. The word translated here and below as "fraction" is elsewhere translated as "part."

than before in relation to those things it was previously older than?"—
"Younger."—"And if the one comes to be younger, don't those others, in
turn, come to be older than before in relation to it?"—"Certainly."—"So
what is younger comes to be older in relation to what has come to be
earlier and is older, but it never is older. On the contrary, it always comes
to be older than that thing. For the older advances toward the younger,
while the younger advances toward the older. And, in the same way, the 155
older, in its turn, comes to be younger than the younger. For both, by
going toward their opposites, come to be each other's opposite, the younger
coming to be older than the older, and the older younger than the younger.
But they could not come to *be* so. For if they came to be, they would no
longer *come* to be, but would be so. But as it is they come to be older and
younger than each other. The one comes to be younger than the others,
because it was shown to be older and to have come to be earlier, whereas
the others come to be older than the one, because they have come to be later. b

"And by the same argument the others, too, come to be younger in
relation to the one, since in fact they were shown to be older than it and
to have come to be earlier."—"Yes, it does appear so."

"Well then, insofar as nothing comes to be older or younger than a
different thing, owing to their always differing from each other by an
equal number, the one would not come to be older or younger than the
others, and they would not come to be older or younger than it. But insofar
as things that came to be earlier must differ from things that come to be
later by a fraction that is always different, and vice versa, in this way they c
must come to be older and younger than each other – both the others than
the one and the one than the others."—"Of course."—"To sum up all this,
the one itself both is and comes to be older and younger than itself and
the others, and it neither is nor comes to be older or younger than itself
or the others."—"Exactly."

"And since the one partakes of time and of coming to be older and d
younger, must it not also partake of time past, future, and present – if in
fact it partakes of time?"—"Necessarily."—"Therefore, the one was and
is and will be, and was coming to be and comes to be and will come to
be."—"To be sure."—"And something could belong to it and be of it, in
the past, present, and future."—"Certainly."—"And indeed there would
be knowledge and opinion and perception of it, if in fact even now we
are engaging in all those activities concerning it."—"You're right."—"And
a name and an account belong to it, and it is named and spoken of. And e
all such things as pertain to the others also pertain to the one."—"That's
exactly so."

"Let's speak of it yet a third time. If the one is as we have described
it – being both one and many and neither one nor many, and partaking
of time – must it not, because it is one, sometimes partake of being, and in
turn because it is not, sometimes not partake of being?"—"Necessarily."—
"When it partakes, can it at that time not partake, or partake when it

doesn't?"—"It cannot."—"So it partakes at one time, and doesn't partake
at another; for only in this way could it both partake and not partake of
156 the same thing."—"That's right."—"Isn't there, then, a definite time when
it gets a share of being and when it parts from it? Or how can it at one
time have and at another time not have the same thing, if it never gets
and releases it?"—"In no way."

"Don't you in fact call getting a share of being 'coming-to-be'?"—"I
do."—"And parting from being 'ceasing-to-be'?"—"Most certainly."—"In-
deed the one, as it seems, when it gets and releases being, comes to be
b and ceases to be."—"Necessarily."—"And since it is one and many and
comes to be and ceases to be, doesn't its being many cease to be whenever
it comes to be one, and doesn't its being one cease to be whenever it comes
to be many?"—"Certainly."—"Whenever it comes to be one and many,
must it not separate and combine?"—"It certainly must."—"Furthermore,
whenever it comes to be like and unlike, must it not be made like and
unlike?"—"Yes."—"And whenever it comes to be greater and less and
equal, must it not increase and decrease and be made equal?"—"Just so."

c "And whenever, being in motion, it comes to a rest, and whenever,
being at rest, it changes to moving, it must itself, presumably, be in no time
at all."—"How is that?"—"It won't be able to undergo being previously at
rest and later in motion or being previously in motion and later at rest
without changing."—"Obviously not."—"Yet there is no time in which
something can, simultaneously, be neither in motion nor at rest."—"Yes,
you're quite right."—"Yet surely it also doesn't change without chang-
ing."—"Hardly."—"So when does it change? For it does not change while
it is at rest or in motion, or while it is in time."—"Yes, you're quite right."

d "Is there, then, this queer thing in which it might be, just when it
changes?"—"What queer thing?"—"The instant. The instant seems to sig-
nify something such that changing occurs from it to each of two states.
For a thing doesn't change from rest while rest continues, or from motion
while motion continues. Rather, this queer creature, the instant, lurks
e between motion and rest – being in no time at all – and to it and from it
the moving thing changes to resting and the resting thing changes to
moving."—"It looks that way."—"And the one, if in fact it both rests and
moves, could change to each state – for only in this way could it do both.
But in changing, it changes at an instant, and when it changes, it would
be in no time at all, and just then it would be neither in motion nor at
rest."—"No, it wouldn't."

157 "Is it so with the other changes too? Whenever the one changes from
being to ceasing-to-be, or from not-being to coming-to-be, isn't it then
between certain states of motion and rest? And then it neither is nor is
not, and neither comes to be nor ceases to be?"—"It seems so, at any
rate."—"Indeed, according to the same argument, when it goes from one
to many and from many to one, it is neither one nor many, and neither
separates nor combines. And when it goes from like to unlike and from
unlike to like, it is neither like nor unlike, nor is it being made like or

unlike. And when it goes from small to large and to equal and vice versa, b
it is neither small nor large nor equal; nor would it be increasing or
decreasing or being made equal."—"It seems not."—"The one, if it is,
could undergo all that."—"Doubtless."

"Must we not examine what would be proper for the others to undergo,
if one is?"—"We must."—"Are we to say, then, what properties things
other than the one must have, if one is?"—"Let's do."—"Well then, since
in fact they are other than the one, the others are not the one. For if they
were, they would not be other than the one."—"That's right." c

"And yet the others are not absolutely deprived of the one, but somehow
partake of it."—"In what way?"—"In that things other than the one are
surely other because they have parts; for if they didn't have parts, they
would be altogether one."—"That's right."—"And parts, we say, are parts
of that which is a whole."—"Yes, we do."—"Yet the whole of which the
parts are to be parts must be one thing composed of many, because each
of the parts must be part, not of many, but of a whole."—"Why is that?"—
"If something were to be part of many, in which it itself is, it will, of d
course, be both part of itself, which is impossible, and of each one of the
others, if in fact it is part of all of them. For if it is not part of one, it will
be part of the others, that one excepted, and thus it will not be part of
each one. And if it is not part of each, it will be part of none of the many.
But if something is part of none, it cannot be a part, or anything else at
all, of all those things of which it is no part of any."—"It certainly appears
so."—"So the part would not be part of many things or all, but of some
one character and of some one thing, which we call a 'whole,' since it has e
come to be one complete thing composed of all. This is what the part
would be part of."—"Absolutely."—"So if the others have parts, they
would also partake of some one whole."—"Certainly."—"So things other
than the one must be one complete whole with parts."—"Necessarily."

"Furthermore, the same account applies also to each part, since it too 158
must partake of the one. For if each of them is a part, 'each,' of course,
signifies that it is one thing, detached from the others and being by itself,
if in fact it is to be *each*."—"That's right."—"But clearly it would partake
of the one, while being something other than one. Otherwise, it wouldn't
partake, but would itself be one. But as it is, it is surely impossible for
anything except the one itself to be one."—"Impossible."

"But both the whole and the part must partake of the one; for the whole
will be one thing of which the parts are parts, and in turn each thing that
is part of a whole will be one part of the whole."—"Just so."—"Well, then, b
won't things that partake of the one partake of it, while being different
from it?"—"Doubtless."—"And things different from the one would surely
be many; for if things other than the one were neither one nor more than
one, they would be nothing."—"Yes, you're quite right."

"Since both things that partake of the oneness of a part and things that
partake of the oneness of a whole are more than one, must not those things

themselves that get a share of the one in fact be unlimited in multitude?"—
"How so?"—"Let's observe the following: isn't it the case that, at the time
when they get a share of the one, they get a share, while not being one
and not partaking of the one?"—"Quite clearly."—"While being multi-
c tudes, then, in which oneness is not present?"—"Certainly, multitudes."—
"Now, if we should be willing to subtract, in thought, the very least we
can from these multitudes, must not that which is subtracted, too, be a
multitude and not one, if in fact it doesn't partake of the one?"—"Necessar-
ily."—"So always, as we examine in this way its nature, itself by itself,
different from the form, won't as much of it as we ever see be unlimited
in multitude?"—"Absolutely."

d "Furthermore, whenever each part comes to be one part, the parts then
have a limit in relation to each other and in relation to the whole, and the
whole has a limit in relation to the parts."—"Quite so."—"Accordingly,
it follows for things other than the one that from the one and themselves
gaining communion with each other, as it seems, something different comes
to be in them, which affords a limit for them in relation to each other; but
their own nature, by themselves, affords unlimitedness."—"Appar-
ently."—"In this way, indeed, things other than the one, taken both as
wholes and part by part, both are unlimited and partake of a limit."—"Cer-
tainly."

e "Well, aren't they both like and unlike each other and themselves?"—
"In what way?"—"On the one hand, insofar as they are all unlimited by
their own nature, they would in this way have a property the same."—
"Certainly."—"Furthermore, insofar as they all partake of a limit, in this
way, too, they would all have a property the same."—"Doubtless."—"On
the other hand, insofar as they are both limited and unlimited, they have
159 these properties, which are opposite to each other."—"Yes."—"And oppo-
site properties are as unlike as possible."—"To be sure."—"So in respect
of either property they would be like themselves and each other, but in
respect of both properties they would be utterly opposite and unlike both
themselves and each other."—"It looks that way."—"Thus the others
would be both like and unlike themselves and each other."—"Just so."

"And indeed we will have no further trouble in finding that things other
than the one are both the same as and different from each other, both in
motion and at rest, and have all the opposite properties, since in fact they
b were shown to have those we mentioned."—"You're right."

"Well, then, suppose we now concede those results as evident and
examine again, if one is: Are things other than the one also not so, or only
so?"—"Of course."—"Let's say from the beginning, what properties things
other than the one must have, if one is."—"Yes, let's do."—"Must not the
one be separate from the others, and the others separate from the one?"—
"Why?"—"Because surely there is not something else in addition to them
c that is both other than the one and other than the others; for all things
have been mentioned, once the one and the others are mentioned."—"Yes,

all things."—"So there is no further thing, different from them, in which same thing the one and the others could be."—"No, there isn't."—"So the one and the others are never in the same thing."—"It seems not."—"So they are separate?"—"Yes."

"Furthermore, we say that what is really one doesn't have parts."—"Obviously not."—"So the one could not be in the others as a whole, nor could parts of it be in them, if it is separate from the others and doesn't have parts."—"Obviously not."—"So the others could in no way partake d
of the one, if they partake neither by getting some part of it nor by getting it as a whole."—"It seems not."—"In no way, then, are the others one, nor do they have any oneness in them."—"Yes, you're quite right."

"So the others aren't many either; for each of them would be one part of a whole, if they were many. But as it is, things other than the one are neither one nor many nor a whole nor parts, since they in no way partake of the one."—"That's right."—"Therefore, the others are not themselves two or three, nor are two or three in them, if in fact they are entirely e
deprived of the one."—"Just so."

"So the others aren't themselves like and unlike the one, and likeness and unlikeness aren't in them. For if they were themselves like and unlike, or had likeness and unlikeness in them, things other than the one would surely have in themselves two forms opposite to each other."—"Apparently."—"But it was impossible for things that couldn't partake even of one to partake of any two."—"Impossible."—"So the others are neither like nor unlike nor both. If they were like or unlike, they would partake 160
of one of the two forms, and if they were both, they would partake of two opposite forms. But these alternatives were shown to be impossible."—"True."

"So they are neither the same nor different, neither in motion nor at rest, neither coming to be nor ceasing to be, neither greater nor less nor equal. Nor do they have any other such properties. For if the others submit to having any such property, they will partake of one and two and three and odd and even, of which it was shown they could not partake, since b
they are in every way entirely deprived of the one."—"Very true."

"Thus if one is, the one is all things and is not even one, both in relation to itself and, likewise, in relation to the others."[17] "Exactly."

"So far so good. But must we not next examine what the consequences must be, if the one is not?"—"Yes, we must."—"What, then, would this hypothesis be: 'if one is not'? Does it differ at all from this hypothesis: 'if not-one is not'?"—"Of course it differs."—"Does it merely differ, or is saying 'if not-one is not' the complete opposite of saying, 'if one is not'?"— c

17. Alternatively, accepting a plausible emendation at b3: "Thus if one is, the one is all things and is not even one, both in relation to itself and in relation to the others, and likewise for the others." With this emended text, the sentence describes the contents of all four deductions, instead of only the first two.

"The complete opposite."—"What if someone were to say, 'if largeness is
not' or 'if smallness is not' or anything else like that, would it be clear in
each case that what he is saying is not is something different?"—"Cer-
tainly."—"So now, too, whenever he says, 'if one is not,' isn't it clear that
what he says is not is different from the others, and don't we recognize
what he means?"—"We do."—"So he speaks of something, in the first
place, knowable, and in the second, different from the others, whenever
d he says 'one,' whether he attaches being or not-being to it; for we still
know what thing is said not to be, and that it is different from the others.
Isn't that so?"—"Necessarily."

"Then we must state from the beginning as follows what must be the
case, if one is not. First, as it seems, this must be so for it, that there is
knowledge of it; otherwise we don't even know what is meant when
someone says, 'if one is not'."—"True."—"And it must be the case that
the others are different from it – or else it isn't said to be different from
them?"—"Certainly."—"Therefore difference in kind pertains to it in addi-
e tion to knowledge. For someone doesn't speak of the difference in kind
of the others when he says that the one is different from the others, but
of *that* thing's difference in kind."—"Apparently."

"Furthermore, the one that is not partakes of *that* and of *something*, *this*,
*to this*, *these*, and so on; for the one could not be mentioned, nor could
things be different from the one, nor could anything belong to it or be of
it, nor could it be said to be anything, unless it had a share of *something*
and the rest."—"That's right."—"The one can't *be*, if in fact it is not,
but nothing prevents it from partaking of many things. Indeed, it's even
161 necessary, if in fact it's that one and not another that is not. If, however,
neither the one nor *that* is not to be, but the account is about something
else, we shouldn't even utter a sound. But if that one and not another is
posited not to be, it must have a share of *that* and of many other things."—
"Quite certainly."

"So it has unlikeness, too, in relation to the others. For things other than
the one, since they are different, would also be different in kind."—"Yes."—
"And aren't things different in kind other in kind?"—"Doubtless."—
b "Aren't things other in kind unlike?"—"Unlike, certainly."—"Well, then,
if in fact they are unlike the one, clearly things unlike would be unlike an
unlike."—"Clearly."—"So the one would also have unlikeness, in relation
to which the others are unlike it."—"So it seems."

"But, then, if it has unlikeness to the others, must it not have likeness
to itself?"—"How so?"—"If the one has unlikeness to one, the argument
would surely not be about something of the same kind as the one, nor
would the hypothesis be about one, but about something other than one."—
c "Certainly."—"But it must not be."—"No indeed."—"Therefore the one
must have likeness of itself to itself."—"It must."

"Furthermore, it is not equal to the others either; for if it were equal, it
would then both be, and be like them in respect of equality. But those are
both impossible, if in fact one is not."—"Impossible."—"Since it is not equal

to the others, must not the others, too, be not equal to it?"—"Necessarily."—"Aren't things that are not equal unequal?"—"Yes."—"And aren't things unequal unequal to something unequal?"—"Doubtless."—"So the one par- d
takes also of inequality, in relation to which the others are unequal to it."—"It does."

"But largeness and smallness are constitutive of inequality."—"Yes, they are."—"So do largeness and smallness, too, belong to this one?"—"It looks that way."—"Yet largeness and smallness always stand apart from each other."—"Certainly."—"So there is always something between them."—"There is."—"Then can you mention anything between them other than equality?"—"No, just that."—"Therefore whatever has largeness and smallness also has equality, since it is between them."—"Apparently."—"The one, if it is not, would have, as it seems, a share of equality, largeness, e
and smallness."—"So it seems."

"Furthermore, it must also somehow partake of being."—"How is that?"—"It must be in the state we describe; for if it is not so, we wouldn't speak truly when we say that the one is not. But if we do speak truly, it is clear that we say things that are. Isn't that so?"—"It is indeed so."—"And since we claim to speak truly, we must claim also to speak of things 162
that are."—"Necessarily."—"Therefore, as it seems, the one *is* a not-being; for if it is not to *be* a not-being, but is somehow to give up its being in relation to not-being, it will straightway be a being."—"Absolutely."—"So if it is not to be, it must have *being* a not-being as a bond in regard to its not-being, just as, in like manner, what is must have *not-being* what is not, in order that it, in its turn, may completely be. This is how what is would most of all be and what is not would not be: on the one hand, by what is, if it is completely to be, partaking of being in regard to being a being b
and of not-being in regard to being a not-being; and, on the other hand, by what is not, if in its turn what is not is completely not to be, partaking of not-being in regard to not-being a not-being and of being in regard to being a not-being."[18]—"Very true."—"Accordingly, since in fact what is has a share of not-being and what is not has a share of being, so, too, the one, since it is not, must have a share of being in regard to its not-being."—"Necessarily."—"Then the one, if it is not, appears also to have being."—"Apparently."—"And of course not-being, if in fact it is not."—"Doubtless."

"Can something that is in some state not be so, without changing from that state?"—"It cannot."—"So everything of the sort we've described, c
which is both so and not so, signifies a change."—"Doubtless."—"And a change is a motion – or what shall we call it?"—"A motion."—"Now wasn't the one shown both to be and not to be?"—"Yes."—"Therefore, it appears both to be so and not so."—"So it seems."—"Therefore the one that is not has been shown also to move, since in fact it has been shown to change from being to not-being."—"It looks that way."

18. Dropping the supplement in 162a8 and removing the brackets in b2.

"Yet, on the other hand, if it is nowhere among the things that are – as it isn't, if in fact it is not – it couldn't travel from one place to another."—
d "Obviously not."—"So it couldn't move by switching place."—"No, it couldn't."—"Nor could it rotate in the same thing, because it nowhere touches the same thing. For that which is the same is a being, and what is not cannot be in anything that is."—"No, it can't."—"Therefore the one, if it is not, would be unable to rotate in that in which it is not."—"Yes, you're quite right."—"And, surely, the one isn't altered from itself either, whether as something that is or as something that is not. For the argument would no longer be about the one, but about something else, if in fact the one were altered from itself."—"That's right."—"But if it isn't altered and doesn't rotate in the same thing or switch place, could it still move
e somehow?"—"Obviously not."—"Yet what is unmoved must enjoy repose, and what reposes must be at rest."—"Necessarily."—"Therefore the one, as it seems, since it is not, is both at rest and in motion."—"So it seems."

163 "Furthermore, if in fact it moves, it certainly must be altered; for however something is moved, by just so much it is no longer in the same state as it was, but in a different state."—"Just so."—"Then because it moves, the one is also altered."—"Yes."—"And yet, because it in no way moves, it could in no way be altered."—"No, it couldn't."—"So insofar as the one that is not moves, it is altered, but insofar as it doesn't move, it is not altered."—"No, it isn't.—"Therefore the one, if it is not, is both altered and not altered."—"Apparently."

"Must not that which is altered come to be different from what it was
b before, and cease to be in its previous state; and must not that which is not altered neither come to be nor cease to be?"—"Necessarily."—"Therefore also the one, if it is not, comes to be and ceases to be, if it is altered, and does not come to be or cease to be, if it is not altered. And thus the one, if it is not, both comes to be and ceases to be, and does not come to be or cease to be."—"Yes, you're quite right."

"Let's go back again to the beginning to see whether things will appear
c the same to us as they do now, or different."—"Indeed, we must."—"Aren't we saying, if one is not, what the consequences must be for it?"—"Yes."—"When we say 'is not,' the words don't signify anything other than absence of being for whatever we say is not, do they?"—"Nothing other."—"When we say that something is not, are we saying that in a way it is not, but in a way it is? Or does this 'is not' signify without qualification that what is not is in no way at all and does not in any way partake of being?"—"Absolutely without qualification."—"Therefore what is not
d could neither be nor partake of being in any other way at all."—"No, it couldn't."

"Can coming-to-be and ceasing-to-be possibly be anything other than getting a share of being and losing it?"—"Nothing other."—"But what has no share of being could neither get nor lose it."—"Obviously not."—"So the one, since it in no way is, must in no way have, release, or get a share

of, being."—"That's reasonable."—"So the one that is not neither ceases
to be nor comes to be, since in fact it in no way partakes of being."—
"Apparently not."—"So it also isn't altered in any way. For if it were to e
undergo this, it would then come to be and cease to be."—"True."—"And
if it isn't altered, it must not move either?"—"Necessarily."—"And surely
we won't say that what in no way is is at rest, since what is at rest must
always be in some same thing."—"In the same thing, no doubt."—"Thus,
let's say that what is not is, in turn, never at rest or in motion."—"Yes,
you're quite right."

"But in fact nothing that is belongs to it; for then, by partaking of 164
that, it would partake of being."—"Clearly."—"So neither largeness nor
smallness nor equality belongs to it."—"No, they don't."—"Furthermore,
it would have neither likeness nor difference in kind in relation to itself
or in relation to the others."—"Apparently not."

"What about this? Can the others be related to it, if, necessarily, nothing
belongs to it?"—"They can't."—"So the others are neither like nor unlike
it, and they are neither the same as nor different from it."—"No, they
aren't."—"And again: will *of that*, *to that*, *something*, *this*, *of this*, *of another*,
*to another*, or time past, hereafter, or now, or knowledge, opinion, percep- b
tion, an account, a name, or anything else that is be applicable to what is
not?"—"It will not."—"Thus one, since it is not, is not in any state at
all."—"At any rate, it certainly seems to be in no state at all."

"Let's go on and say what properties the others must have, if one is
not."—"Yes, let's do."—"They must surely be other; for if they weren't
even other, we wouldn't be talking about the others."—"Just so."—"But
if the argument is about the others, the others are different. Or don't you
apply the names 'other' and 'different' to the same thing?"—"I do."— c
"And surely we say that the different is different from a different thing,
and the other is other than another thing?"—"Yes."—"So the others, too,
if they are to be other, have something they will be other than."—"Neces-
sarily."—"What would it be then? For they won't be other than the one,
if it is indeed not."—"No, they won't."—"So they are other than each
other, since that alternative remains for them, or else to be other than
nothing."—"That's right."

"So they each are other than each other as multitudes; for they couldn't
be so as ones, if one is not. But each mass of them, as it seems, is unlimited d
in multitude, and if you take what seems to be smallest, in an instant, just
as in a dream, instead of seeming to be one, it appears many, and instead
of very small, immense in relation to the bits chopped from it."—"That's
quite right."—"The others would be other than each other as masses of
this sort, if they are other, and if one is not."—"Quite so."

"Well then, won't there be many masses, each appearing, but not being,
one, if in fact one is not to be?"—"Just so."—"And there will seem to be
a number of them, if in fact each seems to be one, although being many."— e
"Certainly."—"And among them some appear even and some odd,

although not really being so, if in fact one is not to be."—"Yes, you're quite right."

"Furthermore, a smallest too, we say, will seem to be among them; but
165 this appears many and large in relation to each of its many, because they
are small."—"Doubtless."—"And each mass will be conceived to be equal
to its many small bits. For it could not, in appearance, shift from greater
to less, until it seems to come to the state in between, and this would be
an appearance of equality."—"That's reasonable."

"Now won't it appear to have a limit in relation to another mass, but
itself to have no beginning, limit, or middle in relation to itself?"—"Why
is that?"—"Because whenever you grasp any bit of them in thought as
b being a beginning, middle, or end, before the beginning another beginning
always appears, and after the end a different end is left behind, and in
the middle others more in the middle than the middle but smaller, because
you can't grasp each of them as one, since the one is not."—"Very true."—
"So every being that you grasp in thought must, I take it, be chopped up and
dispersed, because surely, without oneness, it would always be grasped as
a mass."—"Of course."—"So must not such a thing appear one to a person
c dimly observing from far off; but to a person considering it keenly from
up close, must not each one appear unlimited in multitude, if in fact it is
deprived of the one, if it is not?"—"Indeed, most necessarily."—"Thus the
others must each appear unlimited and as having a limit, and one and
many, if one is not, but things other than the one are."—"Yes, they must."

"Won't they also seem to be both like and unlike?"—"Why is that?"—
"Just as, to someone standing at a distance, all things in a painting,[19]
appearing one, appear to have a property the same and to be like."—
d "Certainly."—"But when the person comes closer, they appear many and
different and, by the appearance of the different, different in kind and
unlike themselves."—"Just so."—"So the masses must also appear both
like and unlike themselves and each other."—"Of course."

"Accordingly, if one is not and many are, the many must appear both
the same as and different from each other, both in contact and separate
from themselves, both moving with every motion and in every way at
rest, both coming to be and ceasing to be and neither, and surely everything
e of that sort, which it would now be easy enough for us to go through."—
"Very true indeed."

"Let's go back to the beginning once more and say what must be the case, if one is not, but things other than the one are."—"Yes, let's do."—"Well, the others won't be one."—"Obviously not."—"And surely they won't be many either, since oneness would also be present in things that are many. For if none of them is one, they are all nothing – so they also

19. Plato's word here refers specifically to painting that aims at the illusion of volume through the contrast of light and shadow.

couldn't be many."—"True."—"If oneness isn't present in the others, the others are neither many nor one."—"No, they aren't."

"Nor even do they appear one or many."—"Why?"—"Because the others 166
have no communion in any way at all with any of the things that are not, and none of the things that are not belongs to any of the others, since things that are not have no part."—"True."—"So no opinion or any appearance of what is not belongs to the others, nor is not-being conceived in any way at all in the case of the others."—"Yes, you're quite right."—"So if one is
not, none of the others is conceived to be one or many, since, without b
oneness, it is impossible to conceive of many."—"Yes, impossible."—"Therefore, if one is not, the others neither are nor are conceived to be one or many."—"It seems not."

"So they aren't like or unlike either."—"No, they aren't."—"And indeed, they are neither the same nor different, neither in contact nor separate, nor anything else that they appeared to be in the argument we went through before. The others neither are nor appear to be any of those things,
if one is not."—"True."—"Then if we were to say, to sum up, 'if one is c
not, nothing is,' wouldn't we speak correctly?"—"Absolutely."

"Let us then say this – and also that, as it seems, whether one is or is not, it and the others both are and are not, and both appear and do not appear all things in all ways, both in relation to themselves and in relation to each other."—"Very true."

# PHILEBUS

*Scholars universally agree that this is one of Plato's last works, along with at least* Laws *(about which we have independent testimony that it was a work of his old age), plus* Sophist *and* Statesman. *It was written after* Phaedo, Republic, *and* Phaedrus, *and also after* Parmenides *and* Theaetetus. *In those other latest works (as well as* Timaeus *and* Critias, *whatever their place in the order of composition may have been), the principal speaker who directs the discussion's agenda is not Socrates, but the Athenian visitor (*Laws*), or the visitor from Elea (*Sophist *and* Statesman*), or Timaeus or Critias themselves. Indeed, although he participates actively in the first part of* Parmenides, *Socrates is already made to yield center stage there to the dialogue's namesake—Parmenides calls the tunes. Here, however, Socrates is again fully in charge. Naturally enough: the topic is again one we readily associate with Socrates in Plato's 'Socratic' dialogues, as well as in* Phaedo, Republic, *and* Phaedrus*: what is 'the human good'? how will a human being lead the best life possible? Yet this is a Socrates very sure of his ground, ready to expound at length difficult metaphysical doctrines, and possessed of a whole theory about the ingredients of the best life and their proper ordering. He pursues the discussion much more in the manner of the Visitor of* Sophist *or* Statesman *than in his own manner in either the 'Socratic' dialogues or the* Republic*—though his fellow discussant is much more ready to throw up opposition to his ideas than the Visitor's are in* Sophist *and* Statesman.

*We pick up the thread* in mediis rebus. *In the presence of a company of young men, Socrates has been disputing with one of them, Philebus, about what constitutes the good in human life. Is it pleasure, as Philebus had maintained, or knowledge—Socrates' candidate? (We know nothing of Philebus, apart from this dialogue: his name means "youth lover" and so pleasure seeker, and he is presented as himself an attractive young man. He may be purely fictional.) They had ended at loggerheads. Now another young man, Protarchus, takes over Philebus' side. (He is addressed at 19b as "son of Callias," the very rich Athenian said in* Apology *20a to have spent more than anyone else on the sophists, and at 58a–b he seems to speak as a respectful admirer of Gorgias.) The discussion now takes a new tack. Socrates will argue, not that the good in human life is knowledge (not pleasure), but that it is some third thing, in fact the principle for the proper mixture of knowledge and pleasure—both together—within a life. Knowledge, he will argue, though not the good itself, is vastly closer and more akin to it than pleasure is. Thus knowledge wins second prize in the contest, coming far ahead of pleasure in the final accounting.*

*Socrates first insists that neither pleasure nor knowledge is a simple unity; there are significantly different varieties of each—different ways of being a pleasure or an instance of knowledge—which must be examined first before one can determine the value of pleasure and knowledge, and so resolve the question of their respective places in the best life. This leads to a lengthy defense of the basic philosophical method of looking to unity-in-plurality in coming to understand the nature of anything and to a metaphysical division (not easy to understand) of 'everything that actually exists now in the universe' into four basic categories: the 'unlimited', 'limit', the 'mixture' of these two, and the 'cause' of the mixture. These methodological and metaphysical passages should be studied alongside the* Sophist*'s theories about being and not being, and the method of division exemplified and discussed in* Sophist *and* Statesman. *There follows a delineation and examination of various genera of pleasure and then of knowledge, including a controversial discussion of some pleasures as 'false' ones. Finally, we reach the 'mixed' life and its ordering principle.*

*The dialogue ends, as it began,* in mediis rebus*: Protarchus is not ready to let Socrates off; more points require to be dealt with. But which ones? That is left for the reader to ponder.*

*J.M.C.*

SOCRATES: Well, then, Protarchus, consider just what the thesis is that 11
you are now taking over from Philebus—and what *our* thesis is that you
are going to argue against, if you find that you do not agree with it. Shall b
we summarize them both?

PROTARCHUS: Yes, let's do that.

SOCRATES: Philebus holds that what is good for all creatures is to enjoy themselves, to be pleased and delighted, and whatever else goes together with that kind of thing. We contend that not these, but knowing, understanding, and remembering, and what belongs with them, right opinion
and true calculations, are better than pleasure and more agreeable to all c
who can attain them; those who can, get the maximum benefit possible from having them, both those now alive and future generations. Isn't that how we present our respective positions, Philebus?

PHILEBUS: Absolutely, Socrates.

SOCRATES: Do you agree, Protarchus, to take over this thesis that's now offered you?

PROTARCHUS: I am afraid I have to. Fair Philebus has given up on us.

SOCRATES: So we must do everything possible to get through somehow to the truth about these matters?

PROTARCHUS: We certainly must. d

SOCRATES: Come on, then. Here is a further point we need to agree on.

Translated by Dorothea Frede.

Protarchus: What is that?

Socrates: That each of us will be trying to prove some possession or state of the soul to be the one that can render life happy for all human beings. Isn't that so?

Protarchus: Quite so.

Socrates: You, that it is pleasure; we, that it is knowledge?

Protarchus: That is so.

Socrates: What if it should turn out that there is another possession,
e better than either of them? Would the result not be that, if it turns out to
be more closely related to pleasure, we will both lose out against a life
12 that firmly possesses that, but the life of pleasure will defeat the life
of knowledge?

Protarchus: Yes.

Socrates: And if it is closer to knowledge, then knowledge wins over pleasure, and pleasure loses? Do you accept this as agreed?

Protarchus: It seems agreeable to me.

Socrates: But also to Philebus? Philebus, what do you say?

Philebus: To my mind pleasure wins and always will win, no matter what. But you must see for yourself, Protarchus.

Protarchus: But now you have handed over the argument to us, Philebus, you can no longer control the agreements we make with Socrates nor our disagreements.

b Philebus: You are right. I absolve myself of all responsibility and now
call the goddess herself as my witness.

Protarchus: We will be your witnesses, too,—that you did say what you are now saying. As to what follows, Socrates, let us go ahead and try to push through to a conclusion, with Philebus' consent or not.

Socrates: We must do our best, making our start with the goddess herself—this fellow claims that though she is called Aphrodite her truest name is pleasure.

Protarchus: Certainly.

c Socrates: I always feel a more than human dread over what names to
use for the gods—it surpasses the greatest fear.[1] So now I address Aphrodite
by whatever title pleases her. But as to pleasure, I know that it is complex
and, just as I said, we must make it our starting point and consider carefully
what sort of nature it has. If one just goes by the name it is one single
thing, but in fact it comes in many forms that are in some way even quite
unlike each other. Think about it: we say that a debauched person gets
d pleasure, as well as that a sober-minded person takes pleasure in his very
sobriety. Again, we say that a fool, though full of foolish opinions and
hopes, gets pleasure, but likewise a wise man takes pleasure in his wisdom.
But surely anyone who said in either case that these pleasures are like one
another would rightly be regarded as a fool.

1. Cf. *Cratylus* 400d–401a.

PROTARCHUS: Well, yes, Socrates—the pleasures come from opposite things. But *they* are not at all opposed to one another. For how could pleasure not be, of all things, most like pleasure? How could that thing e
not be most like itself?

SOCRATES: Just as color is most like color! Really, you surprise me: Colors certainly won't differ insofar as every one of them is a color; but we all know that black is not only different from white but is in fact its very opposite. And shape is most like shape in the same way. For shape is all one in genus, but some of its parts are absolutely opposite to one another, 13
and others differ in innumerable ways. And we will discover many other such cases. So don't rely on this argument which makes a unity of all the things that are most opposed. I am afraid we will find there are some pleasures that are contrary to others.

PROTARCHUS: Maybe so. But how will this harm our thesis?

SOCRATES: Because you call these unlike things, we will say, by a different name. For you say that all pleasant things are *good*. Now, no one contends that pleasant things are not pleasant. But while most of them are bad but b
some good, as we hold, you nevertheless call them all good, even though you would admit that they are unlike one another if someone pressed the point. What is the common element in the good and bad pleasures that allows you to call them all good?

PROTARCHUS: What are you saying, Socrates? Do you think anyone will agree to this who begins by laying it down that pleasure is the good? Do you think he will accept it when you say that some pleasures are good c
but others are bad?

SOCRATES: But you will grant that they are *unlike* each other and that some are opposites?

PROTARCHUS: Not insofar as they are pleasures.

SOCRATES: But really, Protarchus, this takes us back to the same old point. Are we, then, to say that pleasure does not differ from pleasure, but all are alike? Don't the examples just given make the slightest impression on us? Are we to behave and speak in just the same way as those who are the most incompetent and at the same time newcomers in such discussions? d

PROTARCHUS: What way do you mean?

SOCRATES: This: Suppose I imitate you and dare to say, in defense of my thesis, that the most unlike thing is of all things most *like* the most unlike; then I could say the same thing as you did. But this would make us look quite childish, and our discussion would founder on the rock. Let us therefore set it afloat again. Perhaps we can reach a mutual accommodation if each side accepts a similar stance toward its candidate.

PROTARCHUS: Just tell me how. e

SOCRATES: Let me be the one questioned in turn by you.

PROTARCHUS: About what?

SOCRATES: About wisdom, knowledge, understanding, and all the things that I laid down at the beginning as good, when I tried to answer the

question what is good. Won't my answer suffer the same consequences as your thesis did?

PROTARCHUS: How so?

SOCRATES: Taken all together, the branches of knowledge will seem to be a plurality, and some will seem quite unlike others. And if some of
14 them turn out in some way actually to be opposites, would I be a worthy partner in a discussion if I dreaded this so much that I would deny that one kind of knowledge can be unlike another? That way our whole discussion would come to an end like that of a fairy tale—with us kept safe and sound through some absurdity.

PROTARCHUS: We must not let that happen, except the part about our being kept safe and sound. But I am rather pleased by the fact that our theses are on the same footing. So let it be agreed that there can be many and unlike kinds of pleasures, but also many and different kinds of knowledge.

b SOCRATES: Well, then, let us not cover up the difference between your good and mine, Protarchus, but put it right in the middle and brave the possibility that, when put to a closer scrutiny, it will come to light whether pleasure should be called the good, or wisdom, or yet a third thing. For we are not contending here out of love of victory for my suggestion to win or for yours. We ought to act together as allies in support of the truest one.

PROTARCHUS: We certainly ought to.

c SOCRATES: Let us then give even stronger support to our principle by an agreement.

PROTARCHUS: What principle?

SOCRATES: The one that creates difficulties for everyone, for some willingly, for some, sometimes, against their will.

PROTARCHUS: Explain this more clearly.

SOCRATES: It is this principle that has turned up here, which somehow has an amazing nature. For that the many are one and the one many are amazing statements, and can easily be disputed, whichever side of the two one may want to defend.

PROTARCHUS: Do you mean this in the sense that someone says that I,
d Protarchus, am one by nature but then also says that there are many 'me's' and even contrary ones, when he treats me, who am one and the same, as tall and short, heavy and light, and endless other such things?

SOCRATES: You, dear Protarchus, are speaking about those puzzles about the one and many that have become commonplace. They are agreed by everybody, so to speak, to be no longer even worth touching; they are considered childish and trivial but a serious impediment to argument if
e one takes them on. No more worthy is the following quibble: when someone who first distinguishes a person's limbs and parts asks your agreement that all these parts are identical with that unity, but then exposes you to ridicule because of the monstrosities you have to admit, that the one is many and indefinitely many, and again that the many are only one thing.

PROTARCHUS: But what other kinds of such puzzles with respect to the same principle do you have in mind, Socrates, that have not yet admittedly become commonplace?

SOCRATES: When, my young friend, the *one* is not taken from the things 15
that come to be or perish, as we have just done in our example. For that is where the sort of one belongs that we were just discussing, which we agreed is not worthy of scrutiny. But when someone tries to posit man as one, or ox as one, or the beautiful as one, and the good as one, zealous concern with divisions of these unities and the like gives rise to controversy.

PROTARCHUS: In what sense?

SOCRATES: Firstly, whether one ought to suppose that there are any such b
unities truly in existence. Then again, how they are supposed to be: whether
each one of them is always one and the same, admitting neither of genera-
tion nor of destruction; and whether it remains most definitely one and
the same, even though it is afterwards found again among the things that
come to be and are unlimited, so that it finds itself as one and the same
in one and many things at the same time.[2] And must it be treated as
dispersed and multiplied or as entirely separated from itself, which would
seem most impossible of all? It is these problems of the one and many, c
but not those others, Protarchus, that cause all sorts of difficulties if they
are not properly settled, but promise progress if they are.

PROTARCHUS: Is this the first task we should try our hands at right now, Socrates?

SOCRATES: So I would say at least.

PROTARCHUS: Take it, then, that we all here are agreed with you about this. As for Philebus, it might be best not to bother him with questions any further, but let sleeping dogs lie.

SOCRATES: Quite so. Now, where should we make our entry into that d
complex and wide-ranging battle about this controversial issue? Is it not
best to start here?

PROTARCHUS: Where?

SOCRATES: By making the point that it is through *discourse* that the same
thing flits around, becoming one and many in all sorts of ways, in whatever
it may be that is said at any time, both long ago and now. And this will
never come to an end, nor has it just begun, but it seems to me that this
is an "immortal and ageless" condition[3] that comes to us with discourse.
Whoever among the young first gets a taste of it is as pleased as if he had e
found a treasure of wisdom. He is quite beside himself with pleasure and

2. Reading Burnet's text, but replacing his interrogation mark at b4 with a comma, on the assumption that there are two rather than three problems addressed.

3. Socrates uses the customary epithet of the gods (cf. *Iliad* viii.539) to show how serious the problem is. The ambiguity of language, whether words have a unitary and unchangeable meaning, is a serious problem with a flip side that is exploited by the boys who make fun of it.

revels in moving every statement, now turning it to one side and rolling it all up into one, then again unrolling it and dividing it up. He thereby involves first and foremost himself in confusion, but then also whatever others happen to be nearby, be they younger or older or of the same age,
16 sparing neither his father nor his mother nor anyone else who might listen to him. He would almost try it on other creatures, not only on human beings, since he would certainly not spare any foreigner if only he could find an interpreter somewhere.[4]

PROTARCHUS: Careful, Socrates, don't you see what a crowd we are and that we are all young? And are you not afraid that we will gang up against you with Philebus if you insult us? Still, we know what you want to say, and if there are some ways and means to remove this kind of disturbance
b from our discussion in a peaceful way, and to show us a better solution to the problem, then just go ahead, and we will follow you as best we can. For the present question is no mean thing, Socrates.

SOCRATES: It certainly is not, my boys, as Philebus is wont to address you. Indeed, there is not, nor could there be, any way that is finer than the one I have always admired, although it has often escaped me and left me behind, alone and helpless.

PROTARCHUS: What is this way? Let us have it.

c SOCRATES: It is not very difficult to describe it, but extremely difficult to use. For everything in any field of art that has ever been discovered has come to light because of this. See what way I have in mind.

PROTARCHUS: Please do tell us.

SOCRATES: It is a gift of the gods to men, or so it seems to me, hurled down from heaven by some Prometheus along with a most dazzling fire. And the people of old, superior to us and living in closer proximity to the
d gods, have bequeathed us this tale, that whatever is said to be consists of one and many, having in its nature limit and unlimitedness. Since this is the structure of things, we have to assume that there is in each case always one form for every one of them, and we must search for it, as we will indeed find it there. And once we have grasped it, we must look for two, as the case would have it, or if not, for three or some other number. And we must treat every one of those further unities in the same way, until it is not only established of the original unit that it is one, many and unlimited, but also how many kinds it is. For we must not grant the form of the unlimited to the plurality before we know the exact number of every
e plurality that lies between the unlimited and the one. Only then is it permitted to release each kind of unity into the unlimited and let it go. The gods, as I said, have left us this legacy of how to inquire and learn

4. This description of the exploitation of the problem by naughty boys recalls strikingly (even in the words used) Socrates' explanation of why boys should not have access to dialectic (*R.* 539b). The image there is of a dog tearing around and shredding things to pieces, while here Socrates seems to be thinking of the spreading out or rolling together

and teach one another. But nowadays the clever ones among us make a one, haphazardly, and a many, faster or slower than they should; they go 17
straight from the one to the unlimited and omit the intermediates. It is these, however, that make all the difference as to whether we are engaged with each other in dialectical or only in eristic discourse.

PROTARCHUS: Some of what you said I think I understand in some way, Socrates, but of some I still need further clarification.

SOCRATES: What I mean is clear in the case of letters, and you should take your clue from them, since they were part of your own education. b

PROTARCHUS: How so?

SOCRATES: The sound that comes out of the mouth is one for each and every one of us, but then it is also unlimited in number.

PROTARCHUS: No doubt.

SOCRATES: Neither of these two facts alone yet makes us knowledgeable, neither that we know its unlimitedness nor its unity. But if we know how many kinds of vocal sounds there are and what their nature is, that makes every one of us literate.

PROTARCHUS: Very true.

SOCRATES: And the very same thing leads to the knowledge of music.

PROTARCHUS: How is that?

SOCRATES: Sound is also the unit in this art, just as it was in writing. c

PROTARCHUS: Yes, right.

SOCRATES: We should posit low and high pitch as two kinds, and equal pitch as a third kind. Or what would you say?

PROTARCHUS: Just that.

SOCRATES: But you could not yet claim knowledge of music if you knew only this much, though if you were ignorant even about that, you would be quite incompetent in these matters, as one might say.

PROTARCHUS: Certainly.

SOCRATES: But you will be competent, my friend, once you have learned how many intervals there are in high pitch and low pitch, what character
they have, by what notes the intervals are defined, and the kinds of d
combinations they form—all of which our forebears have discovered and left to us, their successors, together with the names of these modes of harmony. And again the motions of the body display other and similar characteristics of this kind, which they say should be measured by numbers and called rhythms and meters. So at the same time they have made us realize that every investigation should search for the one and many. For
when you have mastered these things in this way, then you have acquired e
expertise there, and when you have grasped the unity of any of the other things there are, you have become wise about that. The boundless multitude, however, in any and every kind of subject leaves you in boundless

of dough (or perhaps wool). Cf. also the remarks on the feasts for young boys and late-learners in *Sophist* 252a–c.

ignorance, and makes you count for nothing and amount to nothing, since
you have never worked out the amount and number of anything at all.

PROTARCHUS: For my part, I think that Socrates has explained all this
very well, Philebus.

18 PHILEBUS: I agree as far as this question itself goes. But of what use is
all this talk to us, and what is its purpose?

SOCRATES: Philebus is right, Protarchus, when he asks us this question.

PROTARCHUS: Good, so please answer him.

SOCRATES: I will do so when I have gone a little further into the subject
matter. Just as someone who has got hold of some unity or other should
not, as we were saying, immediately look for the unlimited kind but first
look for some number, so the same holds for the reverse case. For if he is
forced to start out with the unlimited, then he should not head straight
b for the one, but should in each case grasp some number that determines
every plurality whatever, and from all of those finally reach the one. Let
us again make use of letters to explain what this means.

PROTARCHUS: In what way?

SOCRATES: The way some god or god-inspired man discovered that vocal
sound is unlimited, as tradition in Egypt claims for a certain deity called
Theuth. He was the first to discover that the vowels in that unlimited
c variety are not one but several, and again that there are others that are
not voiced, but make some kind of noise, and that they, too, have a number.
As a third kind of letters he established the ones we now call mute. After
this he further subdivided the ones without sound or mutes down to every
single unit. In the same fashion he also dealt with the vowels and the
intermediates, until he had found out the number for each one of them,
and then he gave all of them together the name "letter." And as he realized
that none of us could gain any knowledge of a single one of them, taken
d by itself without understanding them all, he considered that the one link
that somehow unifies them all and called it the art of literacy.

PHILEBUS: Protarchus, I understood this even better than what came
before, at least how it hangs together. But I still find that this explanation
now suffers from the same defect as your earlier one.

SOCRATES: You are wondering again what the relevance of it all is, Philebus?

PHILEBUS: Right, that is what I and Protarchus have been wanting to see
for quite a while.

SOCRATES: But have you not already under your nose what you both, as
e you say, have long wanted to see?

PHILEBUS: How could that be?

SOCRATES: Did we not embark on an investigation of knowledge and
pleasure, to find out which of the two is preferable?

PHILEBUS: Yes, indeed.

SOCRATES: And we do say that each of them is one.

PHILEBUS: Right.

SOCRATES: This is the very point in question to which our preceding
discussion obliges us to give an answer: to show how each of them is one

and many, and how instead of becoming unlimited straightaway, each 19
one of them acquires some definite number before it becomes unlimited.

PROTARCHUS: Socrates has plunged us into a considerable problem, Phile-
bus, by leading us around, I don't know how, in some kind of circle. But
make up your mind which of us should answer the present question. It
would seem quite ridiculous that I, who had volunteered to take over the
thesis from you as your successor, should now hand it back to you because
I don't have an answer to this question. But it would be even more ridicu-
lous if neither of us could answer it. So what do you think we should do? b
Socrates seems to be asking whether there are *kinds* of pleasures or not,
and how many there are, and of what sort they are. And the same set of
questions applies to knowledge.

SOCRATES: You speak the truth, son of Callias. Unless we are able to do
this for every kind of unity, similarity, sameness, and their opposite, in
the way that our recent discussion has indicated, none of us will ever turn
out to be any good at anything.

PROTARCHUS: I am afraid that this is so. But while it is a great thing for c
the wise man to know everything, the second best is not to be mistaken
about oneself, it seems to me. What prompts me to say that at this point?
I will tell you. You, Socrates, have granted this meeting to all of us, and
yourself to boot, in order to find out what is the best of all human posses-
sions. Now, Philebus advocated that it is pleasure, amusement, enjoyment,
and whatever else there is of this kind. You on the contrary denied this
for all of them, but rather proposed those other goods we willingly and d
with good reason keep reminding ourselves of, so that they can be tested
as they are lying side by side in our memory. You claim, it seems, that
the good that should by right be called superior to pleasure, at least, is
reason, as well as knowledge, intelligence, science, and everything that is
akin to them, which must be obtained, rather than Philebus' candidates.
Now, after both these conflicting positions have been set up against each e
other, we threatened you in jest that we would not let you go home before
the deliberation of these questions had reached its satisfactory limit. But
since you made a promise and committed yourself to us, we therefore
insist, like children, that there is no taking back a gift properly given. So
give up this way of turning against us in the discussion here.

SOCRATES: What way are you talking about?

PROTARCHUS: Your way of plunging us into difficulties and repeating 20
questions to which we have at present no proper answer to give you. But
we should not take it that the aim of our meeting is universal confusion;
if we cannot solve the problem, you must do it, for you promised. It is
up to you to decide whether for this purpose you need to divide off
different kinds of pleasure and knowledge or can leave that out, if you
are able and willing to show some other way to settle the issues of our con-
troversy.

SOCRATES: At least there is no longer anything terrible in store for poor b
me, since you said it this way. For the clause "if you are willing" takes

away all further apprehension. In addition, some memory has come to my mind that one of the gods seems to have sent me to help us.

Protarchus: How is that and what about?

Socrates: It is a doctrine that once upon a time I heard in a dream—or perhaps I was awake—that I remember now, concerning pleasure and knowledge, that neither of the two is the good, but that there is some third
c thing which is different from and superior to both of them. But if we can clearly conceive now that this is the case, then pleasure has lost its bid for victory. For the good could no longer turn out to be identical with it. Right?

Protarchus: Right.

Socrates: So we will not have to worry any longer, I think, about the division of the kinds of pleasure. But further progress will show this more clearly.

Protarchus: Very well said; just push on.

Socrates: There are some small matters we ought to agree on first, though.

Protarchus: What are they?

d Socrates: Whether the good is necessarily bound to be perfect or not perfect.

Protarchus: But surely it must be the most perfect thing of all, Socrates!

Socrates: Further: must the good be sufficient?

Protarchus: How could it fail to be that? This is how it is superior to everything else there is.

Socrates: Now, this point, I take it, is most necessary to assert of the good: that everything that has any notion of it hunts for it and desires to get hold of it and secure it for its very own, caring nothing for anything else except for what is connected with the acquisition of some good.

Protarchus: There is no way of denying this.

e Socrates: So let us put the life of pleasure and the life of knowledge on trial, and reach some verdict by looking at them separately.

Protarchus: In what way do you mean?

Socrates: Let there be neither any knowledge in a life of pleasure, nor any pleasure in that of knowledge. For if either of the two is the good, then it must have no need of anything in addition. But if one or the other
21 should turn out to be lacking anything, then this can definitely no longer be the real good we are looking for.

Protarchus: How could it be?

Socrates: So shall we then use *you* as our test case to try both of them?

Protarchus: By all means.

Socrates: Then answer me.

Protarchus: Go ahead.

Socrates: Would you find it acceptable to live your whole life in enjoyment of the greatest pleasures?

Protarchus: Why, certainly!

Socrates: And would you see yourself in need of anything else if you had secured this altogether?

Protarchus: In no way.

Socrates: But look, might you not have some need of knowledge, intelligence, and calculation, or anything else that is related to them?[5] b

Protarchus: How so? If I had pleasure I would have all in all!

Socrates: And living like that you could enjoy the greatest pleasures throughout your life?

Protarchus: Why should I not?

Socrates: Since you would not be in possession of either reason, memory, knowledge, or true opinion, must you not be in ignorance, first of all, about this very question, whether you were enjoying yourself or not, given that you were devoid of any kind of intelligence?

Protarchus: Necessarily.

Socrates: Moreover, due to lack of memory, it would be impossible for c
you to remember that you ever enjoyed yourself, and for any pleasure to survive from one moment to the next, since it would leave no memory. But, not possessing right judgment, you would not realize that you are enjoying yourself even while you do, and, being unable to calculate, you could not figure out any future pleasures for yourself. You would thus not live a human life but the life of a mollusk or of one of those creatures in shells that live in the sea. Is this what would happen, or can we think of any other consequences besides these? d

Protarchus: How could we?

Socrates: But is this a life worth choosing?

Protarchus: Socrates, this argument has left me absolutely speechless for the moment.

Socrates: Even so, let us not give in to weakness; let us in turn rather inspect the life of reason.

Protarchus: What kind of life do you have in mind?

Socrates: Whether any one of us would choose to live in possession of every kind of intelligence, reason, knowledge, and memory of all things, while having no part, neither large nor small, of pleasure or of pain, living e
in total insensitivity of anything of that kind.

Protarchus: To me at least neither of these two forms of life seems worthy of choice, nor would it to anyone else, I presume.

Socrates: But what about a combination of both, Protarchus, a life that 22
results from a mixture of the two?

Protarchus: You mean a mixture of pleasure with reason and intelligence?

Socrates: Right, those are the ingredients I mean.

Protarchus: Everybody would certainly prefer this life to either of the other two, without exception.

Socrates: Do we realize what the upshot of this new development in our discussion is?

5. Accepting the deletion of *ta deonta*.

PROTARCHUS: Certainly, that of the three lives offered to us, two are not
b sufficient or worthy of choice for either man or animal.

SOCRATES: As far as they are concerned, is it then not clear at least, that neither the one nor the other contained the good, since otherwise it would be sufficient, perfect, and worthy of choice for any of the plants and animals that can sustain them, throughout their lifetime? And if anyone among us should choose otherwise, then he would do so involuntarily, in opposition to what is by nature truly choiceworthy, from ignorance or some unfortunate necessity.

PROTARCHUS: It certainly looks that way.

c SOCRATES: Enough has been said, it seems to me, to prove that Philebus' goddess and the good cannot be regarded as one.[6]

PHILEBUS: Nor is your reason the good, Socrates, and the same complaint applies to it.

SOCRATES: It may apply to *my* reason, Philebus, but certainly not to the true, the divine reason, I should think. It is in quite a different condition. But now I am not arguing that reason ought to get first prize over and
d against the combined life; we have rather to look and make up our minds about the second prize, how to dispose of it. One of us may want to give credit for the combined life to reason, making it responsible, the other to pleasure. Thus neither of the two would be the good, but it could be assumed that one or the other of them is its *cause*. But I would be even more ready to contend against Philebus that, whatever the ingredient in the mixed life may be that makes it choiceworthy and good, reason is
e more closely related to that thing and more like it than pleasure; and if this can be upheld, neither first nor second prize could really ever be claimed for pleasure. She will in fact not even get as much as third prize, if we can put some trust in my insight for now.

PROTARCHUS: By now it seems to me indeed that pleasure has been defeated as if knocked down by your present arguments, Socrates. In her
23 fight for victory, she has fallen. And as for reason, we may say that it wisely did not compete for first prize, for it would have suffered the same fate. But if pleasure were also deprived of second prize, she would definitely be somewhat dishonored in the eyes of her own lovers, nor would she seem as fair to them as before.

SOCRATES: What, then? Had we not better leave her alone now, rather than subject her to the most exacting test and give her pain by such an examination?

PROTARCHUS: You talk nonsense, Socrates.

b SOCRATES: Why, because I said the impossible, "giving pain to pleasure"?

PROTARCHUS: Not only that, but because you don't realize that not one among us would let you go before you have carried the discussion of these questions to its end.

6. See 12b ff.

Socrates: Oh dear, Protarchus, then a long discussion lies ahead of us, and not exactly an easy one either at this point. For it seems that, in the battle about the second prize for reason, a different device will be needed, different armament as it were, from that used in our previous discussion, though it may partly be the same. Are we to proceed?

Protarchus: Of course.

Socrates: Let us be very careful about the starting point we take. c

Protarchus: What kind of starting point?

Socrates: Let us make a division of everything that actually exists now in the universe into two kinds, or if this seems preferable, into three.

Protarchus: Could you explain on what principle?

Socrates: By taking up some of what has been said before.

Protarchus: Like what?

Socrates: We agreed earlier that the god had revealed a division of what is into the unlimited and the limit.[7]

Protarchus: Certainly.

Socrates: Let us now take these as two of the kinds, while treating the one that results from the mixture of these two as our third kind. But I must d look like quite a fool with my distinctions into kinds and enumerations!

Protarchus: What are you driving at?

Socrates: That we seem to be in need of yet a fourth kind.

Protarchus: Tell us what it is.

Socrates: Look at the cause of this combination of those two together, and posit it as my fourth kind in addition to those three.

Protarchus: Might you not also be in need of a fifth kind that provides for their separation?

Socrates: Perhaps, but I do not think so, at least for now. But if it turns out that I need it, I gather you will bear with me if I should search for a e fifth kind.

Protarchus: Gladly.

Socrates: Let us first take up three of the four, and since we observe that of two of them, both are split up and dispersed into many, let's make an effort to collect those into a unity again, in order to study how each of them is in fact one and many.

Protarchus: If you could explain all that more clearly, I might be able to follow you.

Socrates: What I mean is this: The two kinds are the ones I referred to 24 just now, the unlimited and what has limit. That the unlimited in a way is many I will try to explain now. The treatment of what has limit will have to wait a little longer.

Protarchus: Let it wait.

Socrates: Attention, then. The matter I am asking you to attend to is difficult and controversial, but attend to it nevertheless. Check first in the case of the hotter and the colder whether you can conceive of a limit, or

7. See 16c.

whether the 'more and less' do not rather reside in these kinds, and while
b they reside in them do not permit the attainment of any end. For once an end has been reached, they will both have been ended as well.

Protarchus: Very true.

Socrates: We are agreed, then, that the hotter and the colder always contain the more and less.

Protarchus: Quite definitely.

Socrates: Our argument forces us to conclude that these things never have an end. And since they are endless, they turn out to be entirely unlimited.

Protarchus: Quite strongly so, Socrates.

Socrates: You have grasped this rather well, Protarchus, and remind
c me rightly with your pronouncement of 'strongly' that it and equally its counterpart 'gently' are of the same caliber as the more and less. Wherever they apply, they prevent everything from adopting a definite quantity; by imposing on all actions the qualification 'stronger' relative to 'gentler' or the reverse, they procure a 'more and less' while doing away with all definite quantity. We are saying now, in effect, that if they do not abolish definite quantity, but let quantity and measurement take a foothold in the
d domain of the more and less, the strong and mild, they will be driven out of their own territory. For once they take on a definite quantity, they would no longer be hotter and colder. The hotter and equally the colder are always in flux and never remain, while definite quantity means standstill and the end of all progression. The upshot of this argument is that the hotter, together with its opposite, turn out to be unlimited.

Protarchus: That seems to be its result, Socrates, although, as you said yourself, it is difficult to follow in these matters. But if they are repeated
e again and again, perhaps both questioner and respondent may end up in a satisfactory state of agreement.

Socrates: A good idea; let us carry it out. But consider whether, to avoid the needless length of going through a complete survey of all cases, the following indication may serve to mark out the nature of the unlimited.

Protarchus: What indication do you have in mind?

Socrates: Whatever seems to us to become 'more and less', or susceptible to 'strong and mild' or to 'too much' and all of that kind, all that we
25 ought to subsume under the genus of the unlimited as its unity. This is in compliance with the principle we agreed on before, that for whatever is dispersed and split up into a multitude, we must try to work out its unifying nature as far as we can, if you remember.

Protarchus: I do remember.

Socrates: But look now at what does not admit of these qualifications but rather their opposites, first of all 'the equal' and 'equality' and, after
b the equal, things like 'double', and all that is related as number to number or measure to measure: If we subsume all these together under the heading of 'limit', we would seem to do a fair job. Or what do you say?

Protarchus: A very fair job, Socrates.

Socrates: Very well, then. But what nature shall we ascribe to the third kind, the one that is the mixture of the two?

Protarchus: You will have to answer that question for me, I think.

Socrates: A god rather, if any of them should listen to my prayers.

Protarchus: So say your prayer, and wait for the result.

Socrates: I am waiting, and indeed I have the feeling that one of the gods is favorably disposed to us now, Protarchus.

Protarchus: What do you mean by that, and what evidence have you? c

Socrates: I certainly will tell you, but you follow closely what I say.

Protarchus: Just go on.

Socrates: We called something hotter and colder just now, didn't we?

Protarchus: Yes.

Socrates: Now add dryer and wetter to them, and more and less, faster and slower, taller and shorter, and whatever else we have previously collected together as the one kind that has the nature of taking on the 'more and less'.

Protarchus: You mean the nature of the unlimited? d

Socrates: Yes. Now take the next step and mix with it the class of the limit.

Protarchus: Which one?

Socrates: The very one we have so far omitted to collect together, the class that has the character of limit, although we ought to have given unity to it, just as we collected together the unlimited kind. But perhaps it will come to the same thing even now if, through the collection of these two kinds, the unity of the former kind becomes conspicuous too.

Protarchus: What kind do you mean, and how is this supposed to work?

Socrates: The kind that contains equal and double, and whatever else puts an end to the conflicts there are among opposites, making them e commensurate and harmonious by imposing a definite number on them.

Protarchus: I understand. I have the impression that you are saying that, from such mixture in each case, certain generations result?

Socrates: Your impression is correct.

Protarchus: Then go on with your explanation.

Socrates: Is it not true that in sickness the right combination of the opposites establishes the state of health?

Protarchus: Certainly. 26

Socrates: And does not the same happen in the case of the high and the low, the fast and the slow, which belong to the unlimited? Is it not the presence of these factors in them[8] which forges a limit and thereby creates the different kinds of music in their perfection?

Protarchus: Beautiful!

Socrates: And once engendered in frost and heat, limit takes away their excesses and unlimitedness, and establishes moderation and harmony in that domain?

8. Retaining *eggignomena* in the text at 26a3, and leaving out the colon after *tauta*.

PROTARCHUS: Quite.

b SOCRATES: And when the unlimited and what has limit are mixed together, we are blessed with seasons and all sorts of fine things of that kind?

PROTARCHUS: Who could doubt it?

SOCRATES: And there are countless other things I have to pass by in silence: With health there come beauty and strength, and again in our soul there is a host of other excellent qualities. It is the goddess herself, fair Philebus, who recognizes how excess and the overabundance of our wickedness allow for no limit in our pleasures and their fulfillment, and she
c therefore imposes law and order as a limit on them. And while you may complain that this ruins them, I by contrast call it their salvation. How does this strike you, Protarchus?

PROTARCHUS: This fits my own intuitions, Socrates.

SOCRATES: These, then, are the three kinds I spoke of, if you see what I mean.

PROTARCHUS: I think I've got it. It seems to me that you are referring to the unlimited as one kind, to the limit within things as the other, second kind. But I still do not sufficiently understand what you mean by the third.

SOCRATES: You are simply overwhelmed by the abundance of the third
d kind,[9] my admirable friend. Although the class of the unlimited also displays a multiplicity, it preserved at least the appearance of unity, since it was marked out by the common character of the more and less.

PROTARCHUS: That is true.

SOCRATES: About limit, on the other hand, we did not trouble ourselves,[10] neither that it has plurality nor whether it is one by nature.

PROTARCHUS: Why should we have done so?

SOCRATES: No reason. But see what I mean by the third kind: I treat all the joint offspring of the other two kinds as a unity, a coming-into-being created through the measures imposed by the limit.

PROTARCHUS: I understand.

e SOCRATES: But now we have to look at the fourth kind we mentioned earlier, in addition to these three. Let this be our joint investigation. See now whether you think it necessary that everything that comes to be comes to be through some cause?

PROTARCHUS: Certainly, as far as I can see. How could anything come to be without one?

SOCRATES: And is it not the case that there is no difference between the nature of what *makes* and the *cause*, except in name, so that the maker and the cause would rightly be called one?

PROTARCHUS: Right.

9. Lit., "of the genesis of the third [kind]": The third kind is described just below as a "coming-into-being," lit. "genesis into [a?] being." See further 53c–55d below, where the word for "genesis" is translated "(process of) generation."

10. Adopting the insertion of *hoti* before *polla* at d4.

Socrates: But what about what is made and what comes into being, 27
will we not find the same situation, that they also do not differ except in name?

Protarchus: Exactly.

Socrates: And isn't it the case that what makes is always leading in the order of nature, while the thing made follows since it comes into being through it?

Protarchus: Right.

Socrates: Therefore the cause and what is subservient to the cause in a process of coming to be are also different and not the same?

Protarchus: How should they be?

Socrates: It follows, then, that what comes to be and that from which it is produced represent all three kinds?

Protarchus: Very true.

Socrates: We therefore declare that the craftsman who produces all b
these must be the fourth kind, the cause, since it has been demonstrated sufficiently that it differs from the others?

Protarchus: It certainly is different.

Socrates: Now that the four kinds have been distinguished, it seems right to go through them one by one, for memory's sake.

Protarchus: Of course.

Socrates: As the first I count the unlimited, limit as the second, afterwards in third place comes the being which is mixed and generated out
of those two. And no mistake is made if the cause of this mixture and c
generation is counted as number four?

Protarchus: How could there be one?

Socrates: Now, let's see, what is going to be our next point after this, and what concern of ours got us to this point? Was it not this? We were wondering whether second prize should be awarded to pleasure or to knowledge, wasn't that it?[11]

Protarchus: It was indeed.

Socrates: On the basis of our fourfold distinction we may now perhaps be in a better position to come to a decision about the first and the second prize, the issue that started our whole debate.

Protarchus: Perhaps.

Socrates: Let us continue, then. We declared the life that combines d
pleasure and knowledge the winner. Didn't we?

Protarchus: We did.

Socrates: Should we not take a look at this life and see what it is and to which kind it belongs?

Protarchus: Nothing to prevent us.

Socrates: We will, I think, assign it to the third kind, for it is not a mixture of just two elements but of the sort where all that is unlimited is

11. See 22a ff.

tied down by limit.[12] It would seem right, then, to make our victorious form of life part of that kind.

Protarchus: Very right.

e Socrates: That is settled, then. But how about your kind of life, Philebus, which is pleasant and unmixed? To which of the established kinds should it by right be assigned? But before you make your pronouncement, answer me the following question.

Philebus: Just tell me!

Socrates: Do pleasure and pain have a limit, or are they of the sort that admit the more and less?

Philebus: Certainly the sort that admit the more, Socrates! For how could pleasure be all that is good if it were not by nature boundless in plenty and increase?

28 Socrates: Nor would, on the other hand, pain be all that is bad, Philebus! So we have to search for something besides its unlimited character that would bestow on pleasures a share of the good. But take note that pleasure[13] is thereby assigned to the boundless. As to assigning intelligence, knowledge, and reason to one of our aforesaid kinds, how can we avoid the danger of blasphemy, Protarchus and Philebus? A lot seems to hinge on whether or not we give the right answer to this question.

b Philebus: Really now, you are extolling your own god, Socrates.

Socrates: Just as you extoll that goddess of yours, Philebus. But the question needs an answer, nevertheless.

Protarchus: Socrates is right in this, Philebus; we must obey him.

Philebus: Didn't you choose to speak instead of me?

Protarchus: Quite. But now I am at a loss, and I entreat you, Socrates, to act as our spokesman, so that we do not misstate the case of your candidate and thus introduce a false note into the discussion.

c Socrates: Your obedient servant, Protarchus, especially since it is not a very difficult task. But did my playful exaltation really confuse you, as Philebus claims, when I asked to what kind reason and knowledge belonged?

Protarchus: It certainly did, Socrates.

Socrates: It is easy to settle, nevertheless. For all the wise are agreed, in true self-exaltation, that reason is our king, both over heaven and earth. And perhaps they are justified. But let us go into the discussion of this class itself at greater length, if you have no objections.

d Protarchus: Discuss it in whichever way you like, Socrates, and don't be apologetic about longwindedness; we will not lose patience.

Socrates: Well said. Let us proceed by taking up this question.

Protarchus: What question?

Socrates: Whether we hold the view that the universe and this whole world order are ruled by unreason and irregularity, as chance would have

12. Reading *mikton ekeino*.

13. Accepting the correction of *touto* at 28a3 and retaining the mss. reading of *estō*.

it, or whether they are not rather, as our forebears taught us, governed by reason and by the order of a wonderful intelligence.

PROTARCHUS: How can you even think of a comparison here, Socrates? e
What you suggest now is downright impious, I would say. The only account that can do justice to the wonderful spectacle presented by the cosmic order of sun, moon, and stars and the revolution of the whole heaven, is that reason arranges it all, and I for my part would never waver in saying or believing it.

SOCRATES: Is this what you want us to do, that we should not only
conform to the view of earlier thinkers who professed this as the truth, 29
repeating without any risk what others have said, but that we should share their risk and blame if some formidable opponent denies it and argues that disorder rules?

PROTARCHUS: How could I fail to want it?

SOCRATES: Well, then, now face up to the consequences of this position that we have to come to terms with.

PROTARCHUS: Please tell me.

SOCRATES: We somehow discern that what makes up the nature of the bodies of all animals—fire, water, and air, "and earth!," as storm-battered sailors say—are part of their composition.

PROTARCHUS: Very much so. We are indeed battered by difficulties in b
our discussion.

SOCRATES: Come, now, and realize that the following applies to all constituents that belong to us.

PROTARCHUS: What is it?

SOCRATES: That the amount of each of these elements in us is small and insignificant, that it does not possess in the very least the purity or the power that is worthy of its nature. Take one example as an illustration representative for all. There is something called fire that belongs to us, and then again there is fire in the universe.

PROTARCHUS: No doubt.

SOCRATES: And is not the fire that belongs to us small in amount, feeble c
and poor, while the fire in the universe overwhelms us by its size and beauty and by the display of all its power?

PROTARCHUS: What you say is very true.

SOCRATES: But what about this? Is the fire in the universe generated, nourished, and ruled by the fire that belongs to us, or is it not quite the reverse, that your heat and mine, and that in every animal, owe all this to the cosmic fire?

PROTARCHUS: It is not even worth answering that question.

SOCRATES: Right. And I guess you will give the same answer about the d
earth here in the animals when it is compared to earth in the universe, and likewise about the other elements I mentioned a little earlier. Is that your answer?

PROTARCHUS: Who could answer differently without seeming insane?

SOCRATES: No one at all. But now see what follows. To the combination of all these elements taken as a unit we give the name "body," don't we?

PROTARCHUS: Certainly.

e SOCRATES: Now, realize that the same holds in the case of what we call the ordered universe. It will turn out to be a body in the same sense, since it is composed of the same elements.

PROTARCHUS: What you say is undeniable.

SOCRATES: Does the body of the universe as a whole provide for the sustenance of what is body in our sphere, or is it the reverse, and the universe possesses and derives all the goods enumerated from ours?

PROTARCHUS: That too is a question not worth asking, Socrates.

30 SOCRATES: But what about the following, is this also a question not worth asking?

PROTARCHUS: Tell me what the question is.

SOCRATES: Of the body that belongs to us, will we not say that it has a soul?

PROTARCHUS: Quite obviously that is what we will say.

SOCRATES: But where does it come from, unless the body of the universe which has the same properties as ours, but more beautiful in all respects, happens to possess a soul?

PROTARCHUS: Clearly from nowhere else.

SOCRATES: We surely cannot maintain this assumption, with respect to
b our four classes (limit, the unlimited, their mixture, and their cause—which is present in everything): that this cause is recognized as all-encompassing wisdom, since among us it imports the soul and provides training for the body and medicine for its ailments and in other cases order and restitution, but that it should fail to be responsible for the same things on a large scale in the whole universe (things that are, in addition, beautiful and pure), for the contrivance of what has so fair and wonderful a nature.

c PROTARCHUS: That would make no sense at all.

SOCRATES: But if that is inconceivable, we had better pursue the alternative account and affirm, as we have said often, that there is plenty of the unlimited in the universe as well as sufficient limit, and that there is, above them, a certain cause, of no small significance, that orders and coordinates the years, seasons, and months, and which has every right to the title of wisdom and reason.

PROTARCHUS: The greatest right.

SOCRATES: But there could be no wisdom and reason without a soul.

PROTARCHUS: Certainly not.

d SOCRATES: You will therefore say that in the nature of Zeus there is the soul of a king, as well as a king's reason, in virtue of this power displayed by the cause, while paying tribute for other fine qualities in the other divinities, in conformity with the names by which they like to be addressed.

PROTARCHUS: Very much so.

SOCRATES: Do not think that we have engaged in an idle discussion here, Protarchus, for it comes as a support for the thinkers of old who held the view that reason is forever the ruler over the universe.

PROTARCHUS: It certainly does.

SOCRATES: It also has provided an answer to my query, that reason
e belongs to that kind which is the cause of everything. But that was one

of our four kinds. So there you already have the solution to our problem in your hands.

PROTARCHUS: I have indeed, and quite to my satisfaction, although at first I did not realize that you were answering.

SOCRATES: Sometimes joking is a relief from seriousness.

PROTARCHUS: Well said.

SOCRATES: By now, dear friend, we have arrived at a satisfactory explana- 31
tion of the class that reason belongs to and what power it has.

PROTARCHUS: Quite so.

SOCRATES: And as to pleasure, it became apparent quite a while ago what class it belongs to.

PROTARCHUS: Definitely.

SOCRATES: Let us firmly keep it in mind about both of them, that reason is akin to cause and is part of that family, while pleasure itself is unlimited and belongs to the kind that in and by itself neither possesses nor will ever possess a beginning, middle, or end.

PROTARCHUS: We will keep it in mind, how could we help it? b

SOCRATES: After this we must next find out in what kind of thing each of them resides and what kind of condition makes them come to be when they do. Let us take pleasure first, for just as we searched for the class it belongs to first, so we start our present investigation with it. But again, we will not be able to provide a satisfactory examination of pleasure if we do not study it together with pain.

PROTARCHUS: If that is the direction we have to take, then let's go that way.

SOCRATES: Do you share my view about their generation?

PROTARCHUS: What view? c

SOCRATES: Pleasure and pain seem to me by nature to arise together in the common kind.

PROTARCHUS: Could you remind us once again, Socrates, which of those you mentioned you called the common kind?

SOCRATES: As far as I can, my most esteemed friend.

PROTARCHUS: That is noble of you.

SOCRATES: By the common kind, we meant the one that was number three on our list of four.

PROTARCHUS: You mean the one you introduced after the unlimited and the limited, the one that included health, and also harmony, I believe?

SOCRATES: Excellently stated. But now try to put your mind to this as d
much as possible.

PROTARCHUS: Just go on.

SOCRATES: What I claim is that when we find the harmony in living creatures disrupted, there will at the same time be a disintegration of their nature and a rise of pain.

PROTARCHUS: What you say is very plausible.

SOCRATES: But if the reverse happens, and harmony is regained and the former nature restored, we have to say that pleasure arises, if we must pronounce only a few words on the weightiest matters in the shortest possible time.

e Protarchus: I believe that you are right, Socrates, but why don't we try to be more explicit about this very point?

Socrates: Well, is it not child's play to understand the most ordinary and well-known cases?

Protarchus: What cases do you mean?

Socrates: Hunger, I take it, is a case of disintegration and pain?

Protarchus: Yes.

Socrates: And eating, the corresponding refilling, is a pleasure?

Protarchus: Yes.

Socrates: But thirst is, once again, a destruction and pain, while the
32 process that fills what is dried out with liquid is pleasure? And, further, unnatural separation and dissolution, the affection caused by heat, is pain, while the natural restoration of cooling down is pleasure?

Protarchus: Very much so.

Socrates: And the unnatural coagulation of the fluids in an animal through freezing is pain, while the natural process of their dissolution or redistribution is pleasure. To cut matters short, see whether the following
b account seems acceptable to you. When the natural combination of limit and unlimitedness that forms a live organism, as I explained before, is destroyed, this destruction is pain, while the return towards its own nature, this general restoration, is pleasure.

Protarchus: So be it, for it seems to provide at least an outline.

Socrates: Shall we then accept this as one kind of pleasure and pain, what happens in either of these two kinds of processes?

Protarchus: Accepted.

Socrates: But now accept also the anticipation by the *soul* itself of these
c two kinds of experiences; the hope before the actual pleasure will be pleasant and comforting, while the expectation of pain will be frightening and painful.

Protarchus: This turns out then to be a different kind of pleasure and pain, namely the *expectation* that the soul experiences by itself, without the body.

Socrates: Your assumption is correct. In both these cases, as I see it at least, pleasure and pain will arise pure and unmixed with each other, so that it will become apparent as far as pleasure is concerned whether its whole class
d is to be welcomed or whether this should rather be the privilege of one of the other classes which we have already discussed. Pleasure and pain may rather turn out to share the predicament of hot and cold and other such things that are welcome at one point but unwelcome at another, because they are not good, but it happens that some of them do occasionally assume a beneficial nature.

Protarchus: You are quite right if you suggest that this must be the direction to take if we want to find a solution to what we are looking for now.

Socrates: First, then, let us take a look together at the following point.
e If it truly holds, as we said, that their disintegration constitutes pain, but restoration is pleasure, what kind of state should we ascribe to animals

when they are neither destroyed nor restored; what kind of condition is this? Think about it carefully, and tell me: Is there not every necessity that the animal will at that time experience neither pain nor pleasure, neither large nor small?

PROTARCHUS: That is indeed necessary.

SOCRATES: There is, then, such a condition, a third one, besides the one in which one is pleased or in which one is in pain? 33

PROTARCHUS: Obviously.

SOCRATES: Make an effort to keep this fact in mind. For it makes quite a difference for our judgment of pleasure whether we remember that there is such a state or not. But we had better give it a little more consideration, if you don't mind.

PROTARCHUS: Just tell me how.

SOCRATES: You realize that nothing prevents the person who has chosen the life of reason from living in this state.

PROTARCHUS: You mean without pleasure and pain? b

SOCRATES: It was one of the conditions agreed on in our comparison of lives that the person who chooses the life of reason and intelligence must not enjoy pleasures either large or small.

PROTARCHUS: That was indeed agreed on.

SOCRATES: He may then live in this fashion, and perhaps there would be nothing absurd if this life turns out to be the most godlike.

PROTARCHUS: It is at any rate not likely that the gods experience either pleasure or the opposite.

SOCRATES: It is certainly not likely. For either of these states would be quite unseemly in their case. But this is a question we had better take up again later if it should be relevant to our discussion, but let us count it as c
an additional point in favor of reason in the competition for second prize, even if we cannot count it in that for first prize.

PROTARCHUS: A very good suggestion.

SOCRATES: But now as for the other kind of pleasure, of which we said that it belongs to the soul itself. It depends entirely on memory.

PROTARCHUS: In what way?

SOCRATES: It seems we have first to determine what kind of a thing memory is; in fact I am afraid that we will have to determine the nature of perception even before that of memory, if the whole subject matter is to become at all clear to us in the right way.

PROTARCHUS: How do you mean? d

SOCRATES: You must realize that some of the various affections of the body are extinguished within the body before they reach the soul, leaving it unaffected. Others penetrate through both body and soul and provoke a kind of upheaval that is peculiar to each but also common to both of them.

PROTARCHUS: I realize that.

SOCRATES: Are we fully justified if we claim that the soul remains oblivious of those affections that do not penetrate both, while it is not oblivious of those that penetrate both?

PROTARCHUS: Of course we are justified. e

Socrates: But you must not so misunderstand me as to suppose I meant that this 'obliviousness' gave rise to any kind of forgetting. Forgetting is rather the loss of memory, but in the case in question here no memory has yet arisen. It would be absurd to say that there could be the process of losing something that neither is nor was in existence, wouldn't it?

Protarchus: Quite definitely.

Socrates: You only have to make some change in names, then.

Protarchus: How so?

Socrates: Instead of saying that the soul is oblivious when it remains unaffected by the disturbances of the body, now change the name of what
34 you so far called obliviousness to that of *nonperception.*

Protarchus: I understand.

Socrates: But when the soul and body are jointly affected and moved by one and the same affection, if you call this motion *perception,* you would say nothing out of the way.

Protarchus: You are right.

Socrates: And so we know by now what we mean by perception?

Protarchus: Certainly.

Socrates: So if someone were to call memory the 'preservation of perception', he would be speaking correctly, as far as I am concerned.

b Protarchus: Rightly so.

Socrates: And do we not hold that recollection differs from memory?

Protarchus: Perhaps.

Socrates: Does not their difference lie in this?

Protarchus: In what?

Socrates: Do we not call it 'recollection' when the soul recalls as much as possible by itself, without the aid of the body, what she had once experienced together with the body? Or how would you put it?

Protarchus: I quite agree.

Socrates: But on the other hand, when, after the loss of memory of
c either a perception or again a piece of knowledge, the soul calls up this memory for itself, we also call all these events recollection.

Protarchus: You are right.

Socrates: The point for the sake of which all this has been said is the following.

Protarchus: What is it?

Socrates: That we grasp as fully and clearly as possible the pleasure that the soul experiences without the body, as well as the desire. And through a clarification of these states, the nature of both pleasure and desire will somehow be revealed.

Protarchus: Let us now discuss this as our next issue, Socrates.

d Socrates: It seems that in our investigation we have to discuss many points about the origin of pleasure and about all its different varieties. For it looks as if we will first have to determine what desire is and on what occasion it arises.

Protarchus: Let us determine that, then. We have nothing to lose.

SOCRATES: We will certainly lose something, Protarchus; by discovering what we are looking for now, we will lose our ignorance about it.

PROTARCHUS: You rightly remind us of that fact. But now let us try to return to the further pursuit of our subject.

SOCRATES: Are we agreed now that hunger and thirst and many other things of this sort are desires? e

PROTARCHUS: Quite in agreement.

SOCRATES: But what is the common feature whose recognition allows us to address all these phenomena, which differ so much, by the same name?

PROTARCHUS: Heavens, that is perhaps not an easy thing to determine, Socrates, but it must be done nevertheless.

SOCRATES: Shall we go back to the same point of departure?

PROTARCHUS: What point?

SOCRATES: When we say "he is thirsty," we always have something in mind?

PROTARCHUS: We do.

SOCRATES: Meaning that he is getting empty?

PROTARCHUS: Certainly.

SOCRATES: But thirst is a desire?

PROTARCHUS: Yes, the desire for drink.

SOCRATES: For drink or for the filling with drink? 35

PROTARCHUS: For the filling with drink, I think.

SOCRATES: Whoever among us is emptied, it seems, desires the opposite of what he suffers. Being emptied, he desires to be filled.

PROTARCHUS: That is perfectly obvious.

SOCRATES: But what about this problem? If someone is emptied for the first time, is there any way he could be in touch with filling, either through sensation or memory, since he has no experience of it, either in the present or ever in the past?

PROTARCHUS: How should he?

SOCRATES: But we do maintain that he who has a desire desires something? b

PROTARCHUS: Naturally.

SOCRATES: He does, then, not have a desire for what he in fact experiences. For he is thirsty, and this is a process of emptying. His desire is rather of filling.

PROTARCHUS: Yes.

SOCRATES: Something in the person who is thirsty must necessarily somehow be in contact with filling.

PROTARCHUS: Necessarily.

SOCRATES: But it is impossible that this should be the body, for the body is what is emptied out.

PROTARCHUS: Yes.

SOCRATES: The only option we are left with is that the soul makes contact with the filling, and it clearly must do so through memory. Or could it c
make contact through anything else?

PROTARCHUS: Clearly through nothing else.

Socrates: Do we understand, then, what conclusions we have to draw from what has been said?

Protarchus: What are they?

Socrates: Our argument forces us to conclude that desire is not a matter of the body.

Protarchus: Why is that?

Socrates: Because it shows that every living creature always strives towards the opposite of its own experience.

Protarchus: And very much so.

Socrates: This impulse, then, that drives it towards the opposite of its own state signifies that it has memory of that opposite state?

Protarchus: Certainly.

d Socrates: By pointing out that it is this memory that directs it towards the objects of its desires, our argument has established that every impulse, and desire, and the rule over the whole animal is the domain of the soul.

Protarchus: Very much so.

Socrates: Our argument will, then, never allow that it is our body that experiences thirst, hunger, or anything of that sort.

Protarchus: Absolutely not.

Socrates: There is yet a further point we have to consider that is connected with these same conditions. For our discussion seems to me to indicate that there is a form of life that consists of these conditions.

e Protarchus: What does it consist of, and what form of life are you talking about?

Socrates: It consists of filling and emptying and all such processes as are related to both the preservation and the destruction of animals. And when one of us is in either of the two conditions, he is in pain, or again he experiences pleasure, depending on the nature of these changes.

Protarchus: That is indeed what happens.

Socrates: But what if someone finds himself in between these two affections?

Protarchus: What do you mean by "in between"?

Socrates: When he is pained by his condition and remembers the pleasant things that would put an end to the pain, but is not yet being filled.
36 What about this situation? Should we claim that he is then in between these two affections, or not?

Protarchus: We should claim that.

Socrates: And should we say that the person is altogether in pain or pleasure?

Protarchus: By heaven, he seems to me to be suffering a twofold pain; one consists in the body's condition, the other in the soul's desire caused by the expectation.

Socrates: How do you mean that there is a twofold pain, Protarchus? Does it not sometimes happen that one of us is emptied at one particular
b time, but is in clear hope of being filled, while at another time he is, on the contrary, without hope?

Protarchus: It certainly happens.

SOCRATES: And don't you think that he enjoys this hope for replenishment when he remembers, while he is simultaneously in pain because he has been emptied at that time?

PROTARCHUS: Necessarily.

SOCRATES: This is, then, the occasion when a human being and other animals are simultaneously undergoing pain and pleasure.

PROTARCHUS: It seems so.

SOCRATES: But what if he is without hope of attaining any replenishment when he is emptied? Is not that the situation where this twofold pain occurs, which you have just come across and simply taken to be twofold? c

PROTARCHUS: That is quite undeniable, Socrates.

SOCRATES: Now let us apply the results of our investigation of these affections to this purpose.

PROTARCHUS: What is it?

SOCRATES: Shall we say that these pains and pleasures are true or false, or rather that some of them are true, but not others?

PROTARCHUS: But how could there be false pleasures or pains, Socrates?

SOCRATES: Well, how could there be true or false fears, true or false expectations, true or false judgments, Protarchus?

PROTARCHUS: For judgments I certainly would be ready to admit it, but d not for the other cases.

SOCRATES: What is that you are saying? I am afraid we are stirring up a weighty controversy here.

PROTARCHUS: You are right.

SOCRATES: But if it is relevant to what we were discussing before, you worthy son of that man, it ought to be taken up.

PROTARCHUS: Perhaps, in that case.

SOCRATES: We have to forego any excursions here or any discussion of whatever side issues are not directly relevant to our topic.

PROTARCHUS: Right.

SOCRATES: But tell me this, for I have lived in continued perplexity about e the difficulty we have come across now. What is your view? Are there not false pleasures, as well as true ones?

PROTARCHUS: How should there be?

SOCRATES: Do you really want to claim that there is no one who, either in a dream or awake, either in madness or any other delusion, sometimes believes he is enjoying himself, while in reality he is not doing so, or believes he is in pain while he is not?

PROTARCHUS: We all assume that this is indeed the case, Socrates.

SOCRATES: But rightly so? Should we not rather take up the question whether or not this claim is justified?

PROTARCHUS: We should take it up, as I at least would say.

SOCRATES: Let us try to achieve more clarity about what we said concern- 37 ing pleasure and judgment. Is there something we call judging?

PROTARCHUS: Yes.

SOCRATES: And is there also taking pleasure?

PROTARCHUS: Yes.

Socrates: But there is also what the judgment is about?

Protarchus: Certainly.

Socrates: And also what the pleasure is about?

Protarchus: Very much so.

Socrates: But what makes a judgment, whether it judges rightly or not, cannot be deprived of really making a judgment.

b Protarchus: How should it?

Socrates: And what takes pleasure, whether it is rightly pleased or not, can obviously never be deprived of really taking pleasure.

Protarchus: Yes, that is also the case.

Socrates: But what we have to question is how it is that judgment is usually either true or false, while pleasure admits only truth, even though in both cases there is equally real judgment and real pleasure.

Protarchus: We have to question that.

Socrates: Is it that judgment takes on the additional qualification of true
c and false and is thus not simply judgment, but also has either one of these two qualities? Would you say that is a point we have to look into?

Protarchus: Yes.

Socrates: And furthermore, whether quite generally certain things allow extra qualifications, while pleasure and pain are simply what they are and do not take on any qualifications. About that we also have to come to an agreement.

Protarchus: Obviously.

Socrates: But at least it is not difficult to see that they, too, take on qualifications. For we said earlier that both of them, pleasures as well as pains, can be great and small, and also have intensity.

d Protarchus: We certainly did.

Socrates: But if some bad state should attach itself to any of them, then we would say that the judgment becomes a bad one, and the pleasure becomes bad too, Protarchus?

Protarchus: Naturally, Socrates.

Socrates: But what if some rightness or the opposite of rightness are added to something, would we not call the judgment right, if it were right, and the pleasure too?

Protarchus: Necessarily.

e Socrates: And if a mistake is made about the object of judgment, then we say that the judgment that makes that mistake is not right and does not judge rightly?

Protarchus: How could it?

Socrates: But what if we notice that a pain or pleasure is mistaken in what it is pleased or pained about, shall we then call it right or proper or give it other names of praise?

Protarchus: That would be impossible, if indeed pleasure should be mistaken.

Socrates: As to pleasure, it certainly often seems to arise in us not with a right, but with a false, judgment.

PROTARCHUS: Of course. But what we call false in this case at that point 38
is the judgment, Socrates; nobody would dream of calling the pleasure itself false.

SOCRATES: You certainly put up a spirited defense for pleasure now, Protarchus!

PROTARCHUS: Not at all; I only repeat what I hear.

SOCRATES: Is there no difference between the pleasure that goes with right judgment and knowledge and the kind that often comes to any of us with false judgment and ignorance?

PROTARCHUS: There's probably no small difference. b

SOCRATES: So let us turn to inspect the difference between them.

PROTARCHUS: Lead on where you like.

SOCRATES: I lead you this way.

PROTARCHUS: What way?

SOCRATES: Of our judgment we say that it is sometimes false, and sometimes true?

PROTARCHUS: It is.

SOCRATES: And as we said just now, these are often accompanied by pleasure and pain. I am talking of true and false judgment.

PROTARCHUS: That's right.

SOCRATES: And is it not memory and perception that lead to judgment or the attempt to come to a definite judgment, as the case may be?

PROTARCHUS: Indeed. c

SOCRATES: Do we agree that the following must happen here?

PROTARCHUS: What?

SOCRATES: Wouldn't you say that it often happens that someone who cannot get a clear view because he is looking from a distance wants to make up his mind about what he sees?

PROTARCHUS: I would say so.

SOCRATES: And might he then not again raise another question for himself?

PROTARCHUS: What question?

SOCRATES: "What could that be that appears to stand near that rock under
a tree?"—Do you find it plausible that someone might say these words to d
himself when he sets his eyes on such appearances?

PROTARCHUS: Certainly.

SOCRATES: And might he not afterwards, as an answer to his own question, say to himself, "It is a man," and in so speaking, would get it right?

PROTARCHUS: No doubt.

SOCRATES: But he might also be mistaken and say that what he sees is a statue, the work of some herdsmen?

PROTARCHUS: Very likely.

SOCRATES: But if he were in company, he might actually say out loud to e
his companion what he had told himself, and so what we earlier called judgment would turn into an assertion?

Protarchus: To be sure.

Socrates: Whereas if he is alone, he entertains this thought by himself, and sometimes he may even resume his way for quite a long time with the thought in his mind?

Protarchus: No doubt.

Socrates: But look, do you share my view on this?

Protarchus: What view?

Socrates: That our soul in such a situation is comparable to a book?

Protarchus: How so?

39 Socrates: If memory and perceptions concur with other impressions at a particular occasion, then they seem to me to inscribe words in our soul, as it were. And if what is written is true, then we form a true judgment and a true account of the matter. But if what our scribe writes is false, then the result will be the opposite of the truth.

b Protarchus: I quite agree, and I accept this way of putting it.

Socrates: Do you also accept that there is another craftsman at work in our soul at the same time?

Protarchus: What kind of craftsman?

Socrates: A painter who follows the scribe and provides illustrations to his words in the soul.

Protarchus: How and when do we say he does this work?

Socrates: When a person takes his judgments and assertions directly from sight or any other sense-perception and then views the images he
c has formed inside himself, corresponding to those judgments and assertions. Or is it not something of this sort that is going on in us?

Protarchus: Quite definitely.

Socrates: And are not the pictures of the true judgments and assertions true, and the pictures of the false ones false?

Protarchus: Certainly.

Socrates: If we have been right with what we have said so far, let us in addition come to terms about this question.

Protarchus: What about?

Socrates: Whether these experiences are necessarily confined to the past and the present, but are not extended into the future.

Protarchus: They should apply equally to all the tenses: past, present, and future.

d Socrates: Now, did we not say before, about the pleasures and pains that belong to the soul alone, that they might precede those that go through the body? It would therefore be possible that we have anticipatory pleasures and pains about the future.

Protarchus: Undeniably.

Socrates: And are those writings and pictures which come to be in us,
e as we said earlier, concerned only with the past and the present, but not with the future?

Protarchus: Decidedly with the future.

Socrates: If you say 'decidedly', is it because all of them are really hopes for future times, and we are forever brimful of hopes, throughout our lifetime?

Protarchus: Quite definitely.

Socrates: Well, then, in addition to what has been said now, also answer this question.

Protarchus: Concerning what?

Socrates: Is not a man who is just, pious, and good in all respects, also loved by the gods?

Protarchus: How could he fail to be?

Socrates: But what about someone who is unjust and in all respects evil? Isn't he that man's opposite? 40

Protarchus: Of course.

Socrates: And is not everyone, as we just said, always full of many hopes?

Protarchus: Certainly.

Socrates: There are, then, assertions in each of us that we call hopes?

Protarchus: Yes.

Socrates: But there are also those painted images. And someone often envisages himself in the possession of an enormous amount of gold and of a lot of pleasures as a consequence. And in addition, he also sees, in this inner picture himself, that he is beside himself with delight.

Protarchus: What else! b

Socrates: Now, do we want to say that in the case of good people these pictures are usually true, because they are dear to the gods, while quite the opposite usually holds in the case of wicked ones, or is this not what we ought to say?

Protarchus: That is just what we ought to say.

Socrates: And wicked people nevertheless have pleasures painted in their minds, even though they are somehow false?

Protarchus: Right.

Socrates: So wicked people as a rule enjoy false pleasures, but the good c among mankind true ones?

Protarchus: Quite necessarily so.

Socrates: From what has now been said, it follows that there are false pleasures in human souls that are quite ridiculous imitations of true ones, and also such pains.

Protarchus: There certainly are.

Socrates: Now, it was agreed that whoever judges anything at all is always *really* judging, even if it is not about anything existing in the present, past, or future.

Protarchus: Right.

Socrates: And these were, I think, the conditions that produce a false d judgment and judging falsely, weren't they?

Protarchus: Yes.

Socrates: But should we not also grant to pleasures and pains a condition that is analogous in these ways?

Protarchus: In what ways?

Socrates: In the sense that whoever has any pleasure at all, however ill-founded it may be, really does have pleasure, even if sometimes it is not about anything that either is the case or ever was the case, or often (or perhaps most of the time) refers to anything that ever will be the case.

e Protarchus: That also must necessarily be so.

Socrates: And the same account holds in the case of fear, anger, and everything of that sort, namely that all of them can at times be false?

Protarchus: Certainly.

Socrates: Well, then, do we have any other way of distinguishing between bad and good judgments than their falsity?

Protarchus: We have no other.

Socrates: Nor, I presume, will we find any other way to account for badness in the case of pleasures unless they are false.

41 Protarchus: What you say is quite the opposite of the truth, Socrates! It is not at all because they are false that we regard pleasures or pains as bad, but because there is some other grave and wide-ranging kind of badness involved.

Socrates: But let us discuss bad pleasures and what badness there is in their case a little later, if we still feel like it. Now we have to take up false pleasures in another sense and show that there is a great variety that arise and are at work in us. This argument will perhaps come in handy later,
b when we have to make our decisions.

Protarchus: That may well be so, at least if there are any such pleasures.

Socrates: There certainly are, Protarchus; I at least am convinced. But until this is our accepted opinion, we cannot leave this conviction unexamined.

Protarchus: Right.

Socrates: So let us get ready like athletes to form a line of attack around this problem.

Protarchus: Here we go.

Socrates: We did say a short while ago in our discussion, as we may
c recall, that when what we call desires are in us, then body and soul part company and have each their separate experiences.

Protarchus: We do remember, that was said before.

Socrates: And wasn't it the soul that had desires, desires for conditions opposite to the actual ones of the body, while it was the body that undergoes the pain or the pleasure of some affection?

Protarchus: That was indeed so.

Socrates: Draw your conclusions as to what is going on here.

Protarchus: You tell me.

d Socrates: What happens is this: Under these circumstances pains and pleasures exist side by side, and there are simultaneously opposite perceptions of them, as we have just made clear.

Protarchus: Yes, that is clear.

Socrates: But did we not also discuss this point and come to an agreement how to settle it earlier?

Protarchus: What point?

Socrates: That the two of them, both pleasure and pain, admit the more and less and belong to the unlimited kind?

Protarchus: That was what we said. What about it?

Socrates: Do we have any means of making a right decision about these matters?

Protarchus: Where and in what respect? e

Socrates: In the case where we intend to come to a decision about any of them in such circumstances, which one is greater or smaller, or which one is more intensive or stronger: pain compared to pleasure, or pain compared to pain, or pleasure to pleasure.

Protarchus: Yes, these questions do arise, and that is what we want to decide.

Socrates: Well, then, does it happen only to eyesight that seeing objects
from afar or close by distorts the truth and causes false judgments? Or 42
does not the same thing happen also in the case of pleasure and pain?

Protarchus: Much more so, Socrates.

Socrates: But this is the reverse of the result we reached a little earlier.

Protarchus: What are you referring to?

Socrates: Earlier it was true and false *judgments* which affected the respective pleasures and pains with their own condition.

Protarchus: Quite right. b

Socrates: But now it applies to pleasures and pains themselves; it is because they are alternately looked at from close up or far away, or simultaneously put side by side, that the pleasures seem greater compared to pain and more intensive, and pains seem, on the contrary, moderate in comparison with pleasures.

Protarchus: It is quite inevitable that such conditions arise under these circumstances.

Socrates: But if you take that portion of them by which they appear
greater or smaller than they really are, and cut it off from each of them c
as a mere appearance and without real being, you will neither admit that this appearance is right nor dare to say that anything connected with this portion of pleasure or pain is right and true.

Protarchus: Certainly not.

Socrates: Next in order after these, we will find pleasures and pains in animals that are even falser than these, both in appearance and reality, if we approach them in this way.

Protarchus: What are they, and what is the way?

Socrates: It has by now been said repeatedly that it is a destruction of
the nature of those entities through combinations and separations, through
processes of filling and emptying, as well as certain kinds of growth and d
decay, that gives rise to pain and suffering, distress, and whatever else comes to pass that goes under such a name.

PROTARCHUS: Yes, that has often been said.

SOCRATES: But when things are restored to their own nature again, this restoration, as we established in our agreement among ourselves, is pleasure.

PROTARCHUS: Correct.

SOCRATES: But what if nothing of that sort happens to our body, what then?

PROTARCHUS: When could that ever happen, Socrates?

e SOCRATES: Your objection is not to the point, Protarchus.

PROTARCHUS: How so?

SOCRATES: Because you do not prevent me from putting my question to you again.

PROTARCHUS: What question?

SOCRATES: If in fact nothing of that sort took place, I will ask you, what would necessarily be the consequence of this for us?

PROTARCHUS: You mean if the body is not moved in either direction, Socrates?

SOCRATES: That is my question.

PROTARCHUS: This much is clear, Socrates, that in such a case there would not be either any pleasure or pain at all.

43 SOCRATES: Very well put. But I guess what you meant to say is that we necessarily are always experiencing one or the other, as the wise men say. For everything is in an eternal flux, upward and downward.

PROTARCHUS: They do say that, and what they say seems important.

SOCRATES: How else, since they themselves are important people? But I do want to avoid this argument which now assails us. I plan to escape it in this way, and you'd better make your escape with me.

PROTARCHUS: Just tell me how.

SOCRATES: "So be it," we will reply to them. But as for you, answer me
b this question: whether all living creatures in all cases notice it whenever they are affected in some way, so that we notice when we grow or experience anything of that sort, or whether it is quite otherwise.

PROTARCHUS: It is indeed quite otherwise. Almost all of these processes totally escape our notice.

SOCRATES: But then what we just agreed to was not well spoken, that the changes 'upwards and downwards' evoke pleasures and pains.

PROTARCHUS: How could it?

c SOCRATES: But if it is stated in this way, it will be better and become unobjectionable.

PROTARCHUS: In what way?

SOCRATES: That great changes cause pleasures and pains in us, while moderate or small ones engender neither of the two effects.

PROTARCHUS: That is more correct than the other statement, Socrates.

SOCRATES: But if this is correct, then we are back with the same kind of life we discussed before.

PROTARCHUS: What kind?

SOCRATES: The life that we said was painless, but also devoid of charm.

PROTARCHUS: Undeniably.

Socrates: So we end up with three kinds of life, the life of pleasure, the d
life of pain, and the neutral life. Or what would you say about these matters?

Protarchus: I would put it in the same way, that there are three kinds of life.

Socrates: But to be free of pain would not be the same thing as to have pleasure?

Protarchus: How could it be the same?

Socrates: If you hear someone say that it is the most pleasant thing of all to live one's whole life without pain, how do you understand the speaker's intention?

Protarchus: To my understanding he seems to identify pleasure with freedom from pain.

Socrates: Now, imagine three sorts of things, whichever you may like, e
and because these are high-sounding names, let us call them gold, silver, and what is neither of the two.

Protarchus: Consider it done.

Socrates: Is there any way conceivable in which this third kind could turn out to be the same as one of our other two sorts, gold or silver?

Protarchus: How could it?

Socrates: That the middle kind of life could turn out to be either pleasant or painful would be the wrong thing to think, if anyone happened to think so, and it would be the wrong thing to say, if anyone should say so, according to the proper account of the matter?

Protarchus: No doubt.

Socrates: But we do find people who both think so and say so, my friend. 44

Protarchus: Certainly.

Socrates: And do they really believe they experience pleasure when they are not in pain?

Protarchus: They say so, at any rate.

Socrates: They believe therefore that they are pleased at that time. Otherwise they would not say that they are.

Protarchus: It looks that way.

Socrates: But they hold a false judgment about pleasure, if in fact freedom from pain and pleasure each have a nature of their own.

Protarchus: But they do have their own.

Socrates: What decision shall we make? That there are three states in us,
as we said just now, or that there are only two: pain being an evil in human b
life, and liberation from pain, also called pleasure, being the good as such?

Protarchus: But why is it that we are asking ourselves this question now, Socrates? I don't get the point.

Socrates: That is because you don't really understand who the enemies of our Philebus here are.

Protarchus: What enemies do you mean?

Socrates: I mean people with a tremendous reputation in natural science who say that there are no such things as pleasures at all.

Protarchus: How so?

c SOCRATES: They hold that everything the followers of Philebus call pleasures are nothing but escape from pain.

PROTARCHUS: Do you suggest we should believe them, Socrates, or what is it you want us to do?

SOCRATES: Not that, but to use them as seers who make their prophecies, not in virtue of any art but in virtue of a certain harshness in their nature. It is a nature not without nobility, but out of an inordinate hatred that they have conceived against the power of pleasure, they refuse to acknowledge anything healthy in it, even to the point that they regard its very attractiveness itself as witchcraft rather than pleasure. You may now make use of them
d for our purposes, taking notice of the rest of their complaints that result from their harshness. After that you will hear what I, for my part, regard as true pleasures, so that through an examination of these two opposed points of view, we can reach a decision about the power of pleasure.

PROTARCHUS: A fair proposal.

SOCRATES: Let us attach ourselves to them as to allies and follow their traces in the direction in which their dour arguments point us. I think they employ reasoning of this kind, starting from some such basic principle: If
e we wanted to know the nature of any character, like that of hardness, would we get a better understanding if we looked at the hardest kinds of things rather than at what has a low degree of hardness? Now, it is your task, Protarchus, to answer these difficult people, just as you answered me.

PROTARCHUS: Gladly, and my answer to them will be that I would look at hardness of the first degree.

SOCRATES: But again if we wanted to study the form of pleasure, to see
45 what kind of nature it has, in that case we ought not to look at low-level pleasures, but at those that are said to be the strongest and most intensive.

PROTARCHUS: Everyone would grant you this point.

SOCRATES: Now, aren't the most immediate and greatest among the pleasures the ones connected with the body, as we have often said?

PROTARCHUS: No doubt.

SOCRATES: And is it the case that pleasures are more intensive or set in with greater intensity when people suffer from an illness than when they are healthy? We have to beware of a hasty answer here, lest we get tripped up.
b Perhaps we might be inclined to affirm this rather for the healthy people?

PROTARCHUS: Quite likely.

SOCRATES: But what about this? Are not those pleasures overwhelming which are also preceded by the greatest desires?

PROTARCHUS: That is certainly true.

SOCRATES: And when people suffer from fever or any such disease, aren't they more subject to thirst, chill, and whatever else continues to affect them through the body? Do they not feel greater deprivations, and also greater pleasures at their replenishment? Or shall we deny that this is true?

PROTARCHUS: It seems undeniable as you explained it now.

c SOCRATES: Very well. Are we justified, then, if we claim that whoever wants to study the greatest pleasures should turn to sickness, not to health?

Now, mind you, my question was not whether the very sick have *more* pleasures than healthy people; my concern is rather with the size and *intensity* of the condition when it takes place. Our task, as we said, is to comprehend both what its true nature is and how those conceive of it who deny that there is any such thing as pleasure at all.

Protarchus: I am following quite well what you say. d

Socrates: You might as well be its guide, Protarchus. Now, tell me. Do you recognize greater pleasures in a life given to excesses—I do not say more pleasures, but pleasures that exceed by their force and intensity—than in a moderate life? Think carefully about it before you answer.

Protarchus: I quite understand what you are after; I see indeed a huge difference. The moderate people somehow always stand under the guidance of the proverbial maxim "nothing too much" and obey it. But as to e
foolish people and those given to debauchery, the excesses of their pleasures drive them near madness and to shrieks of frenzy.

Socrates: Good. But if this is how it stands, then it is obvious that it is in some vicious state of soul and body and not in virtue that the greatest pleasures as well as the greatest pains have their origin.

Protarchus: Obviously.

Socrates: So we must pick out some of them to find out what characteristic of theirs made us call them the greatest.

Protarchus: Necessarily. 46

Socrates: Now, look at the pleasures that go with these types of maladies, what kinds of conditions they are.

Protarchus: What types do you mean?

Socrates: Those pleasures of a rather repugnant type, which our harsh friends hate above all.

Protarchus: What kinds?

Socrates: For example, the relief from itching by rubbing, and all of that sort that needs no other remedy. But if this condition should befall us, what in heaven's name should we call it, pleasure or pain?

Protarchus: That really would seem to be a mixed experience, with a bad component, Socrates.

Socrates: I did not raise this question with the intention of alluding to b
Philebus. But without a clarification of these pleasures and of those who cultivate them, we could hardly come to any resolution of our problem.

Protarchus: Then let us take up the whole tribe of these pleasures.

Socrates: You mean the ones that have that mixed nature?

Protarchus: Right.

Socrates: There are mixtures that have their origin in the body and are confined to the body; then, there are mixtures found in the soul, and they c
are confined to the soul. But then we will also find mixtures of pleasures and pains in both soul and body, and at one time the combination of both will be called pleasure; at other times it will be called pain.

Protarchus: How so?

Socrates: When someone undergoes restoration or destruction he experiences two opposed conditions at once. He may feel hot while shivering or

feel chilled while sweating. I suppose he will then want to retain one of these
d conditions and get rid of the other. But if this so called bittersweet condition is hard to shake, it first causes irritation and later on turns into wild excitement.

PROTARCHUS: A very accurate description.

SOCRATES: Now, isn't it the case that some of those mixtures contain an even amount of pleasures and pain, while there is a preponderance of either of the two in others?

PROTARCHUS: Right.

SOCRATES: Take the case that we just mentioned, of itching and scratching, as an example where the pains outweigh the pleasures. Now, when the
e irritation and infection are inside and cannot be reached by rubbing and scratching, there is only a relief on the surface.[14] In case they treat these parts by exposing them to fire or its opposite—they go from one extreme to the other in their distress—they sometimes procure enormous pleasures. But sometimes this leads to a state inside that is opposite to that outside, with a mixture of pains and pleasures, whichever way the balance may turn, because this treatment disperses by force what was mixed together or
47 mixes together what was separate, so that pains arise besides the pleasures.

PROTARCHUS: Necessarily.

SOCRATES: Now, in all those cases where the mixture contains a surplus of pleasure, the small admixture of pain gives rise only to a tickle and a mild irritation, while the predominant part of pleasure causes contractions of the body to the point of leaping and kicking, color changes of all sorts, distortion of features, and wild palpitations; it finally drives the person totally out of his mind, so that he shouts aloud like a madman.

b PROTARCHUS: Very much so.

SOCRATES: And this state causes him and others to say of him that he is almost dying of these pleasures. And the more profligate and mindless he is, the more will he pursue them by any means possible, and he calls them supreme and considers as the happiest of all mortals whoever lives in continuous enjoyment of them, as much as that is possible.

PROTARCHUS: Your description fits exactly the preconceptions of the common run of people, Socrates.

c SOCRATES: Yes, as far as concerns the pleasures that arise when there is a mixture of the external and internal state of the body, Protarchus. But take now the cases where the soul's contributions are opposed to the body's: When there is pain over and against pleasures, or pleasure against pain, both are finally joined in a mixed state. We have talked about them earlier and agreed that in these cases it is the deprivation that gives rise to the desire for replenishment, and while the expectation is pleasant, the deprivation itself is painful. When we discussed this we did not make any
d special mention, as we do now, of the fact that, in the vast number of cases where soul and body are not in agreement, the final result is a single mixture that combines pleasure and pain.

14. Leaving out Burnet's insertion of *en tois*.

PROTARCHUS: I suspect that you are right.

SOCRATES: But here we are still left with one further kind of mixture of pleasure and pain.

PROTARCHUS: Tell me what it is.

SOCRATES: The case, a common one, where the mixture is the product of affections within the soul itself, as we said before.

PROTARCHUS: What was it again that we said?

SOCRATES: Take wrath, fear, longing, lamentations, love, jealousy, malice, e
and other things like that; don't you regard them as a kind of pain within the soul itself?

PROTARCHUS: I certainly do.

SOCRATES: And don't we find that they are full of marvellous pleasures? Or do we need the famous lines as a reminder about wrath:

> *. . . That can embitter even the wise*
> *. . . But much sweeter than soft-flowing honey . . .*[15]

Similarly, in the case of lamentations and longing, aren't there also plea- 48
sures mixed in with the pain?

PROTARCHUS: No need for further reminders; in all these cases it must be just as you said.

SOCRATES: And the same happens in those who watch tragedies: There is laughter mixed with the weeping, if you remember.

PROTARCHUS: How could I forget?

SOCRATES: Now, look at our state of mind in comedy. Don't you realize that it also involves a mixture of pleasure and pain?

PROTARCHUS: I don't quite see that yet.

SOCRATES: It is indeed not quite so easy to see that this condition applies b
under those circumstances.

PROTARCHUS: It certainly is not to me!

SOCRATES: Since it is such an obscure matter, let us be all the more careful. For this will help us to recognize more easily when there is a mixture of pain and pleasure in other cases as well.

PROTARCHUS: Please tell me.

SOCRATES: Since we just mentioned the word "malice": Do you treat malice as a pain of the soul, or what?

PROTARCHUS: I do.

SOCRATES: On the other hand, will not the malicious person display pleasure at his neighbor's misfortunes?

PROTARCHUS: Very much so. c

SOCRATES: Now, ignorance is a vice, and so is what we call stupidity?

PROTARCHUS: Decidedly!

15. *Iliad* xviii.108–9.

Socrates: What conclusions do you draw from this about the nature of the ridiculous?

Protarchus: You tell me.

Socrates: It is, in sum, a kind of vice that derives its name from a special disposition; it is, among all the vices, the one with a character[16] that stands in direct opposition to the one recommended by the famous inscription in Delphi.

Protarchus: You mean the one that says "Know thyself," Socrates?

d Socrates: I do. The opposite recommendation would obviously be that we not know ourselves at all.[17]

Protarchus: No doubt.

Socrates: Go on and make a subdivision of this disposition into three, Protarchus.

Protarchus: What do you mean? I am afraid I don't know how to.

Socrates: Are you saying that it is up to me to make this division now?

Protarchus: That is indeed what I am saying, but in addition I beg you to do so.

Socrates: Are there not necessarily three ways in which it is possible not to know oneself?

Protarchus: What are they?

e Socrates: The first way concerns money, if someone thinks himself richer than he in fact is.

Protarchus: Many people certainly share that condition.

Socrates: Even more consider themselves taller and handsomer than they in fact are, and believe they have other such physical advantages.

Protarchus: Definitely.

Socrates: But an overwhelming number are mistaken about the third kind, which belongs to the soul, namely virtue, and believe that they are superior in virtue, although they are not.

Protarchus: Very much so.

49 Socrates: And, again, among the virtues, is it not especially to wisdom that the largest number of people lay claim, puffing themselves up with quarrels and false pretensions to would-be knowledge?

Protarchus: Undeniably so.

Socrates: It would therefore be quite justified to say that all these conditions are bad.

Protarchus: Quite justified.

Socrates: So we must continue with our division of ignorance, Protarchus, if we want to find out what a strange mixture of pleasure and pain this comic malice is. How would you suggest that we should further
b subdivide? In the case of all those who have such a false opinion about

16. Inserting *to* before *tounantion* in 48c8.

17. Accepting the deletion of *legomenon hupo tou grammatos* at d2.

themselves, is it not most necessary, as it is for all mankind, that it be combined either with strength and power, or with its opposite?

Protarchus: Necessarily.

Socrates: So make this the point of division. All those who combine this delusion with weakness and are unable to avenge themselves when they are laughed at, you are justified in calling ridiculous. But as for those who do have the power and strength to take revenge, if you call them dangerous and hateful, you are getting exactly the right conception about c
them. For ignorance on the side of the strong and powerful is odious and ugly; it is harmful even for their neighbors, both the ignorance itself and its imitations, whatever they may be. Ignorance on the side of the weak, by contrast, deserves to be placed among the ridiculous in rank and nature.

Protarchus: You are right about this division. But I am still not quite clear about where there is a mixture of pleasure and pain in these cases.

Socrates: So take first the nature of malice.

Protarchus: Please explain.

Socrates: It contains a kind of unjust pain and pleasure. d

Protarchus: Necessarily.

Socrates: Now, if you rejoice about evils that happen to your enemy, is there any injustice or malice in your pleasure?

Protarchus: How should there be?

Socrates: But is there any occasion when it is not unjust to be pleased rather than pained to see bad things happen to your friends?

Protarchus: Clearly not.

Socrates: But we just agreed that ignorance is bad for everyone?

Protarchus: Right.

Socrates: Let us take now the ignorance of friends which we said came in three versions, would-be wisdom and would-be beauty, and the other e
sort we just mentioned, each of which is ridiculous if weak, but odious if strong. Now, are we ready to affirm of our friends' state what we just said, namely, that it is ridiculous if it is harmless to others?

Protarchus: Very much so.

Socrates: But did we not agree that it is bad if it is ignorance?

Protarchus: We certainly did.

Socrates: But if we laugh about it, are we pleased or pained by it?

Protarchus: We are pleased, obviously. 50

Socrates: But this pleasure in the face of the misfortunes of friends—did we not say that it was the product of malice?

Protarchus: Necessarily.

Socrates: Our argument leads to the conclusion that if we laugh at what is ridiculous about our friends, by mixing pleasure with malice, we thereby mix pleasure with pain. For we had agreed earlier that malice is a pain in the soul, that laughing is a pleasure, and that both occur together on those occasions.

Protarchus: True.

b Socrates: The upshot of our discussion, then, is that in lamentations as well as in tragedies and comedies, not only on stage but also in all of life's tragedies and comedies, pleasures are mixed with pains, and so it is on infinitely other occasions.

Protarchus: It would be impossible not to agree with this, even for the most ambitious defense of the opposite position, Socrates.

Socrates: Now, we had on our list of examples wrath, longing, lamenta-
c tions, fear, love, jealousy, malice, and whatever else, and we said that in these cases we would discern the mixture that we have already mentioned so frequently, right?

Protarchus: Right.

Socrates: So we understand, then, that our whole explanation also applies to longing, malice, and wrath?

Protarchus: How could we fail to understand that?

Socrates: And there are many other such cases to which it applies?

Protarchus: A great many.

Socrates: Now, what precisely do you think was the purpose for which I pointed out to you this mixture in comedy? Don't you see that it was
d designed to make it easier to persuade you that there is such a mixture in fear and love and other cases? I hoped that once you had accepted this you would release me from a protracted discussion of the rest—once the main point was understood, that there exists the possibility, for the body without the soul, for the soul without the body, and for both of them in a joint affection, to contain a mixture of pleasure and pain.

Now, tell me whether you will let me go now or whether you will keep us up till midnight. One further remark will gain me my release, I
e hope. I will gladly give you a full account of the rest tomorrow, but for now I want to steer towards the remaining points needed to make the decision Philebus demands of us.

Protarchus: Well spoken, Socrates. Discuss the rest any way you like.

Socrates: It seems natural, somehow, that we must proceed from the mixed pleasures to the discussion of the *unmixed* ones.

51 Protarchus: A very good point.

Socrates: I will now try to explain them in turn. Although I am not really in agreement with those who hold that all pleasures are merely release from pain, I nevertheless treat them as witnesses, as I said before, to prove that there are certain kinds that only seem to be pleasures, but are not so in reality, and furthermore, that there are others that have the appearance of enormous size and great variety, but which are in truth commingled with pain or with respite from severe pains suffered by soul and body.

b Protarchus: But, Socrates, what are the kinds of pleasures that one could rightly regard as true?

Socrates: Those that are related to so-called pure colors and to shapes and to most smells and sounds and in general all those that are based on imperceptible and painless lacks, while their fulfilllments are perceptible and pleasant.

PROTARCHUS: But really, Socrates, what are you talking about?

SOCRATES: What I am saying may not be entirely clear straightaway, but
I'll try to clarify it. By the beauty of a shape, I do not mean what the many c
might presuppose, namely that of a living being or of a picture. What I
mean, what the argument demands, is rather something straight or round
and what is constructed out of these with a compass, rule, and square,
such as plane figures and solids. Those things I take it are not beautiful
in a relative sense, as others are, but are by their very nature forever
beautiful by themselves. They provide their own specific pleasures that
are not at all comparable to those of rubbing! And colors are beautiful in d
an analogous way and import their own kinds of pleasures. Do we now
understand it better, or how do you feel?

PROTARCHUS: I am really trying to understand, Socrates, but will you also try to say this more clearly?

SOCRATES: What I am saying is that those among the smooth and bright sounds that produce one pure note are not beautiful in relation to anything else but in and by themselves and that they are accompanied by their own pleasures, which belong to them by nature.

PROTARCHUS: That much is true.

SOCRATES: Then there is also the less divine tribe of pleasures connected e
with smells. But because there is no inevitable pain mixed with them, in
whatever way or wherever we may come by them, for this reason I regard
them as the counterpart to those others. So, if you get my point, we will
then treat those as two species of the kinds of pleasures we are looking for.

PROTARCHUS: I do get your point.

SOCRATES: Then let us also add to these the pleasures of learning, if indeed
we are agreed that there is no such thing as hunger for learning connected 52
with them, nor any pains that have their source in a hunger for learning.

PROTARCHUS: Here, too, I agree with you.

SOCRATES: Well, then, if after such filling with knowledge, people lose it again through forgetting, do you notice any kinds of pain?

PROTARCHUS: None that could be called inherent by nature, but in our
reflections on this loss when we need it, we experience it as a painful loss. b

SOCRATES: But, my dear, we are here concerned only with the natural affections themselves, apart from reflection on them.

PROTARCHUS: Then you are right in saying that the lapse of knowledge never causes us any pain.

SOCRATES: Then we may say that the pleasures of learning are unmixed with pain and belong, not to the masses, but only to a very few?

PROTARCHUS: How could one fail to agree?

SOCRATES: But now that we have properly separated the pure pleasures c
and those that can rightly be called impure, let's add to our account the attri-
bution of immoderation to the violent pleasures, but moderation, in contrast,
to the others. That is to say, we will assign those pleasures which display
high intensity and violence, no matter whether frequently or rarely, to the
class of the unlimited, the more and less, which affects both body and soul.

d The other kinds of pleasures we will assign to the class of things that possess measurement.

PROTARCHUS: Quite right, Socrates.

SOCRATES: But we have also to look into the following question about them.

PROTARCHUS: What question?

SOCRATES: The question of their relation to truth. What is closer to it: the pure, unadulterated, and sufficient[18] or the violent, multiform, and enormous?

PROTARCHUS: Just what are you after in asking this question, Socrates?

e SOCRATES: I want to omit nothing in the investigation of both pleasure and knowledge. I want to ask if one part of them is pure, another impure, so that both of them may come to trial in their pure form, and so make it easier for you and me and all those present to come to a verdict in this trial.

PROTARCHUS: Quite right.

SOCRATES: Then let us go on and see whether all items that belong in the pure kind display the following qualification. But let us first pick out one of them and study it.

53 PROTARCHUS: Which one shall we choose?

SOCRATES: Let us take whiteness first, if you have no objection.

PROTARCHUS: That is fine with me.

SOCRATES: Now, how can there be purity in the case of whiteness, and what sort of thing is it? Is it the greatest quantity or amount, or is it rather the complete lack of any admixture, that is, where there is not the slightest part of any other kind contained in this color?

PROTARCHUS: It will obviously be the perfectly unadulterated color.

SOCRATES: Right. But shall we not also agree that this is the truest and
b the most beautiful of all instances of white, rather than what is greatest in quantity or amount?

PROTARCHUS: Certainly.

SOCRATES: So we are perfectly justified if we say that a small portion of pure white is to be regarded as whiter than a larger quantity of an impure whiteness, and at the same time more beautiful and possessed of more truth?

PROTARCHUS: Perfectly justified.

SOCRATES: Well, now, we don't need to run through many more examples to justify our account of pleasure, but this example suffices to prove that
c in the case of pleasure, too, every small and insignificant pleasure that is unadulterated by pain will turn out to be pleasanter, truer, and more beautiful than a greater quantity and amount of the impure kind.

PROTARCHUS: Quite definitely so, and the example is sufficient.

SOCRATES: But what about the following point? Have we not been told that pleasure is always a process of *becoming*, and that there is no *being* at all of pleasure? There are some subtle thinkers who have tried to pass on this doctrine to us, and we ought to be grateful to them.

PROTARCHUS: What does it mean?

18. Accepting the transposition of *kai to hikanon* from d8 to after *eilikrines* in d7.

Socrates: I will indeed try to explain it to you, my friend Protarchus, by resuming my questioning. d

Protarchus: You have only to keep on asking.

Socrates: Suppose there are two kinds of things, one kind sufficient to itself, the other in need of something else.

Protarchus: How and what sort of things do you mean?

Socrates: The one kind by nature possesses supreme dignity; the other is inferior to it.

Protarchus: Express this more clearly, please.

Socrates: We must have met handsome and noble youths, together with their courageous lovers.

Protarchus: Certainly.

Socrates: Now, try to think of another set of two items that corresponds to this pair in all the relevant features that we just mentioned. e

Protarchus: Do I have to repeat my request for the third time? Please express more clearly what it is you want to say, Socrates!

Socrates: Nothing fanciful at all, Protarchus; this is just a playful manner of speaking. What is really meant is that all things are either for the sake of something else or they are that for whose sake the other kind comes to be in each case.

Protarchus: I finally managed to understand it, thanks to the many repetitions.

Socrates: Perhaps, my boy, we will understand better as the argu- 54
ment proceeds.

Protarchus: No doubt.

Socrates: So let's take another pair.

Protarchus: Of what kind?

Socrates: Take on the one hand the *generation* of all things, on the other their *being*.

Protarchus: I also accept this pair from you, being and generation.

Socrates: Excellent. Now, which of the two do you think exists for the other's sake? Shall we say that generation takes place for the sake of being, or does being exist for the sake of generation?

Protarchus: Whether what is called being is what it is for the sake of generation, is that what you want to know?

Socrates: Apparently.

Protarchus: By heavens, what a question to ask me! You might as well b
ask: "Tell me, Protarchus, whether shipbuilding goes on for the sake of ships or whether ships are for the sake of shipbuilding," or some such thing.

Socrates: That is precisely what I am talking about, Protarchus.

Protarchus: What keeps you from answering your questions yourself, Socrates?

Socrates: Nothing, provided you take your share in the argument.

Protarchus: I am quite determined to.

Socrates: I hold that all ingredients, as well as all tools, and quite c
generally all materials, are always provided for the sake of some process

of generation. I further hold that every process of generation in turn always takes place for the sake of some particular being, and that all generation taken together takes place for the sake of being as a whole.

PROTARCHUS: Nothing could be clearer.

SOCRATES: Now, pleasure, since it is a process of generation, necessarily comes to be for the sake of some being.

PROTARCHUS: Of course.

SOCRATES: But that for the sake of which what comes to be for the sake of something comes to be in each case, ought to be put into the class of the things good in themselves, while that which comes to be for the sake of something else belongs in another class, my friend.

PROTARCHUS: Undeniably.

d SOCRATES: But if pleasure really is a process of generation, will we be placing it correctly, if we put it in a class different from that of the good?

PROTARCHUS: That too is undeniable.

SOCRATES: It is true, then, as I said at the beginning of this argument, that we ought to be grateful to the person who indicated to us that there is always only generation of pleasure and that it has no being whatsoever. And it is obvious that he will just laugh at those who claim that pleasure is good.

PROTARCHUS: Certainly.

e SOCRATES: But this same person will also laugh at those who find their fulfillment in processes of generation.

PROTARCHUS: How so, and what sort of people are you alluding to?

SOCRATES: I am talking of those who cure their hunger and thirst or anything else that is cured by processes of generation. They take delight in generation as a pleasure and proclaim that they would not want to live if they were not subject to hunger and thirst and if they could not experience all the other things one might want to mention in connection with such conditions.

55 PROTARCHUS: That is very like them.

SOCRATES: But would we not all say that destruction is the opposite of generation?

PROTARCHUS: Necessarily.

SOCRATES: So whoever makes this choice would choose generation and destruction in preference to that third life which consists of neither pleasure nor pain, but is a life of thought in the purest degree possible.

PROTARCHUS: So a great absurdity seems to appear, Socrates, if we posit pleasure as good.

SOCRATES: An absurdity indeed, especially if we go on to look at it this way.

PROTARCHUS: In what way?

b SOCRATES: How is this not absurd: that there should be nothing good or noble in bodies or anywhere else except in the soul, but in the soul pleasure should be the only good thing, so that courage or moderation or reason

or any of the other goods belonging to the soul would be neither good nor noble? In addition, we would have to call the person who experiences not pleasure but pain *bad* while he is in pain, even if he were the best of all men. By contrast, we would have to say of whoever is pleased that the greater his pleasure whenever he is pleased, the more he excels in virtue! c

Protarchus: All that is as absurd as possible, Socrates.

Socrates: Now, let us not undertake to give pleasure every possible test, while going very lightly with reason and knowledge. Let us rather strike them valiantly all around, to see if there is some fault anywhere. So we'll learn what is by nature purest in them. And seeing this, we can use the truest parts of these, as well as of pleasure, to make our joint decision.

Protarchus: Fair enough.

Socrates: Among the disciplines to do with knowledge, one part is d
productive, the other concerned with education and nurture, right?

Protarchus: Just so.

Socrates: But let us first find out whether within the manual arts there is one side more closely related to knowledge itself, the other less closely; secondly, whether we should treat the one as quite pure, as far as it goes, the other as less pure.

Protarchus: That is what we ought to do.

Socrates: So let us sort out the leading disciplines among them.

Protarchus: Which disciplines, and how are we to do it?

Socrates: If someone were to take away all counting, measuring, and e
weighing from the arts and crafts, the rest might be said to be worthless.

Protarchus: Worthless, indeed!

Socrates: All we would have left would be conjecture and the training of our senses through experience and routine. We would have to rely on our ability to make the lucky guesses that many people call art, once it has acquired some proficiency through practice and hard work. 56

Protarchus: Undeniably so.

Socrates: This is clear, to start with, in the case of flute-playing.[19] The harmonies are found not by measurement but by the hit and miss of training, and quite generally music tries to find the measure by observing the vibrating strings. So there is a lot of imprecision mixed up in it and very little reliability.

Protarchus: Very true.

Socrates: And will we not discover that medicine, agriculture, naviga- b
tion, and strategy are in the same condition?

Protarchus: Definitely.

Socrates: But as to building, I believe that it owes its superior level of craftsmanship over other disciplines to its frequent use of measures and instruments, which give it high accuracy.

Protarchus: In what way?

19. Accepting the interchange of *mousikē* in a3 with *autēs aulētikē* in a5.

SOCRATES: In shipbuilding and housebuilding, but also in many other
c woodworking crafts. For it employs straightedge and compass, as well as a mason's rule, a line, and an ingenious gadget called a carpenter's square.

PROTARCHUS: You are quite right, Socrates.

SOCRATES: Let us, then, divide the so-called arts into two parts, those like music, with less precision in their practice, and those like building, with more precision.

PROTARCHUS: Agreed.

SOCRATES: And let's take those among them as most accurate that we called primary just now.

PROTARCHUS: I suppose you mean arithmetic and the other disciplines you mentioned after it.

d SOCRATES: That's right. But don't you think we have to admit that they, too, fall into two kinds, Protarchus?

PROTARCHUS: What two kinds do you mean?

SOCRATES: Don't we have to agree, first, that the arithmetic of the many is one thing, and the philosophers' arithmetic is quite another?

PROTARCHUS: How could anyone distinguish these two kinds of arithmetic?

SOCRATES: The difference is by no means small, Protarchus. First there are those who compute sums of quite unequal units, such as two armies
e or two herds of cattle, regardless whether they are tiny or huge. But then there are the others who would not follow their example, unless it were guaranteed that none of those infinitely many units differed in the least from any of the others.

PROTARCHUS: You explain very well the notable difference among those who make numbers their concern, so it stands to reason that there are those two different kinds of arithmetic.

SOCRATES: Well, then, what about the art of calculating and measuring as builders and merchants use them and the geometry and calculations prac-
57 ticed by philosophers—shall we say there is one sort of each of them or two?

PROTARCHUS: Going by what was said before, I ought to vote for the option that they are two of each sort.

SOCRATES: Right. But do you realize why we have brought up this question here?

PROTARCHUS: Possibly, but I would appreciate it if you answered the question yourself.

SOCRATES: The aim of our discussion now seems to be, just as it was
b when we first set out, to find an analogue here to the point we made about pleasure. So now we ought to find out whether there is a difference in purity between different kinds of knowledge in the same way as there was between different kinds of pleasures.

PROTARCHUS: This obviously was the purpose of our present question.

SOCRATES: But what next? Have we not discovered before that different subject matters require different arts and that they have different degrees of certainty?

PROTARCHUS: Yes, we did.

Socrates: It is questionable, then, whether an art that goes under one name and is commonly treated as one should not rather be treated as two,
depending on the difference in certainty and purity. And if this is so, we c
must also ask whether the art has more precision in the hands of the philosopher than its counterpart in the hands of the nonphilosopher.

Protarchus: That is indeed the question here.

Socrates: So what answer shall we give to it, Protarchus?

Protarchus: Socrates, we have come across an amazing difference between the sciences, as far as precision is concerned.

Socrates: Will that facilitate our answer?

Protarchus: Obviously. And let it be said that these sciences are far
superior to the other disciplines, but that those among them that are d
animated by the spirit of the true philosophers are infinitely superior yet in precision and truth in their use of measure and number.

Socrates: Let us settle for this doctrine, and trusting you, we will confidently answer those powerful makers of word traps.[20]

Protarchus: What answer shall we give them?

Socrates: That there are two kinds of arithmetic and two kinds of geometry, and a great many other sciences following in their lead, which have the same twofold nature while sharing one name.

Protarchus: Let us give our answer, with best wishes, to those powerful e
people, as you call them, Socrates.

Socrates: Do we maintain that these kinds of sciences are the most precise?

Protarchus: Certainly.

Socrates: But the power of dialectic would repudiate us if we put any other science ahead of her.

Protarchus: What science do we mean by that again?

Socrates: Clearly everybody would know what science I am referring 58
to now! For I take it that anyone with any share in reason at all would consider the discipline concerned with being and with what is really and forever in every way eternally self-same by far the truest of all kinds of knowledge. But what is your position? How would you decide this question, Protarchus?

Protarchus: On many occasions, Socrates, I have heard Gorgias insist that the art of persuasion is superior to all others because it enslaves all
the rest, with their own consent, not by force, and is therefore by far the b
best of all the arts. Now I am reluctant to take up a position against either him or you.

Socrates: I suspect that at first you wanted to say "take up arms," but then suppressed it in embarrassment.[21]

Protarchus: You may take this whatever way pleases you.

20. Cf. 15a–16a and 16c ff.

21. Since the claim is that rhetoric persuades and does not use force.

SOCRATES: But am I to blame for a misunderstanding on your part?

PROTARCHUS: In what respect?

SOCRATES: What I wanted to find out here, my dear friend Protarchus,
c was not what art or science excels all others by its grandeur, by its nobility, or by its usefulness to us. Our concern here was rather to find which one aims for clarity, precision, and the highest degree of truth, even if it is a minor discipline and our benefit is small. Look at it this way: You can avoid making an enemy of Gorgias so long as you let his art win as far as the actual profit for human life is concerned.

But as to the discipline I am talking about now, what I said earlier about the white also applies in this case: Even in a small quantity it can
d be superior in purity and truth to what is large in quantity but impure and untrue. We must look for this science without concern for its actual benefit or its prestige, but see whether it is by its nature a capacity in our soul to love the truth and to do everything for its sake. And if thorough reflection and sufficient discussion confirms this for our art, then we can say that it is most likely to possess purity of mind and reason. Otherwise we would have to look for a higher kind of knowledge than this.

e PROTARCHUS: Well, thinking it over, I agree that it would be difficult to find any other kind of art or any other science that is closer to the truth than this one.

SOCRATES: When you gave this answer now, did you realize that most of the arts and sciences and those who work at them are in the first place
59 only concerned with opinions and make opinions the center of their search? For even if they think they are studying nature, you must realize that all their lives they are merely dealing with this world order, how it came to be, how it is affected, and how it acts? Is that our position or not?

PROTARCHUS: Quite so.

SOCRATES: So such a person assumes the task of dealing, not with things eternal, but with what comes to be, will come to be, or has come to be?

PROTARCHUS: Undeniably.

SOCRATES: So how could we assert anything definite about these matters
b with exact truth if it never did possess nor will possess nor now possesses any kind of sameness?

PROTARCHUS: Impossible.

SOCRATES: And how could we ever hope to achieve any kind of certainty about subject matters that do not in themselves possess any certainty?

PROTARCHUS: I see no way.

SOCRATES: Then there can be no reason or knowledge that attains the highest truth about these subjects!

PROTARCHUS: At least it does not seem likely.

SOCRATES: We must therefore dismiss entirely you and me and also Gorgias and Philebus, but must make this declaration about our investigation.

c PROTARCHUS: What declaration?

SOCRATES: Either we will find certainty, purity, truth, and what we may call integrity among the things that are forever in the same state, without

anything mixed in it, or we will find it in what comes as close as possible to it. Everything else has to be called second-rate and inferior.

Protarchus: Very true.

Socrates: Would not strict justice demand that we call the noblest things by the noblest names?

Protarchus: That's only fair.

Socrates: And aren't reason and knowledge names that deserve the d
highest honor?

Protarchus: Yes.

Socrates: So, in their most accurate sense and appropriate use, they are applied to insights into true reality?

Protarchus: Definitely.

Socrates: But these were the very names that I put forward at the beginning for our verdict.

Protarchus: The very ones, Socrates.

Socrates: Good. But as to the *mixture* of intelligence and pleasure, if
one likened our situation to that of builders with ingredients or materials e
to use in construction, this would be a fitting comparison.

Protarchus: Very fitting.

Socrates: So next we ought to try our hands at the mixture?

Protarchus: Definitely.

Socrates: But had we not better repeat and remind ourselves of certain points?

Protarchus: What are they?

Socrates: Those we kept reminding ourselves of before. The proverb fits
well here that says that good things deserve repeating 'twice or even thrice'. 60

Protarchus: Definitely.

Socrates: On, then, by the heavens! This is, I think, the general drift of what we said.

Protarchus: What was it?

Socrates: Philebus says that pleasure is the right aim for all living beings and that all should try to strive for it, that it is at the same time the good for all things, so that good and pleasant are but two names that really
belong to what is by nature one and the same. Socrates, by contrast, affirms b
that these are not one and the same thing but two, just as they are two in name, that the good and the pleasant have a different nature, and that intelligence has a greater share in the good than pleasure. Isn't that the matter at issue now, just as it was before, Protarchus?[22]

Protarchus: Very much so.

Socrates: And are we also agreed on this point now, just as we were before?

Protarchus: What point?

Socrates: That the difference between the nature of the good and everything else is this?

22. See 11b–c, and, for the references just below, 20d–23b.

c Protarchus: What is it?

Socrates: Any creature that was in permanent possession of it, entirely and in every way, would never be in need of anything else, but would live in perfect self-sufficiency. Is that right?

Protarchus: It is right.

Socrates: But didn't we try to give them a separate trial in our discussion, assigning each of them a life of its own, so that pleasure would remain unmixed with intelligence, and, again, intelligence would not have the tiniest bit of pleasure?

Protarchus: That's what we did.

d Socrates: Did either of the two seem to us self-sufficient at that time for anyone?

Protarchus: How could it?

Socrates: If some mistake was made then, anyone now has the opportunity to take it up again and correct it. Let him put memory, intelligence, knowledge, and true opinion into one class, and ask himself whether anybody would choose to possess or acquire anything else without that
e class. Most particularly, whether he would want pleasure, as much and as intensive as it can be, without the true opinion that he enjoys it, without recognizing what kind of experience it is he has, without memory of this affection for any length of time. And let him put reason to the same test, whether anyone would prefer to have it without any kind of pleasure, even a very short-lived one, rather than with some pleasures, provided that he does not want all pleasures without intelligence rather than with some fraction of it.

Protarchus: Neither of them will do, Socrates, and there is no need to raise the same question so often.

61 Socrates: So neither of these two would be perfect, worthy of choice for all, and the supreme good?

Protarchus: How could they?

Socrates: The good therefore must be taken up precisely or at least in outline, so that, as we said before, we know to whom we will give the second prize.

Protarchus: You are right.

Socrates: Have we not discovered at least a road that leads towards the good?

Protarchus: What road?

Socrates: It's as if, when you are looking for somebody, you first find out
b where he actually lives. That would be a major step towards finding him.

Protarchus: No doubt.

Socrates: Similarly here. There is this argument which has now indicated to us, just as it did at the beginning of our discussion, that we ought not to seek the good in the unmixed life but in the mixed one.

Protarchus: Quite.

Socrates: But there is more hope that what we are looking for will show itself in a well-mixed life rather than in a poorly mixed one?

Protarchus: Much more.

SOCRATES: So let us pray to the gods for assistance when we perform our mixture, Protarchus, whether it be Dionysus or Hephaestus or any c other deity who is in charge of presiding over such mixtures.

PROTARCHUS: By all means.

SOCRATES: We stand like cup-bearers before the fountains—the fountain of pleasure, comparable to honey, and the sobering fountain of intelligence, free of wine, like sober, healthy water—and we have to see how to make a perfect mixture of the two.

PROTARCHUS: Certainly.

SOCRATES: But let's look first into this: Will our mixture be as good as it d can be if we mix every kind of pleasure with every kind of intelligence?

PROTARCHUS: Maybe.

SOCRATES: It is not without risk, however. But now I have an idea how we might procure a safer mixture.

PROTARCHUS: Tell us what it is.

SOCRATES: Didn't we find that one pleasure turned out to be truer than another, just as one art was more precise than the other?

PROTARCHUS: Definitely.

SOCRATES: But there was also a difference between different sciences, since one kind deals with a subject matter that comes to be and perishes, the other e is concerned with what is free of that, the eternal and self-same. Since we made truth our criterion, the latter kind appeared to be the truer one.

PROTARCHUS: That was certainly so.

SOCRATES: If we took from each sort the segments that possess most truth and mixed them together, would this mixture provide us with the most desirable life, or would we also need less-true ones?

PROTARCHUS: We should do it this way, it seems to me. 62

SOCRATES: Suppose, then, there is a person who understands what justice itself is and can give the appropriate definitions and possesses the same kind of comprehension about all the rest of what there is.

PROTARCHUS: Let that be presupposed.

SOCRATES: Will he be sufficiently versed in science if he knows the definition of the circle and of the divine sphere itself but cannot recognize the human sphere and these our circles, using even in housebuilding those b other yardsticks and those circles?

PROTARCHUS: We would find ourselves in a rather ridiculous position if we were confined entirely to those divine kinds of knowledge, Socrates!

SOCRATES: What are you saying? Ought we at the same time to include the inexact and impure science of the false yardstick and circle, and add it to the mixture?

PROTARCHUS: Yes, necessarily so, if any one of us ever wants to find his own way home.

SOCRATES: But how about music: Ought we also to mix in the kind of c which we said a little earlier that it is full of lucky hits and imitation but lacks purity?

PROTARCHUS: It seems necessary to me, if in fact our life is supposed to be at least some sort of *life*.

Socrates: Do you want me, then, to yield like a doorkeeper to the pushing and shoving of a crowd and to throw open the doors and let the flood of all sorts of knowledge in, the inferior kind mingling with the pure?

d Protarchus: I for my part can't see what damage it would do to accept all the other kinds of knowledge, as long as we have those of the highest kind.

Socrates: Shall I, then, let the lot of them flow into the vessel like Homer's very poetical "commingling of mountain glens"?[23]

Protarchus: Absolutely.

Socrates: In they go! But now we have to return again to the fountain of pleasure. We cannot any longer carry out our original intention of first mixing only the true parts of each of them together. Our love for every
e kind of knowledge has made us let them all in together, before any of
the pleasures.

Protarchus: What you say is true.

Socrates: Now it is time for us to decide about pleasures, too, whether we ought to admit the whole tribe in their cases or whether we should at first admit the true ones only.

Protarchus: It is much safer if we let the true in first!

Socrates: Let them in, then. But what next? If some turn out to be necessary, should we not mix them in also, as we did in the other case?

Protarchus: No reason why not, at least if they really are necessary.

63 Socrates: But having decided that it was innocuous or even beneficial to spend our lives in the pursuit of all the arts and crafts, we may now come to the same conclusion about the pleasures. If it is beneficial and harmless to live our lives enjoying all the pleasures, then we should mix them all in.

Protarchus: So what are we to say in their case, and what are we to do?

Socrates: We should not turn to ourselves with this question, Protarchus, but to the pleasures themselves, as well as to the different kinds of knowledge, and find out how they feel about each other by putting the question in this way.

b Protarchus: What way?

Socrates: "My friends, whether you ought to be called 'pleasures' or some other name,[24] would you prefer to live together with every kind of knowledge or rather to live without it entirely?"—To this I think they cannot help giving this answer.

Protarchus: What answer?

Socrates: What has been said already: "It is neither possible nor beneficial
c for one tribe to remain alone, in isolation and unmixed. We would prefer to
live side by side with that best kind of knowledge, the kind that understands not only all other things but also each one of us, as far as that is possible."

Protarchus: "An excellent answer," we will reply to them.

23. Cf. *Iliad* iv.452. The picture in Homer is not nearly as cheerful as Plato's; it is the mixture of the uproar in a fierce battle that is there described.

24. See 11b.

Socrates: With justice. But after that we have to raise the question with intelligence and reason. "Do you have any need for any association with the pleasures?" That is how we would address reason and knowledge. "What kinds of pleasures?" they might ask in return.

Protarchus: Very likely.

Socrates: Our discussion would then continue as follows: "Will you d
have any need to associate with the strongest and most intensive pleasures in addition to the true pleasures?" we will ask them. "Why on earth should we need them, Socrates?" they might reply, "They are a tremendous impediment to us, since they infect the souls in which they dwell with madness or even prevent our own development altogether. Furthermore, they totally destroy most of our offspring, since neglect leads to forgetful- e
ness. But as to the true and pure pleasures you mentioned, those regard as our kin. And besides, also add the pleasures of health and of temperance and all those that commit themselves to virtue as to their deity and follow it around everywhere. But to forge an association between reason and those pleasures that are forever involved with foolishness and other kinds of vice would be totally unreasonable for anyone who aims at the best and most stable mixture or blend. This is true particularly if he wants to discover 64
in this mixture what the good is in man and in the universe and to get some vision of the nature of the good itself." When reason makes this defense for herself, as well as for memory and right opinion, shall we not admit that she has spoken reasonably and in accord with her own standards?

Protarchus: Absolutely.

Socrates: But see whether the following is also necessary and without it not a single thing could come to be?

Protarchus: What is it? b

Socrates: Wherever we do not mix in truth nothing could truly come to be nor remain in existence once it had come to be.

Protarchus: How should it?

Socrates: In no way. But now, if there is anything else missing in our mixture, it is up to you and Philebus to say so. To me at least it seems that our discussion has arrived at the design of what might be called an incorporeal order that rules harmoniously over a body possessed by a soul.

Protarchus: Count me as one who shares that opinion, Socrates.

Socrates: Would there be some justification to our claim that we are by c
now standing on the very threshold of the good and of the house[25] of every member of its family?[26]

Protarchus: It would seem so, to me at least.

Socrates: What ingredient in the mixture ought we to regard as most valuable and at the same time as the factor that makes it precious to all mankind? Once we have found it, we will inquire further whether it is more closely related and akin to pleasure or to reason, in nature as a whole.

25. For the house, see 61b.

26. Keeping the reading of the manuscripts.

d PROTARCHUS: You are right. This would certainly be very useful in bringing us closer to our final verdict.

SOCRATES: But it is certainly not difficult to see what factor in each mixture it is that makes it either most valuable or worth nothing at all.

PROTARCHUS: What do you mean?

SOCRATES: There is not a single human being who does not know it.

PROTARCHUS: Know what?

SOCRATES: That any kind of mixture that does not in some way or other possess measure or the nature of proportion will necessarily corrupt its
e ingredients and most of all itself. For there would be no blending in such cases at all but really an unconnected medley, the ruin of whatever happens to be contained in it.

PROTARCHUS: Very true.

SOCRATES: But now we notice that the force of the good has taken refuge in an alliance with the nature of the beautiful. For measure and proportion manifest themselves in all areas as beauty and virtue.

PROTARCHUS: Undeniably.

SOCRATES: But we did say that truth is also included along with them in our mixture?

PROTARCHUS: Indeed.

65 SOCRATES: Well, then, if we cannot capture the good in *one* form, we will have to take hold of it in a conjunction of three: beauty, proportion, and truth. Let us affirm that these should by right be treated as a unity and be held responsible for what is in the mixture, for its goodness is what makes the mixture itself a good one.

PROTARCHUS: Very well stated.

SOCRATES: Anyone should by now be able to judge between pleasure
b and intelligence, which of the two is more closely related to the supreme good and more valuable among gods and men.

PROTARCHUS: Even if it is obvious, it is better to make it explicit in our discussion.

SOCRATES: So now let us judge each one of the three in relation to pleasure and reason. For we have to see for which of those two we want to grant closer kinship to each of them.

PROTARCHUS: You mean to beauty, truth, and measure?

SOCRATES: Yes. Take up truth first, Protarchus, and, holding it in front
c of you, look at all three: reason, truth, and pleasure. Then, after withholding judgment for a long time, give your answer, whether for you pleasure or reason is more akin to truth.

PROTARCHUS: What need is there for any length of time? I think there is an enormous difference. For pleasure is the greatest impostor of all, by general account, and in connection with the pleasures of love, which seem to be the greatest of all, even perjury is pardoned by the gods. Pleasures are perhaps rather like children who don't possess the least bit of reason.
d Reason, by contrast, either is the same as truth or of all things it is most like it and most true.

SOCRATES: Next look at measure in the same way, and see whether pleasure possesses more of it than intelligence or intelligence more than pleasure.

PROTARCHUS: Once again you are setting me a task I am well prepared for. I don't think that one could find anything that is more outside all measure than pleasure and excessive joy, while nothing more measured than reason and knowledge could ever be found.

SOCRATES: Well argued. But now go on to the third criterion. Does reason e
contain more beauty than the tribe of pleasures in our estimate, so that reason is more beautiful than pleasure, or is it the other way round?

PROTARCHUS: Why, Socrates, no one, awake or dreaming, could ever see intelligence and reason to be ugly; no one could ever have conceived of them as becoming or being ugly, or that they ever will be.

SOCRATES: Right.

PROTARCHUS: In the case of pleasures, by contrast, when we see anyone
actively engaged in them, especially those that are most intense, we notice 66
that their effect is quite ridiculous, if not outright obscene; we become quite ashamed ourselves and hide them as much as possible from sight, and we confine such activities to the night, as if daylight must not witness such things.

SOCRATES: So you will announce everywhere, both by sending messengers and saying it in person to those present, that pleasure is not a property of the first rank, nor again of the second, but that first comes what is somehow connected with measure, the measured and the timely, and whatever else is to be considered similar.[27]

PROTARCHUS: That seems at least to be the upshot of our discussion now.

SOCRATES: The second rank goes to the well-proportioned and beautiful, b
the perfect, the self-sufficient, and whatever else belongs in that family.

PROTARCHUS: That seems right.

SOCRATES: If you give the third rank, as I divine, to reason and intelligence, you cannot stray far from the truth.

PROTARCHUS: Perhaps.

SOCRATES: Nor again if, beside these three, you give fourth place to those
things that we defined as the soul's own properties, to the sciences and c
the arts, and what we called right opinions, since they are more closely related to the good than pleasure at least.

PROTARCHUS: Maybe so.

SOCRATES: The fifth kind will be those pleasures we set apart and defined as painless; we called them the soul's own pure pleasures, since they are attached to the sciences, some of them even to sense-perception.

PROTARCHUS: Perhaps.

SOCRATES: "With the sixth generation the well-ordered song may find its end," says Orpheus. So it seems that our discussion, too, has found its

27. In our mss this sentence ends with a hopelessly corrupt and meaningless phrase, which has therefore been omitted in the translation.

d end at the determination of the sixth ranking. There remains nothing further to do for us except to give a final touch to what has been said.

Protarchus: We have to do that.

Socrates: Come on, then, "the third libation goes to Zeus the Savior," let us call the same argument to witness for the third time.

Protarchus: Which one?

Socrates: Philebus declares that every pleasure of any kind is the good. . . .

Protarchus: By the "third libation" you appear to mean, as you just stated, that we have to repeat the argument all over from the beginning!

e Socrates: Yes, but let's also hear what follows. In view of all the considerations laid out here and out of distaste for Philebus' position pronounced by countless others on many occasions, I maintained that reason is far superior to pleasure and more beneficial for human life.

Protarchus: That is correct.

Socrates: Suspecting that there are many other goods, I said that if something turned out to be better than these two, then I would fight on the side of reason for the second prize against pleasure, so that pleasure would be deprived even of the second rank.

67 Protarchus: You did say that.

Socrates: Afterwards it became most sufficiently clear that neither of those two would suffice.

Protarchus: Very true.

Socrates: And did it not become clear at this point in our discussion that both reason and pleasure had lost any claim that one or the other would be the good itself, since they were lacking in autonomy and in the power of self-sufficiency and perfection?

Protarchus: Exactly.

Socrates: Then, when a third competitor showed up, superior to either of them, it became apparent that reason was infinitely more closely related and akin to the character of the victor.

Protarchus: Undeniably.

Socrates: And did not pleasure turn out to receive fifth position, according to the verdict we reached in our discussion?

Protarchus: Apparently.

b Socrates: But not first place, even if all the cattle and horses and the rest of the animals gave testimony by following pleasure. Now, many people accept their testimony, as the seers do that of the birds, and judge that pleasures are most effective in securing the happy life; they even believe that the animal passions are more authoritative witnesses than is the love of argument that is constantly revealed under the guidance of the philosophic muse.

Protarchus: We are all agreed now that what you said is as true as possible, Socrates.

Socrates: So will you let me go now?

Protarchus: There is still a little missing, Socrates. Surely you will not give up before we do. But I will remind you of what is left!

# SYMPOSIUM

*This dialogue, Plato's poetic and dramatic masterpiece, relates the events of a 'symposium' or formal drinking party held in honor of the tragedian Agathon's first victorious production. To gratify Phaedrus (the passionate admirer of speeches and rhetoric in the dialogue named after him), who indignantly regrets the neglect by Greek poets and writers of the god of Love, the company agree to give speeches in turn, while they all drink, in praise of Love. 'Love' (Greek* erôs*) covers sexual attraction and gratification between men and women and between men and teenage boys, but the focus here is also and especially on the adult male's role as ethical and intellectual educator of the adolescent that was traditional among the Athenians in the latter sort of relationship, whether accompanied by sex or not. There are six speeches—plus a seventh delivered by an uninvited and very drunk latecomer, the Athenian statesman and general Alcibiades. In his youth Alcibiades had been one of Socrates' admiring followers, and he now reports in gripping detail the fascinating reversal Socrates worked upon him in the erotic roles of the older and the younger man usual among the Greeks in a relationship of 'love': Socrates became the pursued, Alcibiades the pursuer. Appropriately enough, all the speakers, with the interesting exception of the comic poet Aristophanes, are mentioned in* Protagoras *as among those who flocked to Callias' house to attend the sophists gathered there (all experts on speaking): as he enters Callias' house, Socrates spots four of the* Symposium *speakers—Phaedrus and Eryximachus in a crowd round Hippias, and Agathon and Pausanias (his lover) hanging on the words of Prodicus; Alcibiades joins the company shortly afterwards.*

*Socrates' own speech is given over to reporting a discourse on love he says he once heard from Diotima, a wise woman from Mantinea. This Diotima seems an invention, contrived by Socrates (and Plato) to distance Socrates in his report of it from what she says. In any event, Diotima herself is made to say that Socrates can probably not follow her in the 'final and highest mystery' of the 'rites of love'—her account of the ascent in love, beginning with love for individual young men, ending with love for the Form of Beauty, which 'always* is *and neither comes to be nor passes away, neither waxes nor wanes', and is 'not beautiful this way and ugly that way, nor beautiful at one time and ugly at another, nor beautiful in relation to one thing and ugly in relation to another' but is 'just what it is to be beautiful'. In this way Plato lets us know that this theory of the Beautiful is his own contrivance, not really an idea of Socrates (whether the historical philosopher or the philosopher of the 'Socratic' dialogues). Readers will want to compare Diotima's speech on Love with those*

*of Socrates in* Phaedrus*, and also with Socrates' discussion on friendship with the boys in the* Lysis.

*The events of this evening at Agathon's house are all reported long afterward by a young friend of Socrates' in his last years, Apollodorus. Apparently they had become famous among Socrates' intimates and others who were interested in hearing about him. That, at any rate, is the impression Apollodorus leaves us with: he has himself taken the trouble to learn about it all from Aristodemus, who was present on the occasion, and he has just reported on it to Glaucon (Socrates' conversation partner in the* Republic*). He now reports again to an unnamed friend who has asked to hear about it all—and to us readers of Plato's dialogue.*

*J.M.C.*

172 APOLLODORUS: In fact, your question does not find me unprepared. Just the other day, as it happens, I was walking to the city from my home in Phaleron when a man I know, who was making his way behind me, saw me and called from a distance:

"The gentleman from Phaleron!" he yelled, trying to be funny. "Hey, Apollodorus, wait!"

So I stopped and waited.

b "Apollodorus, I've been looking for you!" he said. "You know there once was a gathering at Agathon's when Socrates, Alcibiades, and their friends had dinner together; I wanted to ask you about the speeches they made on Love. What were they? I heard a version from a man who had it from Phoenix, Philip's son, but it was badly garbled, and he said you were the one to ask. So please, will you tell me all about it? After all, Socrates is your friend—who has a better right than you to report his conversation? But before you begin," he added, "tell me this: were you there yourself?"

c "Your friend must have really garbled his story," I replied, "if you think this affair was so recent that I could have been there."

"I did think that," he said.

"Glaucon, how could you? You know very well Agathon hasn't lived in Athens for many years, while it's been less than three that I've been Socrates' companion and made it my job to know exactly what he says
173 and does each day. Before that, I simply drifted aimlessly. Of course, I used to think that what I was doing was important, but in fact I was the most worthless man on earth—as bad as you are this very moment: I used to think philosophy was the last thing a man should do."

"Stop joking, Apollodorus," he replied. "Just tell me when the party took place."

Translated by A. Nehamas and P. Woodruff.

"When we were still children, when Agathon won the prize with his first tragedy. It was the day after he and his troupe held their victory celebration."

"So it really was a long time ago," he said. "Then who told you about it? Was it Socrates himself?"

"Oh, for god's sake, of course not!" I replied. "It was the very same man b
who told Phoenix, a fellow called Aristodemus, from Cydatheneum, a real runt of a man, who always went barefoot. He went to the party because, I think, he was obsessed with Socrates—one of the worst cases at that time. Naturally, I checked part of his story with Socrates, and Socrates agreed with his account."

"Please tell me, then," he said. "You speak and I'll listen, as we walk to the city. This is the perfect opportunity."

So this is what we talked about on our way; and that's why, as I said c
before, I'm not unprepared. Well, if I'm to tell *you* about it too—I'll be glad to. After all, my greatest pleasure comes from philosophical conversation, even if I'm only a listener, whether or not I think it will be to my advantage. All other talk, especially the talk of rich businessmen like you, bores me to tears, and I'm sorry for you and your friends because you think your affairs are important when really they're totally trivial. Perhaps, d
in your turn, you think I'm a failure, and, believe me, I think that what you think is true. But as for all of you, I don't just *think* you are failures—I know it for a fact.

FRIEND: You'll never change, Apollodorus! Always nagging, even at yourself! I do believe you think everybody—yourself first of all—is totally worthless, except, of course, Socrates. I don't know exactly how you came to be called "the maniac," but you certainly talk like one, always furious with everyone, including yourself—but not with Socrates!

APOLLODORUS: Of course, my dear friend, it's perfectly obvious why I e
have these views about us all: it's simply because I'm a maniac, and I'm raving!

FRIEND: It's not worth arguing about this now, Apollodorus. Please do as I asked: tell me the speeches.

APOLLODORUS: All right . . . Well, the speeches went something like this—
but I'd better tell you the whole story from the very beginning, as Aristode- 174
mus told it to me.

He said, then, that one day he ran into Socrates, who had just bathed and put on his fancy sandals—both very unusual events. So he asked him where he was going, and why he was looking so good.

Socrates replied, "I'm going to Agathon's for dinner. I managed to avoid yesterday's victory party—I really don't like crowds—but I promised to be there today. So, naturally, I took great pains with my appearance: I'm going to the house of a good-looking man; I had to look my best. But let me ask you this," he added, "I know you haven't been invited to the dinner; how would you like to come anyway?" b

And Aristodemus answered, "I'll do whatever you say."

"Come with me, then," Socrates said, "and we shall prove the proverb wrong; the truth is, 'Good men go uninvited to Goodman's feast.'[1] Even Homer himself, when you think about it, did not much like this proverb;
c he not only disregarded it, he violated it. Agamemnon, of course, is one of his great warriors, while he describes Menelaus as a 'limp spearman.' And yet, when Agamemnon offers a sacrifice and gives a feast, Homer has the weak Menelaus arrive uninvited at his superior's table."[2]

Aristodemus replied to this, "Socrates, I am afraid Homer's description is bound to fit me better than yours. Mine is a case of an obvious inferior arriving uninvited at the table of a man of letters. I think you'd better figure out a good excuse for bringing me along, because, you know, I
d won't admit I've come without an invitation. I'll say I'm your guest."

"Let's go," he said. "We'll think about what to say 'as we proceed the two of us along the way.' "[3]

With these words, they set out. But as they were walking, Socrates began to think about something, lost himself in thought, and kept lagging behind. Whenever Aristodemus stopped to wait for him, Socrates would urge him
e to go on ahead. When he arrived at Agathon's he found the gate wide open, and that, Aristodemus said, caused him to find himself in a very embarrassing situation: a household slave saw him the moment he arrived and took him immediately to the dining room, where the guests were already lying down on their couches, and dinner was about to be served.

As soon as Agathon saw him, he called:

"Welcome, Aristodemus! What perfect timing! You're just in time for dinner! I hope you're not here for any other reason—if you are, forget it. I looked all over for you yesterday, so I could invite you, but I couldn't find you anywhere. But where is Socrates? How come you didn't bring him along?"

So I turned around (Aristodemus said), and Socrates was nowhere to be seen. And I said that it was actually Socrates who had brought *me* along as his guest.

175 "I'm delighted he did," Agathon replied. "But where is he?"

"He was directly behind me, but I have no idea where he is now."

"Go look for Socrates," Agathon ordered a slave, "and bring him in. Aristodemus," he added, "you can share Eryximachus' couch."

A slave brought water, and Aristodemus washed himself before he lay down. Then another slave entered and said: "Socrates is here, but he's gone off to the neighbor's porch. He's standing there and won't come in even though I called him several times."

1. Agathon's name could be translated "Goodman." The proverb is, "Good men go uninvited to an inferior man's feast" (Eupolis fr. 289 Kock).

2. Menelaus calls on Agamemnon at *Iliad* ii.408. Menelaus is called a limp spearman at xvii.587–88.

3. An allusion to *Iliad* x.224, "When two go together, one has an idea before the other."

"How strange," Agathon replied. "Go back and bring him in. Don't
leave him there."

But Aristodemus stopped him. "No, no," he said. "Leave him alone. It's b
one of his habits: every now and then he just goes off like that and stands
motionless, wherever he happens to be. I'm sure he'll come in very soon,
so don't disturb him; let him be."

"Well, all right, if you really think so," Agathon said, and turned to the
slaves: "Go ahead and serve the rest of us. What you serve is completely
up to you; pretend nobody's supervising you—as if I ever did! Imagine
that we are all your own guests, myself included. Give us good reason to c
praise your service."

So they went ahead and started eating, but there was still no sign of
Socrates. Agathon wanted to send for him many times, but Aristodemus
wouldn't let him. And, in fact, Socrates came in shortly afterward, as he
always did—they were hardly halfway through their meal. Agathon, who,
as it happened, was all alone on the farthest couch, immediately called:
"Socrates, come lie down next to me. Who knows, if I touch you, I may d
catch a bit of the wisdom that came to you under my neighbor's porch.
It's clear *you've* seen the light. If you hadn't, you'd still be standing there."

Socrates sat down next to him and said, "How wonderful it would be,
dear Agathon, if the foolish were filled with wisdom simply by touching
the wise. If only wisdom were like water, which always flows from a full
cup into an empty one when we connect them with a piece of yarn—well, e
then I would consider it the greatest prize to have the chance to lie down
next to you. I would soon be overflowing with your wonderful wisdom. My
own wisdom is of no account—a shadow in a dream—while yours is bright
and radiant and has a splendid future. Why, young as you are, you're so
brilliant I could call more than thirty thousand Greeks as witnesses."

"Now you've gone *too* far, Socrates," Agathon replied. "Well, eat your
dinner. Dionysus will soon enough be the judge of our claims to wisdom!"[4] 176

Socrates took his seat after that and had his meal, according to Aristode-
mus. When dinner was over, they poured a libation to the god, sang a
hymn, and—in short—followed the whole ritual. Then they turned their
attention to drinking. At that point Pausanias addressed the group:

"Well, gentlemen, how can we arrange to drink less tonight? To be
honest, I still have a terrible hangover from yesterday, and I could really
use a break. I daresay most of you could, too, since you were also part of
the celebration. So let's try not to overdo it." b

Aristophanes replied: "Good idea, Pausanias. We've got to make a plan
for going easy on the drink tonight. I was over my head last night myself,
like the others."

After that, up spoke Eryximachus, son of Acumenus: "Well said, both
of you. But I still have one question: How do *you* feel, Agathon? Are you
strong enough for serious drinking?"

4. Dionysus was the god of wine and drunkenness.

"Absolutely not," replied Agathon. "I've no strength left for anything."

c "What a lucky stroke for us," Eryximachus said, "for me, for Aristodemus, for Phaedrus, and the rest—that you large-capacity drinkers are already exhausted. Imagine how weak drinkers like ourselves feel after last night! Of course I don't include Socrates in my claims: he can drink or not, and will be satisfied whatever we do. But since none of us seems particularly eager to overindulge, perhaps it would not be amiss for me
d to provide you with some accurate information as to the nature of intoxication. If I have learned anything from medicine, it is the following point: inebriation is harmful to everyone. Personally, therefore, I always refrain from heavy drinking; and I advise others against it—especially people who are suffering the effects of a previous night's excesses."

"Well," Phaedrus interrupted him, "I always follow your advice, especially when you speak as a doctor. In this case, if the others know what's good for them, they too will do just as you say."

e At that point they all agreed not to get drunk that evening; they decided to drink only as much as pleased them.

"It's settled, then," said Eryximachus. "We are resolved to force no one to drink more than he wants. I would like now to make a further motion: let us dispense with the flute-girl who just made her entrance; let her play for herself or, if she prefers, for the women in the house. Let us instead spend our evening in conversation. If you are so minded, I would like to
177 propose a subject."

They all said they were quite willing, and urged him to make his proposal. So Eryximachus said:

"Let me begin by citing Euripides' *Melanippe:* 'Not mine the tale.' What I am about to tell belongs to Phaedrus here, who is deeply indignant on this issue, and often complains to me about it:

"'Eryximachus,' he says, 'isn't it an awful thing! Our poets have composed hymns in honor of just about any god you can think of; but has a
b single one of them given one moment's thought to the god of love, ancient and powerful as he is? As for our fancy intellectuals, they have written volumes praising Heracles and other heroes (as did the distinguished Prodicus). Well, perhaps *that's* not surprising, but I've actually read a book
c by an accomplished author who saw fit to extol the usefulness of salt! How *could* people pay attention to such trifles and never, not even once, write a proper hymn to Love? How could anyone ignore so great a god?'

"Now, Phaedrus, in my judgment, is quite right. I would like, therefore, to take up a contribution, as it were, on his behalf, and gratify his wish.
d Besides, I think this a splendid time for all of us here to honor the god. If you agree, we can spend the whole evening in discussion, because I propose that each of us give as good a speech in praise of Love as he is capable of giving, in proper order from left to right. And let us begin with Phaedrus, who is at the head of the table and is, in addition, the father of our subject."

"No one will vote against that, Eryximachus," said Socrates. "How could
e *I* vote 'No,' when the only thing I say I understand is the art of love?

Could Agathon and Pausanias? Could Aristophanes, who thinks of nothing but Dionysus and Aphrodite? No one I can see here now could vote against your proposal.

"And though it's not quite fair to those of us who have to speak last, if the first speeches turn out to be good enough and to exhaust our subject, I promise we won't complain. So let Phaedrus begin, with the blessing of Fortune; let's hear his praise of Love."

They all agreed with Socrates, and pressed Phaedrus to start. Of course, 178
Aristodemus couldn't remember exactly what everyone said, and I myself
don't remember everything he told me. But I'll tell you what he remem-
bered best, and what I consider the most important points.

As I say, he said Phaedrus spoke first, beginning more or less like this:

Love is a great god, wonderful in many ways to gods and men, and
most marvelous of all is the way he came into being. We honor him as
one of the most ancient gods, and the proof of his great age is this: the b
parents of Love have no place in poetry or legend. According to Hesiod,
the first to be born was Chaos,

> *. . . but then came*
> *Earth, broad-chested, a seat for all, forever safe,*
> *And Love.*[5]

And Acusilaus agrees with Hesiod: after Chaos came Earth and Love, these two.[6] And Parmenides tells of this beginning:

> *The very first god [she] designed was Love.*[7]

All sides agree, then, that Love is one of the most ancient gods. As such, c
he gives to us the greatest goods. I cannot say what greater good there is
for a young boy than a gentle lover, or for a lover than a boy to love.
There is a certain guidance each person needs for his whole life, if he is
to live well; and nothing imparts this guidance—not high kinship, not
public honor, not wealth—nothing imparts this guidance as well as Love. d
What guidance do I mean? I mean a sense of shame at acting shamefully,
and a sense of pride in acting well. Without these, nothing fine or great
can be accomplished, in public or in private.

What I say is this: if a man in love is found doing something shameful,
or accepting shameful treatment because he is a coward and makes no
defense, then nothing would give him more pain than being seen by the
boy he loves—not even being seen by his father or his comrades. We see e

5. *Theogony* 116–120, 118 omitted.

6. Acusilaus was an early-fifth-century writer of genealogies.

7. Parmenides, B 13 Diels-Kranz.

the same thing also in the boy he loves, that he is especially ashamed
before his lover when he is caught in something shameful. If only there
were a way to start a city or an army made up of lovers and the boys they
love! Theirs would be the best possible system of society, for they would
179 hold back from all that is shameful, and seek honor in each other's eyes.[8]
Even a few of them, in battle side by side, would conquer all the world,
I'd say. For a man in love would never allow his loved one, of all people,
to see him leaving ranks or dropping weapons. He'd rather die a thousand
deaths! And as for leaving the boy behind, or not coming to his aid in
danger—why, no one is so base that true Love could not inspire him with
b courage, and make him as brave as if he'd been born a hero. When Homer
says a god 'breathes might' into some of the heroes, this is really Love's
gift to every lover.[9]

Besides, no one will die for you but a lover, and a lover will do this
even if she's a woman. Alcestis is proof to everyone in Greece that what
c I say is true.[10] Only she was willing to die in place of her husband, although
his father and mother were still alive. Because of her love, she went so far
beyond his parents in family feeling that she made them look like outsiders,
as if they belonged to their son in name only. And when she did this her
deed struck everyone, even the gods, as nobly done. The gods were so
delighted, in fact, that they gave her the prize they reserve for a handful
d chosen from the throngs of noble heroes—they sent her soul back from
the dead. As you can see, the eager courage of love wins highest honors
from the gods.

Orpheus, however, they sent unsatisfied from Hades, after showing him
only an image of the woman he came for. They did not give him the
woman herself, because they thought he was soft (he was, after all, a
cithara-player) and did not dare to die like Alcestis for Love's sake, but
contrived to enter living into Hades. So they punished him for that, and
e made him die at the hands of women.[11]

The honor they gave to Achilles is another matter. They sent him to the
Isles of the Blest because he dared to stand by his lover Patroclus and
180 avenge him, even after he had learned from his mother that he would die
if he killed Hector, but that if he chose otherwise he'd go home and end
his life as an old man. Instead he chose to die for Patroclus, and more
than that, he did it for a man whose life was already over. The gods were
highly delighted at this, of course, and gave him special honor, because
he made so much of his lover. Aeschylus talks nonsense when he claims

8. Accepting the deletion of *ē* in e5.

9. Cf. *Iliad* x.482, xv.262; *Odyssey* ix.381.

10. Alcestis was the self-sacrificing wife of Admetus, whom Apollo gave a chance to live if anyone would go to Hades in his place.

11. Orpheus was a musician of legendary powers, who charmed his way into the underworld in search of his dead wife, Eurydice.

Achilles was the lover;[12] he was more beautiful than Patroclus, more beautiful than all the heroes, and still beardless. Besides he was much younger, as Homer says.

In truth, the gods honor virtue most highly when it belongs to Love. b
They are more impressed and delighted, however, and are more generous
with a loved one who cherishes his lover, than with a lover who cherishes
the boy he loves. A lover is more godlike than his boy, you see, since he
is inspired by a god. That's why they gave a higher honor to Achilles than
to Alcestis, and sent him to the Isles of the Blest.

Therefore I say Love is the most ancient of the gods, the most honored, and the most powerful in helping men gain virtue and blessedness, whether they are alive or have passed away.

That was more or less what Phaedrus said according to Aristodemus. c
There followed several other speeches which he couldn't remember very
well. So he skipped them and went directly to the speech of Pausanias.

Phaedrus (Pausanias began), I'm not quite sure our subject has been
well defined. Our charge has been simple—to speak in praise of Love.
This would have been fine if Love himself were simple, too, but as a matter
of fact, there are two kinds of Love. In view of this, it might be better to
begin by making clear which kind of Love we are to praise. Let me therefore d
try to put our discussion back on the right track and explain which kind
of Love ought to be praised. Then I shall give him the praise he deserves,
as the god he is.

It is a well-known fact that Love and Aphrodite are inseparable. If,
therefore, Aphrodite were a single goddess, there could also be a single
Love; but, since there are actually two goddesses of that name, there also
are two kinds of Love. I don't expect you'll disagree with me about the
two goddesses, will you? One is an older deity, the motherless daughter
of Uranus, the god of heaven: she is known as Urania, or Heavenly Aphrodite. The other goddess is younger, the daughter of Zeus and Dione: her
name is Pandemos, or Common Aphrodite. It follows, therefore, that there e
is a Common as well as a Heavenly Love, depending on which goddess
is Love's partner. And although, of course, all the gods must be praised,
we must still make an effort to keep these two gods apart.

The reason for this applies in the same way to every type of action:
considered in itself, no action is either good or bad, honorable or shameful. 181
Take, for example, our own case. We had a choice between drinking,
singing, or having a conversation. Now, in itself none of these is better
than any other: how it comes out depends entirely on how it is performed.
If it is done honorably and properly, it turns out to be honorable; if it is
done improperly, it is disgraceful. And my point is that exactly this principle applies to being in love: Love is not in himself noble and worthy of

12. In his play, *The Myrmidons*. In Homer there is no hint of sexual attachment between Achilles and Patroclus.

praise; that depends on whether the sentiments he produces in us are
themselves noble.

b Now the Common Aphrodite's Love is himself truly common. As such,
he strikes wherever he gets a chance. This, of course, is the love felt by
the vulgar, who are attached to women no less than to boys, to the body
more than to the soul, and to the least intelligent partners, since all they
care about is completing the sexual act. Whether they do it honorably or
not is of no concern. That is why they do whatever comes their way,
sometimes good, sometimes bad; and which one it is is incidental to their
purpose. For the Love who moves them belongs to a much younger god-
c dess, who, through her parentage, partakes of the nature both of the female
and the male.

Contrast this with the Love of Heavenly Aphrodite. This goddess, whose
descent is purely male (hence this love is for boys), is considerably older
and therefore free from the lewdness of youth. That's why those who are
inspired by her Love are attracted to the male: they find pleasure in what
is by nature stronger and more intelligent. But, even within the group that
d is attracted to handsome boys, some are not moved purely by this Heavenly
Love; those who are do not fall in love with little boys; they prefer older
ones whose cheeks are showing the first traces of a beard—a sign that
they have begun to form minds of their own. I am convinced that a man
who falls in love with a young man of this age is generally prepared to
share everything with the one he loves—he is eager, in fact, to spend the
rest of his own life with him. He certainly does not aim to deceive him—
to take advantage of him while he is still young and inexperienced and
e then, after exposing him to ridicule, to move quickly on to someone else.

As a matter of fact, there should be a law forbidding affairs with young
boys. If nothing else, all this time and effort would not be wasted on
such an uncertain pursuit—and what is more uncertain than whether a
particular boy will eventually make something of himself, physically or
mentally? Good men, of course, are willing to make a law like this for
themselves, but those other lovers, the vulgar ones, need external restraint.
182 For just this reason we have placed every possible legal obstacle to their
seducing our own wives and daughters. These vulgar lovers are the people
who have given love such a bad reputation that some have gone so far
as to claim that taking *any* man as a lover is in itself disgraceful. Would
anyone make this claim if he weren't thinking of how hasty vulgar lovers
are, and therefore how unfair to their loved ones? For nothing done prop-
erly and in accordance with our customs would ever have provoked such
righteous disapproval.

I should point out, however, that, although the customs regarding Love
in most cities are simple and easy to understand, here in Athens (and in
b Sparta as well) they are remarkably complex. In places where the people
are inarticulate, like Elis or Boeotia, tradition straightforwardly approves
taking a lover in every case. No one there, young or old, would ever
consider it shameful. The reason, I suspect, is that, being poor speakers,

they want to save themselves the trouble of having to offer reasons and
arguments in support of their suits.

By contrast, in places like Ionia and almost every other part of the Persian
empire, taking a lover is always considered disgraceful. The Persian empire
is absolute; that is why it condemns love as well as philosophy and sport. c
It is no good for rulers if the people they rule cherish ambitions for them-
selves or form strong bonds of friendship with one another. That these
are precisely the effects of philosophy, sport, and especially of Love is a
lesson the tyrants of Athens learned directly from their own experience:
Didn't their reign come to a dismal end because of the bonds uniting
Harmodius and Aristogiton in love and affection?[13] d

So you can see that plain condemnation of Love reveals lust for power
in the rulers and cowardice in the ruled, while indiscriminate approval
testifies to general dullness and stupidity.

Our own customs, which, as I have already said, are much more difficult
to understand, are also far superior. Recall, for example, that we consider
it more honorable to declare your love rather than to keep it a secret,
especially if you are in love with a youth of good family and accomplish-
ment, even if he isn't all that beautiful. Recall also that a lover is encouraged
in every possible way; this means that what he does is not considered
shameful. On the contrary, conquest is deemed noble, and failure shameful. e
And as for *attempts* at conquest, our custom is to praise lovers for totally
extraordinary acts—so extraordinary, in fact, that if they performed them 183
for any other purpose whatever, they would reap the most profound
contempt. Suppose, for example, that in order to secure money, or a public
post, or any other practical benefit from another person, a man were willing
to do what lovers do for the ones they love. Imagine that in pressing his
suit he went to his knees in public view and begged in the most humiliating
way, that he swore all sorts of vows, that he spent the night at the other
man's doorstep, that he were anxious to provide services even a slave
would have refused—well, you can be sure that everyone, his enemies no
less than his friends, would stand in his way. His enemies would jeer at b
his fawning servility, while his friends, ashamed on his behalf, would try
everything to bring him back to his senses. But let a lover act in any of
these ways, and everyone will immediately say what a charming man he
is! No blame attaches to his behavior: custom treats it as noble through
and through. And what is even more remarkable is that, at least according
to popular wisdom, the gods will forgive a lover even for breaking his
vows—a lover's vow, our people say, is no vow at all. The freedom given c
to the lover by both gods and men according to our custom is immense.

In view of all this, you might well conclude that in our city we consider
the lover's desire and the willingness to satisfy it as the noblest things in

13. Harmodius and Aristogiton attempted to overthrow the tyrant Hippias in 514 B.C. Although their attempt failed, the tyranny fell three years later, and the lovers were celebrated as tyrannicides.

the world. When, on the other hand, you recall that fathers hire attendants
for their sons as soon as they're old enough to be attractive, and that an
attendant's main task is to prevent any contact between his charge and
his suitors; when you recall how mercilessly a boy's own friends tease
him if they catch him at it, and how strongly their elders approve and
d even encourage such mocking—when you take all this into account, you're
bound to come to the conclusion that we Athenians consider such behavior
the most shameful thing in the world.

In my opinion, however, the fact of the matter is this. As I said earlier,
love is, like everything else, complex: considered simply in itself, it is
neither honorable nor a disgrace—its character depends entirely on the
behavior it gives rise to. To give oneself to a vile man in a vile way is
truly disgraceful behavior; by contrast, it is perfectly honorable to give
oneself honorably to the right man. Now you may want to know who
e counts as vile in this context. I'll tell you: it is the common, vulgar lover,
who loves the body rather than the soul, the man whose love is bound to
be inconstant, since what he loves is itself mutable and unstable. The
moment the body is no longer in bloom, "he flies off and away,"[14] his
promises and vows in tatters behind him. How different from this is a
man who loves the right sort of character, and who remains its lover for
184 life, attached as he is to something that is permanent.

We can now see the point of our customs: they are designed to separate
the wheat from the chaff, the proper love from the vile. That's why we
do everything we can to make it as easy as possible for lovers to press
their suits and as difficult as possible for young men to comply; it is like
a competition, a kind of test to determine to which sort each belongs. This
explains two further facts: First, why we consider it shameful to yield too
quickly: the passage of time in itself provides a good test in these matters.
b Second, why we also consider it shameful for a man to be seduced by
money or political power, either because he cringes at ill-treatment and
will not endure it or because, once he has tasted the benefits of wealth
and power, he will not rise above them. None of these benefits is stable
or permanent, apart from the fact that no genuine affection can possibly
be based upon them.

Our customs, then, provide for only one honorable way of taking a man
c as a lover. In addition to recognizing that the lover's total and willing
subjugation to his beloved's wishes is neither servile nor reprehensible,
we allow that there is one—and only one—further reason for willingly
subjecting oneself to another which is equally above reproach: that is
subjection for the sake of virtue. If someone decides to put himself at
another's disposal because he thinks that this will make him better in
wisdom or in any other part of virtue, we approve of his voluntary subjection: we consider it neither shameful nor servile. Both these principles—
that is, both the principle governing the proper attitude toward the lover

14. *Iliad* ii.71.

of young men and the principle governing the love of wisdom and of d
virtue in general—must be combined if a young man is to accept a lover
in an honorable way. When an older lover and a young man come together
and each obeys the principle appropriate to him—when the lover realizes
that he is justified in doing anything for a loved one who grants him favors,
and when the young man understands that he is justified in performing any
service for a lover who can make him wise and virtuous—and when the e
lover *is* able to help the young man become wiser and better, and the
young man *is* eager to be taught and improved by his lover—then, and only
then, when these two principles coincide absolutely, is it ever honorable for
a young man to accept a lover.

Only in this case, we should notice, is it never shameful to be deceived;
in every other case it is shameful, both for the deceiver and the person he 185
deceives. Suppose, for example, that someone thinks his lover is rich and
accepts him for his money; his action won't be any less shameful if it turns
out that he was deceived and his lover was a poor man after all. For the
young man has already shown himself to be the sort of person who will
do anything for money—and that is far from honorable. By the same token,
suppose that someone takes a lover in the mistaken belief that this lover
is a good man and likely to make him better himself, while in reality the
man is horrible, totally lacking in virtue; even so, it is noble for him to b
have been deceived. For he too has demonstrated something about himself:
that he is the sort of person who will do anything for the sake of virtue—
and what could be more honorable than that? It follows, therefore, that
giving in to your lover for virtue's sake is honorable, whatever the outcome.
And this, of course, is the Heavenly Love of the heavenly goddess. Love's
value to the city as a whole and to the citizens is immeasurable, for he
compels the lover and his loved one alike to make virtue their central c
concern. All other forms of love belong to the vulgar goddess.

Phaedrus, I'm afraid this hasty improvisation will have to do as my contribution on the subject of Love.

When Pausanias finally came to a pause (I've learned this sort of fine
figure from our clever rhetoricians), it was Aristophanes' turn, according
to Aristodemus. But he had such a bad case of the hiccups—he'd probably
stuffed himself again, though, of course, it could have been anything—
that making a speech was totally out of the question. So he turned to the
doctor, Eryximachus, who was next in line, and said to him: d

"Eryximachus, it's up to you—as well it should be. Cure me or take my turn."

"As a matter of fact," Eryximachus replied, "I shall do both. I shall take
your turn—you can speak in my place as soon as you feel better—and I
shall also cure you. While I am giving my speech, you should hold your
breath for as long as you possibly can. This may well eliminate your e
hiccups. If it fails, the best remedy is a thorough gargle. And if even this
has no effect, then tickle your nose with a feather. A sneeze or two will
cure even the most persistent case."

"The sooner you start speaking, the better," Aristophanes said. "I'll follow your instructions to the letter."

This, then, was the speech of Eryximachus:

Pausanias introduced a crucial consideration in his speech, though in
my opinion he did not develop it sufficiently. Let me therefore try to carry
186 his argument to its logical conclusion. His distinction between the two
species of Love seems to me very useful indeed. But if I have learned a
single lesson from my own field, the science of medicine, it is that Love
does not occur only in the human soul; it is not simply the attraction we
feel toward human beauty: it is a significantly broader phenomenon. It
b certainly occurs within the animal kingdom, and even in the world of
plants. In fact, it occurs everywhere in the universe. Love is a deity of the
greatest importance: he directs everything that occurs, not only in the
human domain, but also in that of the gods.

Let me begin with some remarks concerning medicine—I hope you will
forgive my giving pride of place to my own profession. The point is that
our very bodies manifest the two species of Love. Consider for a moment
the marked difference, the radical dissimilarity, between healthy and dis-
eased constitutions and the fact that dissimilar subjects desire and love
objects that are themselves dissimilar. Therefore, the love manifested in
health is fundamentally distinct from the love manifested in disease. And
c now recall that, as Pausanias claimed, it is as honorable to yield to a good
man as it is shameful to consort with the debauched. Well, my point
is that the case of the human body is strictly parallel. Everything sound
and healthy in the body must be encouraged and gratified; that is
precisely the object of medicine. Conversely, whatever is unhealthy and
unsound must be frustrated and rebuffed: that's what it is to be an expert
in medicine.

d In short, medicine is simply the science of the effects of Love on repletion
and depletion of the body, and the hallmark of the accomplished physician
is his ability to distinguish the Love that is noble from the Love that is
ugly and disgraceful. A good practitioner knows how to affect the body
and how to transform its desires; he can implant the proper species of
Love when it is absent and eliminate the other sort whenever it occurs.
The physician's task is to effect a reconciliation and establish mutual love
between the most basic bodily elements. Which are those elements? They
are, of course, those that are most opposed to one another, as hot is to
e cold, bitter to sweet, wet to dry, cases like those. In fact, our ancestor
Asclepius first established medicine as a profession when he learned how
to produce concord and love between such opposites—that is what those
poet fellows say, and—this time—I concur with them.

187 Medicine, therefore, is guided everywhere by the god of Love, and so
are physical education and farming as well. Further, a moment's reflection
suffices to show that the case of poetry and music, too, is precisely the
same. Indeed, this may have been just what Heraclitus had in mind, though

his mode of expression certainly leaves much to be desired. The one, he
says, "being at variance with itself is in agreement with itself" "like the
attunement of a bow or a lyre."[15] Naturally, it is patently absurd to claim
that an attunement or a harmony is in itself discordant or that its elements
are still in discord with one another. Heraclitus probably meant that an
expert musician creates a harmony by resolving the prior discord between b
high and low notes. For surely there can be no harmony so long as high and
low are still discordant; harmony, after all, is consonance, and consonance is
a species of agreement. Discordant elements, as long as they are still in
discord, cannot come to an agreement, and they therefore cannot produce
a harmony. Rhythm, for example, is produced only when fast and slow, c
though earlier discordant, are brought into agreement with each other.
Music, like medicine, creates agreement by producing concord and love
between these various opposites. Music is therefore simply the science of
the effects of Love on rhythm and harmony.

These effects are easily discernible if you consider the constitution of
rhythm and harmony in themselves; Love does not occur in both his forms
in this domain. But the moment you consider, in their turn, the effects of
rhythm and harmony on their audience—either through composition, d
which creates new verses and melodies, or through musical education,
which teaches the correct performance of existing compositions—com-
plications arise directly, and they require the treatment of a good prac-
titioner. Ultimately, the identical argument applies once again: the love
felt by good people or by those whom such love might improve in this
regard must be encouraged and protected. This is the honorable, heavenly
species of Love, produced by the melodies of Urania, the Heavenly Muse. e
The other, produced by Polyhymnia, the muse of many songs, is common
and vulgar. Extreme caution is indicated here: we must be careful to enjoy
his pleasures without slipping into debauchery—this case, I might add, is
strictly parallel to a serious issue in my own field, namely, the problem
of regulating the appetite so as to be able to enjoy a fine meal without
unhealthy aftereffects.

In music, therefore, as well as in medicine and in all the other domains,
in matters divine as well as in human affairs, we must attend with the
greatest possible care to these two species of Love, which are, indeed, to 188
be found everywhere. Even the seasons of the year exhibit their influence.
When the elements to which I have already referred—hot and cold, wet
and dry—are animated by the proper species of Love, they are in harmony
with one another: their mixture is temperate, and so is the climate. Harvests
are plentiful; men and all other living things are in good health; no harm
can come to them. But when the sort of Love that is crude and impulsive
controls the seasons, he brings death and destruction. He spreads the b

15. Heraclitus of Ephesus, a philosopher of the early fifth century, was known for his enigmatic sayings. This one is quoted elsewhere in a slightly different form, frg. B 51 Diels-Kranz.

plague and many other diseases among plants and animals; he causes frost and hail and blights. All these are the effects of the immodest and disordered species of Love on the movements of the stars and the seasons of the year, that is, on the objects studied by the science called astronomy.

c Consider further the rites of sacrifice and the whole area with which
the art of divination is concerned, that is, the interaction between men and gods. Here, too, Love is the central concern: our object is to try to maintain the proper kind of Love and to attempt to cure the kind that is diseased. For what is the origin of all impiety? Our refusal to gratify the orderly kind of Love, and our deference to the other sort, when we should have been guided by the former sort of Love in every action in connection with our parents, living or dead, and with the gods. The task of divination is to keep watch over these two species of Love and to doctor them as
d necessary. Divination, therefore, is the practice that produces loving af-
fection between gods and men; it is simply the science of the effects of Love on justice and piety.

Such is the power of Love—so varied and great that in all cases it might be called absolute. Yet even so it is far greater when Love is directed, in temperance and justice, toward the good, whether in heaven or on earth: happiness and good fortune, the bonds of human society, concord with the gods above—all these are among his gifts.

e Perhaps I, too, have omitted a great deal in this discourse on Love. If
so, I assure you, it was quite inadvertent. And if in fact I have overlooked certain points, it is now your task, Aristophanes, to complete the argument—unless, of course, you are planning on a different approach. In any
189 case, proceed; your hiccups seem cured.

Then Aristophanes took over (so Aristodemus said): "The hiccups have stopped all right—but not before I applied the Sneeze Treatment to them. Makes me wonder whether the 'orderly sort of Love' in the body calls for the sounds and itchings that constitute a sneeze, because the hiccups stopped immediately when I applied the Sneeze Treatment."

"You're good, Aristophanes," Eryximachus answered. "But watch what you're doing. You are making jokes before your speech, and you're forcing me to prepare for you to say something funny, and to put up my guard
b against you, when otherwise you might speak at peace."

Then Aristophanes laughed. "Good point, Eryximachus. So let me 'unsay what I have said.' But don't put up your guard. I'm not worried about saying something funny in my coming oration. That would be pure profit, and it comes with the territory of my Muse. What I'm worried about is that I might say something ridiculous."

"Aristophanes, do you really think you can take a shot at me, and then escape? Use your head! Remember, as you speak, that you will be called
c upon to give an account. Though perhaps, if I decide to, I'll let you off."

"Eryximachus," Aristophanes said, "indeed I do have in mind a different approach to speaking than the one the two of you used, you and Pausanias.

You see, I think people have entirely missed the power of Love, because,
if they had grasped it, they'd have built the greatest temples and altars to
him and made the greatest sacrifices. But as it is, none of this is done for
him, though it should be, more than anything else! For he loves the human d
race more than any other god, he stands by us in our troubles, and he
cures those ills we humans are most happy to have mended. I shall,
therefore, try to explain his power to you; and you, please pass my teaching
on to everyone else."

First you must learn what Human Nature was in the beginning and
what has happened to it since, because long ago our nature was not what
it is now, but very different. There were three kinds of human beings,
that's my first point—not two as there are now, male and female. In e
addition to these, there was a third, a combination of those two; its name
survives, though the kind itself has vanished. At that time, you see, the
word "androgynous" really meant something: a form made up of male
and female elements, though now there's nothing but the word, and that's
used as an insult. My second point is that the shape of each human being
was completely round, with back and sides in a circle; they had four hands
each, as many legs as hands, and two faces, exactly alike, on a rounded 190
neck. Between the two faces, which were on opposite sides, was one head
with four ears. There were two sets of sexual organs, and everything else
was the way you'd imagine it from what I've told you. They walked
upright, as we do now, whatever direction they wanted. And whenever
they set out to run fast, they thrust out all their eight limbs, the ones they
had then, and spun rapidly, the way gymnasts do cartwheels, by bringing
their legs around straight.

Now here is why there were three kinds, and why they were as I b
described them: The male kind was originally an offspring of the sun, the
female of the earth, and the one that combined both genders was an
offspring of the moon, because the moon shares in both. They were spheri-
cal, and so was their motion, because they were like their parents in the sky.

In strength and power, therefore, they were terrible, and they had great
ambitions. They made an attempt on the gods, and Homer's story about
Ephialtes and Otus was originally about them: how they tried to make an
ascent to heaven so as to attack the gods.[16] Then Zeus and the other gods c
met in council to discuss what to do, and they were sore perplexed. They
couldn't wipe out the human race with thunderbolts and kill them all off,
as they had the giants, because that would wipe out the worship they
receive, along with the sacrifices we humans give them. On the other hand,
they couldn't let them run riot. At last, after great effort, Zeus had an idea.

"I think I have a plan," he said, "that would allow human beings to
exist and stop their misbehaving: they will give up being wicked when d

16. *Iliad* v.385, *Odyssey* xi.305 ff.

they lose their strength. So I shall now cut each of them in two. At one
stroke they will lose their strength and also become more profitable to us,
owing to the increase in their number. They shall walk upright on two
legs. But if I find they still run riot and do not keep the peace," he said,
"I will cut them in two again, and they'll have to make their way on one
leg, hopping."

e So saying, he cut those human beings in two, the way people cut sorb-
apples before they dry them or the way they cut eggs with hairs. As he
cut each one, he commanded Apollo to turn its face and half its neck
towards the wound, so that each person would see that he'd been cut and
keep better order. Then Zeus commanded Apollo to heal the rest of the
wound, and Apollo did turn the face around, and he drew skin from all
sides over what is now called the stomach, and there he made one mouth,
as in a pouch with a drawstring, and fastened it at the center of the stomach.
191 This is now called the navel. Then he smoothed out the other wrinkles,
of which there were many, and he shaped the breasts, using some such
tool as shoemakers have for smoothing wrinkles out of leather on the form.
But he left a few wrinkles around the stomach and the navel, to be a
reminder of what happened long ago.

Now, since their natural form had been cut in two, each one longed for
its own other half, and so they would throw their arms about each other,
weaving themselves together, wanting to grow together. In that condition
b they would die from hunger and general idleness, because they would
not do anything apart from each other. Whenever one of the halves died
and one was left, the one that was left still sought another and wove itself
together with that. Sometimes the half he met came from a woman, as
we'd call her now, sometimes it came from a man; either way, they kept
on dying.

Then, however, Zeus took pity on them, and came up with another plan:
he moved their genitals around to the front! Before then, you see, they
c used to have their genitals outside, like their faces, and they cast seed and
made children, not in one another, but in the ground, like cicadas. So Zeus
brought about this relocation of genitals, and in doing so he invented
interior reproduction, *by* the man *in* the woman. The purpose of this was
so that, when a man embraced a woman, he would cast his seed and they
would have children; but when male embraced male, they would at least
have the satisfaction of intercourse, after which they could stop embracing,
d return to their jobs, and look after their other needs in life. This, then, is
the source of our desire to love each other. Love is born into every human
being; it calls back the halves of our original nature together; it tries to
make one out of two and heal the wound of human nature.

Each of us, then, is a "matching half" of a human whole, because each
was sliced like a flatfish, two out of one, and each of us is always seeking
the half that matches him. That's why a man who is split from the double
sort (which used to be called "androgynous") runs after women. Many
e lecherous men have come from this class, and so do the lecherous women

who run after men. Women who are split from a woman, however, pay
no attention at all to men; they are oriented more towards women, and
lesbians come from this class. People who are split from a male are male-
oriented. While they are boys, because they are chips off the male block,
they love men and enjoy lying with men and being embraced by men; 192
those are the best of boys and lads, because they are the most manly in
their nature. Of course, some say such boys are shameless, but they're
lying. It's not because they have no shame that such boys do this, you see,
but because they are bold and brave and masculine, and they tend to
cherish what is like themselves. Do you want me to prove it? Look, these
are the only kind of boys who grow up to be real men in politics. When b
they're grown men, they are lovers of young men, and they naturally pay
no attention to marriage or to making babies, except insofar as they are
required by local custom. They, however, are quite satisfied to live their
lives with one another unmarried. In every way, then, this sort of man
grows up as a lover of young men and a lover of Love, always rejoicing
in his own kind.

And so, when a person meets the half that is his very own, whatever his
orientation, whether it's to young men or not, then something wonderful
happens: the two are struck from their senses by love, by a sense of c
belonging to one another, and by desire, and they don't want to be sepa-
rated from one another, not even for a moment.

These are the people who finish out their lives together and still cannot
say what it is they want from one another. No one would think it is the
intimacy of sex—that mere sex is the reason each lover takes so great and
deep a joy in being with the other. It's obvious that the soul of every lover d
longs for something else; his soul cannot say what it is, but like an oracle
it has a sense of what it wants, and like an oracle it hides behind a riddle.
Suppose two lovers are lying together and Hephaestus[17] stands over them
with his mending tools, asking, "What is it you human beings really want
from each other?" And suppose they're perplexed, and he asks them again:
"Is this your heart's desire, then—for the two of you to become parts of
the same whole, as near as can be, and never to separate, day or night?
Because if that's your desire, I'd like to weld you together and join you
into something that is naturally whole, so that the two of you are made e
into one. Then the two of you would share one life, as long as you lived,
because you would be one being, and by the same token, when you died,
you would be one and not two in Hades, having died a single death. Look
at your love, and see if this is what you desire: wouldn't this be all the
good fortune you could want?"

Surely you can see that no one who received such an offer would turn
it down; no one would find anything else that he wanted. Instead, everyone
would think he'd found out at last what he had always wanted: to come
together and melt together with the one he loves, so that one person

17. Cf. *Odyssey* viii.266 ff.

emerged from two. Why should this be so? It's because, as I said, we used to be complete wholes in our original nature, and now "Love" is the name
193 for our pursuit of wholeness, for our desire to be complete.

Long ago we were united, as I said; but now the god has divided us as punishment for the wrong we did him, just as the Spartans divided the Arcadians.[18] So there's a danger that if we don't keep order before the gods, we'll be split in two again, and then we'll be walking around in the condition of people carved on gravestones in bas-relief, sawn apart between the nostrils, like half dice. We should encourage all men, therefore, to treat
b the gods with all due reverence, so that we may escape this fate and find wholeness instead. And we will, if Love is our guide and our commander. Let no one work against him. Whoever opposes Love is hateful to the gods, but if we become friends of the god and cease to quarrel with him, then we shall find the young men that are meant for us and win their love, as very few men do nowadays.

c Now don't get ideas, Eryximachus, and turn this speech into a comedy. Don't think I'm pointing this at Pausanias and Agathon. Probably, they both do belong to the group that are entirely masculine in nature. But I am speaking about everyone, men and women alike, and I say there's just one way for the human race to flourish: we must bring love to its perfect conclusion, and each of us must win the favors of his very own young man, so that he can recover his original nature. If that is the ideal, then, of course, the nearest approach to it is best in present circumstances, and that is to win the favor of young men who are naturally sympathetic to us.

d If we are to give due praise to the god who can give us this blessing, then, we must praise Love. Love does the best that can be done for the time being: he draws us towards what belongs to us. But for the future, Love promises the greatest hope of all: if we treat the gods with due reverence, he will restore to us our original nature, and by healing us, he will make us blessed and happy.

"That," he said, "is my speech about Love, Eryximachus. It is rather different from yours. As I begged you earlier, don't make a comedy of it.
e I'd prefer to hear what all the others will say—or, rather, what each of them will say, since Agathon and Socrates are the only ones left."

"I found your speech delightful," said Eryximachus, "so I'll do as you say. Really, we've had such a rich feast of speeches on Love, that if I couldn't vouch for the fact that Socrates and Agathon are masters of the art of love, I'd be afraid that they'd have nothing left to say. But as it is, I have no fears on this score."

194 Then Socrates said, "That's because *you* did beautifully in the contest, Eryximachus. But if you ever get in my position, or rather the position I'll

18. Arcadia included the city of Mantinea, which opposed Sparta, and was rewarded by having its population divided and dispersed in 385 B.C. Aristophanes seems to be referring anachronistically to those events; such anachronisms are not uncommon in Plato.

be in after Agathon's spoken so well, then you'll really be afraid. You'll be at your wit's end, as I am now."

"You're trying to bewitch me, Socrates," said Agathon, "by making me think the audience expects great things of my speech, so I'll get flustered." b

"Agathon!" said Socrates, "How forgetful do you think I am? I saw how brave and dignified you were when you walked right up to the theater platform along with the actors and looked straight out at that enormous audience. You were about to put your own writing on display, and you weren't the least bit panicked. After seeing that, how could I expect you to be flustered by us, when we are so few?"

"Why, Socrates," said Agathon. "You must think I have nothing but theater audiences on my mind! So you suppose I don't realize that, if you're intelligent, you find a few sensible men much more frightening than a senseless crowd?"

"No," he said, "It wouldn't be very handsome of me to think you crude c
in any way, Agathon. I'm sure that if you ever run into people you consider wise, you'll pay more attention to them than to ordinary people. But you can't suppose we're in that class; we were at the theater too, you know, part of the ordinary crowd. Still, if you did run into any wise men, other than yourself, you'd certainly be ashamed at the thought of doing anything ugly in front of them. Is that what you mean?"

'That's true," he said.

"On the other hand, you wouldn't be ashamed to do something ugly d
in front of ordinary people. Is that it?"

At that point Phaedrus interrupted: "Agathon, my friend, if you answer Socrates, he'll no longer care whether we get anywhere with what we're doing here, so long as he has a partner for discussion. Especially if he's handsome. Now, like you, I enjoy listening to Socrates in discussion, but it is my duty to see to the praising of Love and to exact a speech from every one of this group. When each of you two has made his offering to the god, then you can have your discussion." e

"You're doing a beautiful job, Phaedrus," said Agathon. "There's nothing to keep me from giving my speech. Socrates will have many opportunities for discussion later."

I wish first to speak of how I ought to speak, and only then to speak. In my opinion, you see, all those who have spoken before me did not so much celebrate the god as congratulate human beings on the good things that come to them from the god. But who it is who gave these gifts, what he is like—no one has spoken about that. Now, only one method is correct 195
for every praise, no matter whose: you must explain what qualities in the subject of your speech enable him to give the benefits for which we praise him. So now, in the case of Love, it is right for us to praise him first for what he is and afterwards for his gifts.

I maintain, then, that while all the gods are happy, Love—if I may say so without giving offense—is the happiest of them all, for he is the most

beautiful and the best. His great beauty lies in this: First, Phaedrus, he is
b the youngest of the gods.[19] He proves my point himself by fleeing old age
in headlong flight, fast-moving though it is (that's obvious—it comes after
us faster than it should). Love was born to hate old age and will come
nowhere near it. Love always lives with young people and is one of them:
the old story holds good that like is always drawn to like. And though
on many other points I agree with Phaedrus, I do not agree with this: that
c Love is more ancient than Cronus and Iapetus. No, I say that he is the
youngest of the gods and stays young forever.

Those old stories Hesiod and Parmenides tell about the gods—those
things happened under Necessity, not Love, if what they say is true. For
not one of all those violent deeds would have been done—no castrations,
no imprisonments—if Love had been present among them. There would
have been peace and brotherhood instead, as there has been now as long
as Love has been king of the gods.

d So he is young. And besides being young, he is delicate. It takes a poet
as good as Homer to show how delicate the god is. For Homer says that
Mischief is a god and that she is delicate—well, that her feet are delicate,
anyway! He says:

> *. . . hers are delicate feet: not on the ground*
> *Does she draw nigh; she walks instead upon the heads of men.*[20]

e A lovely proof, I think, to show how delicate she is: she doesn't walk on
anything hard; she walks only on what is soft. We shall use the same proof
about Love, then, to show that he is delicate. For he walks not on earth,
not even on people's skulls, which are not really soft at all, but in the
softest of all the things that are, there he walks, there he has his home.
For he makes his home in the characters, in the souls, of gods and men—
and not even in every soul that comes along: when he encounters a soul
with a harsh character, he turns away; but when he finds a soft and gentle
character, he settles down in it. Always, then, he is touching with his feet
196 and with the whole of himself what is softest in the softest places. He
must therefore be most delicate.

He is youngest, then, and most delicate; in addition he has a fluid, supple shape. For if he were hard, he would not be able to enfold a soul completely or escape notice when he first entered it or withdrew. Besides, his graceful good looks prove that he is balanced and fluid in his nature. Everyone knows that Love has extraordinary good looks, and between ugliness and Love there is unceasing war.

And the exquisite coloring of his skin! The way the god consorts with
b flowers shows that. For he never settles in anything, be it a body or a soul,

19. Contrast 178b.

20. *Iliad* xix.92–93. "Mischief" translates *Atē*.

that cannot flower or has lost its bloom. His place is wherever it is flowery and fragrant; there he settles, there he stays.

Enough for now about the beauty of the god, though much remains still to be said. After this, we should speak of Love's moral character.[21] The main point is that Love is neither the cause nor the victim of any injustice; he does no wrong to gods or men, nor they to him. If anything has an effect on him, it is never by violence, for violence never touches Love. c
And the effects he has on others are not forced, for every service we give to love we give willingly. And whatever one person agrees on with another, when both are willing, that is right and just; so say "the laws that are kings of society."[22]

And besides justice, he has the biggest share of moderation.[23] For moderation, by common agreement, is power over pleasures and passions, and no pleasure is more powerful than Love! But if they are weaker, they are under the power of Love, and *he* has the power; and because he has power over pleasures and passions, Love is exceptionally moderate.

And as for manly bravery, "Not even Ares can stand up to" Love![24] For d
Ares has no hold on Love, but Love does on Ares—love of Aphrodite, so runs the tale.[25] But he who has hold is more powerful than he who is held; and so, because Love has power over the bravest of the others, he is bravest of them all.

Now I have spoken about the god's justice, moderation, and bravery; his wisdom remains.[26] I must try not to leave out anything that can be said on this. In the first place—to honor *our* profession as Eryximachus e
did his[27]—the god is so skilled a poet that he can make others into poets: once Love touches him, *anyone* becomes a poet,

*. . . howe'er uncultured he had been before.*[28]

21. "Moral character": *aretē*, i.e., virtue.

22. A proverbial expression attributed by Aristotle (*Rhetoric* 1406a17–23) to the fourth-century liberal thinker and rhetorician Alcidamas.

23. *Sōphrosunē*. The word can be translated also as "temperance" and, most literally, "sound-mindedness." (Plato and Aristotle generally contrast *sōphrosunē* as a virtue with self-control: the person with *sōphrosunē* is naturally well-tempered in every way and so does not need to control himself, or hold himself back.)

24. From Sophocles, fragment 234b Dindorf: "Even Ares cannot withstand Necessity." Ares is the god of war.

25. See *Odyssey* viii.266–366. Aphrodite's husband Hephaestus made a snare that caught Ares in bed with Aphrodite.

26. "Wisdom" translates *sophia*, which Agathon treats as roughly equivalent to *technē* (professional skill); he refers mainly to the ability to produce things. Accordingly "wisdom" translates *sophia* in the first instance; afterwards in this passage it is "skill" or "art."

27. At 186b.

28. Euripides, *Stheneboea* (frg. 666 Nauck).

This, we may fittingly observe, testifies that Love is a good poet, good, in sum, at every kind of artistic production. For you can't give to another
197 what you don't have yourself, and you can't teach what you don't know.

And as to the production of animals—who will deny that they are all born and begotten through Love's skill?

And as for artisans and professionals—don't we know that whoever has this god for a teacher ends up in the light of fame, while a man untouched by Love ends in obscurity? Apollo, for one, invented archery,
b medicine, and prophecy when desire and love showed the way. Even he, therefore, would be a pupil of Love, and so would the Muses in music, Hephaestus in bronze work, Athena in weaving, and Zeus in "the governance of gods and men."

That too is how the gods' quarrels were settled, once Love came to be among them—love of beauty, obviously, because love is not drawn to ugliness. Before that, as I said in the beginning, and as the poets say, many dreadful things happened among the gods, because Necessity was king.
c But once this god was born, all goods came to gods and men alike through love of beauty.

This is how I think of Love, Phaedrus: first, he is himself the most beautiful and the best; after that, if anyone else is at all like that, Love is responsible. I am suddenly struck by a need to say something in poetic meter,[29] that it is he who—

*Gives peace to men and stillness to the sea,*
d *Lays winds to rest, and careworn men to sleep.*

Love fills us with togetherness and drains all of our divisiveness away. Love calls gatherings like these together. In feasts, in dances, and in ceremonies, he gives the lead. Love moves us to mildness, removes from us wildness. He is giver of kindness, never of meanness. Gracious, kindly[30]—let wise men see and gods admire! Treasure to lovers, envy to others, father of elegance, luxury, delicacy, grace, yearning, desire. Love cares
e well for good men, cares not for bad ones. In pain, in fear, in desire, or speech, Love is our best guide and guard; he is our comrade and our savior. Ornament of all gods and men, most beautiful leader and the best! Every man should follow Love, sing beautifully his hymns, and join with him in the song he sings that charms the mind of god or man.

This, Phaedrus, is the speech I have to offer. Let it be dedicated to the
198 god, part of it in fun, part of it moderately serious, as best I could manage.

When Agathon finished, Aristodemus said, everyone there burst into applause, so becoming to himself and to the god did they think the young man's speech.

29. After these two lines of poetry, Agathon continues with an extremely poetical prose peroration.

30. Accepting the emendation *aganos* at d5.

Then Socrates glanced at Eryximachus and said, "Now do you think I
was foolish to feel the fear I felt before? Didn't I speak like a prophet a
while ago when I said that Agathon would give an amazing speech and
I would be tongue-tied?"

"You were prophetic about one thing, I think," said Eryximachus, "that
Agathon would speak well. But you, tongue-tied? No, I don't believe that." b

"Bless you," said Socrates. "How am I not going to be tongue-tied, I or
anyone else, after a speech delivered with such beauty and variety? The
other parts may not have been so wonderful, but that at the end! Who
would not be struck dumb on hearing the beauty of the words and phrases?
Anyway, I was worried that I'd not be able to say anything that came
close to them in beauty, and so I would almost have run away and escaped, c
if there had been a place to go. And, you see, the speech reminded me of
Gorgias, so that I actually experienced what Homer describes: I was afraid
that Agathon would end by sending the Gorgian head,[31] awesome at speak-
ing in a speech, against my speech, and this would turn me to stone by
striking me dumb. Then I realized how ridiculous I'd been to agree to join d
with you in praising Love and to say that I was a master of the art of love,
when I knew nothing whatever of this business, of how anything whatever
ought to be praised. In my foolishness, I thought you should tell the truth
about whatever you praise, that this should be your basis, and that from
this a speaker should select the most beautiful truths and arrange them
most suitably. I was quite vain, thinking that I would talk well and that
I knew the truth about praising anything whatever. But now it appears
that this is not what it is to praise anything whatever; rather, it is to apply e
to the object the grandest and the most beautiful qualities, whether he
actually has them or not. And if they are false, that is no objection; for the
proposal, apparently, was that everyone here make the rest of us think he
is praising Love—and not that he actually praise him. I think that is why
you stir up every word and apply it to Love; your description of him and 199
his gifts is designed to make him look better and more beautiful than
anything else—to ignorant listeners, plainly, for of course he wouldn't
look that way to those who knew. And your praise did seem beautiful
and respectful. But I didn't even know the method for giving praise; and
it was in ignorance that I agreed to take part in this. So "the tongue"
promised, and "the mind" did not.[32] Goodbye to that! I'm not giving
another eulogy using that method, not at all—I wouldn't be able to do b
it!—but, if you wish, I'd like to tell the truth my way. I want to avoid any
comparison with your speeches, so as not to give you a reason to laugh
at me. So look, Phaedrus, would a speech like this satisfy your requirement?

31. "Gorgian head" is a pun on "Gorgon's head." In his peroration Agathon had spoken in the style of Gorgias, and this style was considered to be irresistibly powerful. The sight of a Gorgon's head would turn a man to stone.

32. The allusion is to Euripides, *Hippolytus* 612.

You will hear the truth about Love, and the words and phrasing will take care of themselves."

Then Aristodemus said that Phaedrus and the others urged him to speak in the way he thought was required, whatever it was.

"Well then, Phaedrus," said Socrates, "allow me to ask Agathon a few
c little questions, so that, once I have his agreement, I may speak on that
basis."

"You have my permission," said Phaedrus. "Ask away."

After that, said Aristodemus, Socrates began: "Indeed, Agathon, my
friend, I thought you led the way beautifully into your speech when you
said that one should first show the qualities of Love himself, and only
then those of his deeds. I must admire that beginning. Come, then, since
d you have beautifully and magnificently expounded his qualities in other
ways, tell me this, too, about Love. Is Love such as to be a love of something
or of nothing? I'm not asking if he is born *of* some mother or father, (for
the question whether Love is love of mother or of father would really be
ridiculous), but it's as if I'm asking this about a father—whether a father
is the father *of* something or not. You'd tell me, of course, if you wanted
to give me a good answer, that it's *of* a son or a daughter that a father is
the father. Wouldn't you?"

"Certainly," said Agathon.

"Then does the same go for the mother?"

e He agreed to that also.

"Well, then," said Socrates, "answer a little more fully, and you will understand better what I want. If I should ask, 'What about this: a brother, just insofar as he *is* a brother, is he the brother of something or not?' "

He said that he was.

"And he's of a brother or a sister, isn't he?"

He agreed.

"Now try to tell me about love," he said. "Is Love the love of nothing or of something?"

200 "Of something, surely!"

"Then keep this object of love in mind, and remember what it is.[33] But tell me this much: does Love desire that of which it is the love, or not?"

"Certainly," he said.

"At the time he desires and loves something, does he actually have what he desires and loves at that time, or doesn't he?"

"He doesn't. At least, that wouldn't be likely," he said.

"Instead of what's *likely*," said Socrates, "ask yourself whether it's *neces-*
b *sary* that this be so: a thing that desires desires something of which it is
in need; otherwise, if it were not in need, it would not desire it. I can't
tell you, Agathon, how strongly it strikes me that this is necessary. But
how about you?"

"I think so too."

33. Cf. 197b.

"Good. Now then, would someone who is tall, want to be tall? Or someone who is strong want to be strong?"

"Impossible, on the basis of what we've agreed."

"Presumably because no one is in need of those things he already has."

"True."

"But maybe a strong man could want to be strong," said Socrates, "or
a fast one fast, or a healthy one healthy: in cases like these, you might c
think people really do want to be things they already are and do want to have qualities they already have—I bring them up so they won't deceive us. But in these cases, Agathon, if you stop to think about them, you will see that these people are what they are at the present time, whether they want to be or not, by a logical necessity. And who, may I ask, would ever bother to desire what's necessary in any event? But when someone says 'I am healthy, but that's just what I want to be,' or 'I am rich, but that's
just what I want to be,' or 'I desire the very things that I have,' let us say d
to him: 'You already have riches and health and strength in your possession, my man, what you want is to possess these things in time to come, since in the present, whether you want to or not, you have them. Whenever you say, *I desire what I already have*, ask yourself whether you don't mean this: *I want the things I have now to be mine in the future as well*.' Wouldn't he agree?"

According to Aristodemus, Agathon said that he would.

So Socrates said, "Then this is what it is to love something which is not at hand, which the lover does not have: it is to desire the preservation of
what he now has in time to come, so that he will have it then." e

"Quite so," he said.

"So such a man or anyone else who has a desire desires what is not at hand and not present, what he does not have, and what he is not, and that of which he is in need; for such are the objects of desire and love."

"Certainly," he said.

"Come, then," said Socrates. "Let us review the points on which we've agreed. Aren't they, first, that Love is the love of something, and, second,
that he loves things of which he has a present need?" 201

"Yes," he said.

"Now, remember, in addition to these points, what you said in your speech about what it is that Love loves. If you like, I'll remind you. I think you said something like this: that the gods' quarrels were settled by love of beautiful things, for there is no love of ugly ones.[34] Didn't you say something like that?"

"I did," said Agathon.

"And that's a suitable thing to say, my friend," said Socrates. "But if this is so, wouldn't Love have to be a desire for beauty, and never for ugliness?"

He agreed. b

34. 197b3–5.

"And we also agreed that he loves just what he needs and does not have."

"Yes," he said.

"So Love needs beauty, then, and does not have it."

"Necessarily," he said.

"So! If something needs beauty and has got no beauty at all, would you still say that it is beautiful?"

"Certainly not."

"Then do you still agree that Love is beautiful, if those things are so?"

c Then Agathon said, "It turns out, Socrates, I didn't know what I was talking about in that speech."

"It was a beautiful speech, anyway, Agathon," said Socrates. "Now take it a little further. Don't you think that good things are always beautiful as well?"

"I do."

"Then if Love needs beautiful things, and if all good things are beautiful, he will need good things too."

"As for me, Socrates," he said, "I am unable to contradict you. Let it be as you say."

"Then it's the truth, my beloved Agathon, that you are unable to contradict," he said. "It is not hard at all to contradict Socrates."

d Now I'll let you go. I shall try to go through for you the speech about Love I once heard from a woman of Mantinea, Diotima—a woman who was wise about many things besides this: once she even put off the plague for ten years by telling the Athenians what sacrifices to make. She is the one who taught me the art of love, and I shall go through her speech as best I can on my own, using what Agathon and I have agreed to as a basis.

Following your lead, Agathon, one should first describe who Love is
e and what he is like, and afterwards describe his works—I think it will be easiest for me to proceed the way Diotima did and tell you how she questioned me.

You see, I had told her almost the same things Agathon told me just now: that Love is a great god and that he belongs to beautiful things.[35] And she used the very same arguments against me that I used against Agathon; she showed how, according to my very own speech, Love is neither beautiful nor good.

So I said, "What do you mean, Diotima? Is Love ugly, then, and bad?"

202 But she said, "Watch your tongue! Do you really think that, if a thing is not beautiful, it has to be ugly?"

"I certainly do."

35. The Greek is ambiguous between "Love loves beautiful things" and "Love is one of the beautiful things." Agathon had asserted the former (197b5, 201a5), and this will be a premise in Diotima's argument, but he asserted the latter as well (195a7), and this is what Diotima proceeds to refute.

“And if a thing’s not wise, it’s ignorant? Or haven’t you found out yet that there’s something in between wisdom and ignorance?”

“What’s that?”

“It’s judging things correctly without being able to give a reason. Surely you see that this is not the same as knowing—for how could knowledge be unreasoning? And it’s not ignorance either—for how could what hits the truth be ignorance? Correct judgment, of course, has this character: it is *in between* understanding and ignorance.”

“True,” said I, “as you say.” b

“Then don’t force whatever is not beautiful to be ugly, or whatever is not good to be bad. It’s the same with Love: when you agree he is neither good nor beautiful, you need not think he is ugly and bad; he could be something in between,” she said.

“Yet everyone agrees he’s a great god,” I said.

“Only those who don’t know?” she said. “Is that how you mean ‘everyone’? Or do you include those who do know?”

“Oh, everyone together.”

And she laughed. “Socrates, how could those who say that he’s not a c
god at all agree that he’s a great god?”

“Who says that?” I asked.

“You, for one,” she said, “and I for another.”

“How can you say this!” I exclaimed.

“That’s easy,” said she. “Tell me, wouldn’t you say that all gods are beautiful and happy? Surely you’d never say a god is not beautiful or happy?”

“Zeus! Not I,” I said.

“Well, by calling anyone ‘happy,’ don’t you mean they possess good and beautiful things?”

“Certainly.” d

“What about Love? You agreed he needs good and beautiful things, and that’s why he desires them—because he needs them.”

“I certainly did.”

“Then how could he be a god if he has no share in good and beautiful things?”

“There’s no way he could, apparently.”

“Now do you see? You don’t believe Love is a god either!”

“Then, what could Love be?” I asked. “A mortal?”

“Certainly not.”

“Then, what is he?”

“He’s like what we mentioned before,” she said. “He is in between mortal and immortal.”

“What do you mean, Diotima?”

“He’s a great spirit, Socrates. Everything spiritual, you see, is in between e
god and mortal.”

“What is their function?” I asked.

"They are messengers who shuttle back and forth between the two,
conveying prayer and sacrifice from men to gods, while to men they bring
commands from the gods and gifts in return for sacrifices. Being in the
middle of the two, they round out the whole and bind fast the all to all.
203 Through them all divination passes, through them the art of priests in
sacrifice and ritual, in enchantment, prophecy, and sorcery. Gods do not
mix with men; they mingle and converse with us through spirits instead,
whether we are awake or asleep. He who is wise in any of these ways is
a man of the spirit, but he who is wise in any other way, in a profession
or any manual work, is merely a mechanic. These spirits are many and
various, then, and one of them is Love."

b "Who are his father and mother?" I asked.

"That's rather a long story," she said. "I'll tell it to you, all the same."

"When Aphrodite was born, the gods held a celebration. Poros, the son
of Metis, was there among them.[36] When they had feasted, Penia came
begging, as poverty does when there's a party, and stayed by the gates.
Now Poros got drunk on nectar (there was no wine yet, you see) and,
feeling drowsy, went into the garden of Zeus, where he fell asleep. Then
c Penia schemed up a plan to relieve her lack of resources: she would get
a child from Poros. So she lay beside him and got pregnant with Love.
That is why Love was born to follow Aphrodite and serve her: because
he was conceived on the day of her birth. And that's why he is also by
nature a lover of beauty, because Aphrodite herself is especially beautiful.

"As the son of Poros and Penia, his lot in life is set to be like theirs. In
the first place, he is always poor, and he's far from being delicate and
d beautiful (as ordinary people think he is); instead, he is tough and shriveled
and shoeless and homeless, always lying on the dirt without a bed, sleeping
at people's doorsteps and in roadsides under the sky, having his mother's
nature, always living with Need. But on his father's side he is a schemer
after the beautiful and the good; he is brave, impetuous, and intense, an
awesome hunter, always weaving snares, resourceful in his pursuit of
intelligence, a lover of wisdom[37] through all his life, a genius with enchantments, potions, and clever pleadings.

e "He is by nature neither immortal nor mortal. But now he springs to
life when he gets his way; now he dies—all in the very same day. Because
he is his father's son, however, he keeps coming back to life, but then
anything he finds his way to always slips away, and for this reason Love
is never completely without resources, nor is he ever rich.

204 "He is in between wisdom and ignorance as well. In fact, you see, none
of the gods loves wisdom or wants to become wise—for they are wise—
and no one else who is wise already loves wisdom; on the other hand, no

36. *Poros* means "way," "resource." His mother's name, *Mētis*, means "cunning." *Penia* means "poverty."

37. I.e., a philosopher.

one who is ignorant will love wisdom either or want to become wise. For what's especially difficult about being ignorant is that you are content with yourself, even though you're neither beautiful and good nor intelligent. If you don't think you need anything, of course you won't want what you don't think you need."

"In that case, Diotima, who *are* the people who love wisdom, if they are neither wise nor ignorant?" b

"That's obvious," she said. "A child could tell you. Those who love wisdom fall in between those two extremes. And Love is one of them, because he is in love with what is beautiful, and wisdom is extremely beautiful. It follows that Love *must* be a lover of wisdom and, as such, is in between being wise and being ignorant. This, too, comes to him from his parentage, from a father who is wise and resourceful and a mother who is not wise and lacks resource.

"My dear Socrates, that, then, is the nature of the Spirit called Love. c
Considering what you thought about Love, it's no surprise that you were led into thinking of Love as you did. On the basis of what you say, I conclude that you thought Love was *being loved*, rather than *being a lover*. I think that's why Love struck you as beautiful in every way: because it is what is really beautiful and graceful that deserves to be loved, and this is perfect and highly blessed; but being a lover takes a different form, which I have just described."

So I said, "All right then, my friend. What you say about Love is beautiful,
but if you're right, what use is Love to human beings?" d

"I'll try to teach you that, Socrates, after I finish this. So far I've been explaining the character and the parentage of Love. Now, according to you, he is love for beautiful things. But suppose someone asks us, 'Socrates and Diotima, what is the point of loving beautiful things?'

"It's clearer this way: 'The lover of beautiful things has a desire; what does he desire?' "

"That they become his own," I said.

"But that answer calls for still another question, that is, 'What will this man have, when the beautiful things he wants have become his own?' "

I said there was no way I could give a ready answer to that question. e

Then she said, "Suppose someone changes the question, putting 'good' in place of 'beautiful,' and asks you this: 'Tell me, Socrates, a lover of good things has a desire; what does he desire?' "

"That they become his own," I said.

"And what will he have, when the good things he wants have become his own?"

"This time it's easier to come up with the answer," I said. "He'll have hap- 205
piness."[38]

38. *Eudaimonia*: no English word catches the full range of this term, which is used for the whole of well-being and the good, flourishing life.

"That's what makes happy people happy, isn't it—possessing good things. There's no need to ask further, 'What's the point of wanting happiness?' The answer you gave seems to be final."

"True," I said.

"Now this desire for happiness, this kind of love—do you think it is common to all human beings and that everyone wants to have good things forever and ever? What would you say?"

"Just that," I said. "It is common to all."

b "Then, Socrates, why don't we say that everyone is in love," she asked, "since everyone always loves the same things? Instead, we say some people are in love and others not; why is that?"

"I wonder about that myself," I said.

"It's nothing to wonder about," she said. "It's because we divide out a special kind of love, and we refer to it by the word that means the whole—'love'; and for the other kinds of love we use other words."

"What do you mean?" I asked.

"Well, you know, for example, that 'poetry' has a very wide range.[39]
After all, everything that is responsible for creating something out of
c nothing is a kind of poetry; and so all the creations of every craft and
profession are themselves a kind of poetry, and everyone who practices
a craft is a poet."

"True."

"Nevertheless," she said, "as you also know, these craftsmen are not called poets. We have other words for them, and out of the whole of poetry we have marked off one part, the part the Muses give us with melody and rhythm, and we refer to this by the word that means the whole. For this alone is called 'poetry,' and those who practice this part of poetry are called poets."

d "True."

"That's also how it is with love. The main point is this: every desire for good things or for happiness is 'the supreme and treacherous love' in everyone. But those who pursue this along any of its many other ways—through making money, or through the love of sports, or through philosophy—we don't say that *these* people are in love, and we don't call them lovers. It's only when people are devoted exclusively to one special kind of love that we use these words that really belong to the whole of it: 'love' and 'in love' and 'lovers.' "

"I am beginning to see your point," I said.

e "Now there is a certain story," she said, "according to which lovers are those people who seek their other halves. But according to my story, a lover does not seek the half or the whole, unless, my friend, it turns out to be good as well. I say this because people are even willing to cut off

39. "Poetry" translates *poiēsis*, lit. 'making', which can be used for any kind of production or creation. However, the word *poiētēs*, lit. 'maker', was used mainly for poets—writers of metrical verses that were actually set to music.

their own arms and legs if they think they are diseased. I don't think an
individual takes joy in what belongs to him personally unless by 'belonging
to me' he means 'good' and by 'belonging to another' he means 'bad.'
That's because what everyone loves is really nothing other than the good. 206
Do you disagree?"

"Zeus! Not I," I said.

"Now, then," she said. "Can we simply say that people love the good?"

"Yes," I said.

"But shouldn't we add that, in loving it, they want the good to be theirs?"

"We should."

"And not only that," she said. "They want the good to be theirs forever, don't they?"

"We should add that too."

"In a word, then, love is wanting to possess the good forever."

"That's very true," I said. b

"This, then, is the object of love,"[40] she said. "Now, how do lovers pursue it? We'd rightly say that when they are in love they do something with eagerness and zeal. But what is it precisely that they do? Can you say?"

"If I could," I said, "I wouldn't be your student, filled with admiration for your wisdom, and trying to learn these very things."

"Well, I'll tell you," she said. "It is giving birth in beauty,[41] whether in body or in soul."

"It would take divination to figure out what you mean. I can't." c

"Well, I'll tell you more clearly," she said. "All of us are pregnant,
Socrates, both in body and in soul, and, as soon as we come to a certain
age, we naturally desire to give birth. Now no one can possibly give birth
in anything ugly; only in something beautiful. That's because when a man
and a woman come together in order to give birth, this is a godly affair.
Pregnancy, reproduction—this is an immortal thing for a mortal animal
to do, and it cannot occur in anything that is out of harmony, but ugliness d
is out of harmony with all that is godly. Beauty, however, is in harmony
with the divine. Therefore the goddess who presides at childbirth—she's
called Moira or Eilithuia—is really Beauty.[42] That's why, whenever pregnant animals or persons draw near to beauty, they become gentle and joyfully disposed and give birth and reproduce; but near ugliness they are foulfaced and draw back in pain; they turn away and shrink back and do not reproduce, and because they hold on to what they carry inside them,

40. Accepting the emendation *toutou* in b1.

41. The preposition is ambiguous between "within" and "in the presence of." Diotima may mean that the lover causes the newborn (which may be an idea) to come to be within a beautiful person; or she may mean that he is stimulated to give birth to it in the presence of a beautiful person.

42. Moira is known mainly as a Fate, but she was also a birth goddess (*Iliad* xxiv.209), and was identified with the birth-goddess Eilithuia (Pindar, *Olympian Odes* vi.42, *Nemean Odes* vii.1).

the labor is painful. This is the source of the great excitement about beauty
e that comes to anyone who is pregnant and already teeming with life:
beauty releases them from their great pain. You see, Socrates," she said,
"what Love wants is not beauty, as you think it is."

"Well, what is it, then?"

"Reproduction and birth in beauty."

"Maybe," I said.

"Certainly," she said. "Now, why reproduction? It's because reproduc-
207 tion goes on forever; it is what mortals have in place of immortality. A
lover must desire immortality along with the good, if what we agreed
earlier was right, that Love wants to possess the good forever. It follows
from our argument that Love must desire immortality."

All this she taught me, on those occasions when she spoke on the art
of love. And once she asked, "What do you think causes love and desire,
Socrates? Don't you see what an awful state a wild animal is in when it
b wants to reproduce? Footed and winged animals alike, all are plagued by
the disease of Love. First they are sick for intercourse with each other,
then for nurturing their young—for their sake the weakest animals stand
ready to do battle against the strongest and even to die for them, and they
may be racked with famine in order to feed their young. They would do
anything for their sake. Human beings, you'd think, would do this because
c they understand the reason for it; but what causes wild animals to be in
such a state of love? Can you say?"

And I said again that I didn't know.

So she said, "How do you think you'll ever master the art of love, if
you don't know that?"

"But that's why I came to you, Diotima, as I just said. I knew I needed
a teacher. So tell me what causes this, and everything else that belongs to
the art of love."

"If you really believe that Love by its nature aims at what we have often
d agreed it does, then don't be surprised at the answer," she said. "For
among animals the principle is the same as with us, and mortal nature
seeks so far as possible to live forever and be immortal. And this is possible
in one way only: by reproduction, because it always leaves behind a new
young one in place of the old. Even while each living thing is said to be
alive and to be the same—as a person is said to be the same from childhood
till he turns into an old man—even then he never consists of the same
things, though he is called the same, but he is always being renewed and
e in other respects passing away, in his hair and flesh and bones and blood
and his entire body. And it's not just in his body, but in his soul, too, for
none of his manners, customs, opinions, desires, pleasures, pains, or fears
ever remains the same, but some are coming to be in him while others
are passing away. And what is still far stranger than that is that not only
208 does one branch of knowledge come to be in us while another passes away
and that we are never the same even in respect of our knowledge, but
that each single piece of knowledge has the same fate. For what we call

*studying* exists because knowledge is leaving us, because forgetting is the departure of knowledge, while studying puts back a fresh memory in place of what went away, thereby preserving a piece of knowledge, so that it seems to be the same. And in that way everything mortal is preserved,
not, like the divine, by always being the same in every way, but because b
what is departing and aging leaves behind something new, something such as it had been. By this device, Socrates," she said, "what is mortal shares in immortality, whether it is a body or anything else, while the immortal has another way. So don't be surprised if everything naturally values its own offspring, because it is for the sake of immortality that everything shows this zeal, which is Love."

Yet when I heard her speech I was amazed, and spoke: "Well," said I, c
"Most wise Diotima, is this really the way it is?"

And in the manner of a perfect sophist she said, "Be sure of it, Socrates. Look, if you will, at how human beings seek honor. You'd be amazed at their irrationality, if you didn't have in mind what I spoke about and if you hadn't pondered the awful state of love they're in, wanting to become famous and 'to lay up glory immortal forever,' and how they're ready to brave any danger for the sake of this, much more than they are for their children; and they are prepared to spend money, suffer through all sorts
of ordeals, and even die for the sake of glory. Do you really think that d
Alcestis would have died for Admetus," she asked, "or that Achilles would have died after Patroclus, or that your Codrus would have died so as to preserve the throne for his sons,[43] if they hadn't expected the memory of their virtue—which we still hold in honor—to be immortal? Far from it," she said. "I believe that anyone will do anything for the sake of immortal
virtue and the glorious fame that follows; and the better the people, the e
more they will do, for they are all in love with immortality.

"Now, some people are pregnant in body, and for this reason turn more to women and pursue love in that way, providing themselves through childbirth with immortality and remembrance and happiness, as they think,
for all time to come; while others are pregnant in soul—because there 209
surely *are* those who are even more pregnant in their souls than in their bodies, and these are pregnant with what is fitting for a soul to bear and bring to birth. And what is fitting? Wisdom and the rest of virtue, which all poets beget, as well as all the craftsmen who are said to be creative. But by far the greatest and most beautiful part of wisdom deals with the proper ordering of cities and households, and that is called moderation
and justice. When someone has been pregnant with these in his soul from b
early youth, while he is still a virgin, and, having arrived at the proper age, desires to beget and give birth, he too will certainly go about seeking the beauty in which he would beget; for he will never beget in anything

43. Codrus was the legendary last king of Athens. He gave his life to satisfy a prophecy that promised victory to Athens and salvation from the invading Dorians if their king was killed by the enemy.

ugly. Since he is pregnant, then, he is much more drawn to bodies that
are beautiful than to those that are ugly; and if he also has the luck to find
a soul that is beautiful and noble and well-formed, he is even more drawn
c to this combination; such a man makes him instantly teem with ideas and
arguments about virtue—the qualities a virtuous man should have and
the customary activities in which he should engage; and so he tries to
educate him. In my view, you see, when he makes contact with someone
beautiful and keeps company with him, he conceives and gives birth to
what he has been carrying inside him for ages. And whether they are
together or apart, he remembers that beauty. And in common with him
he nurtures the newborn; such people, therefore, have much more to
share than do the parents of human children, and have a firmer bond of
friendship, because the children in whom they have a share are more
d beautiful and more immortal. Everyone would rather have such children
than human ones, and would look up to Homer, Hesiod, and the other
good poets with envy and admiration for the offspring they have left
behind—offspring, which, because they are immortal themselves, provide
their parents with immortal glory and remembrance. For example," she
said, "those are the sort of children Lycurgus[44] left behind in Sparta as the
saviors of Sparta and virtually all of Greece. Among you the honor goes
e to Solon for his creation of your laws. Other men in other places every-
where, Greek or barbarian, have brought a host of beautiful deeds into
the light and begotten every kind of virtue. Already many shrines have
sprung up to honor them for their immortal children, which hasn't hap-
pened yet to anyone for human offspring.

210 "Even you, Socrates, could probably come to be initiated into these rites
of love. But as for the purpose of these rites when they are done correctly—
that is the final and highest mystery, and I don't know if you are capable
of it. I myself will tell you," she said, "and I won't stint any effort. And
you must try to follow if you can.

"A lover who goes about this matter correctly must begin in his youth
to devote himself to beautiful bodies. First, if the leader[45] leads aright, he
should love one body and beget beautiful ideas there; then he should
b realize that the beauty of any one body is brother to the beauty of any
other and that if he is to pursue beauty of form he'd be very foolish not
to think that the beauty of all bodies is one and the same. When he grasps
this, he must become a lover of all beautiful bodies, and he must think
that this wild gaping after just one body is a small thing and despise it.

"After this he must think that the beauty of people's souls is more
valuable than the beauty of their bodies, so that if someone is decent in
c his soul, even though he is scarcely blooming in his body, our lover must
be content to love and care for him and to seek to give birth to such ideas

44. Lycurgus was supposed to have been the founder of the oligarchic laws and stern customs of Sparta.

45. The leader: Love.

as will make young men better. The result is that our lover will be forced to gaze at the beauty of activities and laws and to see that all this is akin to itself, with the result that he will think that the beauty of bodies is a thing of no importance. After customs he must move on to various kinds of knowledge. The result is that he will see the beauty of knowledge and d
be looking mainly not at beauty in a single example—as a servant would who favored the beauty of a little boy or a man or a single custom (being a slave, of course, he's low and small-minded)—but the lover is turned to the great sea of beauty, and, gazing upon this, he gives birth to many gloriously beautiful ideas and theories, in unstinting love of wisdom,[46]
until, having grown and been strengthened there, he catches sight of such e
knowledge, and it is the knowledge of such beauty . . .

"Try to pay attention to me," she said, "as best you can. You see, the man who has been thus far guided in matters of Love, who has beheld beautiful things in the right order and correctly, is coming now to the goal of Loving: all of a sudden he will catch sight of something wonderfully beautiful in its nature; that, Socrates, is the reason for all his earlier labors: 211

"First, it always *is* and neither comes to be nor passes away, neither waxes nor wanes. Second, it is not beautiful this way and ugly that way, nor beautiful at one time and ugly at another, nor beautiful in relation to one thing and ugly in relation to another; nor is it beautiful here but ugly there, as it would be if it were beautiful for some people and ugly for others. Nor will the beautiful appear to him in the guise of a face or hands or anything else that belongs to the body. It will not appear to him as one idea or one kind of knowledge. It is not anywhere in another thing, as in b
an animal, or in earth, or in heaven, or in anything else, but itself by itself with itself, it is always one in form; and all the other beautiful things share in that, in such a way that when those others come to be or pass away, this does not become the least bit smaller or greater nor suffer any change. So when someone rises by these stages, through loving boys correctly, and begins to see this beauty, he has almost grasped his goal. This is what it c
is to go aright, or be led by another, into the mystery of Love: one goes always upwards for the sake of this Beauty, starting out from beautiful things and using them like rising stairs: from one body to two and from two to all beautiful bodies, then from beautiful bodies to beautiful customs, and from customs to learning beautiful things, and from these lessons he arrives[47] in the end at this lesson, which is learning of this very Beauty, so that in the end he comes to know just what it is to be beautiful. d

"And there in life, Socrates, my friend," said the woman from Mantinea, "there if anywhere should a person live his life, beholding that Beauty. If you once see that, it won't occur to you to measure beauty by gold or clothing or beautiful boys and youths—who, if you see them now, strike

46. I.e., philosophy.

47. Reading *teleutēsēi* at c7.

you out of your senses, and make you, you and many others, eager to be with the boys you love and look at them forever, if there were any way to do that, forgetting food and drink, everything but looking at them and
e being with them. But how would it be, in our view," she said, "if someone got to see the Beautiful itself, absolute, pure, unmixed, not polluted by human flesh or colors or any other great nonsense of mortality, but if he
212 could see the divine Beauty itself in its one form? Do you think it would be a poor life for a human being to look there and to behold it by that which he ought, and to be with it? Or haven't you remembered," she said, "that in that life alone, when he looks at Beauty in the only way that Beauty can be seen—only then will it become possible for him to give birth not to images of virtue (because he's in touch with no images), but to true virtue (because he is in touch with the true Beauty). The love of the gods belongs to anyone who has given birth to true virtue and nourished it,
b and if any human being could become immortal, it would be he."

This, Phaedrus and the rest of you, was what Diotima told me. I was persuaded. And once persuaded, I try to persuade others too that human nature can find no better workmate for acquiring this than Love. That's why I say that every man must honor Love, why I honor the rites of Love myself and practice them with special diligence, and why I commend them to others. Now and always I praise the power and courage of Love so far
c as I am able. Consider this speech, then, Phaedrus, if you wish, a speech in praise of Love. Or if not, call it whatever and however you please to call it.

Socrates' speech finished to loud applause. Meanwhile, Aristophanes was trying to make himself heard over their cheers in order to make a response to something Socrates had said about his own speech.[48] Then, all of a sudden, there was even more noise. A large drunken party had arrived at the courtyard door and they were rattling it loudly, accompanied by the shrieks of some flute-girl they had brought along. Agathon at that point called to his slaves:

d "Go see who it is. If it's people we know, invite them in. If not, tell them the party's over, and we're about to turn in."

A moment later they heard Alcibiades shouting in the courtyard, very drunk and very loud. He wanted to know where Agathon was, he demanded to see Agathon at once. Actually, he was half-carried into the
e house by the flute-girl and by some other companions of his, but, at the door, he managed to stand by himself, crowned with a beautiful wreath of violets and ivy and ribbons in his hair.

"Good evening, gentlemen. I'm plastered," he announced. "May I join your party? Or should I crown Agathon with this wreath—which is all I came to do, anyway—and make myself scarce? I really couldn't make it yesterday," he continued, "but nothing could stop me tonight! See, I'm

48. Cf. 205d–e.

wearing the garland myself. I want this crown to come directly from my head to the head that belongs, I don't mind saying, to the cleverest and best looking man in town. Ah, you laugh; you think I'm drunk! Fine, go 213
ahead—I know I'm right anyway. Well, what do you say? May I join you on these terms? Will you have a drink with me or not?"

Naturally they all made a big fuss. They implored him to join them, they begged him to take a seat, and Agathon called him to his side. So Alcibiades, again with the help of his friends, approached Agathon. At the same time, he kept trying to take his ribbons off so that he could crown Agathon with them, but all he succeeded in doing was to push them further down his head until they finally slipped over his eyes. What with the ivy and all, he didn't see Socrates, who had made room for him on the couch as soon as he saw him. So Alcibiades sat down between Socrates b
and Agathon and, as soon as he did so, he put his arms around Agathon, kissed him, and placed the ribbons on his head.

Agathon asked his slaves to take Alcibiades' sandals off. "We can all three fit on my couch," he said.

"What a good idea!" Alcibiades replied. "But wait a moment! Who's the third?"

As he said this, he turned around, and it was only then that he saw Socrates. No sooner had he seen him than he leaped up and cried:

"Good lord, what's going on here? It's Socrates! You've trapped me c
again! You always do this to me—all of a sudden you'll turn up out of nowhere where I least expect you! Well, what do you want now? Why did you choose this particular couch? Why aren't you with Aristophanes or anyone else we could tease you about? But no, you figured out a way to find a place next to the most handsome man in the room!"

"I beg you, Agathon," Socrates said, "protect me from this man! You d
can't imagine what it's like to be in love with him: from the very first moment he realized how I felt about him, he hasn't allowed me to say two words to anybody else—what am I saying, I can't so much as look at an attractive man but he flies into a fit of jealous rage. He yells; he threatens; he can hardly keep from slapping me around! Please, try to keep him under control. Could you perhaps make him forgive me? And if you can't, if he gets violent, will you defend me? The fierceness of his passion terrifies me!"

"I shall never forgive you!" Alcibiades cried. "I promise you, you'll pay e
for this! But for the moment," he said, turning to Agathon, "give me some of these ribbons. I'd better make a wreath for him as well—look at that magnificent head! Otherwise, I know, he'll make a scene. He'll be grumbling that, though I crowned you for your first victory, I didn't honor him even though he has never lost an argument in his life."

So Alcibiades took the ribbons, arranged them on Socrates' head, and lay back on the couch. Immediately, however, he started up again:

"Friends, you look sober to me; we can't have that! Let's have a drink! Remember our agreement? We need a master of ceremonies; who should it be? . . . Well, at least till you are all too drunk to care, I elect . . . myself!

Who else? Agathon, I want the largest cup around . . . No! Wait! You!
214 Bring me that cooling jar over there!"

He'd seen the cooling jar, and he realized it could hold more than two quarts of wine. He had the slaves fill it to the brim, drained it, and ordered them to fill it up again for Socrates.

"Not that the trick will have any effect on *him*," he told the group. "Socrates will drink whatever you put in front of him, but no one yet has seen him drunk."

The slave filled the jar and, while Socrates was drinking, Eryximachus said to Alcibiades:

b "This is certainly most improper. We cannot simply pour the wine down our throats in silence: we must have some conversation, or at least a song. What we are doing now is hardly civilized."

What Alcibiades said to him was this:

"O Eryximachus, best possible son to the best possible, the most temperate father: Hi!"

"Greetings to you, too," Eryximachus replied. "Now what do you suggest we do?"

"Whatever you say. Ours to obey you, 'For a medical mind is worth a million others'.[49] Please prescribe what you think fit."

c "Listen to me," Eryximachus said. "Earlier this evening we decided to use this occasion to offer a series of encomia of Love. We all took our turn—in good order, from left to right—and gave our speeches, each according to his ability. You are the only one not to have spoken yet, though, if I may say so, you have certainly drunk your share. It's only proper, therefore, that you take your turn now. After you have spoken, you can decide on a topic for Socrates on your right; he can then do the same for the man to his right, and we can go around the table once again."

"Well said, O Eryximachus," Alcibiades replied. "But do you really think it's fair to put my drunken ramblings next to your sober orations? And
d anyway, my dear fellow, I hope you didn't believe a single word Socrates said: the truth is just the opposite! He's the one who will most surely beat me up if I dare praise anyone else in his presence—even a god!"

"Hold your tongue!" Socrates said.

"By god, don't you dare deny it!" Alcibiades shouted. "I would never—*never*—praise anyone else with you around."

e "Well, why not just do that, if you want?" Eryximachus suggested. "Why don't you offer an encomium to Socrates?"

"What do you mean?" asked Alcibiades. "Do you really think so, Eryximachus? Should I unleash myself upon him? Should I give him his punishment in front of all of you?"

"Now, wait a minute," Socrates said. "What do you have in mind? Are you going to praise me only in order to mock me? Is that it?"

"I'll only tell the truth—please, let me!"

49. *Iliad* xi.514.

"I would certainly like to hear the truth from you. By all means, go ahead," Socrates replied.

"Nothing can stop me now," said Alcibiades. "But here's what you can do: if I say anything that's not true, you can just interrupt, if you want, and correct me; at worst, there'll be mistakes in my speech, not lies. But 215
you can't hold it against me if I don't get everything in the right order—I'll say things as they come to mind. It is no easy task for one in my condition to give a smooth and orderly account of your bizarreness!"

I'll try to praise Socrates, my friends, but I'll have to use an image. And though he may think I'm trying to make fun of him, I assure you my image is no joke: it aims at the truth. Look at him! Isn't he just like a statue b
of Silenus? You know the kind of statue I mean; you'll find them in any shop in town. It's a Silenus sitting, his flute[50] or his pipes in his hands, and it's hollow. It's split right down the middle, and inside it's full of tiny statues of the gods. Now look at him again! Isn't he also just like the satyr Marsyas?[51]

Nobody, not even you, Socrates, can deny that you *look* like them. But the resemblance goes beyond appearance, as you're about to hear.

You are impudent, contemptuous, and vile! No? If you won't admit it, I'll bring witnesses. And you're quite a fluteplayer, aren't you? In fact, you're much more marvelous than Marsyas, who needed instruments to c
cast his spells on people. And so does anyone who plays his tunes today—for even the tunes Olympus[52] played are Marsyas' work, since Olympus learned everything from him. Whether they are played by the greatest flautist or the meanest flute-girl, his melodies have in themselves the power to possess and so reveal those people who are ready for the god and his mysteries. That's because his melodies are themselves divine. The only difference between you and Marsyas is that you need no instruments; you do exactly what he does, but with words alone. You know, people hardly d
ever take a speaker seriously, even if he's the greatest orator; but let anyone—man, woman, or child—listen to you or even to a poor account of what you say—and we are all transported, completely possessed.

If I were to describe for you what an extraordinary effect his words have always had on me (I can feel it this moment even as I'm speaking), e
you might actually suspect that I'm drunk! Still, I swear to you, the moment

50. This is the conventional translation of the word, but the *aulos* was in fact a reed instrument and not a flute. It was held by the ancients to be the instrument that most strongly arouses the emotions.

51. Satyrs had the sexual appetites and manners of wild beasts and were usually portrayed with large erections. Sometimes they had horses' tails or ears, sometimes the traits of goats. Marsyas, in myth, dared to compete in music with Apollo and was skinned alive for his impudence.

52. Olympus was a legendary musician who was said to be loved by Marsyas (*Minos* 318b5) and to have made music that moved its listeners out of their senses.

he starts to speak, I am beside myself: my heart starts leaping in my chest,
the tears come streaming down my face, even the frenzied Corybantes[53]
seem sane compared to me—and, let me tell you, I am not alone. I have
heard Pericles and many other great orators, and I have admired their
speeches. But nothing like this ever happened to me: they never upset me
so deeply that my very own soul started protesting that my life—*my* life!—
was no better than the most miserable slave's. And yet that is exactly how
216 this Marsyas here at my side makes me feel all the time: he makes it seem
that my life isn't worth living! You can't say that isn't true, Socrates. I
know very well that you could make me feel that way this very moment
if I gave you half a chance. He always traps me, you see, and he makes
me admit that my political career is a waste of time, while all that matters
is just what I most neglect: my personal shortcomings, which cry out for
the closest attention. So I refuse to listen to him; I stop my ears and tear
b myself away from him, for, like the Sirens, he could make me stay by his
side till I die.

Socrates is the only man in the world who has made me feel shame—
ah, you didn't think I had it in me, did you? Yes, he makes me feel ashamed:
I know perfectly well that I can't prove he's wrong when he tells me what
I should do; yet, the moment I leave his side, I go back to my old ways:
I cave in to my desire to please the crowd. My whole life has become one
constant effort to escape from him and keep away, but when I see him, I
c feel deeply ashamed, because I'm doing nothing about my way of life,
though I have already agreed with him that I should. Sometimes, believe
me, I think I would be happier if he were dead. And yet I know that if
he dies I'll be even more miserable. I can't live with him, and I can't live
without him! What *can* I do about him?

That's the effect of this satyr's music—on me and many others. But
that's the least of it. He's like these creatures in all sorts of other ways;
his powers are really extraordinary. Let me tell you about them, because,
d you can be sure of it, none of you really understands him. But, now I've
started, I'm going to show you what he really is.

To begin with, he's crazy about beautiful boys; he constantly follows
them around in a perpetual daze. Also, he likes to say he's ignorant and
knows nothing. Isn't this just like Silenus? Of course it is! And all this is
just on the surface, like the outsides of those statues of Silenus. I wonder,
my fellow drinkers, if you have any idea what a sober and temperate man
he proves to be once you have looked inside. Believe me, it couldn't matter
less to him whether a boy is beautiful. You can't imagine how little he
e cares whether a person is beautiful, or rich, or famous in any other way
that most people admire. He considers all these possessions beneath con-
tempt, and that's exactly how he considers all of us as well. In public, I
tell you, his whole life is one big game—a game of irony. I don't know if

53. Legendary worshippers of Cybele, who brought about their own derangement through music and dance.

any of you have seen him when he's really serious. But I once caught him
when he was open like Silenus' statues, and I had a glimpse of the figures
he keeps hidden within: they were so godlike—so bright and beautiful, 217
so utterly amazing—that I no longer had a choice—I just had to do what-
ever he told me.

What I thought at the time was that what he really wanted was *me*, and
that seemed to me the luckiest coincidence: all I had to do was to let him
have his way with me, and he would teach me everything he knew—
believe me, I had a lot of confidence in my looks. Naturally, up to that
time we'd never been alone together; one of my attendants had always
been present. But with this in mind, I sent the attendant away, and met b
Socrates alone. (You see, in this company I must tell the whole truth: so
pay attention. And, Socrates, if I say anything untrue, I want you to
correct me.)

So there I was, my friends, alone with him at last. My idea, naturally,
was that he'd take advantage of the opportunity to tell me whatever it is
that lovers say when they find themselves alone; I relished the moment.
But no such luck! Nothing of the sort occurred. Socrates had his usual sort
of conversation with me, and at the end of the day he went off. c

My next idea was to invite him to the gymnasium with me. We took
exercise together, and I was sure that this would lead to something. He
took exercise and wrestled with me many times when no one else was
present. What can I tell you? I got nowhere. When I realized that my ploy
had failed, I decided on a frontal attack. I refused to retreat from a battle
I myself had begun, and I needed to know just where matters stood. So
what I did was to invite him to dinner, as if *I* were his lover and he my
young prey! To tell the truth, it took him quite a while to accept my d
invitation, but one day he finally arrived. That first time he left right after
dinner: I was too shy to try to stop him. But on my next attempt, I started
some discussion just as we were finishing our meal and kept him talking
late into the night. When he said he should be going, I used the lateness
of the hour as an excuse and managed to persuade him to spend the night
at my house. He had had his meal on the couch next to mine, so he just
made himself comfortable and lay down on it. No one else was there. e

Now you must admit that my story so far has been perfectly decent; I
could have told it in any company. But you'd never have heard me tell
the rest of it, as you're about to do, if it weren't that, as the saying goes,
'there's truth in wine when the slaves have left'—and when they're present,
too. Also, would it be fair to Socrates for me to praise him and yet to fail
to reveal one of his proudest accomplishments? And, furthermore, you
know what people say about snakebite—that you'll only talk about it with
your fellow victims: only they will understand the pain and forgive you 218
for all the things it made you do. Well, something much more painful
than a snake has bitten me in my most sensitive part—I mean my heart,
or my soul, or whatever you want to call it, which has been struck and
bitten by philosophy, whose grip on young and eager souls is much more

vicious than a viper's and makes them do the most amazing things. Now,
b all you people here, Phaedrus, Agathon, Eryximachus, Pausanias, Aristodemus, Aristophanes—I need not mention Socrates himself—and all the rest, have all shared in the madness, the Bacchic frenzy of philosophy. And that's why you will hear the rest of my story; you will understand and forgive both what I did then and what I say now. As for the house slaves and for anyone else who is not an initiate, my story's not for you: block your ears!

c To get back to the story. The lights were out; the slaves had left; the time was right, I thought, to come to the point and tell him freely what I had in mind. So I shook him and whispered:

"Socrates, are you asleep?"

"No, no, not at all," he replied.

"You know what I've been thinking?"

"Well, no, not really."

"I think," I said, "you're the only worthy lover I have ever had—and yet, look how shy you are with me! Well, here's how I look at it. It would
d be really stupid not to give you anything you want: you can have me, my belongings, anything my friends might have. Nothing is more important to me than becoming the best man I can be, and no one can help me more than you to reach that aim. With a man like you, in fact, I'd be much more ashamed of what wise people would say if I did *not* take you as my lover, than I would of what all the others, in their foolishness, would say if I did."

He heard me out, and then he said in that absolutely inimitable ironic manner of his:

e "Dear Alcibiades, if you are right in what you say about me, you are already more accomplished than you think. If I really have in me the power to make you a better man, then you can see in me a beauty that is really beyond description and makes your own remarkable good looks pale in comparison. But, then, is this a fair exchange that you propose? You seem to me to want more than your proper share: you offer me the merest appearance of beauty, and in return you want the thing itself, 'gold
219 in exchange for bronze.'[54]

"Still, my dear boy, you should think twice, because you could be wrong, and I may be of no use to you. The mind's sight becomes sharp only when the body's eyes go past their prime—and you are still a good long time away from that."

When I heard this I replied:

"I really have nothing more to say. I've told you exactly what I think. Now it's your turn to consider what you think best for you and me."

b "You're right about that," he answered. "In the future, let's consider things together. We'll always do what seems the best to the two of us."

54. *Iliad* vi.232–36 tells the famous story of the exchange by Glaucus of golden armor for bronze.

His words made me think that my own had finally hit their mark, that
he was smitten by my arrows. I didn't give him a chance to say another
word. I stood up immediately and placed my mantle over the light cloak
which, though it was the middle of winter, was his only clothing. I slipped
underneath the cloak and put my arms around this man—this utterly c
unnatural, this truly extraordinary man—and spent the whole night next
to him. Socrates, you can't deny a word of it. But in spite of all my efforts,
this hopelessly arrogant, this unbelievably insolent man—he turned me
down! He spurned my beauty, of which I was so proud, members of the
jury—for this is really what you are: you're here to sit in judgment of
Socrates' amazing arrogance and pride. Be sure of it, I swear to you by
all the gods and goddesses together, my night with Socrates went no d
further than if I had spent it with my own father or older brother!

How do you think I felt after that? Of course, I was deeply humiliated,
but also I couldn't help admiring his natural character, his moderation,
his fortitude—here was a man whose strength and wisdom went beyond
my wildest dreams! How could I bring myself to hate him? I couldn't bear
to lose his friendship. But how could I possibly win him over? I knew e
very well that money meant much less to him than enemy weapons ever
meant to Ajax,[55] and the only trap by means of which I had thought I
might capture him had already proved a dismal failure. I had no idea
what to do, no purpose in life; ah, no one else has ever known the real
meaning of slavery!

All this had already occurred when Athens invaded Potidaea,[56] where
we served together and shared the same mess. Now, first, he took the
hardships of the campaign much better than I ever did—much better, in
fact, than anyone in the whole army. When we were cut off from our
supplies, as often happens in the field, no one else stood up to hunger as 220
well as he did. And yet he was the one man who could really enjoy a
feast; and though he didn't much want to drink, when he had to, he could
drink the best of us under the table. Still, and most amazingly, no one
ever saw him drunk (as we'll straightaway put to the test).

Add to this his amazing resistance to the cold—and, let me tell you, the b
winter there is something awful. Once, I remember, it was frightfully cold;
no one so much as stuck his nose outside. If we absolutely had to leave
our tent, we wrapped ourselves in anything we could lay our hands on
and tied extra pieces of felt or sheepskin over our boots. Well, Socrates
went out in that weather wearing nothing but this same old light cloak,
and even in bare feet he made better progress on the ice than the other

55. Ajax, a hero of the Greek army at Troy, carried an enormous shield and so was virtually invulnerable to enemy weapons.

56. Potidaea, a city in Thrace allied to Athens, was induced by Corinth to revolt in 432 B.C. The city was besieged by the Athenians and eventually defeated in a bloody local war, 432–430 B.C.

c soldiers did in their boots. You should have seen the looks they gave him; they thought he was only doing it to spite them!

So much for that! But you should hear what else he did during that same campaign,

*The exploit our strong-hearted hero dared to do.*[57]

One day, at dawn, he started thinking about some problem or other; he just stood outside, trying to figure it out. He couldn't resolve it, but he wouldn't give up. He simply stood there, glued to the same spot. By midday, many soldiers had seen him, and, quite mystified, they told everyone that Socrates had been standing there all day, thinking about something. He was still there when evening came, and after dinner some Ionians
d moved their bedding outside, where it was cooler and more comfortable (all this took place in the summer), but mainly in order to watch if Socrates was going to stay out there all night. And so he did; he stood on the very same spot until dawn! He only left next morning, when the sun came out, and he made his prayers to the new day.

And if you would like to know what he was like in battle—this is a tribute he really deserves. You know that I was decorated for bravery dur-
e ing that campaign: well, during that very battle, Socrates single-handedly saved my life! He absolutely did! He just refused to leave me behind when I was wounded, and he rescued not only me but my armor as well. For my part, Socrates, I told them right then that the decoration really belonged to you, and you can blame me neither for doing so then nor for saying so now. But the generals, who seemed much more concerned with my social position, insisted on giving the decoration to me, and, I must say, you were more eager than the generals themselves for me to have it.

221 You should also have seen him at our horrible retreat from Delium.[58] I was there with the cavalry, while Socrates was a foot soldier. The army had already dispersed in all directions, and Socrates was retreating together with Laches. I happened to see them just by chance, and the moment I did I started shouting encouragements to them, telling them I was never going to leave their side, and so on. That day I had a better opportunity
b to watch Socrates than I ever had at Potidaea, for, being on horseback, I wasn't in very great danger. Well, it was easy to see that he was remarkably more collected than Laches. But when I looked again I couldn't get your words, Aristophanes, out of my mind: in the midst of battle he was making his way exactly as he does around town,

57. *Odyssey* iv.242, 271.

58. At Delium, a town on the Boeotian coastline just north of Attica, a major Athenian expeditionary force was routed by a Boeotian army in 424 B.C. For another description of Socrates' action during the retreat, see *Laches* 181b.

*. . . with swagg'ring gait and roving eye.*[59]

He was observing everything quite calmly, looking out for friendly troops and keeping an eye on the enemy. Even from a great distance it was obvious that this was a very brave man, who would put up a terrific fight if anyone approached him. This is what saved both of them. For, as a rule, you try to put as much distance as you can between yourself and such men in battle; you go after the others, those who run away helter-skelter. c

You could say many other marvelous things in praise of Socrates. Perhaps he shares some of his specific accomplishments with others. But, as a whole, he is unique; he is like no one else in the past and no one in the present—this is by far the most amazing thing about him. For we might be able to form an idea of what Achilles was like by comparing him to Brasidas or some other great warrior, or we might compare Pericles with Nestor or Antenor or one of the other great orators.[60] There is a parallel d
for everyone—everyone else, that is. But this man here is so bizarre, his ways and his ideas are so unusual, that, search as you might, you'll never find anyone else, alive or dead, who's even remotely like him. The best you can do is not to compare him to anything human, but to liken him, as I do, to Silenus and the satyrs, and the same goes for his ideas and arguments.

Come to think of it, I should have mentioned this much earlier: even his ideas and arguments are just like those hollow statues of Silenus. If e
you were to listen to his arguments, at first they'd strike you as totally ridiculous; they're clothed in words as coarse as the hides worn by the most vulgar satyrs. He's always going on about pack asses, or blacksmiths, or cobblers, or tanners; he's always making the same tired old points in the same tired old words. If you are foolish, or simply unfamiliar with him, you'd find it impossible not to laugh at his arguments. But if you 222
see them when they open up like the statues, if you go behind their surface, you'll realize that no other arguments make any sense. They're truly worthy of a god, bursting with figures of virtue inside. They're of great—no, of the greatest—importance for anyone who wants to become a truly good man.

Well, this is my praise of Socrates, though I haven't spared him my b
reproach, either; I told you how horribly he treated me—and not only me but also Charmides, Euthydemus, and many others. He has deceived us all: he presents himself as your lover, and, before you know it, you're in love with him yourself! I warn you, Agathon, don't let him fool you!

59. Cf. Aristophanes, *Clouds* 362.

60. Brasidas, among the most effective Spartan generals during the Peloponnesian War, was mortally wounded while defeating the Athenians at Amphipolis in 422 B.C. Antenor (for the Trojans) and Nestor (for the Greeks) were legendary wise counsellors during the Trojan War.

Remember our torments; be on your guard: don't wait, like the fool in the
c proverb, to learn your lesson from your own misfortune.[61]

Alcibiades' frankness provoked a lot of laughter, especially since it was obvious that he was still in love with Socrates, who immediately said to him:

"You're perfectly sober after all, Alcibiades. Otherwise you could never have concealed your motive so gracefully: how casually you let it drop, almost like an afterthought, at the very end of your speech! As if the real
d point of all this has not been simply to make trouble between Agathon and me! You think that I should be in love with you and no one else, while you, and no one else, should be in love with Agathon—well, we were *not* deceived; we've seen through your little satyr play. Agathon, my friend, don't let him get away with it: let no one come between us!"

Agathon said to Socrates:

e "I'm beginning to think you're right; isn't it proof of that that he literally came between us here on the couch? Why would he do this if he weren't set on separating us? But he won't get away with it; I'm coming right over to lie down next to you."

"Wonderful," Socrates said. "Come here, on my other side."

"My god!" cried Alcibiades. "How I suffer in his hands! He kicks me when I'm down; he never lets me go. Come, don't be selfish, Socrates; at least, let's compromise: let Agathon lie down between us."

"Why, that's impossible," Socrates said. "You have already delivered your praise of me, and now it's my turn to praise whoever's on my right. But if Agathon were next to you, he'd have to praise me all over again
223 instead of having me speak in his honor, as I very much want to do in any case. Don't be jealous; let me praise the boy."

"Oh, marvelous," Agathon cried. "Alcibiades, nothing can make me stay next to you now. I'm moving no matter what. I simply *must* hear what Socrates has to say about me."

"There we go again," said Alcibiades. "It's the same old story: when Socrates is around, nobody else can get close to a good-looking man. Look
b how smoothly and plausibly he found a reason for Agathon to lie down next to him!"

And then, all of a sudden, while Agathon was changing places, a large drunken group, finding the gates open because someone was just leaving, walked into the room and joined the party. There was noise everywhere, and everyone was made to start drinking again in no particular order.

At that point, Aristodemus said, Eryximachus, Phaedrus, and some
c others among the original guests made their excuses and left. He himself fell asleep and slept for a long time (it was winter, and the nights were quite long). He woke up just as dawn was about to break; the roosters were crowing already. He saw that the others had either left or were asleep

61. Cf. *Iliad* xvii.32.

on their couches and that only Agathon, Aristophanes, and Socrates were still awake, drinking out of a large cup which they were passing around d from left to right. Socrates was talking to them. Aristodemus couldn't remember exactly what they were saying—he'd missed the first part of their discussion, and he was half-asleep anyway—but the main point was that Socrates was trying to prove to them that authors should be able to write both comedy and tragedy: the skillful tragic dramatist should also be a comic poet. He was about to clinch his argument, though, to tell the truth, sleepy as they were, they were hardly able to follow his reasoning. In fact, Aristophanes fell asleep in the middle of the discussion, and very soon thereafter, as day was breaking, Agathon also drifted off.

But after getting them off to sleep, Socrates got up and left, and Aristodemus followed him, as always. He said that Socrates went directly to the Lyceum, washed up, spent the rest of the day just as he always did, and only then, as evening was falling, went home to rest.

# PHAEDRUS

Phaedrus *is commonly paired on the one hand with* Gorgias *and on the other with* Symposium*—with the former in sharing its principal theme, the nature and limitations of rhetoric, with the latter in containing speeches devoted to the nature and value of erotic love. Here the two interests combine in manifold ways. Socrates, a city dweller little experienced in the pleasures of the country, walks out from Athens along the river Ilisus, alone with his friend Phaedrus, an impassioned admirer of oratory, for a private conversation: in Plato most of his conversations take place in a larger company, and no other in the private beauty of a rural retreat. There he is inspired to employ his knowledge of philosophy in crafting two speeches on the subject of erotic love, to show how paltry is the best effort on the same subject of the best orator in Athens, Lysias, who knows no philosophy. In the second half of the dialogue he explains to Phaedrus exactly how philosophical understanding of the truth about any matter discoursed upon, and about the varieties of human soul and their rhetorical susceptibilities, is an indispensable basis for a rhetorically accomplished speech—such as he himself delivered in the first part of the dialogue. By rights, Phaedrus' passionate admiration for oratory ought therefore to be transformed into an even more passionate love of philosophical knowledge, fine oratory's essential prerequisite. Socrates' own speeches about erotic love and his dialectical presentation of rhetoric's subservience to philosophy are both aimed at persuading Phaedrus to this transformation.*

*In his great second speech Socrates draws upon the psychological theory of the* Republic *and the metaphysics of resplendent Forms common to that dialogue and several others (notably* Phaedo *and* Symposium*) to inspire in Phaedrus a love for philosophy. By contrast, the philosophy drawn upon in the second, dialectical, half of the dialogue is linked closely to the much more austere, logically oriented investigations via the 'method of divisions' that we find in* Sophist, Statesman, *and* Philebus*—where the grasp of any important philosophical idea (any Form) proceeds by patient, detailed mapping of its relations to other concepts and to its own subvarieties, not through an awe-inspiring vision of a self-confined, single brilliant entity. One of Socrates' central claims in the second part of the dialogue is that a rhetorical composition, of which his second speech is a paragon, must construct in words mere resemblances of the real truth, ones selected to appeal to the specific type of 'soul' that its hearers possess, so as to draw them on toward knowledge of the truth—or else to disguise it! A rhetorical composition does not actually convey the truth; the truth*

*is known only through philosophical study—of the sort whose results are presented in the second half of the dialogue. So Socrates himself warns us that the 'philosophical theories' embodied in his speech are resemblances only, motivated in fact by his desire to win Phaedrus away from an indiscriminate love of rhetoric to a controlled but elevated love of philosophical study.*

Phaedrus *is one of Plato's most admired literary masterpieces. Yet toward its end Socrates criticizes severely those who take their own writing seriously—any writing, not just orators' speeches. Writings cannot contain or constitute knowledge of any important matter. Knowledge can only be lodged in a mind, and its essential feature there is an endless capacity to express, interpret, and reinterpret itself suitably, in response to every challenge—something a written text once let go by its author plainly lacks:* it *can only keep on repeating the same words to whoever picks it up. But does not a Platonic dialogue, in engaging its reader in a creative, multilayered intellectual encounter, have a similar capacity for ever-deeper reading, for the discovery of underlying meaning beyond the simple presentation of its surface ideas? Knowledge is only in souls, but, despite the* Phaedrus' *own critique of writing, reading such a dialogue may be a good way of working to attain it.*

*J.M.C.*

SOCRATES: Phaedrus, my friend! Where have you been? And where are 227
you going?

PHAEDRUS: I was with Lysias, the son of Cephalus,[1] Socrates, and I am going for a walk outside the city walls because I was with him for a long time, sitting there the whole morning. You see, I'm keeping in mind the
advice of our mutual friend Acumenus,[2] who says it's more refreshing to b
walk along country roads than city streets.

SOCRATES: He is quite right, too, my friend. So Lysias, I take it, is in the city?

PHAEDRUS: Yes, at the house of Epicrates, which used to belong to Morychus,[3] near the temple of the Olympian Zeus.

SOCRATES: What were you doing there? Oh, I know: Lysias must have been entertaining you with a feast of eloquence.

PHAEDRUS: You'll hear about it, if you are free to come along and listen.

Translated by A. Nehamas and P. Woodruff.

1. Cephalus is prominent in the opening section of Plato's *Republic*, which is set in his home in Piraeus, the port of Athens. His sons Lysias, Polemarchus, and Euthydemus were known for their democratic sympathies.

2. Acumenus was a doctor and a relative of the doctor Eryximachus who speaks in the *Symposium*.

3. Morychus is mentioned for his luxurious ways in a number of Aristophanes' plays.

Socrates: What? Don't you think I would consider it "more important than the most pressing engagement," as Pindar says, to hear how you and Lysias spent your time?[4]

Phaedrus: Lead the way, then.

c Socrates: If only you will tell me.

Phaedrus: In fact, Socrates, you're just the right person to hear the speech that occupied us, since, in a roundabout way, it was about love. It is aimed at seducing a beautiful boy, but the speaker is not in love with him—this is actually what is so clever and elegant about it: Lysias argues that it is better to give your favors to someone who does not love you than to someone who does.

Socrates: What a wonderful man! I wish he would write that you should
d give your favors to a poor rather than to a rich man, to an older rather than to a younger one—that is, to someone like me and most other people: then his speeches would be really sophisticated, and they'd contribute to the public good besides! In any case, I am so eager to hear it that I would follow you even if you were walking all the way to Megara, as Herodicus recommends, to touch the wall and come back again.[5]

Phaedrus: What on earth do you mean, Socrates? Do you think that a
228 mere dilettante like me could recite from memory in a manner worthy of him a speech that Lysias, the best of our writers, took such time and trouble to compose? Far from it—though actually I would rather be able to do that than come into a large fortune!

Socrates: Oh, Phaedrus, if I don't know my Phaedrus I must be forgetting who I am myself—and neither is the case. I know very well that he did not hear Lysias' speech only once: he asked him to repeat it over and over again, and Lysias was eager to oblige. But not even that was enough for
b him. In the end, he took the book himself and pored over the parts he liked best. He sat reading all morning long, and when he got tired, he went for a walk, having learned—I am quite sure—the whole speech by heart, unless it was extraordinarily long. So he started for the country, where he could practice reciting it. And running into a man who is sick with passion for hearing speeches, seeing him—just seeing him—he was filled with delight: he had found a partner for his frenzied dance, and he
c urged him to lead the way. But when that lover of speeches asked him to recite it, he played coy and pretended that he did not want to. In the end, of course, he was going to recite it even if he had to force an unwilling audience to listen. So, please, Phaedrus, beg him to do it right now. He'll do it soon enough anyway.

Phaedrus: Well, I'd better try to recite it as best I can: you'll obviously not leave me in peace until I do so one way or another.

Socrates: You are absolutely right.

4. Pindar, *Isthmian* I.2, adapted by Plato.

5. Herodicus was a medical expert whose regimen Socrates criticizes in *Republic* 406a–b.

Phaedrus: That's what I'll do, then. But, Socrates, it really is true that I d
did not memorize the speech word for word; instead, I will give a careful
summary of its general sense, listing all the ways he said the lover differs
from the non-lover, in the proper order.

Socrates: Only if you first show me what you are holding in your left
hand under your cloak, my friend. I strongly suspect you have the speech
itself. And if I'm right, you can be sure that, though I love you dearly, I'll
never, as long as Lysias himself is present, allow you to practice your own e
speechmaking on me. Come on, then, show me.

Phaedrus: Enough, enough. You've dashed my hopes of using you as my training partner, Socrates. All right, where do you want to sit while we read?

Socrates: Let's leave the path here and walk along the Ilisus; then we 229
can sit quietly wherever we find the right spot.

Phaedrus: How lucky, then, that I am barefoot today—you, of course, are always so. The easiest thing to do is to walk right in the stream; this way, we'll also get our feet wet, which is very pleasant, especially at this hour and season.

Socrates: Lead the way, then, and find us a place to sit.

Phaedrus: Do you see that very tall plane tree?

Socrates: Of course.

Phaedrus: It's shady, with a light breeze; we can sit or, if we prefer, lie b
down on the grass there.

Socrates: Lead on, then.

Phaedrus: Tell me, Socrates, isn't it from somewhere near this stretch of the Ilisus that people say Boreas carried Orithuia away?[6]

Socrates: So they say.

Phaedrus: Couldn't this be the very spot? The stream is lovely, pure and clear: just right for girls to be playing nearby.

Socrates: No, it is two or three hundred yards farther downstream, c
where one crosses to get to the district of Agra. I think there is even an
altar to Boreas there.

Phaedrus: I hadn't noticed it. But tell me, Socrates, in the name of Zeus, do you really believe that that legend is true?

Socrates: Actually, it would not be out of place for me to reject it, as
our intellectuals do. I could then tell a clever story: I could claim that a
gust of the North Wind blew her over the rocks where she was playing
with Pharmaceia; and once she was killed that way people said she had
been carried off by Boreas—or was it, perhaps, from the Areopagus? The d
story is also told that she was carried away from there instead. Now,
Phaedrus, such explanations are amusing enough, but they are a job for
a man I cannot envy at all. He'd have to be far too ingenious and work

6. According to legend, Orithuia, daughter of the Athenian king Erechtheus, was abducted by Boreas while she was playing with Nymphs along the banks of the Ilisus River. Boreas personifies the north wind.

too hard—mainly because after that he will have to go on and give a
rational account of the form of the Hippocentaurs, and then of the Chimera;
e and a whole flood of Gorgons and Pegasuses and other monsters, in large
numbers and absurd forms, will overwhelm him. Anyone who does not
believe in them, who wants to explain them away and make them plausible
by means of some sort of rough ingenuity, will need a great deal of time.

But I have no time for such things; and the reason, my friend, is this. I
230 am still unable, as the Delphic inscription orders, to know myself; and it
really seems to me ridiculous to look into other things before I have
understood that. This is why I do not concern myself with them. I accept
what is generally believed, and, as I was just saying, I look not into them
but into my own self: Am I a beast more complicated and savage than
Typhon,[7] or am I a tamer, simpler animal with a share in a divine and
gentle nature? But look, my friend—while we were talking, haven't we
reached the tree you were taking us to?

b PHAEDRUS: That's the one.

SOCRATES: By Hera, it really is a beautiful resting place. The plane tree
is tall and very broad; the chaste-tree, high as it is, is wonderfully shady,
and since it is in full bloom, the whole place is filled with its fragrance.
From under the plane tree the loveliest spring runs with very cool water—
our feet can testify to that. The place appears to be dedicated to Achelous
and some of the Nymphs, if we can judge from the statues and votive
c offerings.[8] Feel the freshness of the air; how pretty and pleasant it is; how
it echoes with the summery, sweet song of the cicadas' chorus! The most
exquisite thing of all, of course, is the grassy slope: it rises so gently that
you can rest your head perfectly when you lie down on it. You've really
been the most marvelous guide, my dear Phaedrus.

PHAEDRUS: And you, my remarkable friend, appear to be totally out of
d place. Really, just as you say, you seem to need a guide, not to be one of
the locals. Not only do you never travel abroad—as far as I can tell, you
never even set foot beyond the city walls.

SOCRATES: Forgive me, my friend. I am devoted to learning; landscapes
and trees have nothing to teach me—only the people in the city can do
that. But you, I think, have found a potion to charm me into leaving. For
e just as people lead hungry animals forward by shaking branches of fruit
before them, you can lead me all over Attica or anywhere else you like
simply by waving in front of me the leaves of a book containing a speech.
But now, having gotten as far as this place this time around, I intend to
lie down; so choose whatever position you think will be most comfortable
for you, and read on.

7. Typhon is a fabulous multiform beast with a hundred heads resembling many different animal species.

8. Achelous is a river god. The Nymphs are benevolent female deities associated with natural phenomena such as streams, woods, and mountains.

PHAEDRUS: Listen, then:

"You understand my situation: I've told you how good it would be for
us, in my opinion, if this worked out. In any case, I don't think I should 231
lose the chance to get what I am asking for, merely because I don't happen
to be in love with you.

"A man in love will wish he had not done you any favors once his
desire dies down, but the time will never come for a man who's not in
love to change his mind. That is because the favors he does for you are
not forced but voluntary; and he does the best that he possibly can for
you, just as he would for his own business.

"Besides, a lover keeps his eye on the balance sheet—where his interests
have suffered from love, and where he has done well; and when he adds
up all the trouble he has taken, he thinks he's long since given the boy he b
loved a fair return. A non-lover, on the other hand, can't complain about
love's making him neglect his own business; he can't keep a tab on the
trouble he's been through, or blame you for the quarrels he's had with
his relatives. Take away all those headaches and there's nothing left for
him to do but put his heart into whatever he thinks will give pleasure.

"Besides, suppose a lover does deserve to be honored because, as they c
say, he is the best friend his loved one will ever have, and he stands ready
to please his boy with all those words and deeds that are so annoying to
everyone else. It's easy to see (if he is telling the truth) that the next time
he falls in love he will care more for his new love than for the old one,
and it's clear he'll treat the old one shabbily whenever that will please the
new one.

"And anyway, what sense does it make to throw away something like
that on a person who has fallen into such a miserable condition that those d
who have suffered it don't even try to defend themselves against it? A
lover will admit that he's more sick than sound in the head. He's well
aware that he is not thinking straight; but he'll say he can't get himself
under control. So when he does start thinking straight, why would he
stand by decisions he had made when he was sick?

"Another point: if you were to choose the best of those who are in love
with you, you'd have a pretty small group to pick from; but you'll have
a large group if you don't care whether he loves you or not and just pick
the one who suits you best; and in that larger pool you'll have a much
better hope of finding someone who deserves your friendship. e

"Now suppose you're afraid of conventional standards and the stigma
that will come to you if people find out about this. Well, it stands to reason
that a lover—thinking that everyone else will admire him for his success 232
as much as he admires himself—will fly into words and proudly declare
to all and sundry that his labors were not in vain. Someone who does not
love you, on the other hand, can control himself and will choose to do
what is best, rather than seek the glory that comes from popular reputation.

"Besides, it's inevitable that a lover will be found out: many people will
see that he devotes his life to following the boy he loves. The result is that

b whenever people see you talking with him they'll think you are spending
time together just before or just after giving way to desire. But they won't
even begin to find fault with people for spending time together if they are
not lovers; they know one has to talk to someone, either out of friendship
or to obtain some other pleasure.

"Another point: have you been alarmed by the thought that it is hard
for friendships to last? Or that when people break up, it's ordinarily just
c as awful for one side as it is for the other, but when you've given up what
is most important to you already, then your loss is greater than his? If so,
it would make more sense for you to be afraid of lovers. For a lover is
easily annoyed, and whatever happens, he'll think it was designed to hurt
him. That is why a lover prevents the boy he loves from spending time
with other people. He's afraid that wealthy men will outshine him with
their money, while men of education will turn out to have the advantage
of greater intelligence. And he watches like a hawk everyone who may
d have any other advantage over him! Once he's persuaded you to turn
those people away, he'll have you completely isolated from friends; and
if you show more sense than he does in looking after your own interests,
you'll come to quarrel with him.

"But if a man really does not love you, if it is only because of his
excellence that he got what he asked for, then he won't be jealous of the
people who spend time with you. Quite the contrary! He'll hate anyone
who does not want to be with you; he'll think they look down on him
e while those who spend time with you do him good; so you should expect
friendship, rather than enmity, to result from this affair.

"Another point: lovers generally start to desire your body before they
know your character or have any experience of your other traits, with the
result that even they can't tell whether they'll still want to be friends with
233 you after their desire has passed. Non-lovers, on the other hand, are friends
with you even before they achieve their goal, and you've no reason to
expect that benefits received will ever detract from their friendship for
you. No, those things will stand as reminders of more to come.

"Another point: you can expect to become a better person if you are
won over by me, rather than by a lover. A lover will praise what you say
and what you do far beyond what is best, partly because he is afraid of
b being disliked, and partly because desire has impaired his judgment. Here
is how love draws conclusions: When a lover suffers a reverse that would
cause no pain to anyone else, love makes him think he's accursed! And
when he has a stroke of luck that's not worth a moment's pleasure, love
compels him to sing its praises. The result is, you should feel sorry for
lovers, not admire them.

"If my argument wins you over, I will, first of all, give you my time
with no thought of immediate pleasure; I will plan instead for the benefits
c that are to come, since I am master of myself and have not been over-
whelmed by love. Small problems will not make me very hostile, and big
ones will make me only gradually, and only a little, angry. I will forgive

you for unintentional errors and do my best to keep you from going wrong
intentionally. All this, you see, is the proof of a friendship that will last a
long time.

"Have you been thinking that there can be no strong friendship in the
absence of erotic love? Then you ought to remember that we would not d
care so much about our children if that were so, or about our fathers and
mothers. And we wouldn't have had any trustworthy friends, since those
relationships did not come from such a desire but from doing quite differ-
ent things.

"Besides, if it were true that we ought to give the biggest favor to those
who need it most, then we should all be helping out the very poorest
people, not the best ones, because people we've saved from the worst
troubles will give us the most thanks. For instance, the right people to e
invite to a dinner party would be beggars and people who need to sate
their hunger, because they're the ones who'll be fond of us, follow us,
knock on our doors,[9] take the most pleasure with the deepest gratitude,
and pray for our success. No, it's proper, I suppose, to grant your favors
to those who are best able to return them, not to those in the direst need—
that is, not to those who merely desire the thing, but to those who really 234
deserve it—not to people who will take pleasure in the bloom of your
youth, but to those who will share their goods with you when you are
older; not to people who achieve their goal and then boast about it in
public, but to those who will keep a modest silence with everyone; not to
people whose devotion is short-lived, but to those who will be steady
friends their whole lives; not to the people who look for an excuse to
quarrel as soon as their desire has passed, but to those who will prove b
their worth when the bloom of your youth has faded. Now, remember
what I said and keep this in mind: friends often criticize a lover for bad
behavior; but no one close to a non-lover ever thinks that desire has led
him into bad judgment about his interests.

"And now I suppose you'll ask me whether I'm urging you to give your
favors to everyone who is not in love with you. No. As I see it, a lover
would not ask you to give in to all your lovers either. You would not, in c
that case, earn as much gratitude from each recipient, and you would not
be able to keep one affair secret from the others in the same way. But this
sort of thing is not supposed to cause any harm, and really should work
to the benefit of both sides.

"Well, I think this speech is long enough. If you are still longing for
more, if you think I have passed over something, just ask."

How does the speech strike you, Socrates? Don't you think it's simply
superb, especially in its choice of words?

SOCRATES: It's a miracle, my friend; I'm in ecstasy. And it's all your d
doing, Phaedrus: I was looking at you while you were reading and it
seemed to me the speech had made you radiant with delight; and since I

9. This is classic behavior in ancient Greek literature of a lovesick man pursuing his prey.

believe you understand these matters better than I do, I followed your
lead, and following you I shared your Bacchic frenzy.

Phaedrus: Come, Socrates, do you think you should joke about this?

Socrates: Do you really think I am joking, that I am not serious?

e Phaedrus: You are not at all serious, Socrates. But now tell me the truth,
in the name of Zeus, god of friendship: Do you think that any other Greek
could say anything more impressive or more complete on this same subject?

Socrates: What? Must we praise the speech even on the ground that
its author has said what the situation demanded, and not instead simply
on the ground that he has spoken in a clear and concise manner, with a
precise turn of phrase? If we must, I will have to go along for your sake,
235 since—surely because I am so ignorant—that passed me by. I paid attention
only to the speech's style. As to the other part, I wouldn't even think that
Lysias himself could be satisfied with it. For it seemed to me, Phaedrus—
unless, of course, you disagree—that he said the same things two or even
three times, as if he really didn't have much to say about the subject,
almost as if he just weren't very interested in it. In fact, he seemed to me
to be showing off, trying to demonstrate that he could say the same thing
in two different ways, and say it just as well both times.

b Phaedrus: You are absolutely wrong, Socrates. That is in fact the best
thing about the speech: He has omitted nothing worth mentioning about
the subject, so that no one will ever be able to add anything of value to
complete what he has already said himself.

Socrates: You go too far: I can't agree with you about that. If, as a favor
to you, I accept your view, I will stand refuted by all the wise men and
women of old who have spoken or written about this subject.

c Phaedrus: Who are these people? And where have you heard anything
better than this?

Socrates: I can't tell you offhand, but I'm sure I've heard better some-
where; perhaps it was the lovely Sappho or the wise Anacreon or even
some writer of prose. So, what's my evidence? The fact, my dear friend,
that my breast is full and I feel I can make a different speech, even better
than Lysias'. Now I am well aware that none of these ideas can have come
from me—I know my own ignorance. The only other possibility, I think,
d is that I was filled, like an empty jar, by the words of other people streaming
in through my ears, though I'm so stupid that I've even forgotten where
and from whom I heard them.

Phaedrus: But, my dear friend, you couldn't have said a better thing! Don't
bother telling me when and from whom you've heard this, even if I ask you—
instead, do exactly what you said: You've just promised to make another
speech making more points, and better ones, without repeating a word from
my book. And I promise you that, like the Nine Archons, I shall set up in
e return a life-sized golden statue at Delphi, not only of myself but also of you.[10]

10. The archons were magistrates chosen by lot in classical Athens. On taking office they swore an oath to set up a golden statue if they violated the laws.

SOCRATES: You're a real friend, Phaedrus, good as gold, to think I'm
claiming that Lysias failed in absolutely every respect and that I can make
a speech that is different on every point from his. I am sure that that
couldn't happen even to the worst possible author. In our own case, for
example, do you think that anyone could argue that one should favor the
non-lover rather than the lover without praising the former for keeping 236
his wits about him or condemning the latter for losing his—points that
are essential to make—and still have something left to say? I believe we
must allow these points, and concede them to the speaker. In their case,
we cannot praise their novelty but only their skillful arrangement; but we
can praise both the arrangement and the novelty of the nonessential points
that are harder to think up.

PHAEDRUS: I agree with you; I think that's reasonable. This, then, is what
I shall do. I will allow you to presuppose that the lover is less sane than b
the non-lover—and if you are able to add anything of value to complete
what we already have in hand, you will stand in hammered gold beside
the offering of the Cypselids in Olympia.[11]

SOCRATES: Oh, Phaedrus, I was only criticizing your beloved in order to tease you—did you take me seriously? Do you think I'd really try to match the product of his wisdom with a fancier speech?

PHAEDRUS: Well, as far as that goes, my friend, you've fallen into your
own trap. You have no choice but to give your speech as best you can: c
otherwise you will force us into trading vulgar jibes the way they do in
comedy. Don't make me say what you said: "Socrates, if I don't know my
Socrates, I must be forgetting who I am myself," or "He wanted to speak,
but he was being coy." Get it into your head that we shall not leave here
until you recite what you claimed to have "in your breast." We are alone, d
in a deserted place, and I am younger and stronger. From all this, "take
my meaning"[12] and don't make me force you to speak when you can do
so willingly.

SOCRATES: But, my dear Phaedrus, I'll be ridiculous—a mere dilettante, improvising on the same topics as a seasoned professional!

PHAEDRUS: Do you understand the situation? Stop playing hard to get! I know what I can say to make you give your speech.

SOCRATES: Then please don't say it!

PHAEDRUS: Oh, yes, I will. And what I say will be an oath. I swear to
you—by which god, I wonder? How about this very plane tree?—I swear e
in all truth that, if you don't make your speech right next to this tree here,
I shall never, never again recite another speech for you—I shall never utter
another word about speeches to you!

11. The Cypselids were rulers of Corinth in the seventh century B.C.; an ornate chest in which Cypselus was said to have been hidden as an infant was on display at Olympia, perhaps along with other offerings of theirs.

12. A line of Pindar's (Snell 105).

SOCRATES: My oh my, what a horrible man you are! You've really found the way to force a lover of speeches to do just as you say!

PHAEDRUS: So why are you still twisting and turning like that?

SOCRATES: I'll stop—now that you've taken this oath. How could I possibly give up such treats?

237 PHAEDRUS: Speak, then.

SOCRATES: Do you know what I'll do?

PHAEDRUS: What?

SOCRATES: I'll cover my head while I'm speaking. In that way, as I'm going through the speech as fast as I can, I won't get embarrassed by having to look at you and lose the thread of my argument.

PHAEDRUS: Just give your speech! You can do anything else you like.

SOCRATES: Come to me, O you clear-voiced Muses, whether you are called so because of the quality of your song or from the musical people of Liguria,[13] "come, take up my burden" in telling the tale that this fine fellow forces upon me so that his companion may now seem to him even
b more clever than he did before:

There once was a boy, a youth rather, and he was very beautiful, and had very many lovers. One of them was wily and had persuaded him that he was not in love, though he loved the lad no less than the others. And once in pressing his suit to him, he tried to persuade him that he ought to give his favors to a man who did not love him rather than to one who did. And this is what he said:

"If you wish to reach a good decision on any topic, my boy, there is
c only one way to begin: You must know what the decision is about, or else you are bound to miss your target altogether. Ordinary people cannot see that they do not know the true nature of a particular subject, so they proceed as if they did; and because they do not work out an agreement at the start of the inquiry, they wind up as you would expect—in conflict with themselves and each other. Now you and I had better not let this happen to us, since we criticize it in others. Because you and I are about to discuss whether a boy should make friends with a man who loves him
d rather than with one who does not, we should agree on defining what love is and what effects it has. Then we can look back and refer to that as we try to find out whether to expect benefit or harm from love. Now, as everyone plainly knows, love is some kind of desire; but we also know that even men who are not in love have a desire for what is beautiful. So how shall we distinguish between a man who is in love and one who is not? We must realize that each of us is ruled by two principles which we follow wherever they lead: one is our inborn desire for pleasures, the other is our acquired judgment that pursues what is best. Sometimes these two
e are in agreement; but there are times when they quarrel inside us, and

13. Socrates here suggests a farfetched etymology for a common epithet of the Muses, as the "clear-voiced" ones, on the basis of its resemblance to the Greek name for the Ligurians, who lived in what is now known as the French Riviera.

then sometimes one of them gains control, sometimes the other. Now when
judgment is in control and leads us by reasoning toward what is best, that
sort of self-control is called 'being in your right mind'; but when desire 238
takes command in us and drags us without reasoning toward pleasure,
then its command is known as 'outrageousness'.[14] Now outrageousness
has as many names as the forms it can take, and these are quite diverse.[15]
Whichever form stands out in a particular case gives its name to the person
who has it—and that is not a pretty name to be called, not worth earning
at all. If it is desire for food that overpowers a person's reasoning about
what is best and suppresses his other desires, it is called gluttony and it b
gives him the name of a glutton, while if it is desire for drink that plays
the tyrant and leads the man in that direction, we all know what name
we'll call him then! And now it should be clear how to describe someone
appropriately in the other cases: call the man by that name—sister to these
others—that derives from the sister of these desires that controls him at
the time. As for the desire that has led us to say all this, it should be
obvious already, but I suppose things said are always better understood
than things unsaid: The unreasoning desire that overpowers a person's
considered impulse to do right and is driven to take pleasure in beauty, c
its force reinforced by its kindred desires for beauty in human bodies—
this desire, all-conquering in its forceful drive, takes its name from the
word for force (*rhōmē*) and is called *erōs*."

There, Phaedrus my friend, don't you think, as I do, that I'm in the grip of something divine?

PHAEDRUS: This is certainly an unusual flow of words for you, Socrates.

SOCRATES: Then be quiet and listen. There's something really divine about
this place, so don't be surprised if I'm quite taken by the Nymphs' madness d
as I go on with the speech. I'm on the edge of speaking in dithyrambs[16]
as it is.

PHAEDRUS: Very true!

SOCRATES: Yes, and you're the cause of it. But hear me out; the attack may yet be prevented. That, however, is up to the god; what we must do is face the boy again in the speech:

"All right then, my brave friend, now we have a definition for the subject
of our decision; now we have said what it really is; so let us keep that in e
view as we complete our discussion. What benefit or harm is likely to
come from the lover or the non-lover to the boy who gives him favors? It
is surely necessary that a man who is ruled by desire and is a slave to
pleasure will turn his boy into whatever is most pleasing to himself. Now
a sick man takes pleasure in anything that does not resist him, but sees

14. I.e., *hubris*, which ranges from arrogance to the sort of crimes to which arrogance gives rise, sexual assault in particular.

15. Reading *polumeles kai polueides* at a3 (lit., "multilimbed and multiformed").

16. A dithyramb was a choral poem originally connected with the worship of Dionysus. In classical times it became associated with an artificial style dominated by music.

239 anyone who is equal or superior to him as an enemy. That is why a lover
will not willingly put up with a boyfriend who is his equal or superior,
but is always working to make the boy he loves weaker and inferior to
himself. Now, the ignorant man is inferior to the wise one, the coward to
the brave, the ineffective speaker to the trained orator, the slow-witted to
the quick. By necessity, a lover will be delighted to find all these mental
defects and more, whether acquired or innate in his boy; and if he does
not, he will have to supply them or else lose the pleasure of the moment.
b The necessary consequence is that he will be jealous and keep the boy
away from the good company of anyone who would make a better man
of him; and that will cause him a great deal of harm, especially if he keeps
him away from what would most improve his mind—and that is, in fact,
divine philosophy, from which it is necessary for a lover to keep his boy
a great distance away, out of fear the boy will eventually come to look
down on him. He will have to invent other ways, too, of keeping the boy
in total ignorance and so in total dependence on himself. That way the
c boy will give his lover the most pleasure, though the harm to himself will
be severe. So it will not be of any use to your intellectual development to
have as your mentor and companion a man who is in love.

"Now let's turn to your physical development. If a man is bound by
necessity to chase pleasure at the expense of the good, what sort of shape
will he want you to be in? How will he train you, if he is in charge? You
will see that what he wants is someone who is soft, not muscular, and not
trained in full sunlight but in dappled shade—someone who has never
worked out like a man, never touched hard, sweaty exercise. Instead, he
d goes for a boy who has known only a soft unmanly style of life, who
makes himself pretty with cosmetics because he has no natural color at
all. There is no point in going on with this description: it is perfectly
obvious what other sorts of behavior follow from this. We can take up
our next topic after drawing all this to a head: the sort of body a lover
wants in his boy is one that will give confidence to the enemy in a war
or other great crisis while causing alarm to friends and even to his lovers.
Enough of that; the point is obvious.

e "Our next topic is the benefit or harm to your possessions that will come
from a lover's care and company. Everyone knows the answer, especially
a lover: His first wish will be for a boy who has lost his dearest, kindliest
and godliest possessions—his mother and father and other close relatives.
He would be happy to see the boy deprived of them, since he would
240 expect them either to block him from the sweet pleasure of the boy's
company or to criticize him severely for taking it. What is more, a lover
would think any money or other wealth the boy owns would only make
him harder to snare and, once snared, harder to handle. It follows by
absolute necessity that wealth in a boyfriend will cause his lover to envy
him, while his poverty will be a delight. Furthermore, he will wish for the
boy to stay wifeless, childless, and homeless for as long as possible, since
that's how long he desires to go on plucking his sweet fruit.

"There are other troubles in life, of course, but some divinity has mixed
most of them with a dash of immediate pleasure. A flatterer, for example, b
may be an awful beast and a dreadful nuisance, but nature makes flattery rather pleasant by mixing in a little culture with its words. So it is with a mistress—for all the harm we accuse her of causing—and with many other creatures of that character, and their callings: at least they are delightful
company for a day. But besides being harmful to his boyfriend, a lover is c
simply disgusting to spend the day with. 'Youth delights youth,' as the old proverb runs—because, I suppose, friendship grows from similarity, as boys of the same age go after the same pleasures. But you can even have too much of people your own age. Besides, as they say, it is miserable for anyone to be forced into anything by necessity—and this (to say nothing of the age difference) is most true for a boy with his lover. The older man
clings to the younger day and night, never willing to leave him, driven d
by necessity and goaded on by the sting that gives him pleasure every time he sees, hears, touches, or perceives his boy in any way at all, so that he follows him around like a servant, with pleasure.

"As for the boy, however, what comfort or pleasure will the lover give to him during all the time they spend together? Won't it be disgusting in the extreme to see the face of that older man who's lost his looks? And everything that goes with that face—why, it is a misery even to hear them
mentioned, let alone actually handle them, as you would constantly be e
forced to do! To be watched and guarded suspiciously all the time, with everyone! To hear praise of yourself that is out of place and excessive! And then to be falsely accused—which is unbearable when the man is sober and not only unbearable but positively shameful when he is drunk and lays into you with a pack of wild barefaced insults!

"While he is still in love he is harmful and disgusting, but after his love fades he breaks his trust with you for the future, in spite of all the promises
he has made with all those oaths and entreaties which just barely kept 241
you in a relationship that was troublesome at the time, in hope of future benefits. So, then, by the time he should pay up, he has made a change and installed a new ruling government in himself: right-minded reason in place of the madness of love. The boy does not even realize that his lover is a different man. He insists on his reward for past favors and reminds him of what they had done and said before—as if he were still talking to the same man! The lover, however, is so ashamed that he does not dare tell the boy how much he has changed or that there is no way, now that he is in his right mind and under control again, that he can stand
by the promises he had sworn to uphold when he was under that old b
mindless regime. He is afraid that if he acted as he had before he would turn out the same and revert to his old self. So now he is a refugee, fleeing from those old promises on which he must default by necessity; he, the former lover, has to switch roles and flee, since the coin has fallen the other way, while the boy must chase after him, angry and cursing. All along he has been completely unaware that he should never have given

c his favors to a man who was in love—and who therefore had by necessity
lost his mind. He should much rather have done it for a man who was
not in love and had his wits about him. Otherwise it follows necessarily
that he'd be giving himself to a man who is deceitful, irritable, jealous,
disgusting, harmful to his property, harmful to his physical fitness, and
absolutely devastating to the cultivation of his soul, which truly is, and
will always be, the most valuable thing to gods and men.

"These are the points you should bear in mind, my boy. You should
know that the friendship of a lover arises without any good will at all.
d No, like food, its purpose is to sate hunger. 'Do wolves love lambs? That's
how lovers befriend a boy!'"

That's it, Phaedrus. You won't hear another word from me, and you'll have to accept this as the end of the speech.

PHAEDRUS: But I thought you were right in the middle—I thought you were about to speak at the same length about the non-lover, to list his good points and argue that it's better to give one's favors to him. So why are you stopping now, Socrates?

e SOCRATES: Didn't you notice, my friend, that even though I am criticizing
the lover, I have passed beyond lyric into epic poetry?[17] What do you
suppose will happen to me if I begin to praise his opposite? Don't you
realize that the Nymphs to whom you so cleverly exposed me will take
complete possession of me? So I say instead, in a word, that every shortcom-
ing for which we blamed the lover has its contrary advantage, and the
non-lover possesses it. Why make a long speech of it? That's enough about
242 them both. This way my story will meet the end it deserves, and I will
cross the river and leave before you make me do something even worse.

PHAEDRUS: Not yet, Socrates, not until this heat is over. Don't you see that it is almost exactly noon, "straight-up" as they say? Let's wait and discuss the speeches, and go as soon as it turns cooler.

SOCRATES: You're really superhuman when it comes to speeches, Phae-
drus; you're truly amazing. I'm sure you've brought into being more of
b the speeches that have been given during your lifetime than anyone else,
whether you composed them yourself or in one way or another forced
others to make them; with the single exception of Simmias the Theban,
you are far ahead of the rest.[18] Even as we speak, I think, you're managing
to cause me to produce yet another one.

PHAEDRUS: Oh, how wonderful! But what do you mean? What speech?

SOCRATES: My friend, just as I was about to cross the river, the familiar
c divine sign came to me which, whenever it occurs, holds me back from
something I am about to do. I thought I heard a voice coming from this
very spot, forbidding me to leave until I made atonement for some offense

17. The overheated choral poems known as dithyrambs (see 238d) were written in lyric meters. The meter of the last line of Socrates' speech, however, was epic, and it is the tradition in epic poetry to glorify a hero, not to attack him.

18. Simmias, a companion of Socrates, was evidently a lover of discussion (cf. *Phaedo* 85c).

against the gods. In effect, you see, I am a seer, and though I am not particularly good at it, still—like people who are just barely able to read and write—I am good enough for my own purposes. I recognize my offense clearly now. In fact, the soul too, my friend, is itself a sort of seer; that's why, almost from the beginning of my speech, I was disturbed by a very d
uneasy feeling, as Ibycus puts it, that "for offending the gods I am honored by men."[19] But now I understand exactly what my offense has been.

PHAEDRUS: Tell me, what is it?

SOCRATES: Phaedrus, that speech you carried with you here—it was horrible, as horrible as the speech you made me give.

PHAEDRUS: How could that be?

SOCRATES: It was foolish, and close to being impious. What could be more horrible than that?

PHAEDRUS: Nothing—if, of course, what you say is right.

SOCRATES: Well, then? Don't you believe that Love is the son of Aphrodite? Isn't he one of the gods?

PHAEDRUS: This is certainly what people say.

SOCRATES: Well, Lysias certainly doesn't and neither does your speech, which you charmed me through your potion into delivering myself. But if Love is a god or something divine—which he is—he can't be bad in e
any way; and yet our speeches just now spoke of him as if he were. That is their offense against Love. And they've compounded it with their utter foolishness in parading their dangerous falsehoods and preening them- 243
selves over perhaps deceiving a few silly people and coming to be admired by them.

And so, my friend, I must purify myself. Now for those whose offense lies in telling false stories about matters divine, there is an ancient rite of purification—Homer did not know it, but Stesichorus did. When he lost his sight for speaking ill of Helen, he did not, like Homer, remain in the dark about the reason why. On the contrary, true follower of the Muses that he was, he understood it and immediately composed these lines:

*There's no truth to that story:*
*You never sailed that lovely ship,*
*You never reached the tower of Troy.*[20] b

And as soon as he completed the poem we call the Palinode, he immediately regained his sight. Now I will prove to be wiser than Homer and Stesichorus to this small extent: I will try to offer my Palinode to Love before I am punished for speaking ill of him—with my head bare, no longer covered in shame.

PHAEDRUS: No words could be sweeter to my ears, Socrates.

19. Ibycus was a sixth-century poet, most famous for his passionate love poetry.

20. Frg. 18 (Edmonds).

c SOCRATES: You see, my dear Phaedrus, you understand how shameless the speeches were, my own as well as the one in your book. Suppose a noble and gentle man, who was (or had once been) in love with a boy of similar character, were to hear us say that lovers start serious quarrels for trivial reasons and that, jealous of their beloved, they do him harm—don't you think that man would think we had been brought up among the most
d vulgar of sailors, totally ignorant of love among the freeborn? Wouldn't he most certainly refuse to acknowledge the flaws we attributed to Love?

PHAEDRUS: Most probably, Socrates.

SOCRATES: Well, that man makes me feel ashamed, and as I'm also afraid of Love himself, I want to wash out the bitterness of what we've heard with a more tasteful speech. And my advice to Lysias, too, is to write as soon as possible a speech urging one to give similar favors to a lover rather than to a non-lover.

PHAEDRUS: You can be sure he will. For once you have spoken in praise
e of the lover, I will most definitely make Lysias write a speech on the same topic.

SOCRATES: I do believe you will, so long as you are who you are.

PHAEDRUS: Speak on, then, in full confidence.

SOCRATES: Where, then, is the boy to whom I was speaking? Let him hear this speech, too. Otherwise he may be too quick to give his favors to the non-lover.

PHAEDRUS: He is here, always right by your side, whenever you want him.

244 SOCRATES: You'll have to understand, beautiful boy, that the previous speech was by Phaedrus, Pythocles' son, from Myrrhinus, while the one I am about to deliver is by Stesichorus, Euphemus' son, from Himera.[21] And here is how the speech should go:

"'There's no truth to that story'—that when a lover is available you should give your favors to a man who doesn't love you instead, because he is in control of himself while the lover has lost his head. That would have been fine to say if madness were bad, pure and simple; but in fact the best things we have come from madness, when it is given as a gift of the god.

b "The prophetess of Delphi and the priestesses at Dodona are out of their minds when they perform that fine work of theirs for all of Greece, either for an individual person or for a whole city, but they accomplish little or nothing when they are in control of themselves. We will not mention the Sybil or the others who foretell many things by means of god-inspired prophetic trances and give sound guidance to many people—that would take too much time for a point that's obvious to everyone. But here's some evidence worth adding to our case: The people who designed our language in the old days never thought of madness as something to be ashamed of or worthy of blame; otherwise they would not have used the word 'manic'

21. Etymologically: "Stesichorus son of Good Speaker, from the Land of Desire." Myrrhinus was one of the demes of ancient Athens.

for the finest experts of all—the ones who tell the future—thereby weaving c
insanity into prophecy. They thought it was wonderful when it came as a gift of the god, and that's why they gave its name to prophecy; but nowadays people don't know the fine points, so they stick in a 't' and call it '*mantic*.' Similarly, the clear-headed study of the future, which uses birds and other signs, was originally called *oionoïstic*, since it uses reasoning to bring intelligence (*nous*) and learning (*historia*) into human thought; but now modern speakers call it *oiōnistic*, putting on airs with their long 'ō'. d
To the extent, then, that prophecy, *mantic*, is more perfect and more admirable than sign-based prediction, *oiōnistic*, in both name and achievement, madness (*mania*) from a god is finer than self-control of human origin, according to the testimony of the ancient language givers.

"Next, madness can provide relief from the greatest plagues of trouble that beset certain families because of their guilt for ancient crimes: it turns up among those who need a way out; it gives prophecies and takes refuge e
in prayers to the gods and in worship, discovering mystic rites and purifications that bring the man it touches[22] through to safety for this and all time to come. So it is that the right sort of madness finds relief from present hardships for a man it has possessed.

"Third comes the kind of madness that is possession by the Muses, 245
which takes a tender virgin soul and awakens it to a Bacchic frenzy of songs and poetry that glorifies the achievements of the past and teaches them to future generations. If anyone comes to the gates of poetry and expects to become an adequate poet by acquiring expert knowledge of the subject without the Muses' madness, he will fail, and his self-controlled verses will be eclipsed by the poetry of men who have been driven out of their minds.

"There you have some of the fine achievements—and I could tell you b
even more—that are due to god-sent madness. We must not have any fear on this particular point, then, and we must not let anyone disturb us or frighten us with the claim that you should prefer a friend who is in control of himself to one who is disturbed. Besides proving that point, if he is to win his case, our opponent must show that love is not sent by the gods as a benefit to a lover and his boy. And we, for our part, must prove the opposite, that this sort of madness is given us by the gods to ensure our greatest good fortune. It will be a proof that convinces the wise if not c
the clever.

"Now we must first understand the truth about the nature of the soul, divine or human, by examining what it does and what is done to it. Here begins the proof:

"Every soul[23] is immortal. That is because whatever is always in motion is immortal, while what moves, and is moved by, something else stops

22. Retaining *heautēs* at e3.

23. Alternatively, "All soul."

living when it stops moving. So it is only what moves itself that never
desists from motion, since it does not leave off being itself. In fact, this
self-mover is also the source and spring of motion in everything else that
d moves; and a source has no beginning. That is because anything that has
a beginning comes from some source, but there is no source for this, since
a source that got its start from something else would no longer be the
source. And since it cannot have a beginning, then necessarily it cannot
be destroyed. That is because if a source were destroyed it could never
get started again from anything else and nothing else could get started
from it—that is, if everything gets started from a source. This then is why
a self-mover is a source of motion. And *that* is incapable of being destroyed
e or starting up; otherwise all heaven and everything that has been started
up[24] would collapse, come to a stop, and never have cause to start moving
again. But since we have found that a self-mover is immortal, we should
have no qualms about declaring that this is the very essence and principle
of a soul, for every bodily object that is moved from outside has no soul,
while a body whose motion comes from within, from itself, does have a
soul, that being the nature of a soul; and if this is so—that whatever moves
itself is essentially a soul—then it follows necessarily that soul should have
neither birth nor death.

246 "That, then, is enough about the soul's immortality. Now here is what
we must say about its structure. To describe what the soul actually is
would require a very long account, altogether a task for a god in every
way; but to say what it is like is humanly possible and takes less time. So
let us do the second in our speech. Let us then liken the soul to the natural
union of a team of winged horses and their charioteer. The gods have
horses and charioteers that are themselves all good and come from good
b stock besides, while everyone else has a mixture. To begin with, our driver
is in charge of a pair of horses; second, one of his horses is beautiful and
good and from stock of the same sort, while the other is the opposite and
has the opposite sort of bloodline. This means that chariot-driving in our
case is inevitably a painfully difficult business.

"And now I should try to tell you why living things are said to include
both mortal and immortal beings. All soul looks after all that lacks a soul,
c and patrols all of heaven, taking different shapes at different times. So
long as its wings are in perfect condition it flies high, and the entire universe
is its dominion; but a soul that sheds its wings wanders until it lights on
something solid, where it settles and takes on an earthly body, which
then, owing to the power of this soul, seems to move itself. The whole
combination of soul and body is called a living thing, or animal, and has
the designation 'mortal' as well. Such a combination cannot be immortal,
not on any reasonable account. In fact it is pure fiction, based neither on
d observation nor on adequate reasoning, that a god is an immortal living
thing which has a body and a soul, and that these are bound together by

24. Reading *pasan te genesin* at e1.

nature for all time—but of course we must let this be as it may please the gods, and speak accordingly.

"Let us turn to what causes the shedding of the wings, what makes them fall away from a soul. It is something of this sort: By their nature wings have the power to lift up heavy things and raise them aloft where the gods all dwell, and so, more than anything that pertains to the body, they are akin to the divine, which has beauty, wisdom, goodness, and e
everything of that sort. These nourish the soul's wings, which grow best in their presence; but foulness and ugliness make the wings shrink and disappear.

"Now Zeus, the great commander in heaven, drives his winged chariot first in the procession, looking after everything and putting all things in order. Following him is an army of gods and spirits arranged in eleven 247
sections. Hestia is the only one who remains at the home of the gods; all the rest of the twelve are lined up in formation, each god in command of the unit to which he is assigned. Inside heaven are many wonderful places from which to look and many aisles which the blessed gods take up and back, each seeing to his own work, while anyone who is able and wishes to do so follows along, since jealousy has no place in the gods' chorus. When they go to feast at the banquet they have a steep climb to the high b
tier at the rim of heaven; on this slope the gods' chariots move easily, since they are balanced and well under control, but the other chariots barely make it. The heaviness of the bad horse drags its charioteer toward the earth and weighs him down if he has failed to train it well, and this causes the most extreme toil and struggle that a soul will face. But when the souls we call immortals reach the top, they move outward and take their stand on the high ridge of heaven, where its circular motion carries c
them around as they stand while they gaze upon what is outside heaven.

"The place beyond heaven—none of our earthly poets has ever sung or ever will sing its praises enough! Still, this is the way it is—risky as it may be, you see, I must attempt to speak the truth, especially since the truth is my subject. What is in this place is without color and without shape and without solidity, a being that really is what it is, the subject of all true knowledge, visible only to intelligence, the soul's steersman. Now a god's d
mind is nourished by intelligence and pure knowledge, as is the mind of any soul that is concerned to take in what is appropriate to it, and so it is delighted at last to be seeing what is real and watching what is true, feeding on all this and feeling wonderful, until the circular motion brings it around to where it started. On the way around it has a view of Justice as it is; it has a view of Self-control; it has a view of Knowledge—not the knowledge that is close to change, that becomes different as it knows the different things which we consider real down here. No, it is the knowledge e
of what really is what it is. And when the soul has seen all the things that are as they are and feasted on them, it sinks back inside heaven and goes home. On its arrival, the charioteer stables the horses by the manger, throws in ambrosia, and gives them nectar to drink besides.

248 "Now that is the life of the gods. As for the other souls, one that follows
a god most closely, making itself most like that god, raises the head of its
charioteer up to the place outside and is carried around in the circular
motion with the others. Although distracted by the horses, this soul does
have a view of Reality, just barely. Another soul rises at one time and falls
at another, and because its horses pull it violently in different directions,
it sees some real things and misses others. The remaining souls are all
eagerly straining to keep up, but are unable to rise; they are carried around
below the surface, trampling and striking one another as each tries to get
b ahead of the others. The result is terribly noisy, very sweaty, and disorderly.
Many souls are crippled by the incompetence of the drivers, and many
wings break much of their plumage. After so much trouble, they all leave
without having seen reality, uninitiated, and when they have gone they
will depend on what they think is nourishment—their own opinions.

"The reason there is so much eagerness to see the plain where truth
c stands is that this pasture has the grass that is the right food for the best
part of the soul, and it is the nature of the wings that lift up the soul to
be nourished by it. Besides, the law of Destiny is this: If any soul becomes
a companion to a god and catches sight of any true thing, it will be
unharmed until the next circuit; and if it is able to do this every time, it
will always be safe. If, on the other hand, it does not see anything true
because it could not keep up, and by some accident takes on a burden of
forgetfulness and wrongdoing, then it is weighed down, sheds its wings
d and falls to earth. At that point, according to the law, the soul is not born
into a wild animal in its first incarnation; but a soul that has seen the most
will be planted in the seed of a man who will become a lover of wisdom[25]
or of beauty, or who will be cultivated in the arts and prone to erotic love.
The second sort of soul will be put into someone who will be a lawful king
or warlike commander; the third, a statesman, a manager of a household, or
a financier; the fourth will be a trainer who loves exercise or a doctor who
e cures the body; the fifth will lead the life of a prophet or priest of the
mysteries. To the sixth the life of a poet or some other representational
artist is properly assigned; to the seventh the life of a manual laborer or
farmer; to the eighth the career of a sophist or demagogue, and to the
ninth a tyrant.

"Of all these, any who have led their lives with justice will change to a
better fate, and any who have led theirs with injustice, to a worse one. In
fact, no soul returns to the place from which it came for ten thousand
249 years, since its wings will not grow before then, except for the soul of a
man who practices philosophy without guile or who loves boys philosophi-
cally. If, after the third cycle of one thousand years, the last-mentioned
souls have chosen such a life three times in a row, they grow their wings
back, and they depart in the three-thousandth year. As for the rest, once
their first life is over, they come to judgment; and, once judged, some are

25. I.e., a philosopher.

condemned to go to places of punishment beneath the earth and pay the
full penalty for their injustice, while the others are lifted up by justice to
a place in heaven where they live in the manner the life they led in human b
form has earned them. In the thousandth year both groups arrive at a
choice and allotment of second lives, and each soul chooses the life it
wants. From there, a human soul can enter a wild animal, and a soul that
was once human can move from an animal to a human being again. But
a soul that never saw the truth cannot take a human shape, since a human
being must understand speech in terms of general forms, proceeding to c
bring many perceptions together into a reasoned unity.[26] That process is
the recollection of the things our soul saw when it was traveling with god,
when it disregarded the things we now call real and lifted up its head to
what is truly real instead.

"For just this reason it is fair that only a philosopher's mind grows
wings, since its memory always keeps it as close as possible to those
realities by being close to which the gods are divine. A man who uses
reminders of these things correctly is always at the highest, most perfect
level of initiation, and he is the only one who is perfect as perfect can be.
He stands outside human concerns and draws close to the divine; ordinary d
people think he is disturbed and rebuke him for this, unaware that he is
possessed by god. Now this takes me to the whole point of my discussion
of the fourth kind of madness—that which someone shows when he sees
the beauty we have down here and is reminded of true beauty; then he
takes wing and flutters in his eagerness to rise up, but is unable to do so;
and he gazes aloft, like a bird, paying no attention to what is down below—
and that is what brings on him the charge that he has gone mad. This is e
the best and noblest of all the forms that possession by god can take for
anyone who has it or is connected to it, and when someone who loves
beautiful boys is touched by this madness he is called a lover. As I said,
nature requires that the soul of every human being has seen reality; other-
wise, no soul could have entered this sort of living thing. But not every 250
soul is easily reminded of the reality there by what it finds here—not souls
that got only a brief glance at the reality there, not souls who had such
bad luck when they fell down here that they were twisted by bad company
into lives of injustice so that they forgot the sacred objects they had seen
before. Only a few remain whose memory is good enough; and they are
startled when they see an image of what they saw up there. Then they
are beside themselves, and their experience is beyond their comprehension
because they cannot fully grasp what it is that they are seeing. b

"Justice and self-control do not shine out through their images down
here, and neither do the other objects of the soul's admiration; the senses
are so murky that only a few people are able to make out, with difficulty,
the original of the likenesses they encounter here. But beauty was radiant

26. Accepting the emendation *iont'* at b7.

to see at that time when the souls, along with the glorious chorus (we[27]
were with Zeus, while others followed other gods), saw that blessed and
spectacular vision and were ushered into the mystery that we may rightly
c call the most blessed of all. And we who celebrated it were wholly perfect
and free of all the troubles that awaited us in time to come, and we gazed
in rapture at sacred revealed objects that were perfect, and simple, and
unshakeable and blissful. That was the ultimate vision, and we saw it in
pure light because we were pure ourselves, not buried in this thing we
are carrying around now, which we call a body, locked in it like an oyster
in its shell.

"Well, all that was for love of a memory that made me stretch out my
d speech in longing for the past. Now beauty, as I said, was radiant among
the other objects; and now that we have come down here we grasp it
sparkling through the clearest of our senses. Vision, of course, is the sharp-
est of our bodily senses, although it does not see wisdom. It would awaken
a terribly powerful love if an image of wisdom came through our sight
as clearly as beauty does, and the same goes for the other objects of inspired
e love. But now beauty alone has this privilege, to be the most clearly visible
and the most loved. Of course a man who was initiated long ago or who
has become defiled is not to be moved abruptly from here to a vision of
Beauty itself when he sees what we call beauty here; so instead of gazing
at the latter reverently, he surrenders to pleasure and sets out in the manner
of a four-footed beast, eager to make babies; and, wallowing in vice, he
251 goes after unnatural pleasure too, without a trace of fear or shame. A
recent initiate, however, one who has seen much in heaven—when he sees
a godlike face or bodily form that has captured Beauty well, first he shud-
ders and a fear comes over him like those he felt at the earlier time; then
he gazes at him with the reverence due a god, and if he weren't afraid
people would think him completely mad, he'd even sacrifice to his boy
b as if he were the image of a god. Once he has looked at him, his chill gives
way to sweating and a high fever, because the stream of beauty that pours
into him through his eyes warms him up and waters the growth of his
wings. Meanwhile, the heat warms him and melts the places where the
wings once grew, places that were long ago closed off with hard scabs to
keep the sprouts from coming back; but as nourishment flows in, the
feather shafts swell and rush to grow from their roots beneath every part
of the soul (long ago, you see, the entire soul had wings). Now the whole
c soul seethes and throbs in this condition. Like a child whose teeth are just
starting to grow in, and its gums are all aching and itching—that is exactly
how the soul feels when it begins to grow wings. It swells up and aches
and tingles as it grows them. But when it looks upon the beauty of the
boy and takes in the stream of particles flowing into it from his beauty

27. I.e., we philosophers; cf. 252e.

(that is why this is called 'desire'[28]), when it is watered and warmed by this, then all its pain subsides and is replaced by joy. When, however, it d
is separated from the boy and runs dry, then the openings of the passages in which the feathers grow are dried shut and keep the wings from sprouting. Then the stump of each feather is blocked in its desire and it throbs like a pulsing artery while the feather pricks at its passageway, with the result that the whole soul is stung all around, and the pain simply drives it wild—but then, when it remembers the boy in his beauty, it recovers its joy. From the outlandish mix of these two feelings—pain and joy—comes anguish and helpless raving: in its madness the lover's soul cannot e
sleep at night or stay put by day; it rushes, yearning, wherever it expects to see the person who has that beauty. When it does see him, it opens the sluice-gates of desire and sets free the parts that were blocked up before. And now that the pain and the goading have stopped, it can catch its breath and once more suck in, for the moment, this sweetest of all pleasures. This it is not at all willing to give up, and no one is more important to it 252
than the beautiful boy. It forgets mother and brothers and friends entirely and doesn't care at all if it loses its wealth through neglect. And as for proper and decorous behavior, in which it used to take pride, the soul despises the whole business. Why, it is even willing to sleep like a slave, anywhere, as near to the object of its longing as it is allowed to get! That is because in addition to its reverence for one who has such beauty, the b
soul has discovered that the boy is the only doctor for all that terrible pain.

"This is the experience we humans call love, you beautiful boy (I mean the one to whom I am making this speech).[29] You are so young that what the gods call it is likely to strike you as funny. Some of the successors of Homer, I believe, report two lines from the less well known poems, of which the second is quite indecent and does not scan very well. They praise love this way:

*Yes, mortals call him powerful winged 'Love';*
*But because of his need to thrust out the wings,*
*the gods call him 'Shove.'*[30]

You may believe this or not as you like. But, seriously, the cause of love c
is as I have said, and this is how lovers really feel.

"If the man who is taken by love used to be an attendant on Zeus, he will be able to bear the burden of this feathered force with dignity. But if

28. "Desire" is *himeros*: the derivation is from *merē* ("particles"), *ienai* ("go") and *rhein* ("flow").

29. Cf. 237b, 238d, 243e.

30. The lines are probably Plato's invention, as the language is not consistently Homeric. The pun in the original is on *erōs* and *pterōs* ("the winged one").

it is one of Ares' troops who has fallen prisoner of love—if that is the god
with whom he took the circuit—then if he has the slightest suspicion that
the boy he loves has done him wrong, he turns murderous, and he is
ready to make a sacrifice of himself as well as the boy.

d "So it is with each of the gods: everyone spends his life honoring the
god in whose chorus he danced, and emulates that god in every way he
can, so long as he remains undefiled and in his first life down here. And
that is how he behaves with everyone at every turn, not just with those
he loves. Everyone chooses his love after his own fashion from among
e those who are beautiful, and then treats the boy like his very own god,
building him up and adorning him as an image to honor and worship.
Those who followed Zeus, for example, choose someone to love who is a
Zeus himself in the nobility of his soul. So they make sure he has a talent
for philosophy and the guidance of others, and once they have found him
and are in love with him they do everything to develop that talent. If any
lovers have not yet embarked on this practice, then they start to learn,
using any source they can and also making progress on their own. They
are well equipped to track down their god's true nature with their own
253 resources because of their driving need to gaze at the god, and as they
are in touch with the god by memory they are inspired by him and adopt
his customs and practices, so far as a human being can share a god's life.
For all of this they know they have the boy to thank, and so they love
him all the more; and if they draw their inspiration from Zeus, then, like
the Bacchants,[31] they pour it into the soul of the one they love in order to
b help him take on as much of their own god's qualities as possible. Hera's
followers look for a kingly character, and once they have found him they
do all the same things for him. And so it is for followers of Apollo or any
other god: They take their god's path and seek for their own a boy whose
nature is like the god's; and when they have got him they emulate the
god, convincing the boy they love and training him to follow their god's
pattern and way of life, so far as is possible in each case. They show no
envy, no mean-spirited lack of generosity, toward the boy, but make every
c possible effort to draw him into being totally like themselves and the god
to whom they are devoted. This, then, is any true lover's heart's desire: if
he follows that desire in the manner I described, this friend who has been
driven mad by love will secure a consummation[32] for the one he has
befriended that is as beautiful and blissful as I said—if, of course, he
captures him. Here, then, is how the captive is caught:

"Remember how we divided each soul in three at the beginning of our
d story—two parts in the form of horses and the third in that of a charioteer?
Let us continue with that. One of the horses, we said, is good, the other
not; but we did not go into the details of the goodness of the good horse

31. Bacchants were worshippers of Dionysus who gained miraculous abilities when possessed by the madness of their god.

32. Reading *teleutē* at c3.

or the badness of the bad. Let us do that now. The horse that is on the
right, or nobler, side is upright in frame and well jointed, with a high neck
and a regal nose; his coat is white, his eyes are black, and he is a lover of
honor with modesty and self-control; companion to true glory, he needs
no whip, and is guided by verbal commands alone. The other horse is a e
crooked great jumble of limbs with a short bull-neck, a pug nose, black
skin, and bloodshot white eyes; companion to wild boasts and indecency,
he is shaggy around the ears—deaf as a post—and just barely yields to
horsewhip and goad combined. Now when the charioteer looks in the eye
of love, his entire soul is suffused with a sense of warmth and starts to
fill with tingles and the goading of desire. As for the horses, the one who
is obedient to the charioteer is still controlled, then as always, by its sense 254
of shame, and so prevents itself from jumping on the boy. The other one,
however, no longer responds to the whip or the goad of the charioteer; it
leaps violently forward and does everything to aggravate its yokemate
and its charioteer, trying to make them go up to the boy and suggest to
him the pleasures of sex. At first the other two resist, angry in their belief b
that they are being made to do things that are dreadfully wrong. At last,
however, when they see no end to their trouble, they are led forward,
reluctantly agreeing to do as they have been told. So they are close to him
now, and they are struck by the boy's face as if by a bolt of lightning.
When the charioteer sees that face, his memory is carried back to the real
nature of Beauty, and he sees it again where it stands on the sacred pedestal
next to Self-control. At the sight he is frightened, falls over backwards
awestruck, and at the same time has to pull the reins back so fiercely that c
both horses are set on their haunches, one falling back voluntarily with
no resistance, but the other insolent and quite unwilling. They pull back
a little further; and while one horse drenches the whole soul with sweat
out of shame and awe, the other—once it has recovered from the pain
caused by the bit and its fall—bursts into a torrent of insults as soon as
it has caught its breath, accusing its charioteer and yokemate of all sorts
of cowardice and unmanliness for abandoning their position and their d
agreement. Now once more it tries to make its unwilling partners advance,
and gives in grudgingly only when they beg it to wait till later. Then,
when the promised time arrives, and they are pretending to have forgotten,
it reminds them; it struggles, it neighs, it pulls them forward and forces
them to approach the boy again with the same proposition; and as soon
as they are near, it drops its head, straightens its tail, bites the bit, and
pulls without any shame at all. The charioteer is now struck with the same e
feelings as before, only worse, and he's falling back as he would from a
starting gate; and he violently yanks the bit back out of the teeth of the
insolent horse, only harder this time, so that he bloodies its foul-speaking
tongue and jaws, sets its legs and haunches firmly on the ground, and
'gives it over to pain.'[33] When the bad horse has suffered this same thing

33. Cf. *Iliad* v.397 and *Odyssey* xvii.567.

time after time, it stops being so insolent; now it is humble enough to follow the charioteer's warnings, and when it sees the beautiful boy it dies of fright, with the result that now at last the lover's soul follows its boy in reverence and awe.

255 "And because he is served with all the attentions due a god by a lover
who is not pretending otherwise but is truly in the throes of love, and
because he is by nature disposed to be a friend of the man who is serving
him (even if he has already been set against love by schoolfriends or others
who say that it is shameful to associate with a lover, and initially rejects
the lover in consequence), as time goes forward he is brought by his
b ripening age and a sense of what must be to a point where he lets the
man spend time with him. It is a decree of fate, you see, that bad is never
friends with bad, while good cannot fail to be friends with good. Now
that he allows his lover to talk and spend time with him, and the man's
good will is close at hand, the boy is amazed by it as he realizes that all
the friendship he has from his other friends and relatives put together is
nothing compared to that of this friend who is inspired by a god.

"After the lover has spent some time doing this, staying near the boy
(and even touching him during sports and on other occasions), then the
c spring that feeds the stream Zeus named 'Desire' when he was in love
with Ganymede begins to flow mightily in the lover and is partly absorbed
by him, and when he is filled it overflows and runs away outside him.
Think how a breeze or an echo bounces back from a smooth solid object
to its source; that is how the stream of beauty goes back to the beautiful
boy and sets him aflutter. It enters through his eyes, which are its natural
d route to the soul; there it waters the passages for the wings, starts the
wings growing, and fills the soul of the loved one with love in return.
Then the boy is in love, but has no idea what he loves. He does not
understand, and cannot explain, what has happened to him. It is as if he
had caught an eye disease from someone else, but could not identify the
cause; he does not realize that he is seeing himself in the lover as in a
mirror. So when the lover is near, the boy's pain is relieved just as the
lover's is, and when they are apart he yearns as much as he is yearned
e for, because he has a mirror image of love in him—'backlove'—though
he neither speaks nor thinks of it as love, but as friendship. Still, his desire
is nearly the same as the lover's, though weaker: he wants to see, touch,
kiss, and lie down with him; and of course, as you might expect, he acts
on these desires soon after they occur.

"When they are in bed, the lover's undisciplined horse has a word to
256 say to the charioteer—that after all its sufferings it is entitled to a little
fun. Meanwhile, the boy's bad horse has nothing to say, but swelling with
desire, confused, it hugs the lover and kisses him in delight at his great
good will. And whenever they are lying together it is completely unable,
for its own part, to deny the lover any favor he might beg to have. Its
yokemate, however, along with its charioteer, resists such requests with
modesty and reason. Now if the victory goes to the better elements in both

their minds, which lead them to follow the assigned regimen of philosophy,
their life here below is one of bliss and shared understanding. They are b
modest and fully in control of themselves now that they have enslaved
the part that brought trouble into the soul and set free the part that gave
it virtue. After death, when they have grown wings and become weightless,
they have won the first of three rounds in these, the true Olympic Contests.
There is no greater good than this that either human self-control or divine
madness can offer a man. If, on the other hand, they adopt a lower way
of living, with ambition in place of philosophy, then pretty soon when c
they are careless because they have been drinking or for some other reason,
the pair's undisciplined horses will catch their souls off guard and together
bring them to commit that act which ordinary people would take to be
the happiest choice of all; and when they have consummated it once, they
go on doing this for the rest of their lives, but sparingly, since they have
not approved of what they are doing with their whole minds. So these two
also live in mutual friendship (though weaker than that of the philosophical
pair), both while they are in love and after they have passed beyond it, d
because they realize they have exchanged such firm vows that it would
be forbidden for them ever to break them and become enemies. In death
they are wingless when they leave the body, but their wings are bursting to
sprout, so the prize they have won from the madness of love is considerable,
because those who have begun the sacred journey in lower heaven may
not by law be sent into darkness for the journey under the earth; their
lives are bright and happy as they travel together, and thanks to their love e
they will grow wings together when the time comes.

"These are the rewards you will have from a lover's friendship, my boy,
and they are as great as divine gifts should be. A non-lover's companion-
ship, on the other hand, is diluted by human self-control; all it pays are
cheap, human dividends, and though the slavish attitude it engenders in
a friend's soul is widely praised as virtue, it tosses the soul around for 257
nine thousand years on the earth and leads it, mindless, beneath it.

"So now, dear Love, this is the best and most beautiful palinode[34] we
could offer as payment for our debt, especially in view of the rather poetical
choice of words Phaedrus made me use.[35] Forgive us our earlier speeches
in return for this one; be kind and gracious toward my expertise at love,
which is your own gift to me: do not, out of anger, take it away or disable
it; and grant that I may be held in higher esteem than ever by those who b
are beautiful. If Phaedrus and I said anything that shocked you in our
earlier speech, blame it on Lysias, who was its father, and put a stop to
his making speeches of this sort; convert him to philosophy like his brother
Polemarchus so that his lover here may no longer play both sides as he does
now, but simply devote his life to Love through philosophical discussions."

34. Cf. 243b.
35. Cf. 234c, 238c.

c PHAEDRUS: I join you in your prayer, Socrates. If this is really best for us, may it come to pass. As to your speech, I admired it from the moment you began: You managed it much better than your first one. I'm afraid that Lysias' effort to match it is bound to fall flat, if of course he even dares to try to offer a speech of his own. In fact, my marvelous friend, a politician I know was only recently taking Lysias to task for just that reason: All through his invective, he kept calling him a "speech writer." So perhaps his pride will keep him from writing this speech for us.

d SOCRATES: Ah, what a foolish thing to say, young man. How wrong you are about your friend: he can't be intimidated so easily! But perhaps you thought the man who was taking him to task meant what he said as a reproach?

PHAEDRUS: He certainly seemed to, Socrates. In any case, you are surely aware yourself that the most powerful and renowned politicians are ashamed to compose speeches or leave any writings behind; they are afraid that in later times they may come to be known as "sophists."

SOCRATES: Phaedrus, you don't understand the expression "Pleasant
e Bend"—it originally referred to the long bend of the Nile.[36] And, besides the bend, you also don't understand that the most ambitious politicians love speechwriting and long for their writings to survive. In fact, when they write one of their speeches, they are so pleased when people praise it that they add at the beginning a list of its admirers everywhere.

PHAEDRUS: What do you mean? I don't understand.

258 SOCRATES: Don't you know that the first thing politicians put in their writings[37] is the names of their admirers?

PHAEDRUS: How so?

SOCRATES: "Resolved," the author often begins, "by the Council" or "by the People" or by both, and "So-and-so said"[38]—meaning himself, the writer, with great solemnity and self-importance. Only then does he go on with what he has to say, showing off his wisdom to his admirers, often composing a very long document. Do you think there's any difference between that and a written speech?

b PHAEDRUS: No, I don't.

SOCRATES: Well, then, if it remains on the books, he is delighted and leaves the stage a poet. But if it is struck down, if he fails as a speech writer and isn't considered worthy of having his work written down, he goes into deep mourning, and his friends along with him.

PHAEDRUS: He certainly does.

SOCRATES: Clearly, then, they don't feel contempt for speechwriting; on the contrary, they are in awe of it.

36. Apparently this was a familiar example of something named by language that means the opposite—though called "pleasant" it was really a long, nasty bend.

37. Reading *suggramatos* at a1.

38. This is the standard form for decisions, including legislation, made by the assembly of Athens, though it is not the standard beginning for even the most political of speeches.

PHAEDRUS: Quite so.

SOCRATES: There's this too. What of an orator or a king who acquires c
enough power to match Lycurgus, Solon, or Darius as a lawgiver[39] and acquires immortal fame as a speech writer in his city? Doesn't he think that he is equal to the gods while he is still alive? And don't those who live in later times believe just the same about him when they behold his writings?

PHAEDRUS: Very much so.

SOCRATES: Do you really believe then that any one of these people, whoever he is and however much he hates Lysias, would reproach him for being a writer?

PHAEDRUS: It certainly isn't likely in view of what you said, for he would probably be reproaching his own ambition as well.

SOCRATES: This, then, is quite clear: Writing speeches is not in itself a d
shameful thing.

PHAEDRUS: How could it be?

SOCRATES: It's not speaking or writing well that's shameful; what's really shameful is to engage in either of them shamefully or badly.

PHAEDRUS: That is clear.

SOCRATES: So what distinguishes good from bad writing? Do we need to ask this question of Lysias or anyone else who ever did or will write anything—whether a public or a private document, poetic verse or plain prose?

PHAEDRUS: You ask if we need to? Why else should one live, I say, if e
not for pleasures of this sort? Certainly not for those you cannot feel unless you are first in pain, like most of the pleasures of the body, and which for this reason we call the pleasures of slaves.

SOCRATES: It seems we clearly have the time. Besides, I think that the
cicadas, who are singing and carrying on conversations with one another 259
in the heat of the day above our heads, are also watching us. And if they
saw the two of us avoiding conversation at midday like most people,
diverted by their song and, sluggish of mind, nodding off, they would
have every right to laugh at us, convinced that a pair of slaves had come
to their resting place to sleep like sheep gathering around the spring in
the afternoon. But if they see us in conversation, steadfastly navigating b
around them as if they were the Sirens, they will be very pleased and
immediately give us the gift from the gods they are able to give to mortals.

PHAEDRUS: What is this gift? I don't think I have heard of it.

SOCRATES: Everyone who loves the Muses should have heard of this. The story goes that the cicadas used to be human beings who lived before the birth of the Muses. When the Muses were born and song was created

39. Lycurgus was the legendary lawgiver of Sparta. Solon reformed the constitution of Athens in the early sixth century B.C. and was revered by both democrats and their opponents. Darius was king of Persia (521–486 B.C.). None of these was famous as a speech writer.

for the first time, some of the people of that time were so overwhelmed
c with the pleasure of singing that they forgot to eat or drink; so they died without even realizing it. It is from them that the race of the cicadas came into being; and, as a gift from the Muses, they have no need of nourishment once they are born. Instead, they immediately burst into song, without food or drink, until it is time for them to die. After they die, they go to the Muses and tell each one of them which mortals have honored her. To
d Terpsichore they report those who have honored her by their devotion to the dance and thus make them dearer to her. To Erato, they report those who honored her by dedicating themselves to the affairs of love, and so too with the other Muses, according to the activity that honors each. And to Calliope, the oldest among them, and Urania, the next after her, who preside over the heavens and all discourse, human and divine, and sing with the sweetest voice, they report those who honor their special kind of music by leading a philosophical life.

There are many reasons, then, why we should talk and not waste our afternoon in sleep.

Phaedrus: By all means, let's talk.

e Socrates: Well, then, we ought to examine the topic we proposed just now: When is a speech well written and delivered, and when is it not?

Phaedrus: Plainly.

Socrates: Won't someone who is to speak well and nobly have to have in mind the truth about the subject he is going to discuss?

Phaedrus: What I have actually heard about this, Socrates, my friend,
260 is that it is not necessary for the intending orator to learn what is really just, but only what will seem just to the crowd who will act as judges. Nor again what is really good or noble, but only what will seem so. For that is what persuasion proceeds from, not truth.

Socrates: Anything that wise men say, Phaedrus, "is not lightly to be cast aside";[40] we must consider whether it might be right. And what you just said, in particular, must not be dismissed.

Phaedrus: You're right.

Socrates: Let's look at it this way, then.

Phaedrus: How?

b Socrates: Suppose I were trying to convince you that you should fight your enemies on horseback, and neither one of us knew what a horse is, but I happened to know this much about you, that Phaedrus believes a horse is the tame animal with the longest ears—

Phaedrus: But that would be ridiculous, Socrates.

Socrates: Not quite yet, actually. But if I were seriously trying to convince you, having composed a speech in praise of the donkey in which I called it a horse and claimed that having such an animal is of immense value

40. *Iliad* ii.361.

both at home and in military service, that it is good for fighting and for carrying your baggage and that it is useful for much else besides— c

PHAEDRUS: Well, that would be totally ridiculous.

SOCRATES: Well, which is better? To be ridiculous and a friend? Or clever and an enemy?

PHAEDRUS: The former.

SOCRATES: And so, when a rhetorician who does not know good from bad addresses a city which knows no better and attempts to sway it, not praising a miserable donkey as if it were a horse, but bad as if it were good, and, having studied what the people believe, persuades them to do something bad instead of good—with that as its seed, what sort of crop d
do you think rhetoric can harvest?

PHAEDRUS: A crop of really poor quality.

SOCRATES: But could it be, my friend, that we have mocked the art of speaking more rudely than it deserves? For it might perhaps reply, "What bizarre nonsense! Look, I am not forcing anyone to learn how to make speeches without knowing the truth; on the contrary, my advice, for what it is worth, is to take me up only after mastering the truth. But I do make this boast: even someone who knows the truth couldn't produce conviction on the basis of a systematic art without me."

PHAEDRUS: Well, is that a fair reply? e

SOCRATES: Yes, it is—if, that is, the arguments now advancing upon rhetoric testify that it is an art. For it seems to me as if I hear certain arguments approaching and protesting that that is a lie and that rhetoric is not an art but an artless practice.[41] As the Spartan said, there is no genuine art of speaking without a grasp of truth, and there never will be.

PHAEDRUS: We need to hear these arguments, Socrates. Come, produce 261
them, and examine them: What is their point? How do they make it?

SOCRATES: Come to us, then, noble creatures; convince Phaedrus, him of the beautiful offspring,[42] that unless he pursues philosophy properly he will never be able to make a proper speech on any subject either. And let Phaedrus be the one to answer.

PHAEDRUS: Let them put their questions.

SOCRATES: Well, then, isn't the rhetorical art, taken as a whole, a way of directing the soul by means of speech, not only in the lawcourts and on other public occasions but also in private? Isn't it one and the same art whether its subject is great or small, and no more to be held in esteem— b
if it is followed correctly—when its questions are serious than when they are trivial? Or what have you heard about all this?

PHAEDRUS: Well, certainly not what *you* have! Artful speaking and writing is found mainly in the lawcourts; also perhaps in the Assembly. That's all I've heard.

41. For a criticism of rhetoric as not an art, see *Gorgias* 462b–c.

42. Cf. 242a–b; *Symposium* 209b–e.

SOCRATES: Well, have you only heard of the rhetorical treatises of Nestor and Odysseus—those they wrote in their spare time in Troy? Haven't you also heard of the works of Palamedes?[43]

c PHAEDRUS: No, by Zeus, I haven't even heard of Nestor's—unless by Nestor you mean Gorgias, and by Odysseus, Thrasymachus or Theodorus.[44]

SOCRATES: Perhaps. But let's leave these people aside. Answer this question yourself: What do adversaries do in the lawcourts? Don't they speak on opposite sides? What else can we call what they do?

PHAEDRUS: That's it, exactly.

SOCRATES: About what is just and what is unjust?

PHAEDRUS: Yes.

d SOCRATES: And won't whoever does this artfully make the same thing appear to the same people sometimes just and sometimes, when he prefers, unjust?

PHAEDRUS: Of course.

SOCRATES: And when he addresses the Assembly, he will make the city approve a policy at one time as a good one, and reject it—the very same policy—as just the opposite at another.

PHAEDRUS: Right.

SOCRATES: Now, don't we know that the Eleatic Palamedes is such an artful speaker that his listeners will perceive the same things to be both similar and dissimilar, both one and many, both at rest and also in motion?[45]

PHAEDRUS: Most certainly.

SOCRATES: We can therefore find the practice of speaking on opposite
e sides not only in the lawcourts and in the Assembly. Rather, it seems that one single art—if, of course, it is an art in the first place—governs all speaking. By means of it one can make out as similar anything that can be so assimilated, to everything to which it can be made similar, and expose anyone who tries to hide the fact that that is what he is doing.

PHAEDRUS: What do you mean by that?

SOCRATES: I think it will become clear if we look at it this way. Where is deception most likely to occur—regarding things that differ much or things that differ little from one another?

262 PHAEDRUS: Regarding those that differ little.

SOCRATES: At any rate, you are more likely to escape detection, as you shift from one thing to its opposite, if you proceed in small steps rather than in large ones.

43. Nestor and Odysseus are Homeric heroes known for their speaking ability. Palamedes, who does not figure in Homer, was proverbial for his cunning.

44. Gorgias of Leontini was the most famous teacher of rhetoric to visit Athens. About Thrasymachus of Chalcedon (cf. 267c) we know little beyond what we can infer from his appearance in Book 1 of the *Republic*. On Theodorus of Byzantium (not to be confused with the geometer who appears in the *Theaetetus*) see 266e and Aristotle *Rhetoric* 3.13.5.

45. The Eleatic Palamedes is presumably Zeno of Elea, the author of the famous paradoxes about motion.

Phaedrus: Without a doubt.

Socrates: Therefore, if you are to deceive someone else and to avoid deception yourself, you must know precisely the respects in which things are similar and dissimilar to one another.

Phaedrus: Yes, you must.

Socrates: And is it really possible for someone who doesn't know what each thing truly is to detect a similarity—whether large or small—between something he doesn't know and anything else?

Phaedrus: That is impossible. b

Socrates: Clearly, therefore, the state of being deceived and holding beliefs contrary to what is the case comes upon people by reason of certain similarities.

Phaedrus: That is how it happens.

Socrates: Could someone, then, who doesn't know what each thing is ever have the art to lead others little by little through similarities away from what is the case on each occasion to its opposite? Or could he escape this being done to himself?

Phaedrus: Never.

Socrates: Therefore, my friend, the art of a speaker who doesn't know c
the truth and chases opinions instead is likely to be a ridiculous thing—not an art at all!

Phaedrus: So it seems.

Socrates: So, shall we look for instances of what we called the artful and the artless in the speech of Lysias you carried here and in our own speeches?

Phaedrus: That's the best thing to do—because, as it is, we are talking quite abstractly, without enough examples.

Socrates: In fact, by some chance the two speeches do, as it seems,
contain an example of the way in which someone who knows the truth d
can toy with his audience and mislead them. For my part, Phaedrus, I hold the local gods responsible for this—also, perhaps, the messengers of the Muses who are singing over our heads may have inspired me with this gift: certainly *I* don't possess any art of speaking.

Phaedrus: Fine, fine. But explain what you mean.

Socrates: Come, then—read me the beginning of Lysias' speech.

Phaedrus: "You understand my situation: I've told you how good it e
would be for us, in my opinion, if we could work this out. In any case, I don't think I should lose the chance to get what I am asking for, merely because I don't happen to be in love with you. A man in love will wish he had not done you any favors—"

Socrates: Stop. Our task is to say how he fails and writes artlessly. Right?

Phaedrus: Yes. 263

Socrates: Now isn't this much absolutely clear: We are in accord with one another about some of the things we discourse about and in discord about others?

Phaedrus: I think I understand what you are saying; but, please, can you make it a little clearer?

SOCRATES: When someone utters the word "iron" or "silver," don't we all think of the same thing?

PHAEDRUS: Certainly.

SOCRATES: But what happens when we say "just" or "good"? Doesn't each one of us go in a different direction? Don't we differ with one another and even with ourselves?

PHAEDRUS: We certainly do.

b SOCRATES: Therefore, we agree about the former and disagree about the latter.

PHAEDRUS: Right.

SOCRATES: Now in which of these two cases are we more easily deceived? And when does rhetoric have greater power?

PHAEDRUS: Clearly, when we wander in different directions.

SOCRATES: It follows that whoever wants to acquire the art of rhetoric must first make a systematic division and grasp the particular character of each of these two kinds of thing, both the kind where most people wander in different directions and the kind where they do not.

c PHAEDRUS: What a splendid thing, Socrates, he will have understood if he grasps *that!*

SOCRATES: Second, I think, he must not be mistaken about his subject; he must have a sharp eye for the class to which whatever he is about to discuss belongs.

PHAEDRUS: Of course.

SOCRATES: Well, now, what shall we say about love? Does it belong to the class where people differ or to that where they don't?

PHAEDRUS: Oh, surely the class where they differ. Otherwise, do you think you could have spoken of it as you did a few minutes ago, first saying that it is harmful both to lover and beloved and then immediately afterward that it is the greatest good?

d SOCRATES: Very well put. But now tell me this—I can't remember at all because I was completely possessed by the gods: Did I define love at the beginning of my speech?

PHAEDRUS: Oh, absolutely, by Zeus, you most certainly did.

SOCRATES: Alas, how much more artful with speeches the Nymphs, daughters of Achelous, and Pan, son of Hermes, are, according to what you say, than Lysias, son of Cephalus! Or am I wrong? Did Lysias too, at
e the start of his love-speech, compel us to assume that love is the single thing that he himself wanted it to be? Did he then complete his speech by arranging everything in relation to that? Will you read its opening once again?

PHAEDRUS: If you like. But what you are looking for is not there.

SOCRATES: Read it, so that I can hear it in his own words.

PHAEDRUS: "You understand my situation: I've told you how good it would be for us, in my opinion, if we could work this out. In any case, I don't think I should lose the chance to get what I am asking for, merely
264 because I don't happen to be in love with you. A man in love will wish he had not done you any favors, once his desire dies down—"

Socrates: He certainly seems a long way from doing what we wanted. He doesn't even start from the beginning but from the end, making his speech swim upstream on its back. His first words are what a lover would say to his boy as he was concluding his speech. Am I wrong, Phaedrus, dear heart?

Phaedrus: Well, Socrates, that was the end for which he gave the speech! b

Socrates: And what about the rest? Don't the parts of the speech appear to have been thrown together at random? Is it evident that the second point had to be made second for some compelling reason? Is that so for any of the parts? I at least—of course I know nothing about such matters—thought the author said just whatever came to mind next, though not without a certain noble willfulness. But you, do you know any principle of speech-composition compelling him to place these things one after another in this order?

Phaedrus: It's very generous of you to think that I can understand his c
reasons so clearly.

Socrates: But surely you will admit at least this much: Every speech must be put together like a living creature, with a body of its own; it must be neither without head nor without legs; and it must have a middle and extremities that are fitting both to one another and to the whole work.

Phaedrus: How could it be otherwise?

Socrates: But look at your friend's speech: Is it like that or is it otherwise? Actually, you'll find that it's just like the epigram people say is inscribed on the tomb of Midas the Phrygian.

Phaedrus: What epigram is that? And what's the matter with it? d

Socrates: It goes like this:

*A maid of bronze am I, on Midas' tomb I lie*
*As long as water flows, and trees grow tall*
*Shielding the grave where many come to cry*
*That Midas rests here I say to one and all.*

I'm sure you notice that it makes no difference at all which of its verses e
comes first, and which last.

Phaedrus: You are making fun of our speech, Socrates.

Socrates: Well, then, if that upsets you, let's leave that speech aside—even though I think it has plenty of very useful examples, provided one tries to emulate them as little as possible—and turn to the others. I think it is important for students of speechmaking to pay attention to one of their features.

Phaedrus: What do you mean? 265

Socrates: They were in a way opposite to one another. One claimed that one should give one's favors to the lover; the other, to the non-lover.

Phaedrus: Most manfully, too.

Socrates: I thought you were going to say "madly," which would have been the truth, and is also just what I was looking for: We did say, didn't we, that love is a kind of madness?

PHAEDRUS: Yes.

SOCRATES: And that there are two kinds of madness, one produced by human illness, the other by a divinely inspired release from normally accepted behavior?

b PHAEDRUS: Certainly.

SOCRATES: We also distinguished four parts within the divine kind and connected them to four gods. Having attributed the inspiration of the prophet to Apollo, of the mystic to Dionysus, of the poet to the Muses, and the fourth part of madness to Aphrodite and to Love, we said that the madness of love is the best. We used a certain sort of image to describe love's passion; perhaps it had a measure of truth in it, though it may also have led us astray. And having whipped up a not altogether implausible
c speech, we sang playfully, but also appropriately and respectfully, a story-like hymn to my master and yours, Phaedrus—to Love, who watches over beautiful boys.

PHAEDRUS: And I listened to it with the greatest pleasure.

SOCRATES: Let's take up this point about it right away: How was the speech able to proceed from censure to praise?

PHAEDRUS: What exactly do you mean by that?

SOCRATES: Well, everything else in it really does appear to me to have been spoken in play. But part of it was given with Fortune's guidance,
d and there were in it two kinds of things the nature of which it would be quite wonderful to grasp by means of a systematic art.

PHAEDRUS: Which things?

SOCRATES: The first consists in seeing together things that are scattered about everywhere and collecting them into one kind, so that by defining each thing we can make clear the subject of any instruction we wish to give. Just so with our discussion of love: Whether its definition was or was not correct, at least it allowed the speech to proceed clearly and consistently with itself.

PHAEDRUS: And what is the other thing you are talking about, Socrates?

e SOCRATES: This, in turn, is to be able to cut up each kind according to its species along its natural joints, and to try not to splinter any part, as a bad butcher might do. In just this way, our two speeches placed all
266 mental derangements into one common kind. Then, just as each single body has parts that naturally come in pairs of the same name (one of them being called the right-hand and the other the left-hand one), so the speeches, having considered unsoundness of mind to be by nature one single kind within us, proceeded to cut it up—the first speech cut its left-hand part, and continued to cut until it discovered among these parts a sort of love that can be called "left-handed," which it correctly denounced; the second speech, in turn, led us to the right-hand part of madness; discovered a love that shares its name with the other but is actually divine; set it out
b before us, and praised it as the cause of our greatest goods.

PHAEDRUS: You are absolutely right.

SOCRATES: Well, Phaedrus, I am myself a lover of these divisions and collections, so that I may be able to think and to speak; and if I believe

that someone else is capable of discerning a single thing that is also by nature capable of encompassing many,[46] I follow "straight behind, in his tracks, as if he were a god."[47] God knows whether this is the right name for those who can do this correctly or not, but so far I have always called c
them "dialecticians." But tell me what I must call them now that we have learned all this from Lysias and you. Or is it just that art of speaking that Thrasymachus and the rest of them use, which has made them masters of speechmaking and capable of producing others like them—anyhow those who are willing to bring them gifts and to treat them as if they were kings?

PHAEDRUS: They may behave like kings, but they certainly lack the knowledge you're talking about. No, it seems to me that you are right in calling the sort of thing you mentioned dialectic; but, it seems to me, rhetoric still eludes us.

SOCRATES: What are you saying? Could there be anything valuable which d
is independent of the methods I mentioned and is still grasped by art? If there is, you and I must certainly honor it, and we must say what part of rhetoric it is that has been left out.

PHAEDRUS: Well, there's quite a lot, Socrates: everything, at any rate, written up in the books on the art of speaking.

SOCRATES: You were quite right to remind me. First, I believe, there is the Preamble with which a speech must begin. This is what you mean, isn't it—the fine points of the art?

PHAEDRUS: Yes. e

SOCRATES: Second come the Statement of Facts and the Evidence of Witnesses concerning it; third, Indirect Evidence; fourth, Claims to Plausibility. And I believe at least that excellent Byzantine word-wizard adds Confirmation and Supplementary Confirmation.

PHAEDRUS: You mean the worthy Theodorus?[48]

SOCRATES: Quite. And he also adds Refutation and Supplementary Refu- 267
tation, to be used both in prosecution and in defense. Nor must we forget the most excellent Evenus of Paros,[49] who was the first to discover Covert Implication and Indirect Praise and who—some say—has even arranged Indirect Censures in verse as an aid to memory: a wise man indeed! And Tisias[50] and Gorgias? How can we leave them out when it is they who realized that what is likely must be held in higher honor than what is true; they who, by the power of their language, make small things appear great and great things small; they who express modern ideas in ancient garb, b
and ancient ones in modern dress; they who have discovered how to argue

46. Reading *pephukos* at b6.

47. *Odyssey* ii.406.

48. Cf. 261c.

49. Evenus of Paros was active as a sophist toward the end of the fifth century B.C. Only a few tiny fragments of his work survive.

50. Tisias of Syracuse, with Corax, is credited with the founding of the Sicilian school of rhetoric, represented by Gorgias and Polus.

both concisely and at infinite length about any subject? Actually, when I told Prodicus[51] this last, he laughed and said that only he had discovered the art of proper speeches: What we need are speeches that are neither long nor short but of the right length.

Phaedrus: Brilliantly done, Prodicus!

Socrates: And what about Hippias?[52] How can we omit him? I am sure our friend from Elis would cast his vote with Prodicus.

Phaedrus: Certainly.

Socrates: And what shall we say of the whole gallery of terms Polus[53]
c set up—speaking with Reduplication, Speaking in Maxims, Speaking in
Images—and of the terms Licymnius gave him as a present to help him
explain Good Diction?[54]

Phaedrus: But didn't Protagoras actually use similar terms?[55]

Socrates: Yes, Correct Diction, my boy, and other wonderful things. As
to the art of making speeches bewailing the evils of poverty and old age,
the prize, in my judgment, goes to the mighty Chalcedonian.[56] He it is also
d who knows best how to inflame a crowd and, once they are inflamed,
how to hush them again with his words' magic spell, as he says himself.
And let's not forget that he is as good at producing slander as he is at
refuting it, whatever its source may be.

As to the way of ending a speech, everyone seems to be in agreement, though some call it Recapitulation and others by some other name.

Phaedrus: You mean, summarizing everything at the end and reminding the audience of what they've heard?

Socrates: That's what I mean. And if you have anything else to add about the art of speaking—

Phaedrus: Only minor points, not worth making.

268 Socrates: Well, let's leave minor points aside. Let's hold what we do
have closer to the light so that we can see precisely the power of the art
these things produce.

Phaedrus: A very great power, Socrates, especially in front of a crowd.

Socrates: Quite right. But now, my friend, look closely: Do you think, as I do, that its fabric is a little threadbare?

51. Prodicus of Ceos, who lived from about 470 till after 400 B.C., is frequently mentioned by Plato in connection with his ability to make fine verbal distinctions.

52. Hippias of Elis was born in the mid-fifth century and traveled widely teaching a variety of subjects, including mathematics, astronomy, harmony, mnemonics, ethics, and history as well as public speaking.

53. Polus was a pupil of Gorgias; Plato represents him in the *Gorgias*, esp. at 448c and 471a–c. He was said to have composed an *Art of Rhetoric* (*Gorgias*, 462b).

54. Licymnius of Chios was a dithyrambic poet and teacher of rhetoric.

55. Protagoras of Abdera, whose life spanned most of the fifth century B.C., was the most famous of the early sophists. We have a vivid portrayal of him in Plato's *Protagoras* and an intriguing reconstruction of his epistemology in the *Theaetetus*.

56. Literally, "the might of the Chalcedonian": a Homeric figure referring to Thrasymachus, who came from Chalcedon. Cf. 261c.

PHAEDRUS: Can you show me?

SOCRATES: All right, tell me this. Suppose someone came to your friend
Eryximachus or his father Acumenus and said: "I know treatments to raise
or lower (whichever I prefer) the temperature of people's bodies; if I decide b
to, I can make them vomit or make their bowels move, and all sorts of
things. On the basis of this knowledge, I claim to be a physician; and I
claim to be able to make others physicians as well by imparting it to them."
What do you think they would say when they heard that?

PHAEDRUS: What could they say? They would ask him if he also knew to whom he should apply such treatments, when, and to what extent.

SOCRATES: What if he replied, "I have no idea. My claim is that whoever
learns from me will manage to do what you ask on his own"? c

PHAEDRUS: I think they'd say the man's mad if he thinks he's a doctor just because he read a book or happened to come across a few potions; he knows nothing of the art.

SOCRATES: And suppose someone approached Sophocles and Euripides
and claimed to know how to compose the longest passages on trivial topics
and the briefest ones on topics of great importance, that he could make
them pitiful if he wanted, or again, by contrast, terrifying and menacing, d
and so on. Suppose further that he believed that by teaching this he was
imparting the knowledge of composing tragedies—

PHAEDRUS: Oh, I am sure they too would laugh at anyone who thought a tragedy was anything other than the proper arrangement of these things: They have to fit with one another and with the whole work.

SOCRATES: But I am sure they wouldn't reproach him rudely. They would
react more like a musician confronted by a man who thought he had
mastered harmony because he was able to produce the highest and lowest e
notes on his strings. The musician would not say fiercely, "You stupid
man, you are out of your mind!" As befits his calling, he would speak
more gently: "My friend, though that too is necessary for understanding
harmony, someone who has gotten as far as you have may still know
absolutely nothing about the subject. What you know is what it's necessary
to learn before you study harmony, but not harmony itself."

PHAEDRUS: That's certainly right.

SOCRATES: So Sophocles would also tell the man who was showing off 269
to them that he knew the preliminaries of tragedy, but not the art of
tragedy itself. And Acumenus would say his man knew the preliminaries
of medicine, but not medicine itself.

PHAEDRUS: Absolutely.

SOCRATES: And what if the "honey-tongued Adrastus" (or perhaps Pericles)[57] were to hear of all the marvelous techniques we just discussed—Speaking Concisely and Speaking in Images and all the rest we listed and

57. Pericles, who dominated Athens from the 450s until his death in 429 B.C., was famous as the most successful orator-politician of his time. The quotation is from the early Spartan poet Tyrtaeus, fragment 12.8 (Edmonds). Adrastus is a legendary warrior hero of Argos, one of the main characters in Euripides' *Suppliants*.

b proposed to examine under the light? Would he be angry or rude, as you and I were, with those who write of those techniques and teach them as if they are rhetoric itself, and say something coarse to them? Wouldn't he—being wiser than we are—reproach us as well and say, "Phaedrus and Socrates, you should not be angry with these people—you should be sorry for them. The reason they cannot define rhetoric is that they are ignorant of dialectic. It is their ignorance that makes them think they have discovered what rhetoric is when they have mastered only what it is
c necessary to learn as preliminaries. So they teach these preliminaries and imagine their pupils have received a full course in rhetoric, thinking the task of using each of them persuasively and putting them together into a whole speech is a minor matter, to be worked out by the pupils from their own resources"?

PHAEDRUS: Really, Socrates, the art these men present as rhetoric in their courses and handbooks is no more than what you say. In my judgment,
d at least, your point is well taken. But how, from what source, could one acquire the art of the true rhetorician, the really persuasive speaker?

SOCRATES: Well, Phaedrus, becoming good enough to be an accomplished competitor is probably—perhaps necessarily—like everything else. If you have a natural ability for rhetoric, you will become a famous rhetorician, provided you supplement your ability with knowledge and practice. To the extent that you lack any one of them, to that extent you will be less than perfect. But, insofar as there is an art of rhetoric, I don't believe the right method for acquiring it is to be found in the direction Lysias and Thrasymachus have followed.

PHAEDRUS: Where can we find it then?

e SOCRATES: My dear friend, maybe we can see now why Pericles was in all likelihood the greatest rhetorician of all.

PHAEDRUS: How is that?

270 SOCRATES: All the great arts require endless talk and ethereal speculation about nature: This seems to be what gives them their lofty point of view and universal applicability. That's just what Pericles mastered—besides having natural ability. He came across Anaxagoras, who was just that sort of man, got his full dose of ethereal speculation, and understood the nature of mind and mindlessness[58]—just the subject on which Anaxagoras had the most to say. From this, I think, he drew for the art of rhetoric what was useful to it.

PHAEDRUS: What do you mean by that?

b SOCRATES: Well, isn't the method of medicine in a way the same as the method of rhetoric?

PHAEDRUS: How so?

SOCRATES: In both cases we need to determine the nature of something—of the body in medicine, of the soul in rhetoric. Otherwise, all we'll have will be an empirical and artless practice. We won't be able to supply, on

58. Reading *anoias* at a5.

the basis of an art, a body with the medicines and diet that will make it healthy and strong, or a soul with the reasons and customary rules for conduct that will impart to it the convictions and virtues we want.

PHAEDRUS: That is most likely, Socrates.

SOCRATES: Do you think, then, that it is possible to reach a serious under- c
standing of the nature of the soul without understanding the nature of the world as a whole?

PHAEDRUS: Well, if we're to listen to Hippocrates, Asclepius' descendant,[59] we won't even understand the body if we don't follow that method.

SOCRATES: He speaks well, my friend. Still, Hippocrates aside, we must consider whether argument supports that view.

PHAEDRUS: I agree.

SOCRATES: Consider, then, what both Hippocrates and true argument
say about nature. Isn't this the way to think systematically about the nature d
of anything? First, we must consider whether the object regarding which we intend to become experts and capable of transmitting our expertise is simple or complex. Then, if it is simple, we must investigate its power: What things does it have what natural power of acting upon? By what things does it have what natural disposition to be acted upon? If, on the other hand, it takes many forms, we must enumerate them all and, as we did in the simple case, investigate how each is naturally able to act upon what and how it has a natural disposition to be acted upon by what.

PHAEDRUS: It seems so, Socrates.

SOCRATES: Proceeding by any other method would be like walking with e
the blind. Conversely, whoever studies anything on the basis of an art must never be compared to the blind or the deaf. On the contrary, it is clear that someone who teaches another to make speeches as an art will demonstrate precisely the essential nature of that to which speeches are to be applied. And that, surely, is the soul.

PHAEDRUS: Of course.

SOCRATES: This is therefore the object toward which the speaker's whole 271
effort is directed, since it is in the soul that he attempts to produce conviction. Isn't that so?

PHAEDRUS: Yes.

SOCRATES: Clearly, therefore, Thrasymachus and anyone else who teaches the art of rhetoric seriously will, first, describe the soul with absolute precision and enable us to understand what it is: whether it is one and homogeneous by nature or takes many forms, like the shape of bodies, since, as we said, that's what it is to demonstrate the nature of something.

PHAEDRUS: Absolutely.

59. Hippocrates, a contemporary of Socrates, is the famous doctor whose name is given to the Hippocratic Oath. None of the written works that have come down to us under his name express the view attributed to him in what follows. All doctors were said to be descendants of Asclepius, hero and god of healing.

SOCRATES: Second, he will explain how, in virtue of its nature, it acts and is acted upon by certain things.

PHAEDRUS: Of course.

b SOCRATES: Third, he will classify the kinds of speech and of soul there are, as well as the various ways in which they are affected, and explain what causes each. He will then coordinate each kind of soul with the kind of speech appropriate to it. And he will give instructions concerning the reasons why one kind of soul is necessarily convinced by one kind of speech while another necessarily remains unconvinced.

PHAEDRUS: This, I think, would certainly be the best way.

SOCRATES: In fact, my friend, no speech will ever be a product of art, whether it is a model or one actually given, if it is delivered or written in
c any other way—on this or on any other subject. But those who now write *Arts of Rhetoric*—we were just discussing them—are cunning people: they hide the fact that they know very well everything about the soul. Well, then, until they begin to speak and write in this way, we mustn't allow ourselves to be convinced that they write on the basis of the art.

PHAEDRUS: What way is that?

SOCRATES: It's very difficult to speak the actual words, but as to how one should write in order to be as artful as possible—that I am willing to tell you.

PHAEDRUS: Please do.

d SOCRATES: Since the nature of speech is in fact to direct the soul, whoever intends to be a rhetorician must know how many kinds of soul there are. Their number is so-and-so many; each is of such-and-such a sort; hence some people have such-and-such a character and others have such-and-such. Those distinctions established, there are, in turn, so-and-so many kinds of speech, each of such-and-such a sort. People of such-and-such a character are easy to persuade by speeches of such-and-such a sort in connection with such-and-such an issue for this particular reason, while people of such-and-such another sort are difficult to persuade for those particular reasons.

The orator must learn all this well, then put his theory into practice and
e develop the ability to discern each kind clearly as it occurs in the actions of real life. Otherwise he won't be any better off than he was when he was still listening to those discussions in school. He will now not only be able to say what kind of person is convinced by what kind of speech; on
272 meeting someone he will be able to discern what he is like and make clear to himself that the person actually standing in front of him is of just this particular sort of character he had learned about in school—to that he must now apply speeches of such-and-such a kind in this particular way in order to secure conviction about such-and-such an issue. When he has learned all this—when, in addition, he has grasped the right occasions for speaking and for holding back; and when he has also understood when the time is right for Speaking Concisely or Appealing to Pity or Exaggeration or for any other of the kinds of speech he has learned and when it is not—then,

and only then, will he have finally mastered the art well and completely. But
if his speaking, his teaching, or his writing lacks any one of these elements b
and he still claims to be speaking with art, you'll be better off if you don't believe him.

"Well, Socrates and Phaedrus," the author of this discourse might say, "do you agree? Could we accept an art of speaking presented in any other terms?"

Phaedrus: That would be impossible, Socrates. Still, it's evidently rather a major undertaking.

Socrates: You're right. And that's why we must turn all our arguments
every which way and try to find some easier and shorter route to the art: c
we don't want to follow a long rough path for no good reason when we can choose a short smooth one instead.

Now, try to remember if you've heard anything helpful from Lysias or anybody else. Speak up.

Phaedrus: It's not for lack of trying, but nothing comes to mind right now.

Socrates: Well, then, shall I tell you something I've heard people say who care about this topic?

Phaedrus: Of course.

Socrates: We do claim, after all, Phaedrus, that it is fair to give the wolf's side of the story as well.

Phaedrus: That's just what you should do. d

Socrates: Well, these people say that there is no need to be so solemn about all this and stretch it out to such lengths. For the fact is, as we said ourselves at the beginning of this discussion,[60] that one who intends to be an able rhetorician has no need to know the truth about the things that are just or good or yet about the people who are such either by nature or upbringing. No one in a lawcourt, you see, cares at all about the truth of
such matters. They only care about what is convincing. This is called "the e
likely," and that is what a man who intends to speak according to art should concentrate on. Sometimes, in fact, whether you are prosecuting or defending a case, you must not even say what actually happened, if it was not likely to have happened—you must say something that is likely instead. Whatever you say, you should pursue what is likely and leave
the truth aside: the whole art consists in cleaving to that throughout 273
your speech.

Phaedrus: That's an excellent presentation of what people say who profess to be expert in speeches, Socrates. I recall that we raised this issue briefly earlier on, but it seems to be their single most important point.

Socrates: No doubt you've churned through Tisias' book quite carefully.
Then let Tisias tell us this also: By "the likely" does he mean anything but b
what is accepted by the crowd?

Phaedrus: What else?

60. At 259e ff.

Socrates: And it's likely it was when he discovered this clever and artful technique that Tisias wrote that if a weak but spunky man is taken to court because he beat up a strong but cowardly one and stole his cloak or something else, neither one should tell the truth. The coward must say that the spunky man didn't beat him up all by himself, while the latter
c must rebut this by saying that only the two of them were there, and fall back on that well-worn plea, "How could a man like me attack a man like him?" The strong man, naturally, will not admit his cowardice, but will try to invent some other lie, and may thus give his opponent the chance to refute him. And in other cases, speaking as the art dictates will take similar forms. Isn't that so, Phaedrus?

Phaedrus: Of course.

Socrates: Phew! Tisias—or whoever else it was and whatever name he pleases to use for himself[61]—seems[62] to have discovered an art which he has disguised very well! But now, my friend, shall we or shall we not say to him—

d Phaedrus: What?

Socrates: This: "Tisias, some time ago, before you came into the picture, we were saying that people get the idea of what is likely through its similarity to the truth. And we just explained that in every case the person who knows the truth knows best how to determine similarities. So, if you have something new to say about the art of speaking, we shall listen. But if you don't, we shall remain convinced by the explanations we gave just before: No one will ever possess the art of speaking, to the extent that any
e human being can, unless he acquires the ability to enumerate the sorts of characters to be found in any audience, to divide everything according to its kinds, and to grasp each single thing firmly by means of one form. And no one can acquire these abilities without great effort—a laborious effort a sensible man will make not in order to speak and act among human beings, but so as to be able to speak and act in a way that pleases the gods as much as possible. Wiser people than ourselves, Tisias, say that a reasonable man must put his mind to being pleasant not to his fellow
274 slaves (though this may happen as a side effect) but to his masters, who are wholly good. So, if the way round is long, don't be astonished: we must make this detour for the sake of things that are very important, not for what you have in mind. Still, as our argument asserts, if that is what you want, you'll get it best as a result of pursuing our own goal.

Phaedrus: What you've said is wonderful, Socrates—if only it could be done!

b Socrates: Yet surely whatever one must go through on the way to an honorable goal is itself honorable.

Phaedrus: Certainly.

61. Socrates may be referring to Corax, whose name is also the Greek word for "crow."

62. Literally, "is likely."

SOCRATES: Well, then, that's enough about artfulness and artlessness in connection with speaking.

PHAEDRUS: Quite.

SOCRATES: What's left, then, is aptness and ineptness in connection with writing: What feature makes writing good, and what inept? Right?

PHAEDRUS: Yes.

SOCRATES: Well, do you know how best to please god when you either use words or discuss them in general?

PHAEDRUS: Not at all. Do you?

SOCRATES: I can tell you what I've heard the ancients said, though they c
alone know the truth. However, if we could discover that ourselves, would we still care about the speculations of other people?

PHAEDRUS: That's a silly question. Still, tell me what you say you've heard.

SOCRATES: Well, this is what I've heard. Among the ancient gods of Naucratis[63] in Egypt there was one to whom the bird called the ibis is sacred. The name of that divinity was Theuth,[64] and it was he who first
discovered number and calculation, geometry and astronomy, as well as d
the games of checkers and dice, and, above all else, writing.

Now the king of all Egypt at that time was Thamus,[65] who lived in the great city in the upper region that the Greeks call Egyptian Thebes; Thamus they call Ammon.[66] Theuth came to exhibit his arts to him and urged him to disseminate them to all the Egyptians. Thamus asked him about the
usefulness of each art, and while Theuth was explaining it, Thamus praised e
him for whatever he thought was right in his explanations and criticized him for whatever he thought was wrong.

The story goes that Thamus said much to Theuth, both for and against each art, which it would take too long to repeat. But when they came to writing, Theuth said: "O King, here is something that, once learned, will make the Egyptians wiser and will improve their memory; I have discovered a potion for memory and for wisdom." Thamus, however, replied: "O most expert Theuth, one man can give birth to the elements of an art, but only
another can judge how they can benefit or harm those who will use them. 275
And now, since you are the father of writing, your affection for it has made you describe its effects as the opposite of what they really are. In fact, it will introduce forgetfulness into the soul of those who learn it: they will not practice using their memory because they will put their trust in writing, which

63. Naucratis was a Greek trading colony in Egypt. The story that follows is probably an invention of Plato's (see 275b3) in which he reworks elements from Egyptian and Greek mythology.

64. Theuth (or Thoth) is the Egyptian god of writing, measuring, and calculation. The Greeks identified Thoth with Hermes, perhaps because of his role in weighing the soul. Thoth figures in a related story about the alphabet at *Philebus* 18b.

65. As king of the Egyptian gods, Ammon (Thamus) was identified by Egyptians with the sun god Ra and by the Greeks with Zeus.

66. Accepting the emendation of *Thamoun* at d4.

is external and depends on signs that belong to others, instead of trying to remember from the inside, completely on their own. You have not discovered a potion for remembering, but for reminding; you provide your students with the appearance of wisdom, not with its reality. Your invention will enable them to hear many things without being properly taught, and they will
b imagine that they have come to know much while for the most part they will know nothing. And they will be difficult to get along with, since they will merely appear to be wise instead of really being so."

PHAEDRUS: Socrates, you're very good at making up stories from Egypt or wherever else you want!

SOCRATES: But, my friend, the priests of the temple of Zeus at Dodona say that the first prophecies were the words of an oak. Everyone who lived at that time, not being as wise as you young ones are today, found it rewarding enough in their simplicity to listen to an oak or even a stone,
c so long as it was telling the truth, while it seems to make a difference to you, Phaedrus, who is speaking and where he comes from. Why, though, don't you just consider whether what he says is right or wrong?

PHAEDRUS: I deserved that, Socrates. And I agree that the Theban king was correct about writing.

SOCRATES: Well, then, those who think they can leave written instructions for an art, as well as those who accept them, thinking that writing can yield results that are clear or certain, must be quite naive and truly ignorant of Ammon's prophetic judgment: otherwise, how could they possibly think
d that words that have been written down can do more than remind those who already know what the writing is about?

PHAEDRUS: Quite right.

SOCRATES: You know, Phaedrus, writing shares a strange feature with painting. The offsprings of painting stand there as if they are alive, but if anyone asks them anything, they remain most solemnly silent. The same is true of written words. You'd think they were speaking as if they had some understanding, but if you question anything that has been said because you want to learn more, it continues to signify just that very same
e thing forever. When it has once been written down, every discourse roams about everywhere, reaching indiscriminately those with understanding no less than those who have no business with it, and it doesn't know to whom it should speak and to whom it should not. And when it is faulted and attacked unfairly, it always needs its father's support; alone, it can neither defend itself nor come to its own support.

PHAEDRUS: You are absolutely right about that, too.

276 SOCRATES: Now tell me, can we discern another kind of discourse, a legitimate brother of this one? Can we say how it comes about, and how it is by nature better and more capable?

PHAEDRUS: Which one is that? How do you think it comes about?

SOCRATES: It is a discourse that is written down, with knowledge, in the soul of the listener; it can defend itself, and it knows for whom it should speak and for whom it should remain silent.

PHAEDRUS: You mean the living, breathing discourse of the man who knows, of which the written one can be fairly called an image.

SOCRATES: Absolutely right. And tell me this. Would a sensible farmer, b
who cared about his seeds and wanted them to yield fruit, plant them in all seriousness in the gardens of Adonis in the middle of the summer and enjoy watching them bear fruit within seven days? Or would he do this as an amusement and in honor of the holiday, if he did it at all?[67] Wouldn't he use his knowledge of farming to plant the seeds he cared for when it was appropriate and be content if they bore fruit seven months later?

PHAEDRUS: That's how he would handle those he was serious about, c
Socrates, quite differently from the others, as you say.

SOCRATES: Now what about the man who knows what is just, noble, and good? Shall we say that he is less sensible with his seeds than the farmer is with his?

PHAEDRUS: Certainly not.

SOCRATES: Therefore, he won't be serious about writing them in ink, sowing them, through a pen, with words that are as incapable of speaking in their own defense as they are of teaching the truth adequately.

PHAEDRUS: That wouldn't be likely.

SOCRATES: Certainly not. When he writes, it's likely he will sow gardens d
of letters for the sake of amusing himself, storing up reminders for himself "when he reaches forgetful old age" and for everyone who wants to follow in his footsteps, and will enjoy seeing them sweetly blooming. And when others turn to different amusements, watering themselves with drinking parties and everything else that goes along with them, he will rather spend his time amusing himself with the things I have just described.

PHAEDRUS: Socrates, you are contrasting a vulgar amusement with the e
very noblest—with the amusement of a man who can while away his time telling stories of justice and the other matters you mentioned.

SOCRATES: That's just how it is, Phaedrus. But it is much nobler to be serious about these matters, and use the art of dialectic. The dialectician chooses a proper soul and plants and sows within it discourse accompanied by knowledge—discourse capable of helping itself as well as the man who
planted it, which is not barren but produces a seed from which more 277
discourse grows in the character of others. Such discourse makes the seed forever immortal and renders the man who has it as happy as any human being can be.

PHAEDRUS: What you describe is really much nobler still.

SOCRATES: And now that we have agreed about this, Phaedrus, we are finally able to decide the issue.

PHAEDRUS: What issue is that?

SOCRATES: The issue which brought us to this point in the first place: We
wanted to examine the attack made on Lysias on account of his writing b

67. Gardens of Adonis were pots or window boxes used for forcing plants during the festival of Adonis.

speeches, and to ask which speeches are written artfully and which not. Now, I think that we have answered that question clearly enough.

PHAEDRUS: So it seemed; but remind me again how we did it.

SOCRATES: First, you must know the truth concerning everything you
are speaking or writing about; you must learn how to define each thing
in itself; and, having defined it, you must know how to divide it into kinds
until you reach something indivisible. Second, you must understand the
nature of the soul, along the same lines; you must determine which kind
c of speech is appropriate to each kind of soul, prepare and arrange your
speech accordingly, and offer a complex and elaborate speech to a complex
soul and a simple speech to a simple one. Then, and only then, will you
be able to use speech artfully, to the extent that its nature allows it to be
used that way, either in order to teach or in order to persuade. This is the
whole point of the argument we have been making.

PHAEDRUS: Absolutely. That is exactly how it seemed to us.

d SOCRATES: Now how about whether it's noble or shameful to give or
write a speech—when it could be fairly said to be grounds for reproach,
and when not? Didn't what we said just a little while ago make it clear—

PHAEDRUS: What was that?

SOCRATES: That if Lysias or anybody else ever did or ever does write—
privately or for the public, in the course of proposing some law—a political
document which he believes to embody clear knowledge of lasting impor-
tance, then this writer deserves reproach, whether anyone says so or not.
For to be unaware of the difference between a dream-image and the reality
e of what is just and unjust, good and bad, must truly be grounds for
reproach even if the crowd praises it with one voice.

PHAEDRUS: It certainly must be.

SOCRATES: On the other hand, take a man who thinks that a written
discourse on any subject can only be a great amusement, that no discourse
worth serious attention has ever been written in verse or prose, and that
those that are recited in public without questioning and explanation, in
278 the manner of the rhapsodes, are given only in order to produce conviction.
He believes that at their very best these can only serve as reminders to
those who already know. And he also thinks that only what is said for
the sake of understanding and learning, what is truly written in the soul
concerning what is just, noble, and good can be clear, perfect, and worth
serious attention: Such discourses should be called his own legitimate
children, first the discourse he may have discovered already within himself
b and then its sons and brothers who may have grown naturally in other
souls insofar as these are worthy; to the rest, he turns his back. Such a
man, Phaedrus, would be just what you and I both would pray to become.

PHAEDRUS: I wish and pray for things to be just as you say.

SOCRATES: Well, then: our playful amusement regarding discourse is
complete. Now you go and tell Lysias that we came to the spring which
is sacred to the Nymphs and heard words charging us to deliver a message
c to Lysias and anyone else who composes speeches, as well as to Homer

and anyone else who has composed poetry either spoken or sung, and third, to Solon and anyone else who writes political documents that he calls laws: If any one of you has composed these things with a knowledge of the truth, if you can defend your writing when you are challenged, and if you can yourself make the argument that your writing is of little worth, then you must be called by a name derived not from these writings but d
rather from those things that you are seriously pursuing.

PHAEDRUS: What name, then, would you give such a man?

SOCRATES: To call him wise, Phaedrus, seems to me too much, and proper only for a god. To call him wisdom's lover—a philosopher—or something similar would fit him better and be more seemly.

PHAEDRUS: That would be quite appropriate.

SOCRATES: On the other hand, if a man has nothing more valuable than what he has composed or written, spending long hours twisting it around, pasting parts together and taking them apart—wouldn't you be right to call him a poet or a speech writer or an author of laws? e

PHAEDRUS: Of course.

SOCRATES: Tell that, then, to your friend.

PHAEDRUS: And what about you? What shall you do? We must surely not forget your own friend.

SOCRATES: Whom do you mean?

PHAEDRUS: The beautiful Isocrates.[68] What are you going to tell him, Socrates? What shall we say he is?

SOCRATES: Isocrates is still young, Phaedrus. But I want to tell you what 279
I foresee for him.

PHAEDRUS: What is that?

SOCRATES: It seems to me that by his nature he can outdo anything that Lysias has accomplished in his speeches; and he also has a nobler character. So I wouldn't be at all surprised if, as he gets older and continues writing speeches of the sort he is composing now, he makes everyone who has ever attempted to compose a speech seem like a child in comparison. Even more so if such work no longer satisfies him and a higher, divine impulse leads him to more important things. For nature, my friend, has placed the love of wisdom in his mind. b

That is the message I will carry to my beloved, Isocrates, from the gods of this place; and you have your own message for your Lysias.

PHAEDRUS: So it shall be. But let's be off, since the heat has died down a bit.

SOCRATES: Shouldn't we offer a prayer to the gods here before we leave?

PHAEDRUS: Of course.

SOCRATES: O dear Pan and all the other gods of this place, grant that I may be beautiful inside. Let all my external possessions be in friendly c
harmony with what is within. May I consider the wise man rich. As for

68. Isocrates (436–338 B.C.) was an Athenian teacher and orator whose school was more famous in its day than Plato's Academy.

279c gold, let me have as much as a moderate man could bear and carry with him.

Do we need anything else, Phaedrus? I believe my prayer is enough for me.

PHAEDRUS: Make it a prayer for me as well. Friends have everything in common.

SOCRATES: Let's be off.

# ALCIBIADES

*Socrates feels that the time has come to approach Alcibiades and bring him into his intellectual and moral orbit. It is Alcibiades' lust for power that Socrates appeals to, promising that Alcibiades will never amount to anything without his help. In the discussion that follows, Alcibiades is brought to see, very reluctantly, that he knows nothing about moral values or political expediency and that he needs to cultivate himself assiduously in order to realize his enormous ambitions.*

*But what is this "self" that he needs to cultivate? It is his soul, the ruler of his body. The virtues of the soul that he needs to acquire are the intellectual skills that give it the authority to rule, over its body and over other people as well. Alcibiades is dismayed to recognize that he has no knowledge of himself and is currently fit to be ruled, not to rule. He attaches himself to Socrates to cultivate the knowledge of virtue and pledges undying devotion to Socrates and his values, a pledge which Socrates presciently distrusts, for Alcibiades was notorious in later life for his unprincipled conduct. He became a brilliant Athenian politician and general in the Peloponnesian War, but he defected to the Spartan side when accused of capital crimes in Athens and later became a double agent in the war between Athens and Persia.*

*Socrates wins Alcibiades over, but their affair remains on a Platonic level; in fact, their love affair gave us the term 'Platonic love'. Many of Socrates' followers wrote versions of this love story: Euclides, Antisthenes, and Aeschines each wrote an* Alcibiades *dialogue—some fragments of Aeschines' survive, in which Alcibiades eventually weeps with humiliation. Plato's* Symposium *also contributes to this genre, in an inventive way, in the speech in praise of Socrates by the drunken Alcibiades. Platonic love is an intensely affectionate, but not a sexual, relationship; but with Socrates and Alcibiades it was also a teaching relationship, in which Socrates tried to help Alcibiades make the transition to manhood by his stimulating conversation.*

*Because of its emphasis on self-knowledge as the necessary foundation of any other worthwhile knowledge,* Alcibiades *held pride of place in later antiquity as the ideal work with which to begin the study of Platonic philosophy. We have extensive commentaries from Olympiodorus (complete) and Proclus (first half only) and fragments of commentaries by Iamblichus, Damascius, and others. Proclus says, "Let this then be the start of philosophy and of the teaching of Plato, viz., the knowledge of ourselves."*

*Until the nineteenth century* Alcibiades *was assumed to be the work of Plato, but the ascription to Plato is now a minority view. It resembles Plato's*

*'Socratic' dialogues in its plain conversational quality, but it reflects later Academic doctrine as well. The clearest argument against Plato's authorship is probably that Plato never wrote a work whose interpretation was as simple and straightforward as that of* Alcibiades*. That very quality makes it an excellent introduction to philosophy.*

*If Plato is not the author, the signs point to an Academic philosopher writing in the 350s or soon after (116d). The anthropology implicit in* Alcibiades *is similar to Aristotle's, and the Aristotelian* Magna Moralia *(1213a20–24) takes up the striking idea that self-knowledge is best gained through a philosophical friendship in which we see ourselves, as if in a mirror (132c–133c).*

*D.S.H.*

103 SOCRATES: I was the first man to fall in love with you, son of Clinias,
and now that the others have stopped pursuing you I suppose you're
wondering why I'm the only one who hasn't given up—and also why,
when the others pestered you with conversation, I never even spoke to
you all these years. Human causes didn't enter into it; I was prevented
by some divine being, the effect of which you'll hear about later on. But
b now it no longer prevents me, so here I am. I'm confident it won't prevent
me in future either.

I've been observing you all this time, and I've got a pretty good idea
how you treated all those men who pursued you: they held themselves
in high esteem, but you were even more arrogant and sent them packing,
104 every single one of them. I'd like to explain the reason why you felt yourself
so superior.

You say you don't need anybody for anything, since your own qualities,
from your body right up to your soul, are so great there's nothing you
lack. In the first place, you fancy yourself the tallest and best-looking man
around—and it's quite plain to see you're not wrong about that. Next,
you think that yours is the leading family in your city, which is the greatest
b city in Greece: on your father's side you have plenty of aristocratic friends
and relations, who would be of service to you if there was any need; and
on your mother's side your connections are no worse and no fewer. And
you have Pericles son of Xanthippus,[1] whom your father left as a guardian
to you and your brother; you think he's a more powerful ally than all
those people I mentioned put together—he can do whatever he likes, not
only in this city, but anywhere in Greece, and also in many important

Translated by D. S. Hutchinson. Except where noted, the translation follows the edition of J. Burnet; I have also consulted the edition of Antonio Carlini, *Platone: Alcibiade, Alcibiade Secondo, Ipparco, Rivali* (Turin, 1964).—D.S.H.

1. Pericles was the most influential Athenian politician of the mid-fifth century B.C.

foreign countries. I will also mention your wealth, but I think that's the c
least of the reasons you hold yourself in high esteem. You bragged about
all those things and got the better of your suitors; they didn't measure up
and came off the worse. You knew what was going on.

And so I'm sure you're wondering what I could possibly have in mind—why don't I give up on you? The others have all been sent packing, so what do I hope to achieve by persisting?

Alcibiades: Yes, Socrates, perhaps you don't realize that you've just
taken the words out of my mouth. I had already decided to come and ask d
you that very question: what could you have in mind? What do you hope
to achieve by bothering me, always making so sure you're there wherever
I am? Yes, I really do wonder what you might be up to, and I'd be very
glad to find out.

Socrates: So then you'll probably be eager to give me your full attention, since, as you say, you're keen to know what I have in mind. I take it that you'll listen carefully?

Alcibiades: Yes, of course—just tell me.

Socrates: Watch out—I wouldn't be at all surprised if I found it as hard e
to stop as it was to start.

Alcibiades: Tell me, please. I will pay attention.

Socrates: Speak I must, then. It's not easy to play the role of suitor with a man who doesn't give in to them; nevertheless, I must summon up my courage and say what's on my mind.

Alcibiades, if I saw that you were content with the advantages I just
mentioned and thought that this was the condition in which you should
live out the rest of your life, I would have given up on you long ago; at 105
least that's what I persuade myself. But I'm going to prove to you in person
what very different plans you actually have in mind. Then you'll realize
how constantly I've been thinking about you.

Suppose one of the gods asked you, "Alcibiades, would you rather live
with what you now have, or would you rather die on the spot if you
weren't permitted to acquire anything greater?" I think you'd choose to
die. What then *is* your real ambition in life? I'll tell you. You think that
as soon as you present yourself before the Athenian people—as indeed b
you expect to in a very few days—by presenting yourself you'll show
them that you deserve to be honored more than Pericles or anyone else
who ever was. Having shown that, you'll be the most influential man in
the city, and if you're the greatest here, you'll be the greatest in the rest
of Greece, and not only in Greece, but also among the foreigners who live
on the same continent as we do.

And if that same god were then to tell you that you should have absolute
power in Europe, but that you weren't permitted to cross over into Asia c
or get mixed up with affairs over there, I think you'd rather not live with
only that to look forward to; you want your reputation and your influence
to saturate all mankind, so to speak. I don't think you regard anybody as

ever having been much to speak of, except perhaps Cyrus and Xerxes.[2] I'm not guessing that this is your ambition—I'm sure of it.

Since you know that what I say is true, maybe you'll say, "Well then,
d Socrates, what's this got to do with your point? You said you were going to tell me why you haven't given up on me."[3] Yes, I will tell you, my dear son of Clinias and Dinomache. It is impossible to put any of these ideas of yours into effect without me—that's how much influence I think I have over you and your business. I think this is why the god hasn't allowed me to talk to you all this time; and I've been waiting for the day he allows me.

e I'm hoping for the same thing from you[4] as you are from the Athenians: I hope to exert great influence over you by showing you that I'm worth the world to you and that nobody is capable of providing you with the influence you crave, neither your guardian nor your relatives, nor anybody else except me—with the god's help, of course. When you were younger, before you were full of such ambitions, I think the god didn't let me talk
106 to you because the conversation would have been pointless. But now he's told me to, because now you will listen to me.

ALCIBIADES: Really, Socrates, now that you've started talking you seem much more bizarre to me than when you followed me in silence, though you were very bizarre to look at then, too. Well, on the question of whether or not these are my ambitions, you seem to have made up your mind already, and no denial of mine will do anything to convince you otherwise. Fine. But supposing I really do have these ambitions, how will you help me achieve them? What makes you indispensable? Have you got something to say?

b SOCRATES: Are you asking if I can say some long speech like the ones you're used to hearing? No, that sort of thing's not for me. But I do think I'd be able to show you that what I said is true, if only you were willing to grant me just one little favor.

ALCIBIADES: Well, as long as you mean a favor that's not hard to grant, I'm willing.

SOCRATES: Do you think it's hard to answer questions?

ALCIBIADES: No, I don't.

SOCRATES: Then answer me.

ALCIBIADES: Ask me.

SOCRATES: My question is whether you have in mind what I say you have in mind.

c ALCIBIADES: Let's say I do, if you like, so I can find out what you're going to say.

SOCRATES: Right then; you plan, as I say, to come forward and advise the Athenians some time soon. Suppose I stopped you as you were about to take the podium and asked, "Alcibiades, what are the Athenians propos-

3. Retaining the bracketed phrase in d1.

4. Omitting d7–e2 *endeixasthai . . . dunēsesthai.*

ing to discuss? You're getting up to advise them because it's something you know better than they do, aren't you?" What would you reply?

Alcibiades: Yes, I suppose I would say it was something that I know d
better than they do.

Socrates: So it's on matters you know about that you're a good adviser.

Alcibiades: Of course.

Socrates: Now the only things you know are what you've learned from others or found out for yourself; isn't that right?

Alcibiades: What else could I know?

Socrates: Could you ever have learned or found out anything without wanting to learn it or work it out for yourself?

Alcibiades: No, I couldn't have.

Socrates: Is that right? Would you have wanted to learn or work out something that you thought you understood?

Alcibiades: Of course not.

Socrates: So there was a time when you didn't think you knew what e
you now understand.

Alcibiades: There must have been.

Socrates: But I've got a pretty good idea what you've learned. Tell me if I've missed anything: as far as I remember, you learned writing and lyre-playing and wrestling, but you didn't want to learn aulos-playing.[5] These are the subjects that you understand—unless perhaps you've been learning something while I wasn't looking; but I don't think you have been, either by night or by day, on your excursions from home.

Alcibiades: No, those are the only lessons I took.

Socrates: Well then, is it when the Athenians are discussing how to 107
spell a word correctly that you'll stand up to advise them?

Alcibiades: Good God, I'd never do that!

Socrates: Then is it when they're discussing the notes on the lyre?

Alcibiades: No, never.

Socrates: But surely they're not in the habit of discussing wrestling in the Assembly.

Alcibiades: Certainly not.

Socrates: Then what will they be discussing? I presume it won't be building.

Alcibiades: Of course not.

Socrates: Because a builder would give better advice on these matters than you.

Alcibiades: Yes. b

Socrates: Nor will they be discussing divination, will they?

Alcibiades: No.

Socrates: Because then a diviner would be better at giving advice than you.

Alcibiades: Yes.

5. The *aulos*, conventionally translated 'flute', was actually a reed instrument.

SOCRATES: Regardless of whether he's tall or short, or handsome or ugly, or even noble or common.

ALCIBIADES: Of course.[6]

SOCRATES: And when the Athenians are discussing measures for public c health, it will make no difference to them if their counsellor is rich or poor, but they will make sure that their adviser is a doctor.

ALCIBIADES: Of course.

SOCRATES: I suppose that's because advice on any subject is the business not of those who are rich but of those who know it.

ALCIBIADES: Quite reasonably so.

SOCRATES: Then what *will* they be considering when you stand up to advise them, assuming you're right to do so?

ALCIBIADES: They'll be discussing their own business, Socrates.

SOCRATES: You mean their shipbuilding business—what sorts of ships they should be building?

ALCIBIADES: No, Socrates, I don't.

SOCRATES: I suppose that's because you don't understand shipbuilding. Am I right, or is there some other reason?

ALCIBIADES: No, that's it.

d SOCRATES: So what kind of 'their own business' do you think they'll be discussing?

ALCIBIADES: War, Socrates, or peace, or anything else which is the business of the city.

SOCRATES: Do you mean they'll be discussing who they should make peace with and who they should go to war with and how?

ALCIBIADES: Yes.

SOCRATES: But shouldn't they do that with the ones with whom it's better to?

ALCIBIADES: Yes.

e SOCRATES: And when it's better?

ALCIBIADES: Certainly.

SOCRATES: And for as long a time as it's better?

ALCIBIADES: Yes.

SOCRATES: Now supposing the Athenians were discussing who they should wrestle with and who they should spar with and how, who would be a better adviser, you or the trainer?

ALCIBIADES: The trainer, I guess.

SOCRATES: And can you tell me what the trainer has in view when he advises you who you should or shouldn't wrestle with, and when, and how? I mean, for example, that one should wrestle with those with whom it's better to wrestle, isn't that right?

ALCIBIADES: Yes.

6. In the manuscripts, Alcibiades' reply and the next speech of Socrates are preceded by the following reply-speech pair; the translation follows a conjectural transposition of b8–10 with b11–c2.

SOCRATES: And as much as is better? 108
ALCIBIADES: That's right.
SOCRATES: And when it's better, right?
ALCIBIADES: Certainly.
SOCRATES: Let's take another example: when you're singing, you should sometimes accompany the song with lyre-playing and dancing.
ALCIBIADES: Yes, you should.
SOCRATES: You should do so when it's better to, right?
ALCIBIADES: Yes.
SOCRATES: And as much as is better.
ALCIBIADES: I agree.
SOCRATES: Really? Since you used the term 'better' in both cases—in b
wrestling and in playing the lyre while singing—what do you call what's better in lyre-playing, as I call what's better in wrestling 'athletic'? What do you call that?
ALCIBIADES: I don't get it.
SOCRATES: Then try to follow my example. My answer was, I think, 'what is correct in every case'—and what is correct, I presume, is what takes place in accordance with the skill, isn't it?
ALCIBIADES: Yes.
SOCRATES: Wasn't the skill athletics?
ALCIBIADES: Of course.
SOCRATES: I said that what's better in wrestling, was 'athletic'. c
ALCIBIADES: That's what you said.
SOCRATES: Wasn't that well said?
ALCIBIADES: I think so, anyway.
SOCRATES: Come on then, it's your turn; it's partly up to you, surely, to keep our conversation going well. First of all, tell me what the skill is for singing and dancing and playing the lyre correctly. What is it called as a whole? . . . Aren't you able to tell me yet?
ALCIBIADES: No, I can't.
SOCRATES: Well, try it this way. Who are the goddesses to whom the skill belongs?
ALCIBIADES: Do you mean the Muses, Socrates?
SOCRATES: I do indeed. Don't you see? What's the name of the skill that's d
named after them?
ALCIBIADES: I think you mean music.
SOCRATES: Yes, I do. Now what is "correctly" for what takes place in accordance with this skill? In the other case I told you what "correctly" is for what takes place in accordance with the skill, so now it's your turn to say something similar in this case. *How* does it take place?
ALCIBIADES: Musically, I think.
SOCRATES: A good answer. Come on now, what do you call what's better
in both going to war and keeping the peace? In these last two examples you e
said that what was better was more musical and more athletic, respectively. Now try to tell me what's better in this case, too.

Alcibiades: I really can't do it.

Socrates: But surely it's disgraceful if when you're speaking and giving advice about food—saying that a certain kind is better than another, and better at a certain time and in a certain quantity—and someone should ask you, "What do you mean by 'better', Alcibiades?" you could tell him in that case that 'better' was 'healthier', though you don't even pretend
109 to be a doctor; and yet in a case where you do pretend to understand and are going to stand up and give advice as though you knew, if you aren't able, as seems likely, to answer the question in this case, won't you be embarrassed? Won't that seem disgraceful?

Alcibiades: Yes, certainly.

Socrates: Then think about it, and try to tell me what the better tends towards, in keeping the peace or in waging war with the right people.

Alcibiades: I'm thinking, but I can't get it.

Socrates: But suppose we're at war with somebody—surely you know what treatment we accuse each other of when we enter into a war, and what we call it.

b Alcibiades: I do—we say that they're playing some trick on us, or attacking us or taking things away from us.

Socrates: Hold on—*how* do we suffer from each of these treatments? Try to tell me how one way differs from another way.

Alcibiades: When you say 'way', Socrates, do you mean 'justly' or 'unjustly'?

Socrates: Precisely.

Alcibiades: But surely that makes all the difference in the world.

Socrates: Really? Who will you advise the Athenians to wage war on? Those who are treating us unjustly, or those who are treating us justly?

c Alcibiades: That's a hard question you're asking. Even if someone thought it was necessary to wage war on people who were treating us justly, he wouldn't admit it.

Socrates: Because I think that wouldn't be lawful.

Alcibiades: It certainly wouldn't.

Socrates: Nor would it be considered a proper thing to do.

Alcibiades: No.[7]

Socrates: So you would also frame your speech in these terms.

Alcibiades: I'd have to.

Socrates: Then this 'better' I was just asking you about—when it comes to waging war or not, on whom to wage war and on whom not to, and when and when not to—this 'better' turns out to be the same as 'more just', doesn't it?

Alcibiades: It certainly seems so.

d Socrates: But how could it, my dear Alcibiades? Don't you realize that this is something you don't understand? Or perhaps, when I wasn't look-

7. Attributing *oude ge kalon dokei einai* in c5 to Socrates, and accepting the conjectured reply *ou* from Alcibiades.

ing, you've been seeing some teacher who taught you how to tell the difference between the more just and the less just. Have you? . . . Well, who is he? Tell me who he is so that you can sign me up with him as well.

ALCIBIADES: Stop teasing me, Socrates.

SOCRATES: I'm not—I'll swear by Friendship,[8] yours and mine. I'd never perjure myself by him. So tell me who he is, if you can.

ALCIBIADES: And what if I can't? Don't you think I might know about e
justice and injustice some other way?

SOCRATES: Yes, you might—if you found it out.

ALCIBIADES: Well, don't you think I might find it out?

SOCRATES: Yes, of course—if you investigate the matter.

ALCIBIADES: And don't you think I might investigate it?

SOCRATES: Yes, I do—if you thought you didn't know.

ALCIBIADES: And didn't I once think that?

SOCRATES: A fine answer. Can you tell me when this was, when you
didn't think you knew about justice and injustice . . . Well, was it last year 110
that you were looking into it and didn't think you knew? Or did you think you knew? . . . Answer me truthfully, or else our conversation will be a waste of time.

ALCIBIADES: Yes, I thought I knew.

SOCRATES: Didn't you think the same thing two years ago, and three years ago, and four?

ALCIBIADES: I did.

SOCRATES: But surely before that you were a boy, weren't you?

ALCIBIADES: Yes.

SOCRATES: Well now, at that point I'm sure you thought you knew.

ALCIBIADES: How can you be sure of that?

SOCRATES: When you were a boy I often observed you, at school and b
other places, and sometimes when you were playing knucklebones or some other game, you'd say to one or another of your playmates, very loudly and confidently—not at all like someone who was at a loss about justice and injustice—that he was a lousy cheater and wasn't playing fairly. Isn't that true?

ALCIBIADES: But what was I to do, Socrates, when somebody cheated me like that?

SOCRATES: Do you mean, what should you have done if you didn't actually know then whether or not you were being cheated?

ALCIBIADES: But I *did* know, by Zeus! I saw clearly that they were cheat- c
ing me.

SOCRATES: So it seems that even as a child you thought you understood justice and injustice.

ALCIBIADES: Yes, and I *did* understand.

SOCRATES: At what point did you find it out? Surely it wasn't when you thought you knew.

8. One of the aspects under which Zeus was worshipped was as the god of friendship.

Alcibiades: Of course not.

Socrates: Then when did you think you didn't know? Think about it—you won't find any such time.

Alcibiades: By Zeus, Socrates, I really can't say.

d Socrates: So it isn't by finding it out that you know it.

Alcibiades: That's not very likely.

Socrates: But surely you just finished saying that it wasn't by being taught, either, that you knew it. So if you neither found it out nor were taught it, how and where did you come to know it?

Alcibiades: Maybe I gave you the wrong answer when I said I knew it by finding it out myself.

Socrates: Then how did it happen?

Alcibiades: I suppose I learned it in the same way as other people.

Socrates: That brings us back to the same argument: from whom? Do tell me.

e Alcibiades: From people in general.

Socrates: When you give the credit to 'people in general', you're falling back on teachers who are no good.

Alcibiades: What? Aren't they capable of teaching?

Socrates: No, they can't even teach you what moves to make or not make in knucklebones. And yet that's a trivial matter, I suppose, compared with justice . . . What? Don't you agree?

Alcibiades: Yes.

Socrates: So although they can't teach trivial things, you say they can teach more serious things.

Alcibiades: *I* think so; at any rate, they can teach a lot of things that are more important than knucklebones.

Socrates: Like what?

111 Alcibiades: Well, for example, I learned how to speak Greek from them; I couldn't tell you who my teacher was, but I give the credit to the very people you say are no good at teaching.

Socrates: Yes, my noble friend, people in general are good teachers of that, and it would be only fair to praise them for their teaching.

Alcibiades: Why?

Socrates: Because they have what it takes to be good teachers of the subject.

Alcibiades: What do you mean by that?

Socrates: Don't you see that somebody who is going to teach anything must first know it himself? Isn't that right?

b Alcibiades: Of course.

Socrates: And don't people who know something agree with each other, not disagree?

Alcibiades: Yes.

Socrates: If people disagree about something, would you say that they know it?

Alcibiades: Of course not.

Socrates: Then how could they be teachers of it?

Alcibiades: They couldn't possibly.

Socrates: Well then, do you think that people in general disagree about what wood or stone is? If you ask them, don't they give the same answers? Don't they reach for the same things when they want to get some wood c or some stone? And similarly for all other such cases; I suppose this is pretty much what you mean by understanding Greek, isn't it?

Alcibiades: Yes.

Socrates: So they agree with each other in these cases, as we said, and with themselves when acting privately. But don't they also agree in public? Cities don't disagree with each other and use different words for the same thing, do they?

Alcibiades: No.

Socrates: So it's likely that they would make good teachers of these things.

Alcibiades: Yes. d

Socrates: So if we wanted somebody to know these things, we'd be right to send him to lessons given by these people in general.

Alcibiades: Certainly.

Socrates: Now if we wanted to know not just what men or horses are like, but which of them could and couldn't run, would people in general be able to teach this as well?

Alcibiades: Of course not.

Socrates: Isn't the fact that they disagree with each other about these things enough to show you that they don't understand them, and are not e 'four-square teachers' of them?

Alcibiades: Yes, it is.

Socrates: Now if we wanted to know not just what men are like, but what sick and healthy men are like, would people in general be able to teach us?

Alcibiades: Of course not.

Socrates: And if you saw them disagreeing about it, that would show you that they were bad teachers of it.

Alcibiades: Yes, it would.

Socrates: Very well, then—does it seem to you that people in general actually agree among themselves or with each other about just and unjust people and actions?

Alcibiades: Not in the slightest, Socrates. 112

Socrates: Really? Do they disagree a huge amount about these things?

Alcibiades: Very much so.

Socrates: I don't suppose you've ever seen or heard people disagreeing so strongly about what is healthy and unhealthy that they fight and kill each other over it, have you?

Alcibiades: Of course not.

Socrates: But I know you've seen this sort of dispute over questions of justice and injustice; or even if you haven't seen it, at least you've heard b

about it from many other people—especially Homer, since you've heard the *Iliad* and the *Odyssey*, haven't you?

Alcibiades: I certainly have, of course, Socrates.

Socrates: Aren't these poems all about disagreements over justice and injustice?

Alcibiades: Yes.

Socrates: It was over this sort of disagreement that the Achaeans and the Trojans fought battles and lost their lives, as did Odysseus and the suitors of Penelope.

c Alcibiades: You're right.

Socrates: I suppose the same is true of those Athenians and Spartans and Boeotians who died at Tanagra, and later at Coronea, including your own father. The disagreement that caused those battles and those deaths was none other than a disagreement over justice and injustice, wasn't it?

Alcibiades: You're right.

Socrates: Are we to say that people understand something if they dis-
d agree so much about it that in their disputes with each other they resort to such extreme measures?

Alcibiades: Obviously not.

Socrates: But aren't you giving credit to teachers of this sort who, as you yourself admit, have no knowledge?

Alcibiades: I guess I am.

Socrates: Well then, given that your opinion wavers so much, and given that you obviously neither found it out yourself nor learned it from anyone else, how likely is it that you know about justice and injustice?

Alcibiades: From what you say anyway, it's not very likely.

e Socrates: See, there you go again, Alcibiades, that's not well said!

Alcibiades: What do you mean?

Socrates: You say that *I* say these things.

Alcibiades: What? Aren't you saying that I don't understand justice and injustice?

Socrates: No, not at all.

Alcibiades: Well, am *I*?

Socrates: Yes.

Alcibiades: How?

Socrates: Here's how. If I asked you which is more, one or two, would you say two?

Alcibiades: I would.

Socrates: By how much?

Alcibiades: By one.

Socrates: Then which of us is saying that two is one more than one?

Alcibiades: I am.

Socrates: Wasn't I asking and weren't you answering?

Alcibiades: Yes.

113 Socrates: Who do you think is saying these things—me, the questioner, or you, the answerer?

ALCIBIADES: I am.

SOCRATES: And what if I asked you how to spell 'Socrates', and you told me? Which of us would be saying it?

ALCIBIADES: I would.

SOCRATES: Come then, give me the general principle. When there's a question and an answer, who is the one saying things—the questioner or the answerer?

ALCIBIADES: The answerer, I think, Socrates.

SOCRATES: Wasn't I the questioner in everything just now? b

ALCIBIADES: Yes.

SOCRATES: And weren't you the answerer?

ALCIBIADES: I certainly was.

SOCRATES: Well then, which of us said what was said?

ALCIBIADES: From what we've agreed, Socrates, it seems that I did.

SOCRATES: And what was said was that Alcibiades, the handsome son of Clinias, doesn't understand justice and injustice—though he thinks he does—and that he is about to go to the Assembly to advise the Athenians on what he doesn't know anything about. Wasn't that it?

ALCIBIADES: Apparently. c

SOCRATES: Then it's just like in Euripides, Alcibiades; 'you heard it from yourself, not from me.'[9] I'm not the one who says these things—*you* are—don't try to blame me. And furthermore, you're quite right to say so. This scheme you have in mind—teaching what you don't know and haven't bothered to learn—your scheme, my good fellow, is crazy.

ALCIBIADES: Actually, Socrates, I think the Athenians and the other Greeks d rarely discuss which course is more just or unjust. They think that sort of thing is obvious, so they skip over it and ask which one would be advantageous to do. In fact, though, what's just is not the same, I think, as what's advantageous; many people have profited by committing great injustices, and others, I think, got no advantage from doing the right thing.

SOCRATES: So? Even if just and advantageous things happen to be completely different, surely you don't think you know what's advantageous e for people, and why, do you?

ALCIBIADES: What's to stop me, Socrates?—unless you're going to ask me all over again who I learned it from or how I found it out myself.

SOCRATES: What a way of carrying on! If you say something wrong, and if there's a previous argument that can prove that it was wrong, you think you ought to be given some new and different proof, as if the previous one were a worn-out scrap of clothing that you refuse to wear again. No, you want an immaculate, brand-new proof.

I'll pass over your anticipation of my argument and ask you, all the 114 same, 'How did you come to understand what is advantageous? Who was your teacher?', and in my one question ask everything I asked you before. Clearly this will put you in the same position again—you won't be able

9. Cf. Euripides, *Hippolytus* 350–53.

to prove that you know what is advantageous, either by finding it out or by learning it.

But since you've got a delicate stomach and wouldn't enjoy another taste of the same argument, I'll pass over this question of whether or not
b you know what is advantageous for the Athenians. But why don't you prove whether the just and the advantageous are the same or different? You can question me, if you like, as I questioned you—or else work it out yourself, in your own argument.

Alcibiades: No, Socrates, I don't think I'd be able to work it out in front of you.

Socrates: Well then, my good sir, imagine that I'm the Assembly and the people gathered there; even there, you know, you'll have to persuade them one by one. Isn't that right?

Alcibiades: Yes.

Socrates: If somebody knows something, don't you think he can per-
c suade people about it one by one, as well as all together? Take the schoolteacher—don't you think he persuades people about letters individually, as well as collectively?

Alcibiades: Yes.

Socrates: And won't the same person be able to persuade people about numbers individually, as well as in groups?

Alcibiades: Yes.

Socrates: He would be a mathematician, someone who knows about numbers.

Alcibiades: Certainly.

Socrates: So won't you also be able to persuade an individual person about the things you can persuade a group of people about?

Alcibiades: Probably.

Socrates: Obviously these are things you know about.

Alcibiades: Yes.

Socrates: Is there any difference between an orator speaking to the
d people and an orator speaking in this sort of conversation, except insofar as the former persuades them all together while the latter persuades them one by one?

Alcibiades: I guess not.

Socrates: Well then, since it's plain that the same person can persuade individuals as well as groups, practice on me, and try to prove that what is just is sometimes not advantageous.

Alcibiades: Stop pushing me around, Socrates!

Socrates: No, in fact I'm going to push you around and persuade you of the *opposite* of what you're not willing to show me.

Alcibiades: Just try it!

Socrates: Just answer my questions.

e Alcibiades: No, you do the talking yourself.

Socrates: What?! Don't you want to be completely convinced?

Alcibiades: Absolutely, I'm sure.

Socrates: Wouldn't you be completely convinced if you yourself said, 'Yes, that's how it is'?

Alcibiades: Yes, I think so.

Socrates: Then answer my questions. And if you don't hear yourself say that just things are also advantageous, then don't believe anything else I say.

Alcibiades: No, I'm sure I won't. But I'd better answer—I don't think I'll come to any harm.

Socrates: You're quite a prophet. Now tell me—are you saying that 115
some just things are advantageous while others are not?

Alcibiades: Yes.

Socrates: Really? Are some of them admirable and others not admirable?

Alcibiades: What do you mean by that question?

Socrates: Have you ever thought that someone was doing something that was both just and contemptible?

Alcibiades: No, I haven't.

Socrates: So all just things are admirable.

Alcibiades: Yes.

Socrates: Now what about admirable things? Are they all good, or are some good and others not good?

Alcibiades: What I think, Socrates, is that some admirable things are bad.

Socrates: And some contemptible things are good?

Alcibiades: Yes.

Socrates: Are you thinking of this sort of case? Many people get b
wounded and killed trying to rescue their friends and relatives in battle, while those who don't go to rescue them, as they should, escape safe and sound. Is this what you're referring to?

Alcibiades: Exactly.

Socrates: Now you call a rescue of this sort admirable, in that it's an attempt to help the people whom you should help, and this is what courage is; isn't that what you're saying?

Alcibiades: Yes.

Socrates: But you call it bad, in that it involves wounds and death, don't you?

Alcibiades: Yes.

Socrates: Now courage is one thing, and death is something else, right? c

Alcibiades: Certainly.

Socrates: So it's not on the same basis that rescuing your friends is admirable and bad, is it?

Alcibiades: Apparently not.

Socrates: Now let's see whether, insofar as it's admirable, it's also good, as indeed it is. You agreed that the rescue is admirable, in that it's courageous. Now consider this very thing—courage. Is it good or bad? Look at it like this: which would you rather have, good things or bad things?

Alcibiades: Good things.

Socrates: Namely the greatest goods? d

Alcibiades: Very much so.[10]

Socrates: And wouldn't you be least willing to be deprived of such things?

Alcibiades: Of course.

Socrates: What would you say about courage? How much would you have to be offered to be deprived of that?

Alcibiades: I wouldn't even want to go on living if I were a coward.

Socrates: So you think that cowardice is the worst thing in the world.

Alcibiades: I do.

Socrates: On a par with death, it would seem.

Alcibiades: That's what I say.

Socrates: Aren't life and courage the extreme opposites of death and cowardice?

Alcibiades: Yes.

e Socrates: And wouldn't you want the former most and the latter least?

Alcibiades: Yes.

Socrates: Is that because you think that the former are best and the latter are worst?

Alcibiades: Certainly.

Socrates: Would you say that courage ranks among the best things and death among the worst?

Alcibiades: I would say so.

Socrates: So you called rescuing your friends in battle admirable, insofar as it is admirable, in that it does something good, being courageous.

Alcibiades: I think so, anyway.

Socrates: But you called it bad, in that it does something bad, being fatal.[11]

Alcibiades: Yes.

Socrates: Now since you call this act bad insofar as it produces some-
116 thing bad, wouldn't you also, in all fairness, have to call it good insofar as it produces something good?

Alcibiades: I think so.

Socrates: Isn't it also admirable insofar as it's good, and contemptible insofar as it's bad?

Alcibiades: Yes.

Socrates: Then when you say that rescuing one's friends in battle is admirable but bad, you mean exactly the same as if you'd called it good but bad.

Alcibiades: I suppose you're right, Socrates.

Socrates: So nothing admirable, to the extent that it's admirable, is bad, and nothing contemptible, to the extent that it's contemptible, is good.

Alcibiades: Apparently not.

10. Assigning *malista* (d1) to Alcibiades, and rejecting the supplement *nai* (d2).

11. Omitting *ge* in e13.

SOCRATES: Now then, let's take a new approach. People who do what's admirable do things well, don't they? b

ALCIBIADES: Yes.

SOCRATES: And don't people who do things well live successful lives?

ALCIBIADES: Of course.

SOCRATES: Aren't they successful because they've got good things?

ALCIBIADES: Certainly.

SOCRATES: And they get good things by acting properly and admirably.

ALCIBIADES: Yes.

SOCRATES: So it is good to act properly.

ALCIBIADES: Of course.

SOCRATES: And good conduct is admirable.

ALCIBIADES: Yes.

SOCRATES: So we've seen once again that the very thing that is admirable is also good. c

ALCIBIADES: Apparently.

SOCRATES: So if we find that something is admirable, we'll also find that it's good—according to this argument, at least.

ALCIBIADES: We'll have to.

SOCRATES: Well then, are good things advantageous, or not?

ALCIBIADES: Advantageous.

SOCRATES: Do you remember what we agreed about doing just things?

ALCIBIADES: I think we agreed that someone who does what's just must also be doing what's admirable.

SOCRATES: And didn't we also agree that someone who does what's admirable must also be doing what's good?

ALCIBIADES: Yes.

SOCRATES: And that what's good is advantageous? d

ALCIBIADES: Yes.

SOCRATES: So, Alcibiades, just things are advantageous.

ALCIBIADES: So it seems.

SOCRATES: Well then, am I not the questioner and are you not the answerer?

ALCIBIADES: It appears I am.

SOCRATES: So if someone who believed that he knew what is just and unjust were to stand up to advise the Athenians, or even the Peparethians,[12] and said that sometimes just things are bad,[13] what could you do but laugh at him? After all, as you yourself say, the same things are just and also e
advantageous.

ALCIBIADES: I swear by the gods, Socrates, I have no idea what I mean—I must be in some absolutely bizarre condition! When you ask me questions, first I think one thing, and then I think something else.

12. Peparethus, an otherwise insignificant Aegean island, was embroiled in conflict in the late 360s.

13. As Alcibiades did at 113d.

SOCRATES: And are you unaware, my dear fellow, of what this feeling is?

ALCIBIADES: Completely.

SOCRATES: Well, if someone asked you whether you had two eyes or three eyes, or two hands or four hands, or something else like that, do you think you'd give different answers at different times, or would you always give the same answer?

117 ALCIBIADES: I'm quite unsure of myself at this point, but I think I'd give the same answer.

SOCRATES: Because you know it—isn't that the reason?

ALCIBIADES: I think so.

SOCRATES: So if you gave conflicting answers about something, without meaning to, then it would be obvious that you didn't know it.

ALCIBIADES: Probably.

SOCRATES: Well then, you tell me that you're wavering about what is just and unjust, admirable and contemptible, good and bad, and advantageous and disadvantageous. Isn't it obvious that the reason you waver about them is that you don't know about them?

b ALCIBIADES: Yes, it is.

SOCRATES: Would you also say that whenever someone doesn't know something, his soul will necessarily waver about it?

ALCIBIADES: Of course.

SOCRATES: Really? Do you know any way of ascending to the stars?

ALCIBIADES: *I* certainly don't.

SOCRATES: Does your opinion waver on this question, too?

ALCIBIADES: Of course not.

SOCRATES: Do you know the reason, or shall I tell you?

ALCIBIADES: Tell me.

SOCRATES: It's because, my friend, you don't understand it and you don't think you understand it.

c ALCIBIADES: And what do you mean by that?

SOCRATES: Let's look at it together. Do you waver about what you realize you don't understand? For example, you know, I think, that you don't know how to prepare a fine meal, right?

ALCIBIADES: Quite right.

SOCRATES: So do you have your own opinions about how to prepare it, and waver about it; or do you leave it to someone who knows how?

ALCIBIADES: The latter.

SOCRATES: Well, if you were sailing in a ship, would you be out there
d wondering whether to put the helm to port or starboard, and wavering because you didn't know? Or would you leave it to the skipper and take it easy?

ALCIBIADES: I'd leave it to the skipper.

SOCRATES: So you don't waver about what you don't know, if in fact you know that you don't know.

ALCIBIADES: Apparently not.

SOCRATES: Don't you realize that the errors in our conduct are caused by this kind of ignorance, of thinking that we know when we don't know?

ALCIBIADES: What do you mean by that?

SOCRATES: Well, we don't set out to do something unless we think we know what we're doing, right?

ALCIBIADES: Right.

SOCRATES: But when people don't think they know how to do something, e
they hand it over to somebody else, right?

ALCIBIADES: Of course.

SOCRATES: So the sort of people who don't think they know how to do things make no mistakes in life, because they leave those things to other people.

ALCIBIADES: You're right.

SOCRATES: Well, who are the ones making the mistakes? Surely not the ones who know?

ALCIBIADES: Of course not.

SOCRATES: Well, since it's not those who know, and it's not those who
don't know and know they don't know, is there anyone left except those 118
who don't know but think they do know?

ALCIBIADES: No, they're the only ones left.

SOCRATES: So this is the ignorance that causes bad things; this is the most disgraceful sort of stupidity.

ALCIBIADES: Yes.

SOCRATES: And isn't it most harmful and most contemptible when it is ignorance of the most important things?

ALCIBIADES: Very much so.

SOCRATES: Well, can you name anything more important than what's just and admirable and good and advantageous?

ALCIBIADES: No, I really can't.

SOCRATES: But aren't those the things you say you're wavering about?

ALCIBIADES: Yes.

SOCRATES: So, if you're wavering, it's obvious from what we've said that
not only are you ignorant about the most important things, but you also b
think you know what you don't know.

ALCIBIADES: I guess that's right.

SOCRATES: Good God, Alcibiades, what a sorry state you're in! I hesitate to call it by its name, but still, since we're alone, it must be said. You are wedded to stupidity, my good fellow, stupidity in the highest degree—our discussion and your own words convict you of it. This is why you're rushing into politics before you've got an education. You're not alone in
this sad state—you've got most of our city's politicians for company. There c
are only a few exceptions, among them, perhaps, your guardian, Pericles.

ALCIBIADES: Yes, Socrates, and people do say that he didn't acquire his expertise all by himself; he kept company with many experts like Pythoclides and Anaxagoras. Even now, despite his advanced age, he consults with Damon[14] for the same purpose.

14. Pythoclides of Ceos and Damon of Athens were musicians and philosophers; Anaxagoras of Clazomenae was a philosopher; all taught in Athens in the fifth century B.C.

Socrates: Really? Have you ever seen any expert who is unable to make others expert in what he knows? The person who taught you how to read and write—he had expertise in his field, and he made you and anybody else he liked expert as well, didn't he?

Alcibiades: Yes.

d Socrates: And will you, having learned from him, be able to teach somebody else?

Alcibiades: Yes.

Socrates: And isn't it the same with the music teacher and the gymnastics teacher?

Alcibiades: Certainly.

Socrates: I think we can be pretty sure that someone understands something when he can show that he has made someone else understand it.

Alcibiades: I agree.

Socrates: Well then, can you tell me who Pericles has made into an expert? Shall we start with his sons?

e Alcibiades: But Socrates, both of his sons turned out to be idiots!

Socrates: What about Clinias, your brother?

Alcibiades: There's no point talking about *him*—he's a madman!

Socrates: Well then, since Clinias is mad and Pericles' sons were idiots, what shall we say is the reason that he allowed *you* to be in the state you're in?

Alcibiades: I suppose it's because I didn't really pay attention.

119 Socrates: But can you name any other Athenian or any foreigner—slave or free—who became any more of an expert by keeping company with Pericles? After all, I can name Pythodorus, son of Isolochus, and Callias, son of Calliades, who became wise through their association with Zeno;[15] they paid him a hundred minas each and became famous experts.

Alcibiades: I can't think of anyone, by Zeus.

Socrates: Very well. What do you propose for yourself? Do you intend to remain in your present condition, or practice some self-cultivation?

b Alcibiades: Let's discuss it together, Socrates. You know, I do see what you're saying and actually I agree—it seems to me that none of our city's politicians has been properly educated, except for a few.

Socrates: And what does that mean?

Alcibiades: Well, if they were educated, then anyone who wanted to compete with them would have to get some knowledge and go into training, like an athlete. But as it is, since they entered politics as amateurs, there's no need for me to train and go to the trouble of learning. I'm sure
c my natural abilities will be far superior to theirs.

Socrates: Good God, my dear boy, what a thing to say—how unworthy of your good looks and your other advantages!

15. Zeno of Elea was a philosopher; Pythodorus and Callias were both prominent politicians in Athens in the fifth century B.C. See *Parmenides* 126e–128e.

Alcibiades: What in the world do you mean, Socrates? What are you getting at?

Socrates: I'm furious with you and with my infatuation for you!

Alcibiades: Why?

Socrates: Because you stoop to compete with these people.

Alcibiades: Who else have I got to compete with?

Socrates: That's a fine sort of question, from a man who thinks he holds d
himself in high esteem!

Alcibiades: What do you mean? Aren't they my competitors?

Socrates: Look here, if you were intending to steer a ship into battle, would you be content to be the best sailor at steering? Granted that's necessary, but wouldn't you keep your eye on your real opponents and not on your comrades, as you're doing now? Surely you ought to be so far superior to them that they're happy to be your humble comrades in
the struggle, and wouldn't dream of competing with you. I'm assuming e
that you do really intend to distinguish yourself with some splendid deed worthy of you and your city.

Alcibiades: Yes, that's certainly what I intend to do.

Socrates: Dear me, how very proper it is for you to be satisfied with being better than the soldiers—how proper not to keep an eye on the leaders of the opposing camp, so that you can some day become better than them by training and scheming against them!

Alcibiades: Who are you talking about, Socrates? 120

Socrates: Don't you know that our city is at war from time to time with the Spartans and with the Great King of Persia?

Alcibiades: You're right.

Socrates: So since you plan to be leader of this city, wouldn't it be right to think that your struggle is with the kings of Sparta and Persia?

Alcibiades: That may well be true.

Socrates: But no sir, you've got to keep an eye on Midias the cockfighter
and such people—people who try to run the city's affairs with their 'slave- b
boy hair styles' (as the women say) still showing on their boorish minds. They set out to flatter the city with their outlandish talk, not to rule it. These are the people, I'm telling you, you've got to keep your eyes on. So relax, don't bother to learn what needs to be learned for the great struggle
to come, don't train yourself for what needs training—go ahead and go c
into politics with your complete and thorough preparation.

Alcibiades: No, Socrates, I think you're right. But still I don't think the Spartan generals or the Persian king are any different from anybody else.

Socrates: But what sort of a notion is that? Think about it.

Alcibiades: About what?

Socrates: In the first place, when do you think you'd cultivate yourself:
if you feared them and thought they were formidable, or if you didn't? d

Alcibiades: Obviously if I thought they were formidable.

Socrates: Surely you don't think that cultivating yourself will do you any harm, do you?

Alcibiades: Not at all. In fact, it would be a big help.

Socrates: So that's one flaw in this notion of yours, a big flaw, isn't it?

Alcibiades: You're right.

Socrates: Now the second flaw is that it's also false, judging by the probabilities.

Alcibiades: What do you mean?

Socrates: Is it likely that natural talents will be greatest among noble families, or in other families?

e Alcibiades: In noble families, obviously.

Socrates: Those who are well born will turn out to be perfectly virtuous, if they're well brought up, won't they?

Alcibiades: They certainly will.

Socrates: So let's compare our situation with theirs, and consider, first of all, whether the Spartan and Persian kings are of humbler descent. We know, of course, that the Spartan kings are descended from Heracles, and the Persian kings are descended from Achaemenes, and that the families of Heracles and Achaemenes go right back to Perseus, son of Zeus.

121 Alcibiades: Mine too, Socrates—my family goes back to Eurysaces and Eurysaces' goes back to Zeus.

Socrates: So does mine too, noble Alcibiades, mine goes back to Daedalus and Daedalus' goes back to Hephaestus,[16] son of Zeus. Starting with those kings, though, and tracing backwards, every one of them is a king all the way back to Zeus—kings of Argos and Sparta, and kings of Persia in eternity, and sometimes of Asia, too, as they are now. But you and I
b are private citizens, as were our fathers. And if you had to show off your ancestors and Salamis, the native land of Eurysaces, to Artaxerxes, son of Xerxes—or Aegina, the native land of Aeacus the ancestor of Eurysaces—don't you realize how much you'd be laughed at? But you think we're the equal of those men in the dignity of our descent, as well as in our upbringing.

Haven't you noticed what a commanding position the Spartan kings enjoy? Their wives are guarded at public expense by the ephors, so as to ensure, as far as possible, that their kings are descended from the family
c of the Heraclidae alone. And as for the Persian king, his position is so supreme that nobody so much as *suspects* his heir of being fathered by anybody but him; that's why his queen is left unguarded except by fear. When the eldest son and heir to the throne is born, all the king's subjects have a feast day. Then, in the years that follow, the whole of Asia celebrates that day, the king's birthday, with further sacrifice and feasting. But when
d *we* are born, Alcibiades, "even the neighbors hardly notice it," as the comic poet[17] says.

16. Socrates' father was a sculptor; sculptors recognized Daedalus as their patron and legendary ancestor. Hephaestus was the artisan among the Olympian gods.

17. A line of the comic poet Plato, frg. 204 Kock.

Then the boy is brought up—not by some nanny of no account, but by
the most highly respected eunuchs in the royal household. They attend to
all the needs of the infant child, and are especially concerned to make him
as handsome as possible, shaping and straightening his infant limbs; and
for this they are held in great esteem. When the boys reach seven years e
of age they take up horseback riding with their instructors, and begin to
hunt wild game.

When he is twice seven years, the boy is entrusted to people called the
"royal tutors." These are four Persians of mature age who have been
selected as the best: the wisest, the justest, and most self-controlled, and
the bravest. The first of them instructs him in the worship of their gods, 122
the Magian lore of Zoroaster, son of Horomazes, and also in what a king
should know. The justest man teaches him to be truthful his whole life
long. The most self-controlled man teaches him not to be mastered by even
a single pleasure, so that he can get accustomed to being a free man and
a real king, whose first duty is to rule himself, not be a slave to himself.
The bravest man trains him to be fearless and undaunted, because fear
is slavery.

But for you, Alcibiades, Pericles chose from among his household Zo- b
pyrus the Thracian, a tutor so old he was perfectly useless. I could tell
you about all the rest of the upbringing and education of your competitors,
but it would be a long story and, besides, you can probably imagine the
later stages from what I've told you so far. But, Alcibiades, your birth,
your upbringing, and your education—or that of any other Athenian—is
of no concern to anybody, to tell the truth—nobody, that is, except perhaps
some man who may happen to be in love with you.

Again, if you care to consider the wealth of the Persians, the splendor, c
the clothes and trailing robes, the anointings with myrrh, the throng of
servants-in-waiting, and all their other luxuries, you'd be ashamed of your
circumstances, because you'd see how inferior they are to theirs.

Again, if you care to consider the self-control and the decorum of the Spartans, their confidence and their composure, their self-esteem and their discipline, their courage and their fortitude, and their love of hardship, victory, and honor, you'd consider yourself a mere child in all these respects.

Again, we'd better discuss your wealth, Alcibiades, if you're to see where d
you stand. *You* may devote yourself to it and think it makes you something,
but if you care to look at the wealth of the Spartans you'd realize that it
greatly exceeds ours in Athens. They have land of their own and in Messene
that not a single one of our estates could compete with—not in size, nor
in quality, nor in slaves—especially Helots—nor even in horses, nor in the
other livestock grazing in Messene. But I'll pass over all that. e

There is more gold and silver in Sparta in private hands than in the rest
of Greece put together. It's been coming in to them for many generations,
pouring in from all of Greece's cities, and often from foreign cities, too,
and it never goes out again. It's just like what the fox says to the lion in 123

Aesop's fable[18]—you can clearly see the tracks of the money going in toward Sparta, but the tracks coming out are nowhere to be seen. So you can be sure that the Spartans are the richest of the Greeks in gold and silver, and that the king is the richest of all the Spartans, because the greatest share of these revenues goes to him. Furthermore, he receives a considerable sum from the Spartans by way of royal tribute.

b But great as they are when compared with other Greek cities, the Spartan fortunes are nothing compared with the fortunes of the Persians and their king. I once spoke with a reliable man who travelled over to the Persian court, and he told me that he crossed a very large and rich tract of land, nearly a day's journey across, which the locals called "the Queen's girdle."
c There's another one called "the Queen's veil," as well as many others, all fine and rich properties, each one named for a part of the Queen's wardrobe, because each one is set aside to pay for the Queen's finery.

Now suppose someone were to say to Amestris, the king's mother and the widow of Xerxes, "The son of Dinomache intends to challenge your son; her wardrobe is worth only fifty minas at best, and her son has less than three hundred acres[19] of land at Erchia." I think she'd be wondering
d what this Alcibiades had up his sleeve to think of competing against Artaxerxes. I think she'd say, "I don't see what this fellow could be relying on, except diligence and wisdom—the Greeks don't have anything else worth mentioning."

But if she heard that this Alcibiades who is making this attempt is, in the first place, hardly twenty years old yet, and, secondly, entirely uneducated, and furthermore, when his lover tells him to study and culti-
e vate himself and discipline himself so that he can compete with the king, he says he doesn't want to and that he's happy with the way he is—if she heard all that, I think she'd ask in amazement, "What in the world could this youngster be relying on?" Suppose we were to reply, "Good looks, height, birth, wealth, and native intelligence." Then, Alcibiades, considering all that they have of these things as well, she'd conclude that we were stark raving mad. Again, I think that Lampido, the daughter of Leotychides,
124 wife of Archidamus and mother of Agis, who were all Spartan kings, would be similarly amazed if you, with your bad upbringing, proposed to compete with her son, considering all his advantages.

And yet, don't you think it's disgraceful that even our enemies' *wives* have a better appreciation than we do of what it would take to challenge them? No, my excellent friend, trust in me and in the Delphic inscription
b and 'know thyself'. These are the people we must defeat, not the ones you think, and we have no hope of defeating them unless we act with both diligence and skill. If you fall short in these, then you will fall short

18. No. 142 (Perry), 147 (Hausrath).

19. The Attic 'acre' was 874 square meters, so Alcibiades' holding was less than 26 hectares (65 modern acres).

of achieving fame in Greece as well as abroad; and that is what I think you're longing for, more than anyone else ever longed for anything.

ALCIBIADES: Well, Socrates, what kind of self-cultivation do I need to practice? Can you show me the way? What you said really sounded true.

SOCRATES: Yes—but let's discuss together how we can become as good as possible. You know, what I've said about the need for education applies c
to me as well as to you—we're in the same condition, except in one respect.

ALCIBIADES: What?

SOCRATES: My guardian is better and wiser than Pericles, your guardian.

ALCIBIADES: Who's that, Socrates?

SOCRATES: God, Alcibiades; it was a god who prevented me from talking with you before today. I put my faith in him, and I say that your glory will be entirely my doing.

ALCIBIADES: You're teasing me, Socrates. d

SOCRATES: Maybe; but I'm right in saying that we stand in need of self-cultivation. Actually, every human being needs self-cultivation, but *especially* the two of us.

ALCIBIADES: You're right about me.

SOCRATES: And about me.

ALCIBIADES: So what should we do?

SOCRATES: There must be no giving up, my friend, and no slacking off.

ALCIBIADES: No, Socrates, that really wouldn't do.

SOCRATES: No it wouldn't. So let's work it out together. Tell me—we say e
that we want to be as good as possible, don't we?

ALCIBIADES: Yes.

SOCRATES: In what respect?

ALCIBIADES: In what good men do, obviously.

SOCRATES: Good at what?

ALCIBIADES: Taking care of things, obviously.

SOCRATES: What sorts of things? Horses?

ALCIBIADES: Of course not.

SOCRATES: In that case, we'd consult a horse expert.

ALCIBIADES: Yes.

SOCRATES: Well, do you mean sailing?

ALCIBIADES: No.

SOCRATES: In that case, we'd consult a sailing expert.

ALCIBIADES: Yes.

SOCRATES: Well, what sorts of things? Whose business is it?

ALCIBIADES: The leading citizens of Athens.

SOCRATES: By 'leading citizens' do you mean clever men or stupid men? 125

ALCIBIADES: Clever.

SOCRATES: But isn't everybody good at what they're clever at?

ALCIBIADES: Yes.

SOCRATES: And bad at what they're not?

ALCIBIADES: Of course.

SOCRATES: And is the shoemaker clever at making shoes?

ALCIBIADES: Certainly.

SOCRATES: Then he's good at it.

ALCIBIADES: That's right.

SOCRATES: Well now, isn't the shoemaker stupid at making clothes?

ALCIBIADES: Yes.

b SOCRATES: So he's bad at that.

ALCIBIADES: Yes.

SOCRATES: So the same person is both good and bad, at least by this argument.

ALCIBIADES: Apparently.

SOCRATES: Do you mean to say that *good men* are also bad?

ALCIBIADES: Of course not.

SOCRATES: So which ones *do* you say are good men?

ALCIBIADES: I mean those with the ability to rule in the city.

SOCRATES: But not, I presume, over horses.

ALCIBIADES: No, of course not.

SOCRATES: Over people?

ALCIBIADES: Yes.

SOCRATES: When they're sick?

ALCIBIADES: No.

SOCRATES: When they're at sea?

ALCIBIADES: No.

SOCRATES: When they're harvesting?

ALCIBIADES: No.

c SOCRATES: When they're doing nothing? Or when they're doing something?

ALCIBIADES: Doing something.

SOCRATES: Doing what? Try to make it clear for me.

ALCIBIADES: It's when they're helping each other and dealing with each other, as we do in our urban way of life.

SOCRATES: So you mean ruling over men who deal with men.

ALCIBIADES: Yes.

SOCRATES: Over the boatswains who deal with rowers?

ALCIBIADES: Of course not.

SOCRATES: That's what the pilot is good at.

ALCIBIADES: Yes.

d SOCRATES: Do you mean ruling over flute-players, who direct the singers and deal with the dancers?

ALCIBIADES: Of course not.

SOCRATES: Again, that's what the chorus-master is good at.

ALCIBIADES: Certainly.

SOCRATES: So what *do* you mean by being able to 'rule over men who deal with men'?

ALCIBIADES: I mean ruling over the men in the city who take part in citizenship and who make a mutual contribution.

Socrates: Well, what skill is this? Suppose I asked you the same thing again—what skill makes men understand how to rule over men who take part in sailing?

Alcibiades: The pilot's.

Socrates: And what knowledge did we say enables them to rule over e
those who take part in singing?

Alcibiades: The chorus-master's, as you just said.

Socrates: Well now, what do you call the knowledge that enables you to rule over those who take part in citizenship?

Alcibiades: I call it the knowledge of good advice, Socrates.

Socrates: But then do you think the pilot's advice is bad advice?

Alcibiades: Of course not.

Socrates: Then is it good advice?

Alcibiades: I should think so; he has to ensure the safety of his passengers. 126

Socrates: You're right. Well then, what's the purpose of this good advice you're talking about?

Alcibiades: The safety and better management of the city.

Socrates: But what is present or absent when the city is safe and better managed? If, for example, you asked me, "What is present or absent in the body when it is safe and better managed?" I'd reply, "Health is present and disease is absent." Wouldn't you agree?

Alcibiades: Yes. b

Socrates: And if you asked me again, "What is present in our eyes when they are better cared for?" I'd say the same sort of thing—"Sight is present and blindness is absent." Again, with our ears, deafness is absent and hearing is present when they're in better condition and getting better treatment.

Alcibiades: You're right.

Socrates: Well then, what about a city? What is it that's present or absent when it's in a better condition and getting better management and treatment?

Alcibiades: The way I look at it, Socrates, mutual friendship will be c
present, and hatred and insurrection will be absent.

Socrates: When you say 'friendship', do you mean agreement or disagreement?

Alcibiades: Agreement.

Socrates: What skill is it that makes cities agree about numbers?

Alcibiades: Arithmetic.

Socrates: What about private citizens? Isn't it the same skill?

Alcibiades: Yes.

Socrates: And doesn't it also make each person agree with himself?

Alcibiades: Yes.

Socrates: And what skill is it that makes each of us agree with himself
about whether a hand's-width is larger than an arm's-length? It's measur- d
ing, isn't it?

Alcibiades: Of course.

Socrates: Doesn't it make both cities and private citizens agree?

Alcibiades: Yes.

Socrates: And isn't it the same with weighing?

Alcibiades: It is.

Socrates: Well, this agreement you're talking about, what is it? What's it about? What skill provides it? Doesn't the same skill make both a city and a private citizen agree, both with themselves and with others?

Alcibiades: That does seem quite likely.

e Socrates: What is it then? Don't give up. . . . Try your best to tell me.

Alcibiades: I suppose I mean the sort of friendship and agreement you find when a mother and father agree with a son they love, and when a brother agrees with his brother, and a woman agrees with her husband.

Socrates: Well, Alcibiades, do you think that a husband is able to agree with his wife about wool-working, when he doesn't understand it and she does?

Alcibiades: Of course not.

Socrates: Nor does he have any need to, because that's for a woman to know about.

Alcibiades: That's right.

127 Socrates: And is a woman able to agree with her husband about military tactics, without having learned about it?

Alcibiades: Of course not.

Socrates: I suppose you'd say that that's for a man to know about.

Alcibiades: I would.

Socrates: So, according to your argument, some subjects are women's subjects and some are men's subjects.

Alcibiades: Of course.

Socrates: So, in these areas at least, there's no agreement between men and women.

Alcibiades: No.

Socrates: Nor is there any friendship, since friendship was agreement.

Alcibiades: Apparently not.

Socrates: So women are not loved by men, insofar as they do their own work.

b Alcibiades: It seems not.

Socrates: Nor are men loved by women, insofar as they do theirs.

Alcibiades: No.

Socrates: So neither are cities well governed when the different groups each do their own work.

Alcibiades: But I think they *are*, Socrates.

Socrates: What do you mean? In that case there's no friendship in cities, but we said friendship was present when cities are well governed, and not otherwise.

Alcibiades: But I think it's when each person does his own work that mutual friendship results.

SOCRATES: You've just changed your mind. What do you mean now? c
Can there be friendship without agreement? Can there be any agreement when some know about the matter and others don't?

ALCIBIADES: There can't possibly.

SOCRATES: But when everyone does his own work, is everyone being just, or unjust?

ALCIBIADES: Just, of course.

SOCRATES: So when the citizens do what is just in the city, there is no friendship between them.

ALCIBIADES: Again, Socrates, I think there must be.

SOCRATES: Then what *do* you mean by this 'friendship' and 'agreement' d
that we must be wise and good advisers in if we're to be good men? I can't figure out what it is, or who's got it. According to your argument, it seems that sometimes certain people have it and sometimes they don't.

ALCIBIADES: Well, Socrates, I swear by the gods that I don't even know what I mean. I think I must have been in an appalling state for a long time, without being aware of it.

SOCRATES: But don't lose heart. If you were fifty when you realized it, e
then it would be hard for you to cultivate yourself, but now you're just the right age to see it.

ALCIBIADES: Now that I've seen it, Socrates, what should I do about it?

SOCRATES: Answer my questions, Alcibiades. If you do that, then, God willing,—if we are to trust in my divination—you and I will be in a better state.

ALCIBIADES: Then we will be, if it depends on my answering.

SOCRATES: Well then, what does it mean to cultivate oneself?—I'm afraid 128
we often think we're cultivating ourselves when we're not. When does a man do that? Is he cultivating himself when he cultivates what he has?

ALCIBIADES: *I* think so, anyway.

SOCRATES: Really? When does a man cultivate or care for his feet? Is it when he's caring for what belongs to his feet?

ALCIBIADES: I don't understand.

SOCRATES: Is there anything you'd say belonged to a hand? Take a ring, for example—could it belong anywhere else on a man but on his finger?

ALCIBIADES: Of course not.

SOCRATES: Similarly a shoe belongs nowhere but on the feet.

ALCIBIADES: Yes.

SOCRATES: Likewise cloaks and bedclothes belong to the rest of the body.

ALCIBIADES: Yes. b

SOCRATES: So when we cultivate or care for our shoes, are we caring for our feet?

ALCIBIADES: I don't really understand, Socrates.

SOCRATES: Surely, Alcibiades, you talk about taking proper care of one thing or another, don't you?

ALCIBIADES: Yes, I do.

SOCRATES: And when you make something better, you say you're taking proper care of it.

ALCIBIADES: Yes.

SOCRATES: What skill is it that makes shoes better?

ALCIBIADES: Shoemaking.

SOCRATES: So shoemaking is the skill by which we take care of shoes.

c ALCIBIADES: Yes.

SOCRATES: Do we use shoemaking to take care of our feet, too? Or do we use the skill that makes our feet better?

ALCIBIADES: The latter.

SOCRATES: Isn't the skill that makes the feet better the same as what makes the rest of the body better?

ALCIBIADES: I think so.

SOCRATES: Isn't this skill athletics?

ALCIBIADES: Yes, absolutely.

SOCRATES: So while we take care of our feet with athletics, we take care of what belongs to our feet with shoemaking.

ALCIBIADES: Certainly.

SOCRATES: And while we take care of our hands with athletics, we take care of what belongs to our hands with ring-making.

ALCIBIADES: Yes.

SOCRATES: And while we cultivate our bodies with athletics, we take care
d of what belongs to our bodies with weaving and other skills.

ALCIBIADES: That's absolutely right.

SOCRATES: So while we cultivate each thing with one skill, we cultivate what belongs to it with another skill.

ALCIBIADES: Apparently so.

SOCRATES: And so when you're cultivating what belongs to you, you're not cultivating yourself.

ALCIBIADES: Not at all.

SOCRATES: For it seems that cultivating yourself and cultivating what belongs to you require different skills.

ALCIBIADES: Apparently.

SOCRATES: Well then, what sort of skill could we use to cultivate ourselves?

ALCIBIADES: I couldn't say.

e SOCRATES: But we've agreed on this much, at least—it's a skill that won't make anything that belongs to us better, but it will make *us* better.

ALCIBIADES: You're right.

SOCRATES: Now if we didn't know what a shoe was, would we have known what skill makes a shoe better?

ALCIBIADES: No, we couldn't have.

SOCRATES: Nor would we have known what skill makes a ring better if we didn't know what a ring was.

ALCIBIADES: True.

SOCRATES: Well then, could we ever know what skill makes us better if we didn't know what *we* were?

ALCIBIADES: We couldn't. 129

SOCRATES: Is it actually such an easy thing to know oneself? Was it some simpleton who inscribed those words on the temple wall at Delphi? Or is it difficult, and not for everybody?

ALCIBIADES: Sometimes I think, Socrates, that anyone can do it, but then sometimes I think it's extremely difficult.

SOCRATES: But Alcibiades, whether it's easy or not, nevertheless this is the situation we're in: if we know ourselves, then we might be able to know how to cultivate ourselves, but if we don't know ourselves, we'll never know how.

ALCIBIADES: I agree.

SOCRATES: Tell me, how can we find out what 'itself' is, in itself?[20] Maybe b
this is the way to find out what we ourselves might be—maybe it's the only possible way.

ALCIBIADES: You're right.

SOCRATES: Hold on, by Zeus—who are you speaking with now? Anybody but me?

ALCIBIADES: No.

SOCRATES: And I'm speaking with you.

ALCIBIADES: Yes.

SOCRATES: Is Socrates doing the talking?

ALCIBIADES: He certainly is.

SOCRATES: And is Alcibiades doing the listening?

ALCIBIADES: Yes.

SOCRATES: And isn't Socrates talking with words?

ALCIBIADES: Of course. c

SOCRATES: I suppose you'd say that talking is the same as using words?

ALCIBIADES: Certainly.

SOCRATES: But the thing being used and the person using it—they're different, aren't they?

ALCIBIADES: What do you mean?

SOCRATES: A shoemaker, for example, cuts with a knife and a scraper, I think, and with other tools.

ALCIBIADES: Yes, he does.

SOCRATES: So isn't the cutter who uses the tools different from the tools he's cutting with?

ALCIBIADES: Of course.

SOCRATES: And likewise isn't the lyre-player different from what he's playing with?

ALCIBIADES: Yes.

20. Reading *auto to auto* in b1.

d Socrates: This is what I was just asking—doesn't the user of a thing always seem to be different from what he's using?

Alcibiades: It seems so.

Socrates: Let's think about the shoemaker again. Does he cut with his tools only, or does he also cut with his hands?

Alcibiades: With his hands, too.

Socrates: So he uses his hands, too.

Alcibiades: Yes.

Socrates: And doesn't he use his eyes, too, in shoemaking?

Alcibiades: Yes.

Socrates: Didn't we agree that the person who uses something is different from the thing that he uses?

Alcibiades: Yes.

Socrates: So the shoemaker and the lyre-player are different from the hands and eyes they use in their work.

e Alcibiades: So it seems.

Socrates: Doesn't a man use his whole body, too?

Alcibiades: Certainly.

Socrates: And we agreed that the user is different from the thing being used.

Alcibiades: Yes.

Socrates: So a man is different from his own body.

Alcibiades: So it seems.

Socrates: Then what *is* a man?

Alcibiades: I don't know what to say.

Socrates: Yes, you do—say that it's what uses the body.

Alcibiades: Yes.

130 Socrates: What else uses it but the soul?

Alcibiades: Nothing else.

Socrates: And doesn't the soul rule the body?

Alcibiades: Yes.

Socrates: Now here's something I don't think anybody would disagree with.

Alcibiades: What?

Socrates: Man is one of three things.

Alcibiades: What things?

Socrates: The body, the soul, or the two of them together, the whole thing.

Alcibiades: Of course.

Socrates: But we agreed that man is that which rules the body.

b Alcibiades: Yes, we did agree to that.

Socrates: Does the body rule itself?

Alcibiades: It couldn't.

Socrates: Because we said it was ruled.

Alcibiades: Yes.

Socrates: So *this* can't be what we're looking for.

Alcibiades: Not likely.

Socrates: Well then, can the two of them together rule the body? Is this what man is?

Alcibiades: Yes, maybe that's it.

Socrates: No, that's the least likely of all. If one of them doesn't take part in ruling, then surely no combination of the two of them could rule.

Alcibiades: You're right.

Socrates: Since a man is neither his body, nor his body and soul together, c
what remains, I think, is either that he's nothing, or else, if he *is* something, he's nothing other than his soul.

Alcibiades: Quite so.

Socrates: Do you need any clearer proof that the soul is the man?

Alcibiades: No, by Zeus, I think you've given ample proof.

Socrates: Well, if we've proven it fairly well, although perhaps not rigorously, that will do for us. We'll have a rigorous proof when we find out what we skipped over, because it would have taken quite a lot of study. d

Alcibiades: What was that?

Socrates: What we mentioned just now, that we should first consider what 'itself' is, in itself. But in fact, we've been considering what an individual self[21] is, instead of what 'itself' is. Perhaps that was enough for us, for surely nothing about us has more authority than the soul, wouldn't you agree?

Alcibiades: Certainly.

Socrates: So the right way of looking at it is that, when you and I talk to each other, one soul uses words to address another soul.

Alcibiades: Very true. e

Socrates: That's just what we were saying a little while ago—that Socrates converses with Alcibiades not by saying words to his face, apparently, but by addressing his words to *Alcibiades*, in other words, to his soul.

Alcibiades: I see it now.

Socrates: So the command that we should know ourselves means that we should know our souls.

Alcibiades: So it seems. 131

Socrates: And someone who knows certain things[22] about his body knows about what belongs to him, not himself.

Alcibiades: That's right.

Socrates: So no doctor, to the extent he's a doctor, knows himself, and neither does any trainer, to the extent he's a trainer.

Alcibiades: It seems not.

Socrates: So farmers and other tradesmen are a long way from knowing themselves. It seems *they* don't even know what belongs to them; their skills are about what's even further away than what belongs to them. They b
only know what belongs to the body and how to take care of it.

21. Reading *auton hekaston* at d4.

22. Conjecturing *atta* before *tōn* in a2, and omitting *ti*.

Alcibiades: You're right.

Socrates: If being self-controlled is knowing yourself, then their skills don't make any of them self-controlled.

Alcibiades: I don't think so.

Socrates: That's why we consider these skills to be beneath us, and not suitable for a gentleman to learn.

Alcibiades: You're quite right.

Socrates: Furthermore, if someone takes care of his body, then isn't he caring for something that belongs to him, and not for himself?

Alcibiades: That seems likely.

Socrates: And isn't someone who takes care of his wealth caring neither
c for himself nor for what belongs to him, but for something even further away?

Alcibiades: I agree.

Socrates: So the money-earner is not, in fact, doing his own work.

Alcibiades: Right.

Socrates: Now if there was someone who loved Alcibiades' body, he wouldn't be loving Alcibiades, only something that belonged to Alcibiades.

Alcibiades: That's right.

Socrates: But someone who loved you would love your soul.

Alcibiades: By our argument, I think he'd have to.

Socrates: Wouldn't someone who loves your body go off and leave you when your beauty is no longer in full bloom?

Alcibiades: Obviously.

d Socrates: But someone who loves your soul will not leave you, as long as you're making progress.

Alcibiades: That's probably right.

Socrates: Well, I'm the one who won't leave you—I'm the one who will stay with you, now that your body has lost its bloom and everyone else has gone away.

Alcibiades: I'm glad you are, Socrates, and I hope you never leave me.

Socrates: Then you must try to be as attractive as possible.

Alcibiades: I'll certainly try.

e Socrates: So this is your situation: you, Alcibiades, son of Clinias, have no lovers and never have had any, it seems, except for one only, and he is your darling[23] Socrates, son of Sophroniscus and Phaenarete.

Alcibiades: True.

Socrates: Remember when I first spoke to you? You said that you were just about to say something; you wanted to ask me why I was the only one who hadn't given up on you.[24]

Alcibiades: That's right.

Socrates: Well, this is the reason: I was your only lover—the others were only lovers of what you had. While your possessions are passing

23. An echo of *Odyssey* ii.365.

24. At 104c–d.

their prime, *you* are just beginning to bloom. I shall never forsake you now, never, unless the Athenian people make you corrupt and ugly. And that is my greatest fear, that a love of the common people might corrupt you, for many Athenian gentlemen have suffered that fate already. "The people of great-hearted Erechtheus"[25] might look attractive on the outside, but you need to scrutinize them in their nakedness, so take the precaution I urge. 132

ALCIBIADES: What precaution?

SOCRATES: Get in training first, my dear friend, and learn what you need to know *before* entering politics. That will give you an antidote against the terrible dangers. b

ALCIBIADES: I think you're right, Socrates. But try to explain how exactly we should cultivate ourselves.

SOCRATES: Well, we've made one step forward anyway—we've pretty well agreed what we are; we were afraid that we might make a mistake about that and unwittingly cultivate something other than ourselves.

ALCIBIADES: That's right.

SOCRATES: And the next step is that we have to cultivate our soul and look to that. c

ALCIBIADES: Obviously.

SOCRATES: And let others take care of our bodies and our property.

ALCIBIADES: Quite so.

SOCRATES: Now, how can we get the clearest knowledge of our soul? If we knew that, we'd probably know ourselves as well . . . By the gods—that admirable Delphic inscription we just mentioned[26]—didn't we understand it?

ALCIBIADES: What's the point of bringing that up again, Socrates?

SOCRATES: I'll tell you what I suspect that inscription means, and what advice it's giving us. There may not be many examples of it, except the case of sight. d

ALCIBIADES: What do you mean by that?

SOCRATES: You think about it, too. If the inscription took our eyes to be men and advised them, "See thyself," how would we understand such advice? Shouldn't the eye be looking at something in which it could see itself?

ALCIBIADES: Obviously.

SOCRATES: Then let's think of something that allows us to see both it and ourselves when we look at it.

ALCIBIADES: Obviously, Socrates, you mean mirrors and that sort of thing. e

SOCRATES: Quite right. And isn't there something like that in the eye, which we see with?

ALCIBIADES: Certainly.

25. An epithet for the people of Athens, in Homer, *Iliad* ii.547.

26. "Know Thyself"; cf. 129a.

133 Socrates: I'm sure you've noticed that when a man looks into an eye his face appears in it, like in a mirror. We call this the 'pupil', for it's a sort of miniature of the man who's looking.[27]

Alcibiades: You're right.

Socrates: Then an eye will see itself if it observes an eye and looks at the best part of it, the part with which it can see.

Alcibiades: So it seems.

Socrates: But it won't see itself if it looks at anything else in a man, or anything else at all, unless it's similar to the eye.

b Alcibiades: You're right.

Socrates: So if an eye is to see itself, it must look at an eye, and at that region of it in which the good activity of an eye actually occurs, and this, I presume, is seeing.

Alcibiades: That's right.

Socrates: Then if the soul, Alcibiades, is to know itself, it must look at a soul, and especially at that region in which what makes a soul good, wisdom, occurs, and at anything else which is similar to it.

Alcibiades: I agree with you, Socrates.

c Socrates: Can we say that there is anything about the soul which is more divine than that where knowing and understanding take place?

Alcibiades: No, we can't.

Socrates: Then that region in it resembles the divine,[28] and someone who looked at that and grasped everything divine—vision[29] and understanding—would have the best grasp of himself as well.

Alcibiades: So it seems.[30]

Socrates: But we agreed that knowing oneself was the same as being self-controlled.

Alcibiades: Certainly.

Socrates: So if we didn't know ourselves and weren't self-controlled, would we be able to know which of the things that belong to us were good and which were bad?

Alcibiades: How could we know that, Socrates?

d Socrates: No; I suppose it would seem impossible to you to know that what belongs to Alcibiades belongs to him, without knowing Alcibiades.

27. The Greek word for 'pupil' also means 'doll'.

28. Reading *theiōi* in c4.

29. Accepting the emendation *thean* (vision) for *theon* (god) in c5.

30. Omitting 133c8–17 (which seem to have been added by a later neo-Platonist scholar). The lines read:

Socrates: Just as mirrors are clearer, purer, and brighter than the reflecting surface of the eye, isn't God both purer and brighter than the best part of our soul?

Alcibiades: I would certainly think so, Socrates.

Socrates: So the way that we can best see and know ourselves is to use the finest mirror available and look at God and, on the human level, at the virtue of the soul.

Alcibiades: Yes.

ALCIBIADES: Quite impossible, I'm sure.

SOCRATES: And similarly we couldn't know that what belongs to us belongs to us, without knowing ourselves.

ALCIBIADES: How could we?

SOCRATES: And if we didn't even know what belongs to us, how could we possibly know what belongs to our belongings?

ALCIBIADES: We couldn't.

SOCRATES: Then it wasn't quite right to agree, as we did a few minutes ago,[31] that some people know what belongs to them without knowing themselves, while others know what belongs to their belongings. It seems e
that it's the job of one man, and one skill, to know all these things: himself, his belongings, and his belongings' belongings.

ALCIBIADES: That seems likely.

SOCRATES: And it follows that anyone who doesn't know his own belongings probably won't know other people's belongings either.

ALCIBIADES: Quite so.

SOCRATES: And if he doesn't know other people's belongings, nor will he know what belongs to the city.

ALCIBIADES: He couldn't.

SOCRATES: So such a man couldn't become a statesman.

ALCIBIADES: Of course not.

SOCRATES: Nor could he even manage a household estate.

ALCIBIADES: Of course not.

SOCRATES: Nor indeed will he know what he's doing. 134

ALCIBIADES: Certainly not.

SOCRATES: And if he doesn't know what he's doing, won't he make mistakes?

ALCIBIADES: Certainly.

SOCRATES: Since he makes mistakes, won't he conduct himself badly, both publicly and privately?

ALCIBIADES: Of course.

SOCRATES: Since he conducts himself badly, won't he be a failure?

ALCIBIADES: Absolutely.

SOCRATES: What about the people he's working for?

ALCIBIADES: They will be too.

SOCRATES: Then it's impossible for anyone to prosper unless he is self-controlled and good.

ALCIBIADES: Impossible. b

SOCRATES: So it's the bad men who are failures.

ALCIBIADES: Absolutely.

SOCRATES: And so the way to avoid being a failure is not by getting rich, but by being self-controlled.

ALCIBIADES: Apparently.

31. At 131a–c.

Socrates: So it's not walls or war-ships or shipyards that cities need, Alcibiades, if they are to prosper, nor is it numbers or size, without virtue.

Alcibiades: Definitely.

Socrates: So if you are to manage the city's business properly and well,
c you must impart virtue to the citizens.

Alcibiades: Of course.

Socrates: Is it possible to impart something you haven't got?

Alcibiades: How could you?

Socrates: Then you, or anyone else who is to be ruler and trustee, not only of himself and his private business, but also the city and the city's business, must first acquire virtue himself.

Alcibiades: You're right.

Socrates: So what you need to get for yourself and for the city isn't political power, nor the authority to do what you like; what you need is justice and self-control.

Alcibiades: Apparently.[32]

e Socrates: Because my dear Alcibiades, when an individual or a city with no intelligence is at liberty to do what he or it wants, what do you think the likely result will be? For example, if he's sick and has the power
135 to do whatever he likes—without any medical insight but with such a dictator's power that nobody criticizes him—what's going to happen? Isn't it likely his health will be ruined?

Alcibiades: You're right.

Socrates: And in a ship, if someone were free to do what he liked, but was completely lacking in insight and skill in navigation, don't you see what would happen to him and his fellow sailors?

Alcibiades: I do indeed; they would all die.

32. Accepting a conjectural deletion of 134d1–e7 (which seem to have been added by a later neo-Platonist scholar). The lines read:

Socrates: And if you and the city act with justice and self-control, you and the city will be acting in a way that pleases God.

Alcibiades: That seems likely.

Socrates: And, as we were saying before, you will be acting with a view to what is divine and bright.

Alcibiades: Apparently.

Socrates: Of course, if you keep that in view, you will see and understand yourselves and your own good.

Alcibiades: Yes.

Socrates: And you will act properly and well.

Alcibiades: Yes.

Socrates: And if you act that way, I'm prepared to guarantee your prosperity.

Alcibiades: And I trust your guarantee.

Socrates: But if you act unjustly, with your eyes on what is dark and godless, as is likely, your conduct will also be dark and godless, because you don't know yourself.

Alcibiades: That's likely.

Socrates: Likewise, if a city, or any ruler or administrator, is lacking in virtue, then bad conduct will result. b

Alcibiades: It must.

Socrates: Well then, my good Alcibiades, if you are to prosper, it isn't supreme power you need to get for yourself or the city, but virtue.

Alcibiades: You're right.

Socrates: But before one acquires virtue it's better to be ruled by somebody superior than to rule; this applies to men as well as to boys.

Alcibiades: So it seems.

Socrates: And isn't what is better also more admirable?

Alcibiades: Yes.

Socrates: And isn't what is more admirable more appropriate?

Alcibiades: Of course. c

Socrates: So it's appropriate for a bad man to be a slave, since it's better.

Alcibiades: Yes.

Socrates: And vice is appropriate for a slave.

Alcibiades: Apparently.

Socrates: And virtue is appropriate for a free man.

Alcibiades: Yes.

Socrates: Well, my friend, shouldn't we avoid whatever is appropriate for slaves?

Alcibiades: Yes, as much as possible, Socrates.

Socrates: Can you see what condition you're now in? Is it appropriate for a free man or not?

Alcibiades: I think I see only too clearly.

Socrates: Then do you know how to escape from your present state?—let's not call a handsome young man by *that* name.

Alcibiades: I do. d

Socrates: How?

Alcibiades: It's up to you, Socrates.

Socrates: That's not well said, Alcibiades.

Alcibiades: Well, what should I say?

Socrates: That it's up to God.

Alcibiades: Then that's what I say. And furthermore I say this as well: we're probably going to change roles, Socrates. I'll be playing yours and you'll be playing mine, for from this day forward I will never fail to attend on you, and you will always have me as your attendant.

Socrates: Then my love for you, my excellent friend, will be just like a e
stork: after hatching a winged love in you, it will be cared for by it in return.

Alcibiades: Yes, that's right. I'll start to cultivate justice in myself right now.

Socrates: I should like to believe that you will persevere, but I'm afraid—not because I distrust your nature, but because I know how powerful the city is—I'm afraid it might get the better of both me and you.

# SECOND ALCIBIADES

*Alcibiades, full of ambition, encounters Socrates, who engages him in conversation and makes him realize how little he understands of what he needs to understand; at the end Alcibiades is humiliated and begs Socrates to be his teacher and lover. To this schematic extent* Second Alcibiades *tells the same story as the* Alcibiades *also preserved in the Platonic corpus. Certain other parallels suggest that the author of* Second Alcibiades *adapted* Alcibiades*: 141a–b ≈ 105a–c; 145b–c ≈ 107d–108a. But perhaps the similarities between the two dialogues are to be explained by their common derivation from the celebrated* Alcibiades *of Aeschines of Sphettus, or from one of the other dialogues called* Alcibiades*. We cannot determine this question, because Aeschines' dialogue survives only in fragments, and the* Alcibiades *dialogues of Euclides and Antisthenes, other students of Socrates and writers of Socratic dialogues, are lost.*

*In most respects Socrates in* Second Alcibiades *is a figure familiar from other Socratic literature. He uses analogies taken from humble occupations; he argues that sometimes ignorance is better than knowledge; he argues that the only truly valuable knowledge is the knowledge of the good, an authoritative knowledge that will correctly advise us when to use the other goods and skills in our possession; he believes that the gods hold the virtues of the soul in higher regard than expensive gifts and sacrifices. Most important is the main theme of the dialogue: Socrates argues that it would be better not to pray for anything in particular, so fallible is our human knowledge of what is good for us; best would be to follow the example of the Spartans, who simply pray to the gods for what is good and what is noble. This coheres well with what is known of Socrates' view of prayer (cf. Xenophon's* Memoirs of Socrates *I.iii.2).*

*But the author of* Second Alcibiades *seems also to be writing against a different branch of the Socratic legacy, Cynicism. The Cynics regarded all ignorance as madness, whereas Socrates in* Second Alcibiades *takes care to distinguish madmen from people with lesser forms of ignorance. The latter he calls fools and asses, or (euphemistically) innocent, naive, simple, or even bighearted (*megalopsychos*). Why does the author use this word?* Megalopsychia*, the ability to rise above and be unaffected by the events in life that are normally thought to be bad—pain, poverty, bad treatment by other people, and so on—was a cardinal virtue for the Cynics. But here Socrates applies the term to people who stupidly don't know or care about what's good for them (140c, 150c). This curious negative connotation of* megalopsychia*—not found elsewhere in*

*ancient Greek—is another sign that* Second Alcibiades *is arguing against the Cynics.*

*The author of* Second Alcibiades *had a notable predilection (shared with Plato, but with few of the other authors in the Platonic corpus) to quote and adapt Greek poetry. Certain features of his language tell us that he came from Northern Greece and suggest that he wrote in the third century* B.C.*, but the evidence is not strong and the dialogue might well date from the end of the fourth century* B.C.

*D.S.H.*

Socrates: Alcibiades, are you on your way to say your prayers? 138

Alcibiades: Yes, indeed, Socrates.

Socrates: You have a depressed and downcast look; you seem preoccupied.

Alcibiades: And what might preoccupy me, Socrates?

Socrates: The most serious of all questions, in my view. Tell me, in b
God's name, what you think. In public and private prayer we make requests to the gods: don't they sometimes grant some of them and not all of them, and don't they say yes to some people and no to others?

Alcibiades: Indeed they do.

Socrates: So don't you agree that there is a great need for caution, for fear you might, all unawares, be praying for great evils when you think you are asking for great goods? Suppose the gods were in a mood to give whatever was asked; it might be just like the case of Oedipus who blurted out the prayer that his sons might take arms to settle their inheritance.[1] c
He could have prayed for relief from the ills which beset him without begging for others in addition! But in fact, what he asked for came to pass, with many terrible consequences which there is no need to enumerate.

Alcibiades: But you're talking about a madman, Socrates: do you think any person of sound mind would have dared to make such a prayer?

Socrates: Do you take madness to be the opposite of wisdom?

Alcibiades: Yes, indeed.

Socrates: Do you think there are some people who are wise and some d
who are stupid?

Alcibiades: So it seems.

Socrates: Well, then, let's see which are which. We have agreed that there are some people who are stupid, some who are wise, and others who are mad.

Alcibiades: Agreed.

Translated by Anthony Kenny.

1. Socrates refers to *The Thebans* (frg. 2 Davies), an epic poem in the style of Homer about the travails of unfortunate King Oedipus of Thebes and his family. Oedipus' prayer was granted—and his sons killed one another.

Socrates: Are there some people who are healthy?

Alcibiades: Yes.

Socrates: And others who are sick?

139 Alcibiades: Indeed.

Socrates: Not the same people?

Alcibiades: Of course not.

Socrates: Are there any other people who are neither one thing nor the other?

Alcibiades: No.

Socrates: Because a person has to be either sick or not sick?

Alcibiades: That's what I think.

Socrates: Well now, do you have the same view about wisdom and stupidity?

Alcibiades: How do you mean?

Socrates: Do you think it is only possible either to be wise or stupid,
b or is there also a third state in between in which a person is neither wise nor stupid?

Alcibiades: No, there isn't.

Socrates: So you have to be one or the other?

Alcibiades: So I believe.

Socrates: Now do you remember that you agreed that madness is the opposite of wisdom?

Alcibiades: Yes, I did.

Socrates: And that there is no third state in which a person is neither wise nor stupid?

Alcibiades: Yes.

Socrates: And can one thing have two distinct opposites?

Alcibiades: No.

c Socrates: So it looks as if stupidity and madness are one and the same thing.

Alcibiades: It does.

Socrates: So would it be correct to say that all stupid people are mad—not just any of your contemporaries who are stupid, as some of them certainly are, but even older people? Tell me, in God's name, don't you think that in our city the wise are in a minority, and most people are stupid, or, as you would say, mad?

Alcibiades: I do.

d Socrates: But do you think we could live comfortably in a city of so many madmen? Would we not have met our fate long ago, and been punched and beaten and subjected to every madman's trick? Things aren't quite like that, are they?

Alcibiades: No, not at all; it looks as if I've not got the matter quite right.

Socrates: I don't think so either. Try looking at it another way.

Alcibiades: What way do you mean?

Socrates: I'll tell you. We take it that some people are sick, don't we?

Alcibiades: Yes, indeed.

Socrates: Do you think that anyone who is sick must necessarily have e
gout, or fever, or eye ache? Or can a person be sick in some other way without having any of these? Surely there are many other diseases besides these?

Alcibiades: Surely.

Socrates: Eye ache is always a sickness, don't you think?

Alcibiades: Yes.

Socrates: But is sickness always eye ache?

Alcibiades: No; but I'm not sure what to say.

Socrates: But if you pay attention to me, we may find out; for two heads 140
are better than one.

Alcibiades: I am paying attention, Socrates, as well as I can.

Socrates: Well, we have agreed that while eye ache is always a sickness, not every sickness is eye ache, have we not?

Alcibiades: Yes, we have.

Socrates: And rightly. Anyone with a fever is sick, but not everyone
who is sick has a fever—nor gout, I take it, nor eye ache. Each of these is b
a disease, but they present quite different symptoms, to use the doctors' term. They are not all alike, and they do not have like effects; each of them works according to its own nature, but they are all none the less diseases. Similarly, we classify some people as workmen, don't we?

Alcibiades: Of course.

Socrates: There are shoemakers, and carpenters, and sculptors, and very many others whom we needn't enumerate. They all have their own share
of work, and they are all workmen; but they are not all carpenters or c
shoemakers or sculptors even though they are all workmen.

Alcibiades: No.

Socrates: Well now, in the same way people have shared out stupidity among themselves; those who have the largest share we call madmen, those with a smaller share we call fools or asses. People who prefer euphe-
misms call them big-hearted or simple, or perhaps innocent, naive, or d
dumb: you will come across many other names if you look for them. But all these things are stupidity, and differ from each other in the way one kind of work and one kind of disease differs from another. Isn't that right?

Alcibiades: Absolutely.

Socrates: Let's go back, then. At the beginning of our discussion we set out to discover which people were wise and which were stupid, because we had agreed that some were one and some were the other.

Alcibiades: We had indeed.

Socrates: Is it your view that the wise are those who know what should e
be done and said?

Alcibiades: Yes.

Socrates: And who are the stupid? Those who know neither of these things?

Alcibiades: Just so.

Socrates: And those who know neither of these things will say and do what they ought not, without knowing that this is what they are saying and doing?

Alcibiades: So it seems.

141 Socrates: And just such a person—I said—was Oedipus. And in our
own time you will find many such people—not in a rage as he was—who
pray for things that are bad for them in the belief that they are good for
them. He did not think so, or pray so; but there are others who are in a
very different case. Suppose that the god to whom you are about to pray
were to appear to you and ask you, before you began praying, whether
you would be happy to be sole ruler of the city of Athens—or, if that
b seemed mean and tiny, were to offer you all the Greeks as well—or, if he
saw that you regarded that too as insignificant unless the whole of Europe
were included, were to promise you all of that plus simultaneous acknowledgment
by the whole human race of the rule of Alcibiades son of Clinias.
If that happened, I imagine, you would go home very happy and think
you had come into possession of the greatest of goods.

Alcibiades: So would anyone else, I imagine, Socrates, if he were given the same promise.

c Socrates: But you would not give your own life in exchange for the
territory and sole rule of all the Greeks and all the barbarians?

Alcibiades: I should think not, since they would be no use to me.

Socrates: But suppose you were going to use them, but were going to make a bad and harmful use of them? Would you want them then?

Alcibiades: No.

Socrates: So you see, it is not safe to accept without thinking what one
d is given, nor to pray for something which is going to injure one or take
away one's life altogether. We could name many people who set their
hearts on obtaining sole rulership, and strove to achieve this goal as a
great good, and then had their lives taken by plotters against their rule. I
think you are not unaware of the events of the last few days: Archelaus
of Macedon was in love with a man whose love for Archelaus' kingship
was greater than Archelaus' love for him, and who killed his lover in order
e to make himself a king and a happy man. He had only ruled for three or
four days when he in his turn fell victim to a plot and was killed himself.

Among our own citizens too—as we know not just by hearsay, but as
142 eye-witnesses—we see some who have longed to command armies, and
having got what they wanted are now exiled from the city or have lost
their lives altogether. And even those who seem to have done best have
lived amidst dangers and fears; not only during their campaigns, but when
they have returned home where they have been besieged by informers as
tightly as they were by the enemy, so that some of them wished to heaven
b that they had stayed privates rather than generals. Of course, it would
make some sense if these dangers and burdens brought any benefit; but
in fact it's quite the contrary.

You will find the same in the matter of children: some people pray to
have them, and when they have them they bring them utter disaster and
grief. Some people's children are so thoroughly bad that they make their
whole life a misery; other people have good children and lose them in c
some calamity and end up no less miserable than the others, wishing they
had never had children at all.

However, in spite of all these and similar dire examples, you rarely find
anyone who declines a gift or who refrains from praying for what he hopes
to be granted. Most people, if given the chance to become a ruler or a
general, or any of the other things which bring more harm than good, will d
not hesitate to take the opportunity; and they will even pray for such
things before they are on offer. After a while, however, they change their
tune and pray away their former prayers.

I wonder, then, if humans are not wrong in "placing the blame" for
their ills on the gods, when "they themselves by their own presumption"—
or stupidity, should we say?—"have brought sorrows on themselves be-
yond their destined lot."[2] There was a poet who composed a prayer for e
all his friends to say in common, more or less like this:

> *King Zeus, whether we pray or not, give us what is good for us* 143
> *What is bad for us, give us not, however hard we pray for it.*[3]

He certainly seems to have been a wise man: I expect he had stupid friends
whom he had seen working and praying for things that it was better
for them not to have, no matter what they thought. That is what he
recommended, and in my view he spoke well and soundly; but if you
have anything against what he said, speak up.

ALCIBIADES: It is hard, Socrates, to speak against what has been well
spoken. One thing I do observe is that the cause of very many human
evils is ignorance: it is ignorance which deceives us into doing and—what b
is worse—praying for the greatest evils. No one, however, thinks thus
about himself; each of us thinks himself quite capable of praying not for
the worst but for the best. For such a prayer would really seem to be more
like a curse than a prayer!

SOCRATES: Well said! But perhaps someone even wiser than you and I
might say that we were wrong to blame ignorance in such general terms; c
we should specify what it is ignorance *of*. Indeed, just as ignorance is an
evil to some people, there are other people, in certain states, to whom it
is a good.

ALCIBIADES: How do you mean? Can there be anything of which it is
better for people to have ignorance than knowledge, no matter what state
they are in?

2. Socrates adapts *Odyssey* i.32–34.

3. An epigram in the *Palatine Anthology*, X.108, modified.

Socrates: I think there can; don't you?

Alcibiades: No, I don't; not on your life.

Socrates: But surely I am not to judge that you would ever want to
d commit against your mother crimes like those of Orestes and Alcmaeon[4] and anyone else like them?

Alcibiades: Spare me, for God's sake, Socrates!

Socrates: It isn't the person who says that you would not ever want to behave like that whom you should ask to spare you, but rather anyone who contradicted him; for the act seems to you so horrendous that you do not like to hear it spoken of even by way of example. But do you think that Orestes, if he had been of sound mind and known what was best for him to do, would have dared to commit any such crime?

Alcibiades: No, I don't.

e Socrates: Nor, I think, would anyone else.

Alcibiades: Certainly not.

Socrates: It seems then that it is ignorance of the best, failing to know what is best, that is a bad thing.

Alcibiades: So it seems.

Socrates: And not only for the person himself, but also for everyone else?

Alcibiades: I agree.

Socrates: Let's consider a further point. Suppose the thought sprang into your mind that it would be an excellent thing to kill your friend and mentor Pericles,[5] and you took a dagger and went to his door and asked
144 if he were at home, with the intention of killing him and him alone, and they said he was at home. I don't mean to say that you would wish to do any such thing; but just suppose that you were to think that the worst thing was the best thing—that's a thought that might at any time occur to someone who is ignorant of what is really best—or don't you think so?

Alcibiades: Absolutely.

b Socrates: Well then, if you went inside and saw Pericles, but did not recognize him and thought he was someone else, would you still go on to kill him?

Alcibiades: I should think not, in God's name.

Socrates: For your intention surely was to kill not just anyone you came across, but only that particular person. Isn't that right?

Alcibiades: Yes.

Socrates: And if, having tried several times, you always failed, when it came to the point, to recognize Pericles, you would never lay a hand on him.

Alcibiades: Certainly not.

4. According to legend, they murdered their mothers to avenge the deaths of their fathers.

5. Alcibiades' father died early and left his two sons in the care of Pericles, the most influential Athenian politician of the mid-fifth century.

SOCRATES: Well then, do you think that Orestes would ever have laid a hand on his mother if he had failed to recognize her?

ALCIBIADES: I don't think so. c

SOCRATES: For presumably he too had no intention of killing the first woman he came across, or killing just anyone's mother, but only his own.

ALCIBIADES: That's right.

SOCRATES: Then for those in that state, with such intentions, these are things which it is better not to know.

ALCIBIADES: Very likely.

SOCRATES: So you see that there are some things which, for certain people in certain states, it is better not to know than to know.

ALCIBIADES: So it seems.

SOCRATES: Now if you care to look at what follows from this, you may d
find that you're in for a surprise.

ALCIBIADES: What surprise, Socrates?

SOCRATES: I mean that, in general, it seems that if someone lacks knowledge of what is best, the possession of other skills will only rarely help, but in most cases will harm, their possessor. Consider it this way. When we are about to say or do something, mustn't we first of all know, or at least believe we know, what we are so keen to say and do? e

ALCIBIADES: I believe so.

SOCRATES: Orators, for instance, are bound to know, or at least to think they know, how to give us advice on various topics—whether it is about war and peace, or about the construction of walls or the equipment of harbors. Altogether, whatever a state does in foreign or domestic matters 145
is done on the advice of the orators.

ALCIBIADES: As you say.

SOCRATES: See then what follows.

ALCIBIADES: If I can.

SOCRATES: You call some people wise and others stupid?

ALCIBIADES: I do.

SOCRATES: And you call most people stupid, and a few wise?

ALCIBIADES: Exactly.

SOCRATES: In each case you make use of a criterion?

ALCIBIADES: Yes.

SOCRATES: Well, do you call a man wise who knows how to give advice, b
but not what advice is best to give or when it is best to give it?

ALCIBIADES: Certainly not.

SOCRATES: Nor, I imagine, a man who knows how to make war, without knowing when or for how long war should best be made? Isn't that right?

ALCIBIADES: Yes.

SOCRATES: Nor again a man who knows how to kill or steal or banish people without knowing when it is better to do this, or to whom?

ALCIBIADES: No.

c Socrates: So what we want is the person who knows one or other of these things but also has the knowledge of what is best—which no doubt is the same as knowledge of utility.

Alcibiades: Yes.

Socrates: And this is the person whom we shall call wise, a reliable counsellor for himself and for the state. But someone who is not like this we shall call the opposite. What do you think?

Alcibiades: I agree.

Socrates: Now suppose we have a person who knows how to ride or
d shoot, or box, or wrestle, or compete in any other sport or exhibit any other skill. What do you call the person who knows how best to exercise a particular skill? If it is the skill of riding, I expect you will call him a good rider.

Alcibiades: I will.

Socrates: And if it is boxing, you will call him a good boxer, and if it is flute-playing you will call him a good flute-player, and so in other cases. Or do you disagree?

Alcibiades: No, not at all.

Socrates: Now do you think that knowing about these things suffices
e to make a person wise, or is more needed?

Alcibiades: Much more, upon my life.

Socrates: Suppose there were a state in which there were good archers and flute-players, good athletes and craftsmen, and among them the kind of people we have been talking about, who know only how to make war and only how to kill, and also fine orators who know how to sound off about politics, but none of them had the knowledge of what is best, and
146 none of them knew when or on whom it was better for them to exercise their skills—what sort of state do you think that would be?

Alcibiades: A miserable one, Socrates.

Socrates: I'm sure you would if you saw them all competing with each other for honors, "each one assigning precedence in political matters to his own sphere of excellence"[6]—I mean, what is best according to the scope of his own skill—while he may be much mistaken about what is best for the state and for himself, since he has not used his intelligence
b but put his trust in mere seeming. If that's the situation, wouldn't we be right to describe such a state as a hotbed of dissension and lawlessness?

Alcibiades: Indeed we would.

Socrates: Did we not think that if you are on the point of saying or doing something, you must first know, or at least think you know what you are doing or saying?

Alcibiades: We did.

Socrates: So if someone does what he knows, or thinks he knows, and
c has in addition knowledge of utility, we will judge him a boon both to the state and to himself?

6. Socrates adapts some lines from Euripides' *Antiope* (frg. 183 Nauck[2]).

ALCIBIADES: Absolutely.

SOCRATES: But if he does the contrary, he will be no good to the state or to himself?

ALCIBIADES: No good.

SOCRATES: Well, then: are you still of the same mind, or have you changed it?

ALCIBIADES: Still the same.

SOCRATES: You said that you called most people stupid, and only a few wise?

ALCIBIADES: I did.

SOCRATES: So, to repeat, most people have been mistaken about what is best because they have not used their intelligence but put their trust in mere seeming.

ALCIBIADES: Yes. d

SOCRATES: For most people, then, it is an advantage neither to know nor to think they know anything, if they are going to do themselves more harm than good by rushing to do what they know or think they know.

ALCIBIADES: Very true.

SOCRATES: So you see it seems that I was quite right when I said that it
looked as if other skills, if not combined with the knowledge of what is e
best, are more often than not harmful to their possessors.

ALCIBIADES: I may not have thought so then, but I do now, Socrates.

SOCRATES: So if the life of a soul or a state is to go aright, this knowledge
of what is best must be embraced with exactly the kind of trust a patient
has in his doctor or a seafarer in his good ship's captain. For without this,
the stronger the winds of fortune blow towards the acquisition of wealth 147
or health and strength or anything else of that kind, the greater the errors
to which these things will necessarily lead. Someone may have acquired
so many skills as to deserve the name of polymath, but if he lets himself
be led by one or other of these skills and lacks this true knowledge he
will, as he indeed deserves, run into very rough weather, "alone on the b
high seas with no helmsman and with not long to live." There is a verse
which fits his case, where the poet complains of someone that "he knew
a lot of things but knew them all wrong."[7]

ALCIBIADES: Whatever has that verse got to do with the matter, Socrates? It does not seem at all to the point.

SOCRATES: It is very much to the point; but you are right that he speaks
enigmatically, just like a poet. All poetry, by its nature, is enigmatic, and
not everyone can take it in; but when, in addition, it is housed in a poet c
who is miserly and wishes so far as possible to conceal rather than exhibit
his wisdom, it may be quite remarkably difficult to find out what each of
them might mean. For you don't think that Homer, the divinest and wisest
of poets—for it is he who says that Margites knew a lot of things but knew d

7. Socrates quotes from the mock epic *Margites* (frg. 3 Allen), which was generally (but incorrectly) attributed to Homer in the ancient world.

them all wrong—didn't know that it was impossible to know a thing
wrong. He is riddling, I think; he meant "wrong" as an adjective, not as
an adverb; and he meant "to know" rather than "knew." So, if we forget
about the original meter we can put together his meaning as this: he knew
a lot of things, but it was wrong for him to know them all. Clearly, if it
was wrong for him to know a lot of things, he must have been a bad man,
if we are to trust our previous arguments.

e ALCIBIADES: I agree Socrates; if we cannot trust these arguments I really
don't know which ones we can trust.

SOCRATES: You are right to think so.

ALCIBIADES: But perhaps I should think again.

SOCRATES: Oh, for God's sake! You see what a terrible great muddle we
are in, and it is partly your fault; for you change incessantly from side to
side. No sooner are you convinced of something than you give it up again
148 and change your mind. Well, if the god to whom you are on your way
should appear to you at this very moment, before you start praying, and
ask whether you would be happy to get one of the things we spoke of
earlier, or whether he should leave the choice of prayer to you, which do
you think offers the best prospect: accepting his offers or making your
own prayer?

ALCIBIADES: By the gods, Socrates, I would have to take time to answer
b your question; an impromptu response would be folly. You really have
to take a great deal of care to make sure that you are not, all unawares,
praying for evil in the belief that it is good, and that after a little while
you won't, as you said a moment ago, change your tune and call back all
your prayers.

SOCRATES: That poet I mentioned at the beginning of our discussion, who
told us to pray to be saved from the evils we pray for—he was wiser than
us, wasn't he?

ALCIBIADES: I guess so.

SOCRATES: Whether in admiration of this poet, or because they have
c worked it out for themselves, the Spartans take the same course in their
public and private prayers. They pray the gods to give them first what is
good and then what is noble; no one ever hears them asking anything
more. They have not, so far, been any less fortunate in consequence than
any other people; and even if they have not invariably enjoyed good
d fortune it has not been because of their prayers. Whether we are given
what we pray for or the reverse is in the lap of the gods.

I would like to tell you another story which I once heard from some of
my elders. There was a quarrel between the Athenians and the Spartans,
and whenever there was a battle, whether by land or sea, our city always
came off worse and could never win a victory. The Athenians took this
e hard, and cast about to discover how they could find relief from their
troubles. After discussion they decided to send a delegation to consult
Ammon,[8] to ask in particular why the gods granted victory to the Spartans

8. An Egyptian god with an oracle in the Libyan desert.

rather than themselves. "We" they said "offer more and finer sacrifices
than the rest of the Greeks, and we surpass all others in adorning the
temples with emblems, and every year we organize for the gods' benefit
the most solemn and sumptuous processions, spending more money than 149
all the other Greeks put together. But the Spartans have never taken any
such pains, and they are so mean to the gods that they regularly sacrifice
blemished animals and fall well behind us in the quality of their worship,
in spite of being no less wealthy than ourselves." Having said that, they
also asked what they should do to be relieved from the evils that beset
them. The prophet, no doubt under divine instruction, called them to him b
and said simply this. "Thus saith Ammon to the Athenians: I prefer the
terse Laconic utterance to all the sacrifices of the Greeks." That was all he
said; not a word more. By their "terse utterance" I expect the god meant
their prayer, for it is indeed very different from other prayers. Other Greeks c
offer bulls with gilded horns, and others present the gods with votive
emblems, and pray for whatever comes into their heads, good or bad.
But when the gods hear their profanities they scorn these magnificent
processions and sacrifices. We should, I believe, be very careful and cau-
tious when we consider what should be said and what should not.

In Homer you will find other similar stories. He tells how the Trojans, d
when they pitched camp, "sacrificed to the immortals perfect hecatombs"
and how

> *The winds carried the delicious smell from the plain up to heaven.*
> *But the blessed gods took none of it, and had no pleasure in it;*
> *So deep was their hatred of holy Ilium, and Priam,* e
> *And the people of Priam of the ashen spear.*[9]

So it was no help to them to sacrifice and offer vain gifts, when they were out of favor with the gods. For I don't imagine that it is like the gods to be swayed by gifts, like some low moneylender; we make ourselves sound very silly when we boast that we do better than the Spartans on this score.

It would be a strange and sorry thing if the gods took more account of
our gifts and sacrifices than of our souls and whether there is holiness
and justice to be found in them. Yes, that is what they care about, I believe, 150
far more than about these extravagant processions and sacrifices offered
year by year by states and individuals who may, for all we know, have
sinned greatly against gods and men. The gods are not venal, and scorn
all these things, as Ammon and his prophet told us. Gods and men of
sound mind are more likely to hold justice and wisdom in especial honor; b
and none are wise and just but those who know how to behave and speak
to gods and men. But now I would like to hear what your opinion may
be about all this.

9. Cf. *Iliad* viii.548–52.

Alcibiades: No different from yours and the god's, Socrates; it would hardly be fitting for me to take sides against the god.

Socrates: But you remember that you said you were very worried that
c without knowing it you might pray for evil, thinking it to be good?

Alcibiades: I do.

Socrates: You see, then, how dangerous it is for you to go to pray to the god, in case he hears you speaking amiss, rejects your sacrifice altogether, and perhaps adds some further penalty. I think you would do best to hold your peace; for I expect you are rather too big-hearted (to use the
d favorite euphemism for stupidity) to be willing to use the Laconian prayer. It takes time to learn how to behave towards gods and men.

Alcibiades: How long will it take, Socrates, and who will teach me? I would very much like to see the man who could do it.

Socrates: It is the man who has his eye on you. But you remember how
e Homer says that Athena took away the fog from the eyes of Diomedes, "so that he could clearly see both god and man."[10] You too need to get rid of the fog which is wrapped around your soul, so as to prepare you to receive the means of telling good from evil. At present I don't think you could do so.

Alcibiades: Let him remove the fog, or whatever else it is; I am prepared to do whatever he tells me, whoever he may be, so long as it will make me better.

151 Socrates: He too is more than anxious to help.

Alcibiades: Then I think it is better to put off the sacrifice for the time being.

Socrates: You're quite right; it is much safer than running such a big risk.

Alcibiades: Here's an idea, Socrates; I'll put this garland on *your* head,
b for giving me such good advice. Only when there comes the day of which you have spoken will we give the gods their garlands and their customary dues. God willing, that day will not be too far off.

Socrates: I am glad to accept, and I look forward to seeing myself receiving other gifts from you. In Euripides' play, when Creon sees Tiresias crowned with garlands and learns that he has been given them by the enemy as trophies to reward his skill, he says

*Good as an omen are your victor's wreaths*
*For we, you know, are battered by the waves.*[11]

c Just so, I regard the honor you have paid me as a good omen. For I am just as tempest-tossed as Creon, and I look forward to victory over your lovers.

# HIPPARCHUS

*Socrates and a friend try to find a definition of greed. The friend feels that he understands the concept perfectly well: isn't greed an inclination to profit from things which a gentleman shouldn't exploit, things of no value? Socrates replies that insofar as greed is an intention to profit from worthless things, it's a foolish intention, and no sensible man is greedy; but insofar as it's a desire for profit, it's a desire for the good, and everyone is greedy. The latter conclusion is especially hard to accept, but the friend cannot get the better of Socrates and accuses him of deceiving him somehow in the argument. Socrates protests that deceiving a friend would be contrary to the teaching of Hipparchus, a ruler of Athens in the late sixth century* B.C. *who was keen to learn from the poets and bestow his wisdom upon the Athenian people. Although Socrates offers to take back any disputable premise of the argument, the friend cannot escape the dialogue's paradoxical conclusion that everyone is greedy.*

*Plato called the irrational part of the soul 'greedy' (*Republic *581a, 586d). The sketch of the greedy man in the* Characters *of Theophrastus (§30) is vivid and witty; Theophrastus knew well what he was talking about. So when the speakers in* Hipparchus *seem unable to avoid the idea that everyone, even a good person, is greedy, many readers will agree with Socrates' friend that he has been tricked somehow. This is the other main theme of the dialogue: intellectual honesty and fair play in the conduct of dialectical discussion. Socrates tells an implausibly revisionist history of Hipparchus, whom he represents as wise and cultivated, whereas his regime was generally regarded by Athenians of later generations as tyranny, and his assassins Harmodius and Aristogiton were celebrated as national heroes. Socrates protests that he would never disobey Hipparchus' wise injunction and deceive a friend. To no avail: right to the end of the dialogue the friend is unpersuaded by Socrates' arguments, though he cannot say what is wrong with them, just as many modern readers of Socratic dialogues feel that the wool has somehow been pulled over their eyes. But has it?*

*From the formal point of view,* Hipparchus *is composed of dry Academic dialectic together with a literary-historical excursus on Hipparchus. The classic example of such an excursus is the Atlantis myth in Plato's* Timaeus *and* Critias, *and there are other examples in* Alcibiades, Second Alcibiades, Minos, *and probably in the (now mostly lost) Socratic dialogues of Antisthenes and Aeschines. The academic dialectic of* Hipparchus *is a good example of the way questions were discussed in the mid-fourth-century Academy, the dialectic studied in Aristotle's* Topics *and* Sophistical Refutations. *The combination of*

*dialectic and excursus is similar to that in* Minos*, as is the scepticism toward the values implicit in Athenian popular culture and history; many scholars conclude that they are the work of the same author, probably writing soon after the middle of the fourth century* B.C.

*D.S.H.*

225 Socrates: What is greed? What can it be, and who are greedy people?

Friend: In my opinion, they're the ones who think it's a good idea to profit from things of no value.

Socrates: Do you think they know these things are of no value, or do they not know? For if they don't know, you mean that greedy people are stupid.

Friend: No, I don't mean they're stupid. What I mean is this: they're
b unscrupulous and wicked people who are overcome by profit, knowing that the things from which they dare to profit are of no value; yet their shamelessness makes them dare to be greedy.

Socrates: So, then, do you mean that the greedy person is, for example, like a farmer who plants, knowing his plant is of no value, and thinks it's a good idea to profit from the plant when fully grown? Is this the sort of person you mean?

Friend: The greedy person, at any rate, Socrates, thinks he ought to profit from everything.

Socrates: Don't let me make you give in like that, as if you had somehow
c been tricked by something; pay attention and answer as if I were asking again from the beginning. Don't you agree that the greedy person knows about the value of the thing from which he thinks it is a good idea to profit?

Friend: I do.

Socrates: So who knows about the value of plants, in what seasons and soils it's a good idea to plant them—if we may throw in one of those clever phrases with which legal experts beautify their speeches?[1]

d Friend: The farmer, I think.

Socrates: By "thinking it's a good idea to profit" do you mean anything but thinking one ought to profit?

Friend: That's what I mean.

226 Socrates: Well then, don't try to deceive me—I'm already an old man and you're so very young—by answering as you did just now, saying what you yourself don't think; tell the truth. Do you think there is any man who takes up farming, and expects to profit from planting crops that he knows to be of no value?

Friend: By Zeus, I don't!

Translated by Nicholas D. Smith.

1. The Greek words for "seasons and soils" rhyme.

SOCRATES: Well then, do you think that a horseman who knowingly gives his horse food that is of no value is unaware that he is harming his horse?

FRIEND: I don't.

SOCRATES: So *he* doesn't expect to profit from food that is of no value. b

FRIEND: No.

SOCRATES: Well then, do you think that a ship's captain who has rigged his ship with sails and rudders that are of no value is unaware that he will suffer loss, and risks being lost himself and losing the ship and all it carries?

FRIEND: No, I don't.

SOCRATES: So *he* doesn't expect to profit from equipment that is of no c
value.

FRIEND: Not at all.

SOCRATES: Or does a general who knows that his army has arms that are of no value expect to profit, or think it's a good idea to profit from them?

FRIEND: Certainly not.

SOCRATES: Or does a flute-player who has flutes that are of no value, or a lyre-player with a lyre, or an archer with a bow, or, in short, does any other craftsman, or any other sensible man who has worthless tools, or any other sort of equipment, expect to profit from them?

FRIEND: Obviously not. d

SOCRATES: Then who *do* you say the greedy people are? For surely the ones just mentioned are not the ones who expect to profit from what they know has no value.[2] But in that case, my wonderful friend, there aren't any greedy people at all, according to what you say.

FRIEND: What I mean, Socrates, is this: greedy people are those whose greed gives them an insatiable desire to profit even from things that are actually quite petty, and of little or no value. e

SOCRATES: Not, of course, knowing that they are of no value, my very good friend; for we have just proved to ourselves in our argument that this is impossible.

FRIEND: I believe so.

SOCRATES: And if they don't know this, plainly they're ignorant of it, thinking instead that the things of no value are very valuable.

FRIEND: Apparently.

SOCRATES: Now, of course, greedy people love to make a profit.

FRIEND: Yes.

SOCRATES: And by profit, you mean the opposite of loss?

FRIEND: I do. 227

SOCRATES: Is there anyone for whom it is a good thing to suffer loss?

FRIEND: No one.

SOCRATES: It's a bad thing?

FRIEND: Yes.

SOCRATES: So people are harmed by loss?

2. Omitting *all'* in d4.

FRIEND: Yes, harmed.

SOCRATES: So loss is bad?

FRIEND: Yes.

SOCRATES: And profit is the opposite of loss?

FRIEND: Yes, the opposite.

SOCRATES: So profit is good?

FRIEND: Yes.

SOCRATES: So it is those who love the good whom you call greedy.

FRIEND: So it seems.

b SOCRATES: Well, my friend, at least you don't call greedy people lunatics. But you yourself, do you or don't you love what's good?

FRIEND: I do.

SOCRATES: Is there something good that you don't love? Or something bad that you do?

FRIEND: By Zeus, no!

SOCRATES: So presumably you love all good things?

FRIEND: Yes.

SOCRATES: And you can ask me, too, if I'm not the same; for I will also agree with you that I love good things. But besides you and me, don't
c you believe that all other people love what's good and hate what's bad?

FRIEND: So it appears to me.

SOCRATES: And we agreed that profit is good?

FRIEND: Yes.

SOCRATES: Well, then, in this way of looking at it, everyone appears to be greedy; whereas, according to what we said earlier, no one was greedy. So which of these approaches would it be safe to rely on?

FRIEND: I think, Socrates, we have to get the right conception of the greedy person. The right conception is that the greedy person is the one
d who is concerned with and thinks it's a good idea to profit from things which virtuous people would never dare to profit from.

SOCRATES: But you see, my dear sweet fellow, that we have already agreed that to profit is to be benefited.

FRIEND: Well, what of it?

SOCRATES: We also agreed that everyone always wants good things.

FRIEND: Yes.

SOCRATES: Therefore, even good people want every kind of profit, at least if they're good.

e FRIEND: But not profits from which they're going to suffer harm, Socrates.

SOCRATES: By "suffer harm," do you mean "suffer loss," or something else?

FRIEND: No; I mean "suffer loss."

SOCRATES: Do people suffer loss from profit, or from loss?

FRIEND: From both; for they suffer loss from loss and from wicked profit.

SOCRATES: Well, do you believe that anything virtuous and good is wicked?

FRIEND: I don't.

SOCRATES: And we agreed a little while ago that profit is the opposite 228
of loss, which is bad?

FRIEND: I would say so.

SOCRATES: And being the opposite of bad, it's good?

FRIEND: We agreed to that.

SOCRATES: So you see, you're trying to deceive me, deliberately saying the opposite of what we just agreed to.

FRIEND: No, by Zeus, Socrates! Quite the opposite: it's you who's deceiving me, and turning me upside down in these arguments—I don't know how you do it!

SOCRATES: Be careful what you say; it wouldn't be right for me not to b
obey a good and wise man.

FRIEND: Who is that? What are you talking about?

SOCRATES: I mean my and your fellow citizen: Pisistratus' son, Hipparchus, of Philaedae, who was the eldest and wisest of Pisistratus' children. In addition to the many other fine deeds in which he displayed his wisdom, it was he who first brought the works of Homer to this land, and compelled the rhapsodes at the Panathenaea to recite them in relays—one
following another—as they still do now. He also sent a fifty-oared ship c
for Anacreon of Teos, and brought him to the city. He also entreated Simonides of Ceos always to be around, with large fees and gifts.[3] He did these things with a view to educating the citizens, so that he could govern the best possible people; like the gentleman he was, he didn't think it right to begrudge wisdom to anyone.

And when the citizens from the city had been educated by him and were impressed by his wisdom, he decided to educate the country-people,
as well, setting up Herms[4] for them along the roads between the middle d
of the city and each deme.[5] And then, selecting from his store of wisdom—both what he had learned and what he had found out by himself—what he thought were the wisest he put into elegaic verse and inscribed them (his own poetry and examples of his wisdom) on the Herms. He did this in order that, first, his citizens would not be impressed by those wise
Delphic inscriptions, "Know Thyself," and "Nothing in Excess," and other e
things of this sort, but would instead regard the words of Hipparchus as wiser. And, second, he did this so that when they travelled back and forth they would read and acquire a taste for his wisdom and would come in from the country to complete their education. There are two sides to the
inscriptions: on the left side of each Herm, it is inscribed that the Herm 229
stands in the middle of the city or the deme, whereas on the right it says: "This is a monument of Hipparchus: walk with justice in mind." There

3. Anacreon and Simonides were lyric poets of the sixth and early fifth centuries.

4. Herms were statues with full heads of Hermes, the god of travellers, on rectangular pillars, often placed along roadways.

5. The local districts into which Attica was divided.

are many other fine inscriptions of his poetry on other Herms. There is one
in particular—on the Stiria road—on which it says: "This is a monument of
b Hipparchus: do not deceive a friend." So, since I am your friend, I would
never dare to deceive you and disobey so great a man.

After his death the Athenians were ruled under tyranny by his brother,
Hippias, for three years, and you would have heard from all of those of
earlier days that there was tyranny in Athens only for those three years,
and that during the other times the Athenians lived almost as when Cronus
was King.[6] In fact, the more sophisticated people claim that his death did
c not come about in the way that the common people think—that it was
because his sister was dishonored in the carrying of the basket,[7] for that's
silly—but because Harmodius had become the boyfriend of Aristogiton
and was educated by him. Aristogiton also prided himself on educating
this fellow, and regarded himself as a rival of Hipparchus. At that time,
d Harmodius himself happened to be a lover of one of the handsome and
noble youths of that era. (They say what his name was, but I don't remember
it.) In any case, this youth was for a while impresssed by Harmodius and
Aristogiton as wise men, but later—after associating with Hipparchus—
he disdained them, and they were so hurt by this dishonor that they killed
Hipparchus for it.

Friend: Well now, Socrates, it seems likely that either you don't regard
me as your friend, or if you do, you don't obey Hipparchus. For you
e will never be able to persuade me that you aren't deceiving me in these
arguments, though I don't know how you do it.

Socrates: Very well, just like in a friendly game of checkers, I'm willing to let you take back anything you want of what's been said in the discussion, so you won't think you're being deceived. So should I take this back for you, that all men desire good things?

Friend: No, not that.

Socrates: Well, how about that suffering loss, or loss, is bad?

Friend: No, not that.

Socrates: Well, how about that profit and profiting are opposite to loss and suffering loss?

230 Friend: Not that, either.

Socrates: Well, how about that profiting, as the opposite of bad, is good?

Friend: It's not always good; take that back for me.

Socrates: So you believe, it seems, that some profit is good, and some is bad.

Friend: I do.

Socrates: All right, I'll take this back for you; let's say that some profit is good and some other profit is bad. And neither one is more profit, the good or the bad. Right?

6. A mythical golden age when Cronus, the father of Zeus, ruled.

7. A ritual in the Panathenaic procession.

Friend: What are you asking me?

Socrates: I'll explain. Is some food good and some bad?

Friend: Yes. b

Socrates: Then is one of them more food than the other, or are they both the same thing, food, and in this respect, at least, the one is no different from the other in so far as being food, but only in so far as one is good, and one is bad?

Friend: Yes.

Socrates: And so with drink and everything else; when some things of the same sort come to be good and others bad, the one does not differ from the other in that respect by which they are the same? For example with people, I suppose: one is virtuous, and one is wicked. c

Friend: Yes.

Socrates: But neither of them is more or less a person than the other, I think—neither the virtuous person more than the wicked, nor vice versa.

Friend: That's true.

Socrates: Then are we to think this way about profit, too, that both the wicked and the virtuous sort alike are profit?

Friend: They have to be.

Socrates: So, then, one who makes virtuous profit doesn't profit more than one who makes the wicked sort—it appears that neither one is more d
profit than the other, as we agree.

Friend: Yes.

Socrates: For neither "more" nor "less" is added to either of them.

Friend: Not at all.

Socrates: And how could one ever do or suffer anything more or less with this sort of thing, to which neither of these things is added?

Friend: Impossible.

Socrates: Therefore, because both alike are profits and profitable, we must now investigate what it is in virtue of which you call both of them profit—what do you see that's the same in both of them? For example, if e
you were to ask me, about the examples I just gave, "what is it, in virtue of which you call both good and bad food alike, 'food'," I would tell you that both are solid nourishment for the body—this is why. For surely you would agree that this is what food is, wouldn't you?

Friend: I would.

Socrates: And with regard to drink, the answer would be the same, that the liquid nourishment of the body, whether virtuous or wicked, has this name: "drink," and similarly in other cases. Try, therefore, to imitate 231
me by answering in this way. When you say that virtuous profit and wicked profit are both profit, what do you see in both that's the same—that which is actually profit? If you yourself are again unable to answer, consider what I say: do you call a profit every possession that one has acquired either by spending nothing, or by spending less and receiving more?

Friend: Yes, I believe I'd call that profit. b

SOCRATES: Do you mean cases like this—when you are given a feast, spending nothing but eating your fill, and getting sick?

FRIEND: By Zeus, I do not!

SOCRATES: If you became healthy from the feast, would you be profiting or losing?

FRIEND: Profiting.

SOCRATES: So this, at least, is not profit: acquiring just any possession at all.

FRIEND: Certainly not.

SOCRATES: Not if it's bad, right? But if one acquires anything good at all, doesn't one acquire a profit?

FRIEND: Apparently, if it's good.

c SOCRATES: And if it's bad, won't one suffer a loss?

FRIEND: I believe so.

SOCRATES: Don't you see that you are coming around back again to the same place? Profit appears to be good, and loss bad.

FRIEND: I'm at a loss for what to say.

SOCRATES: At least you're not at an unfair loss. But answer this: when one acquires more than one has spent, do you say it's profit?

FRIEND: At least I don't mean when it's bad, but if one acquires more gold or silver than one has spent.

SOCRATES: I'm just about to ask you that: if someone spends half a measure
d of gold and gets double that in silver, has he profited or lost?

FRIEND: Lost, surely, Socrates, for then his gold is worth only double, instead of twelve times as much as silver.

SOCRATES: But still he's acquired more; or isn't double more than half?

FRIEND: Not in value, at least, with silver and gold.

SOCRATES: So it looks like we must add the notion of *value* to profit. At least, now you say that silver, though there is more of it than gold, is not as valuable, and that gold, although there's less, is of equal value.

e FRIEND: Of course, for that is indeed the case.

SOCRATES: Value, then, is what brings profit, whether it's small or large, and what has no value brings no profit.

FRIEND: Yes.

SOCRATES: And by "value," do you mean anything other than "valuable to possess"?

FRIEND: Yes, "valuable to possess."

SOCRATES: Moreover, by "valuable to possess," do you mean the unbeneficial or the beneficial?

FRIEND: The beneficial, surely.

SOCRATES: Well, isn't the beneficial good?

FRIEND: Yes.

232 SOCRATES: And so, my valiant warrior, haven't we once again, for the third or fourth time, come to the agreement that what's profitable is good?

FRIEND: So it seems.

SOCRATES: Do you remember the point from which this discussion of ours arose?

FRIEND: I think so.

SOCRATES: If not, I'll remind you. You disagreed with me, claiming that good people do not want to make just any sort of profit, but only those that are good ones, and not the wicked ones.

FRIEND: Yes indeed.

SOCRATES: And doesn't the argument now force us to agree that all gains, b small and large, are good?

FRIEND: It forces me, Socrates, rather than persuades me.

SOCRATES: Well, perhaps later it will also persuade you. But for now, whatever condition you're in—persuaded or not—you do at least agree with us that all profits are good, both small and large.

FRIEND: I do agree.

SOCRATES: And do you agree that all virtuous people want all good things, or not?

FRIEND: I agree.

SOCRATES: Well now, you yourself said that wicked people love profits, c both small and large.

FRIEND: I did.

SOCRATES: So according to your argument, all people would be greedy, both the virtuous and the wicked.

FRIEND: Apparently.

SOCRATES: So, therefore, it is not a correct reproach, if someone reproaches another as being greedy—for it turns out that he who makes this reproach is greedy himself.

# RIVAL LOVERS

*Socrates encounters a young man who is keen to learn something about everything and who sneers at his rival, a young man whose strength is not knowledge but athletic discipline. The young polymath supposes that in pursuing universal general knowledge he is pursuing philosophy. Socrates rejects this conception of philosophy. Since no generalist can master a number of subjects to the same standard as a specialist can master his speciality, no one with general knowledge can ever excel in any field, but must be like the pentathlete who may win overall but be only a runner-up in each individual competition. No generalist can therefore ever claim any right to authority, not even over mere workmen—as the true philosopher must. For Socrates, philosophy is essentially a discipline of authority—the authority to evaluate, improve, and discipline oneself and others, an authority based on justice, good sense, and self-knowledge.*

*The dialogue's charming setting and amusing touches invite comparison with Plato's* Charmides, *where the Socratic ideal of self-control and good sense through self-knowledge is shown to involve subtleties that need exploring in a deeper philosophical investigation. Elsewhere Plato argued that the (very few) people who are capable of intelligent self-control and authority over others should enjoy a highly focused and disciplined education (*Republic *521c–535a;* Laws *965a–968a); the wide learning favored by the young polymath of* Rival Lovers *is rejected (*Laws *817e–819a). The author of* Rival Lovers *also agrees with Plato in recognizing only one kind of authority, whether practiced by politician, king, head of household, or master of slaves (*Statesman *258a–259d).*

*Standing on the other side of these issues was Aristotle, a student of Plato who embraced a research project to search for the general principles of every branch of knowledge, including those of humble workmen (*Parts of Animals *639a1–12;* Metaphysics *982a8–983a10). Aristotle held (especially in his lost dialogue* On Justice*) that there are many kinds of authority and justice, which differ according to the context in which they are exercised (*Politics *1278b30–79a21;* Eudemian Ethics *1231b27–40;* Nicomachean Ethics *1160b22–61a9). "Those who think it is the same thing to be able to be a politician, a king, a head of a household, or a master of slaves, are mistaken" (*Politics *1252a7–9).*

*There was probably a lively debate along these lines within the Academy while Aristotle was still a member, and* Rival Lovers *might have been a contribution to that debate in the years before Plato's death in 347* B.C. *Or else it might be a diatribe aimed by one of his former Academic colleagues against Aristotle's way of thinking, written after he began teaching in the Lyceum in Athens, in which case it dates from the last third of the fourth century. It was*

*probably someone familiar with* Rival Lovers *who gave the nicknames "Pentathlete" and "Runner-up" to Eratosthenes of Cyrene, an accomplished scholar and polymath who studied philosophy in Athens in the early third century* B.C.

*A note on the title: in an ancient list of the works of Plato, the title is* Rival Lovers *(and the word for 'rival lover' introduces the young polymath at 132c), but the manuscripts carry the title* Lovers, *as do many editions and translations.*

*D.S.H.*

I walked into the school of Dionysius the grammarian and saw there 132
some extremely attractive young men of good family; their lovers were there too. Two of the boys happened to be arguing about something, but I couldn't quite make out what it was. They appeared, however, to be
arguing about Anaxagoras or Oenopides; in any event, they appeared to b
be drawing circles and holding their hands at angles to depict certain astronomical inclinations, and they were very serious about it.[1] And I—I'd sat down next to the lover of one of them—I nudged him with my elbow and asked him what it could be that the boys were arguing about so seriously and said, "It must be something important and admirable for them to be putting such serious effort into it."

"What?!" he said. "Important and admirable? Those guys are just babbling about things up in the sky and talking philosophical nonsense."

Astonished at his reply, I asked him, "Young man, does the pursuit of c
philosophy seem to you to be contemptible? Why do you speak of it so harshly?"

And the other one—a rival lover of the boy, you see, happened to be sitting next to him—the other one heard my question and his reply and said, "You're wasting your time, Socrates, asking *him* whether he thinks philosophy is a contemptible pursuit. Don't you realize that he's spent his whole life wrestling, stuffing himself and sleeping? How could you expect him to give any answer *other* than that philosophy is contemptible?"

Of the two lovers, this one spent all his time pursuing the liberal studies,[2] d
while the other, the one he'd just insulted, spent all his time on athletics. And it seemed to me that I ought to leave off questioning the one I'd just asked—as he didn't claim to be any good with words, but only with deeds—and instead direct my questions to the one who claimed to be the wiser, on the chance that I might somehow be able to benefit from him.

Translated by Jeffrey Mitscherling. In preparing this translation we have consulted, in addition to Burnet's edition, that of Antonio Carlini, *Platone: Alcibiade, Alcibiade Secondo, Ipparco, Rivali* (Turin, 1964).

1. Anaxagoras of Clazomenae, the fifth century B.C. philosopher of nature, is reported to have worked on problems of geometry; Oenopides of Chios, a younger contemporary, was a mathematical astronomer.

2. The activities over which the Muses presided, especially music, poetry, literature, and philosophy.

So then I said, "My question was addressed to everybody, and if you think you can give a better answer, then I'll ask you the same thing: do you think the pursuit of philosophy is admirable, or not?"

133 At about this point in our conversation, the two boys overheard us and fell silent, and, putting aside their argument, came over to listen to us. Now, I don't know what their lovers were feeling, but I was struck senseless—as always happens to me when I'm around beautiful young men. It did seem to me, however, that the other lover was struggling no less than I was. And yet he did manage to answer me, and in a very self-important manner.
b "Socrates," he said, "if I ever came to regard philosophy as contemptible, I would no longer consider myself a human being, nor anybody else who felt that way!" As he said this he gestured toward his rival and raised his voice so that his young favorite would be sure to get the message.

"So," I said, "you think philosophy is an admirable pursuit."

"Certainly," he said.

"Well then," I said, "do you think it's possible for someone to know whether a thing is admirable or contemptible unless he first knows what it is?"

"No," he said.

c "So you know what philosophy is," I went on.

"Certainly," he said.

"What is it, then?" I asked.

"What else but what Solon says it is? He says somewhere, 'I continue to learn many things as I grow old.'[3] And I agree with him that someone who wants to pursue philosophy, whether young or old, should always be learning one thing or another in order to learn as many things as possible in life."

Now at first I thought there was something to this, but after I thought it over a bit I asked him if he thought philosophy consisted in learning many things.

d "Precisely that," he said.

"And do you believe," I went on, "that philosophy is only admirable, or that it's also good?"

"It's also good," he said, "of course it is."

"Do you regard this property as something peculiar to philosophy, or do you think it belongs to other things as well? For example, do you believe athletics to be not only admirable but also good, or don't you?"

e Very sarcastically, he gave me two answers: "To *him* I would say that it is neither. But with you, Socrates, I agree that it is both admirable and good, for I believe this to be correct."

Then I asked him, "And do you think athletics consists in doing lots of exercise?"

3. This verse (frg. 18 Edmonds, *Elegy and Iambus*, Loeb, vol. I) is also quoted at *Laches* 189a5 and alluded to at *Republic* 536d.

"Indeed," he said, "just as I think philosophy consists in learning many things."

And then I said, "Do you think that athletes desire anything other than what will bring about their good physical condition?"

"Just that," he said.

"And is it true," I went on, "that it's by doing lots of exercise that one gets into good physical condition?"

"Obviously," he said, "for how could anyone get into good physical 134
condition by doing only a little exercise?"

It seemed to me appropriate at this point to get the athlete going, so that he might offer me some assistance drawn from his experience in athletics. So I asked him, "How can you sit there so quietly, my friend, with this man saying these things? Does it seem to you too that people get into good physical condition by exercising a lot, or by exercising moderately?"

"As far as I'm concerned, Socrates," he said, "I thought even a pig would
know, as they say, that it's moderate exercise that produces good physical b
condition, so why shouldn't a man who doesn't sleep or eat know this, somebody who's out of shape and scrawny from sitting around meditating?" The boys were amused by what he said, and they snickered, while the other lover blushed.

And I said, "Well then, do *you* now grant that it's neither lots of exercise nor a little, but a moderate amount, that produces good physical condition? Or do you want to fight out the argument against the two of us?"

Then he said, "With *him* I would very happily fight it out, and I'm sure c
that I would be able to support the claim I made, even if my position were far weaker than it is—for he's no competition. But there's no need to compete with you about my opinion. I agree that it's not lots of athletics but a moderate amount that produces good physical condition in people."

"And what about food?" I said. "A moderate amount or a lot?"

He agreed about food as well.

And then I also made him agree that with everything else concerning d
the body the moderate is the most beneficial, neither a large nor a small amount; and he agreed with me about that.

"And what about the soul?" I said. "Does it benefit most from having moderate or immoderate amounts of things administered to it?"

"Moderate amounts," he said.

"And isn't learning something that's administered to the soul?"

He agreed.

"And so a moderate amount of learning is beneficial, but not a great deal of learning?"

He agreed.

"Now suppose we wanted to ask which exercises and which foods are e
moderate for the body; who would be the right man to ask?"

All three of us agreed that it would be either a doctor or an athletic trainer.

"And who would we ask about the moderate amount of seed to sow?"

The farmer, is what we agreed this time.

"And what about sowing and planting the seeds of learning in the soul? Suppose we wanted to ask which ones and how many were moderate; who would be the right man to ask?"

135 At this point we all found ourselves completely at a loss. So I asked them, in fun, "Since we're all at a loss, would you like it if we asked these boys here? Or perhaps we're ashamed to do that, like the suitors in Homer, who didn't expect anybody else to be able to string the bow?"[4]

At this point they seemed to me to be losing enthusiasm for the argument, so I tried a different approach, and I said, "What would you guess are the main sorts of subjects that a philosopher needs to learn, since he doesn't need to learn them all, or even a lot of them?"

b The wiser one now took up the question and said, "The most admirable and proper sorts of learning are those from which one derives the most fame as a philosopher, and one acquires the most fame by appearing to be an expert in all the skills, or if not in all of them, in most of the really important ones, learning as much of them as is proper for a free man—that is, their theory, not their actual practice."

c "Do you mean," I said, "something like in the building trade? You can buy a workman for five or six minas, but a master architect will cost you thousands of drachmas, and indeed there are few of them in all of Greece. Do you perhaps mean something like that?" He agreed that what I said was something like what he meant.

Then I asked him if it wasn't impossible to learn even two of the skills so thoroughly, let alone several important ones.

"You mustn't think I'm saying, Socrates," he replied, "that the philoso-
d pher needs to understand each skill as thoroughly as the man who makes it his profession. He needs to understand it only as far as is reasonable for a free and educated man, so that he can follow the explanations offered by the tradesman better than everyone else present, and can add his own opinion; that way, he always appears to be the most accomplished and the wisest of those present whenever the skills are discussed or practiced."

e But since I still wasn't sure what he meant, I asked him, "Am I understanding what sort of man you suppose the philosopher to be? It seems to me that you mean someone like the pentathlon athletes who compete against runners or wrestlers. They lose to the latter in their respective sports and are runners-up behind them, but they place first among the other athletes and defeat them. Perhaps you're suggesting something along
136 those lines, that philosophy produces this result in those who devote themselves to it. In knowledge of the skills, they rank behind those who place first, but as runners-up they remain superior to the rest; and so a man who has studied philosophy becomes a strong competitor in all subjects. You seem to be describing someone like that."

4. Cf. *Odyssey* xxi.285 ff.: Penelope's suitors, ashamed at having proven unable to string Odysseus' bow, are reluctant to permit Odysseus (disguised as a beggar) to attempt it.

"You appear to me, Socrates," he said, "to have just the right conception of the philosopher, when you compare him with the pentathlete. He is just the sort of man not to be enslaved to any one thing, nor to have worked anything out in such detail that, by concentrating on only that b
one thing, as do the tradesmen, he is left behind in all the others, but has touched on everything to a moderate extent."

After he'd offered this answer, I was eager to know exactly what he meant, so I asked him whether he supposed that good people were useful or useless.

"Useful, surely, Socrates," he said.

"So, if good people are useful, then bad people are useless?"

He agreed.

"Well then, do you think that philosophers are useful men, or not?"

He agreed that they were useful, and he added that he held them to be c
extremely useful.

"Let's see, then. Supposing what you're saying is true, when are these people, these runners-up, of any use to us? For it's obvious that the philosopher is inferior to each of the skilled professionals."

He agreed.

"And what about you?" I went on. "If it happened that you, or one of your friends about whom you cared a great deal, were to become sick, and you were looking for a cure, would you call that runner-up, the philosopher,[5] to your house, or would you call the doctor?"

"I'd call both," he said. d

"No, don't tell me you'd call both of them; tell me which you'd rather call first."

"No one would have any doubt," he said, "about calling the doctor first."

"Well then, on a ship in stormy weather, to whom would you rather entrust you and your possessions, the pilot or the philosopher?"

"I would prefer the pilot."

"And isn't it the same in every other case, that as long as there's a tradesman, the philosopher is of no use?"

"So it appears," he said. e

"Then isn't the philosopher actually useless to us? For surely we always have tradesmen. We agreed, however, that good men are useful, and bad men useless."

He was forced to agree.

"So what follows? Should I question you further, or would that be rude?"

"Ask whatever you like."

"All I'm trying to do," I said, "is sum up what's been said. It was 137
something like this: we agreed that philosophy is admirable,[6] that philosophers are good, that good men are useful, and that bad men are useless;

5. Reading *ton philosophon* at c10.

6. Accepting a conjectural deletion of *kai autoi philosophoi einai* at a2.

on the other hand, we agreed that philosophers are of no use whenever there are tradesmen, and that tradesmen are always to be found. Isn't that what we agreed?"

"It is indeed," he said.

"We agreed then, it seems, at least according to *your* argument, that if
b philosophy consists, as you suggest, in knowledge of skills, then philosophers are bad and useless, as long as there are men with skills.

"But no, my friend, philosophers are *not* like that, and philosophy does *not* consist in stooping to a concern with skills nor in learning many things,[7] but in something quite different—in fact, I thought that was actually dishonorable, and that people who pursued the skills were called vulgar. But we'll be able to see more clearly whether what I say is true if you will
c answer this: who understands how to discipline horses properly, those who make them better[8] horses, or someone else?"

"Those who make them better."

"And as it is with horses, so it is with every other animal?"

"That's correct."[9]

"Well then, aren't those who know how to make dogs better also those who know how to discipline them properly?"

"Yes."

"Then it's the same skill which both makes better and properly disciplines?"

"That's how it seems to me," he said.

"Well then, is the skill that makes them better and properly disciplines them the same as that which distinguishes between the good ones and the bad ones, or is it a different skill?"

"It's the same," he said.

d "And are you prepared to agree to this point concerning people, that the skill which makes them better is the same as that which disciplines them and that which distinguishes between the good ones and the bad?"

"Certainly," he said.

"And a skill that can do this with one can also do it with many, and vice versa?"

"Yes."

"Now what kind of knowledge is it that properly disciplines the undisciplined and lawless people in cities? Is it not knowledge of the law?"

"Yes."

"Now is what you call justice the same as this or is it different?"

"No, it's the same."

e "Isn't the knowledge used in disciplining people properly the same as that used in knowing the good ones from the bad?"

7. Accepting a conjectural deletion of *espoudakenai, oude polupragmonounta* at b3.

8. Reading *beltious* rather than *beltistous* at c1, c2, c3, c6, c9, and d1.

9. Moving this and the preceding line (137d8-9), so as to make them follow c2 (a conjectural transposition).

"It's the same."

"And whoever has such knowledge with regard to one person will also have it with regard to many?"

"Yes."

"And whoever is ignorant with regard to many is also ignorant with regard to one?"

"That's correct."

"So if one were a horse and didn't know good horses from bad horses, then one also wouldn't know what sort of horse one was oneself?"

"That's right."

"And if one were an ox and didn't know bad oxen from good ones, then one also wouldn't know what sort of ox one was?"

"Yes," he said.

"Likewise if one were a dog?"

He agreed.

"Well then, if a human being didn't know good human beings from 138
bad ones, wouldn't he fail to know whether he himself was good or bad, since he is in fact a human being?"

He conceded that.

"And not knowing yourself, is that being sensible, or is it not being sensible?"

"Not being sensible."

"Then knowing yourself is being sensible?"

"It is," he said.

"So it is this, it seems, which is prescribed in the Delphic inscription, to exercise good sense and justice."

"It would seem so."

"And this is how we understand how to discipline properly?"

"Yes."

"So the way we understand how to discipline properly is justice, and b
the way we evaluate ourselves and others is good sense."

"It would seem so," he said.

"So justice and good sense are one and the same."

"Apparently."

"And isn't it also the case that cities are well governed when the unjust are punished?"

"That's true," he said.

"And this is political skill."

He agreed.

"Well then, when one man properly governs a city, isn't he called a tyrant or a king?"

"He is."

"And isn't it by means of kingly or tyrannical skill that he governs?"

"That's right."

"These skills, then, are the same as the previous ones?"

"So they seem."

c "Well then, when one man governs a household properly, what's the name for him? Isn't it 'head of the household', and 'master of slaves'?"

"Yes."

"And isn't it also by means of justice that he governs his household well, or is it through some other skill?"

"It's through justice."

"So they are all the same, it seems: king, tyrant, politician, head of the household, master of slaves, sensible man, and just man. And they are all one skill: kingly, tyrannical, political, managerial and household skills, and justice and good sense."

d "So it seems," he said.

"Now if it is contemptible for the philosopher to be unable to follow what the doctor says when he talks about sick people or to add any opinion of his own regarding what's being said or done, and to be in the same situation whenever any other tradesman does or says something—when it's a judge speaking or a king or any of those others we've just been talking about—wouldn't it be contemptible for him to be able neither to follow what is said nor to add his own opinion?"

"How could it not be contemptible, Socrates, for him to be incapable of contributing an opinion concerning such matters?"

e "So," I said, "are we to say that he needs to be a pentathlete and a runner-up in these areas as well?[10] To begin with, surely he shouldn't hand over control of his own household to anybody else or take second place in it, but should himself administer justice and discipline, if his household is to be well governed?"

He conceded this point to me.

"And furthermore, if his friends entrust him with the settling of some
139 dispute, or if the city commissions him to investigate or pass judgment on something, wouldn't it surely be contemptible in these cases, my friend, for him to appear second or third and not to take the lead?"

"I think it would."

"So for us to say, my friend, that philosophy consists in learning many things and busying oneself with skills, would be very far from the truth."

When I said this, the wise fellow was ashamed at what he'd said before and fell silent, while the unlearned one said that I was right; and the others approved of what I'd said.

10. Accepting a conjectural deletion of *kai tautēs . . . toutōn tis ēi* (e2–4).

# THEAGES

Theages *tells the story of the first encounter between Socrates and the young Theages, who hoped to fulfill his political ambitions by learning whatever Socrates had to teach him. We also hear about Theages in Plato's* Republic, *where we learn that his poor health (the 'bridle of Theages') frustrated his political ambitions, and in Plato's* Apology, *where we learn that he died before Socrates.* Theages *provides a vivid and distinctive account of what was unusual about Socrates: his divine inner voice and the magical effect he had on his students.*

*At unpredictable times Socrates would experience an inner premonition which he interpreted as a voice from the gods. In Plato this premonition always held him back from something he was about to do. In Xenophon we read of similar incidents (*Symposium *viii.5,* Apology *4 =* Memoirs of Socrates *IV.viii.5), as well as cases where the voice warned him against what his companions were about to do (*Memoirs of Socrates *I.i.4). In* Theages *we are told of four cases in which the premonition was ignored, with disastrous consequences to others. In Plato's* Theaetetus *Socrates says that the voice prevents him from accepting back some of his students who had strayed (151b), but in* Theages *the spiritual power that speaks to him not only prohibits Socrates sometimes from taking new students, it also exerts itself for some of his students rather than others. Theages is under the impression that this divine power can be propitiated by prayer and sacrifice, an almost superstitious idea that has no parallel in any other surviving Socratic dialogue.*

*In Plato's* Symposium, *Socrates said that he was an expert in nothing except love (177e), and in* Theages *Socrates says something similar. In his (now mostly lost) dialogue* Alcibiades, *Aeschines has Socrates say, "Although I know no subject with which I might help a man by teaching it to him, still I thought that if I was with Alcibiades my loving him would make him better" (frg. 11c). Although he has nothing to teach his students, his affection and conversation make them improve. Unlike in other Socratic dialogues, the only improvement mentioned in* Theages *is intellectual and dialectical skill, not progress in moral virtue.*

*But not all his students made permanent progress. Alcibiades reverted to his former dissolute ways when he stayed away from Socrates (Plato,* Symposium *216b), and others, including young Aristides, reverted to being the incompetent fools they had been before Socrates began to improve their minds (*Theaetetus *150d–151a).* Theages *tells a remarkable version of the lapse of Aristides: now that Aristides has gone away from Socrates, the impressive skill in argument he formerly had has deserted him; better was to be in his presence; but*

*best of all was to be right beside him, touching him, feeling his mysterious power flowing out of him. Plato argued against such a conception of Socrates' pedagogical gifts (*Symposium *175c–e), whereas for the author of* Theages *the magical effect of Socrates on his students was another aspect of the divine power that dwelled in him.*

*The arguments against Plato being the author are circumstantial but convincing enough that there is virtual unanimity among modern scholars on the issue. In the decades after 350 B.C., several philosophers in Plato's Academy pursued an interest in the miraculous and the supernormal; the author of* Theages *may have been among them.*

*D.S.H.*

121 DEMODOCUS: Oh, Socrates, I've been needing to have a talk with you in private, if you've got the time—even if you *are* busy—still, please make some time, for my sake.

SOCRATES: Well, it so happens that I do have some time, lots of time, in fact, if it's for *your* sake. If there's something you want to talk about, go ahead.

DEMODOCUS: Do you mind if we move back out of the way into the portico of Zeus the Liberator?

SOCRATES: If you like.

b DEMODOCUS: Then let's go.

Socrates, all living things tend to follow the same course—particularly man, but also the other animals and the plants that grow in the earth. It's an easy thing, for us farmers, to prepare the ground for planting, and the planting is easy, too. But after the plants come up, there's a great deal of hard and difficult work in tending to them. It seems the same goes for
c people, if others have the same problems I've had. I found the planting, or procreation—whatever you're supposed to call it—of this son of mine the easiest thing in the world. But his upbringing has been difficult, and I've always been anxious about him.

There are many things I could mention, but his current passion really scares me—not that it's beneath him, but it *is* dangerous. Here we have
d him, Socrates, saying that he wants to become wise. What I think is that some other boys from his district who go into town have got him all worked up by telling him about certain discussions they've heard. He envies them and he's been pestering me for a long time—he's demanding that I take his ambition seriously, and pay money to some expert who'll make him wise. The money is actually the least of my concerns, but I think
122 what he's up to is very risky.

Translated by Nicholas D. Smith.

For a while I held him back with reassurances. But since I can't hold him back any longer, I think I'd better give in to him, so that he won't get corrupted, as he might by associating with someone behind my back. This is why I've come to town, to place this boy with one of those so-called experts. And then you appeared before us at just the right moment, and I'd be very glad to have your advice about what to do next. If you've got any advice to give based on what I've said, you're welcome to give b it, please.

SOCRATES: Well, you know, Demodocus, they say that advice is a sacred thing, and if it's ever sacred, then it surely is in this case. There's nothing more divine for a man to take advice about than the education of himself and his family.

First, then, let's settle exactly what it is that you and I intend to discuss. c I might perhaps be taking it to be one thing, and you another, and then, after we'd discussed it a while, we'd both feel silly because I, the one giving advice, and you, the one taking advice, would be thinking about entirely different matters.

DEMODOCUS: I think you're right, Socrates—that's the way it should be done.

SOCRATES: I *am* right, but not completely—I have one little change to make. It occurs to me that this youngster may not really want what we think he wants, but something else. In that case our thinking would be even more absurd and irrelevant. So it seems best for us to start with the d boy himself, and ask what exactly it is that he wants.

DEMODOCUS: Well, it does seem that it would be best to do as you say.

SOCRATES: Then tell me, what's the fine name of the young man? How should we address him?

DEMODOCUS: Theages is his name, Socrates.

SOCRATES: It *is* a fine name you've given your son, Demodocus, and godly.[1] Tell us, then, Theages, do you say you want to become wise; are e you demanding that your father here arrange to have you associate with some man who'll make you wise?

THEAGES: Yes.

SOCRATES: Whom do you call wise—those who know (whatever they know about), or those who don't?

THEAGES: Those who know.

SOCRATES: Well, didn't your father have you taught and trained in what others of your age—the sons of gentlemen—are taught, such as reading and writing, and playing the lyre, and wrestling, and other sports?

THEAGES: Yes, he did.

SOCRATES: Yet you think that you're lacking some knowledge, which it's 123 appropriate for your father to provide you?

THEAGES: I do.

1. The name seems to mean either "guided by god" or "revered by god" or "revering god."

SOCRATES: What is it? Tell us, so we can oblige you.

THEAGES: *He* knows it, Socrates, because I've often told him. But in front of you he talks as if he didn't know what I want. In fact, he argues with me about these things, and other things, too,[2] and refuses to place me with anyone.

SOCRATES: But what you said before was said without witnesses, as it
b were. Now make me your witness, and state in my presence what this wisdom is that you want. Come on; if you desired that wisdom by which people steer ships, and I asked you: "Theages, what wisdom do you lack? Why do you criticize your father for refusing to place you with someone who could make you wise?" What would you answer me? What is it? Isn't it the helmsman's skill?

THEAGES: Yes.

c SOCRATES: And if you criticized your father because you desired the wisdom by which people steer chariots, and again I asked what this wisdom is, what would you say it is? Isn't it the charioteer's skill?

THEAGES: Yes.

SOCRATES: And the object of your current desire; is it some nameless thing, or does it have a name?

THEAGES: I think it has.

SOCRATES: Then do you know it, but not the name, or do you know the name, as well?

THEAGES: I know the name, too.

SOCRATES: So what is it? Tell me!

d THEAGES: What other name, Socrates, would anyone give it but wisdom?

SOCRATES: But isn't the charioteer's skill also a kind of wisdom? Or do you think it's ignorance?

THEAGES: I don't.

SOCRATES: So it's wisdom.

THEAGES: Yes.

SOCRATES: What do we use it for? Isn't it what we use in knowing how to direct a team of horses?

THEAGES: Yes.

SOCRATES: Isn't the helmsman's skill also a kind of wisdom?

THEAGES: I think it is.

SOCRATES: And isn't that the skill we use in knowing how to direct ships?

THEAGES: Yes, that's right.

SOCRATES: And the one that you desire, what sort of wisdom is that?
e What would it give us the knowledge to direct?

THEAGES: People, I think.

SOCRATES: Sick people?

THEAGES: Of course not!

SOCRATES: That would be medicine, wouldn't it?

THEAGES: Yes.

2. Reading *eti kai hetera* in a7.

SOCRATES: Well is it what we use in knowing how to direct the singers in choruses?

THEAGES: No.

SOCRATES: That would be music?

THEAGES: Obviously.

SOCRATES: Well is it what we use in knowing how to direct athletes?

THEAGES: No.

SOCRATES: Because that's physical education?

THEAGES: Yes.

SOCRATES: Well then, to direct those who are doing what? Try your best to tell me, following the examples I've just given.

THEAGES: Those in the city, that's what *I* think. 124

SOCRATES: But aren't the sick people in the city, too?

THEAGES: Yes, but I don't mean just those people, but also everyone else in the city, too.

SOCRATES: Let's see if I understand the skill you're talking about. I don't think you're talking about the skill by which we know how to direct harvesters and pickers and planters and seeders and threshers, for it's the farmer's skill by which we direct these isn't it?

THEAGES: Yes.

SOCRATES: Nor, I suppose, do you mean the skill by which we know b
how to direct sawyers and drillers and planers and turners, and so on, because that would be carpentry.

THEAGES: Yes.

SOCRATES: Perhaps it's the skill by which we know how to direct or rule over all of these—the farmers and the carpenters, and all the workers and ordinary people, both women and men. Is this, perhaps, the sort of wisdom you mean?

THEAGES: That's what I've been trying to say all along, Socrates.

SOCRATES: So, can you say whether Aegisthus, who killed Agamemnon c
in Argos, ruled over those you mean—the workers and the ordinary people, both men and women, all together, or over other people?

THEAGES: No; just those.

SOCRATES: Really? Didn't Peleus (son of Aeacus) rule over the same sorts of people in Phthia?

THEAGES: Yes.

SOCRATES: And have you heard about how Periander (son of Cypselus) ruled in Corinth?

THEAGES: I have.

SOCRATES: Weren't these the people he ruled over in his city?

THEAGES: Yes. d

SOCRATES: Well, then. Don't you think that Archelaus (son of Perdiccas), who recently ruled in Macedonia, ruled over the same sorts of people?

THEAGES: I do.

SOCRATES: And whom do you suppose did Hippias (son of Pisistratus) rule over when he ruled this city? Weren't they the same sort of people?

Theages: Of course.

Socrates: Tell me next, then, what name do Bakis, and Sibyl, and our own Amphilytus have?

Theages: "Oracle-givers," Socrates. What else?

e Socrates: Right. Now try to answer me in the same way about these: what name do Hippias and Periander have, considering their style of ruling?

Theages: "Tyrants," I suppose. What else could we call them?

Socrates: When someone wants to rule over all the people in the city together, doesn't he want the same sort of rule as these people had—tyranny, and to be a tyrant?

Theages: Apparently.

Socrates: Isn't this what you claim to desire?

Theages: It seems so, from what I said.

Socrates: You rascal! So you want to be a tyrant over us, and that's
125 why you criticized your father all along for refusing to send you to some tyrant-teacher! And you, Demodocus, aren't you ashamed for having known all along what he wants, and though you knew where you could have sent him to make him skilled in the wisdom he wants, you begrudge it to him and refuse to send him! But look here; now that he has accused you right in front of me, don't you think you and I had better discuss this together? To whom should we send him? Whose company will make him a wise tyrant?

b Demodocus: Yes, by Zeus, Socrates, let's do it. It seems to me that this issue requires careful consideration.

Socrates: Not now, my good man; let's first finish our examination of him.

Demodocus: Let's do that.

Socrates: Well now, what if we were to bring in Euripides, Theages? For Euripides somewhere says, "Wise company makes wise tyrants." So if someone were to ask Euripides, "Euripides, in *what* are these men wise,
c whose company, you say, makes tyrants wise? For example, if he said, "Wise company makes wise farmers," and we asked: "Wise in *what*?," what would his answer be? Wouldn't it be: "in what's pertinent to farming"?

Theages: Right.

Socrates: And what if he said, "Wise company makes wise cooks?" If we asked "wise in *what*?," what would his answer be? Wouldn't it be: "in what's pertinent to cooking"?[3]

Theages: Yes.

Socrates: And what if "Wise company makes wise wrestlers" were what
d he said? If we asked "Wise in *what*?," wouldn't he say, "in wrestling"?

Theages: Yes.

3. Accepting the emendation to *tōn ta mageirika* in c10.

Socrates: But since he said: "Wise company makes wise tyrants," we are asking, "What do you mean, Euripides, those who are wise in *what*?" What would he reply? What would he say it was this time?[4]

Theages: Well, by Zeus, I don't know!

Socrates: Well, do you want me to tell you?

Theages: If you want to.

Socrates: These are the kinds of things that Anacreon said that Callicrite knew. Or don't you know the song?

Theages: I do.

Socrates: Well, now, do you, too, desire to get together with some man
who has the same skill as Callicrite (daughter of Cyane), and knows what e
is pertinent to tyranny, as the poet said, so that you, too, may become a tyrant over us and the city?

Theages: All along, Socrates, you've been joking and playing games with me.

Socrates: Really? Don't you claim to desire that wisdom by which you might rule over all the citizens? If you did this, would you be anything other than a tyrant?

Theages: I would pray, no doubt, to become a tyrant, over all people if
possible, but if not, over as many as possible. And so would you, I think, 126
and everyone else. Or perhaps even to become a god. But that's not what I said I wanted.

Socrates: Well, what is it you want, then? Didn't you claim to want to rule over the citizens?

Theages: But not by *violence*, the way tyrants do. I want to rule over those who voluntarily submit. This is the way other people—men of good repute in the city—rule over people.

Socrates: So you mean you want to rule over people in the way Themistocles and Pericles and Cimon did,[5] and whoever else was an outstanding politician.

Theages: Yes, by Zeus, *that's* what I mean!

Socrates: Well, then, what if you wanted to become wise in horseman-
ship? To whom do you suppose you'd have to go, in order to become an b
outstanding horseman? To the horsemen, right?

Theages: Right, by Zeus!

Socrates: Moreover, you'd go to those who are themselves outstanding at these things, and who have horses and work with them all the time, both their own horses and many other people's, too?

Theages: Obviously.

Socrates: And what if you wanted to become wise in javelin-throwing? Don't you suppose that you'd become wise by going to the javelin-

4. Accepting an emendation to *poia au* in d6.

5. Three of the most famous leaders of democratic Athens.

c throwers, who have javelins, and work with them all the time, many of them, both others' and their own?[6]

Theages: I think so.

Socrates: Then tell me: since you want to become wise in politics, do you suppose that you'll become wise by going to anyone else than the politicians, the ones who are outstanding at politics, and work with their own city all the time, and many others, conducting business with both Greek and foreign cities? Or do you believe you'll become wise in what these men do by associating with other people and not with the politicians themselves?

d Theages: I've heard, Socrates, about the arguments they say you offer, that the sons of the politicians are no better than the sons of the shoemakers.[7] And I believe that what you say is really true, from what I've been able to see. So I'd be foolish if I thought that one of these men would give his wisdom to me, but wouldn't be of any help to his own son, if indeed he could have been helpful to anyone else at all in these matters.

Socrates: Well, then, my dear sir, how would *you* deal with it, if, when you came to have a son, he pestered you like this, and said that he wanted
e to become a good painter, and criticized you, his father, for refusing to spend money on him for this, and yet he didn't respect those who practiced this very thing, the painters, and refused to learn from them? Or the flute-players, if he wanted to become a flute-player, or the lyre-players? Would you know what to do with him and where else to send him, if he refused to learn from them?

Theages: By Zeus, I wouldn't.

127 Socrates: So now, when you yourself are acting like this with your father, how can you be surprised and criticize him if he's at a loss as to what to do with you and where to send you? And yet we'll place you with any of the gentlemen in politics you want, of the Athenians at least, who'll associate with you without charge. You won't waste any money, and you'll also gain a much better reputation among the general public than if you associate with someone else.

Theages: Well, then, Socrates—aren't *you* one of these gentlemen? If you'll agree to associate with me, that satisfies me, and I won't look for anyone else.

b Socrates: What do you mean by that, Theages?

Demodocus: Oh, Socrates, that's not a bad idea at all! And you would oblige me as well; for there's nothing I'd consider a greater stroke of luck than if he were content to associate with you and you agreed to associate with him. Indeed, I'm even ashamed to say how much I want it! I beg you both: you—to agree to associate with this boy, and you—not to seek
c to associate with anyone other than Socrates. You'll thereby relieve me of

6. Accepting the conjectural deletion of *akontiois* in c1.

7. Cf. *Alcibiades* 118d–119a; *Meno* 93a–94e; *Protagoras* 319e–320b.

a great load of worry. As it is now, I'm very afraid that he might fall in
with some other person who'll corrupt him.

THEAGES: Don't worry any more about me now, father, if you're able to
persuade him to accept me!

DEMODOCUS: Excellent! Socrates, what I have to say from here on is now
*your* business: to be brief, I'm prepared to make available to you both
myself and what I own, as freely as I can, pretty well whatever you might d
need—if you'll welcome Theages here and be of whatever service you can.

SOCRATES: Demodocus, I'm not surprised at your seriousness, if you
think that I could really help this boy of yours—for I don't know what a
sensible person should be more serious about than that his own son become
the best he can be. But I *do* wonder where you got the idea that I would
be better able than you yourself to help your son become a good citizen—
and how he imagined that I'd help him more than you could. In the first
place, you're older than I am, and moreover you've served in many of the e
highest offices for the Athenians, and are held in the highest esteem by
those of the Anagyrus district, as well as by the rest of the city. You don't
see this in my case.

Moreover, if Theages here refuses to associate with the politicians and
seeks some other men, who claim to be able to educate young people,
there are a number of such men here: Prodicus of Ceos, and Gorgias of
Leontini, and Polus of Acragas, and many others, who are so wise that 128
they go from city to city and persuade the most aristocratic and wealthiest
of the young men—who can associate with any of the citizens they want
without charge—these men persuade them to desert the others and associ-
ate only with them instead, to pay a great deal of money up front,[8] and,
on top of that, to be grateful! It would be reasonable for your son and you b
to choose one of these men, but it wouldn't be reasonable to choose me.
I know none of these magnificent and splendid subjects. I wish I did! I
am always saying, indeed, that I know virtually nothing, except a certain
small subject—love, although on this subject, I'm thought to be amazing,
better than anyone else, past or present.

THEAGES: You see, father? I really don't think that Socrates is actually
willing to associate with me, and yet I'd be prepared to if he were willing.
But he's only playing games with us. I know some people my age, and c
some a little older, who were nothing before they associated with him,
but after associating even for a very short time with him became obviously
better than all of those they had been worse than before.

SOCRATES: Do you know how that's possible, son of Demodocus?

THEAGES: Yes, by Zeus, I do: if you agree, I will become like them, too.

SOCRATES: No, sir; you don't understand. I'll have to explain it to you. d
There's a certain spiritual thing which, by divine dispensation, has been
with me from childhood. It's a voice that, when it comes, always signals
me to turn away from what I'm about to do, but never prescribes anything.

8. Accepting an emendation to *prokatatithentas* in a6.

And if some one of my friends consults with me and the voice comes, it's the same: it prohibits him and won't allow him to act.

e I have witnesses for this: Surely you know Charmides (son of Glaucon) who's become so good-looking. He once happened to be consulting with me when he was just about to train for the race at Nemea. As soon as he began to tell me that he was going to train, the voice came and I tried to stop him and said, "As you were speaking, the voice of the spiritual thing came to me. Don't train!"

"Maybe," he said, "its significance is that I won't win; but even if I'm not going to win, I'll benefit from the exercise I'll get." Saying this, he
129 trained; it would be worthwhile to ask him what happened to him as a result of his training.

Or if you want, ask Clitomachus, the brother of Timarchus, what Timarchus said to him when he was on his way to his death together with Euathlus the runner,[9] who harbored Timarchus as a fugitive. This is what Timarchus said, according to him . . .

THEAGES: What?

SOCRATES: "Clitomachus," he said, "I'm going off to die now, because I refused to trust Socrates."

You might wonder why Timarchus would say that. I'll explain. When
b Timarchus and Philemon (son of Philemonides) got up to leave the banquet, they were planning to kill Nicias (son of Heroscamandrus). Only those two knew the plot.

But Timarchus, as he got up to leave, said to me, "What do you say, Socrates? You guys go on drinking, but I have to get up and go somewhere. I'll be back a little later, perhaps."

And then the voice came to me and I said to him, "No! Don't get up!
c For my familiar spiritual sign has come to me." And he stayed.

But after a while he again started to go and said, "Well, I'm going, Socrates."

Again the voice came, and so again I compelled him to stay. The third time, wanting me not to notice, he got up without saying anything more to me, watching until I had my attention elsewhere. Thus it was that he went off and did what led him to his death. And this is why he spoke to his brother in the way I just told you—he was going to his death because he hadn't trusted me.

d Moreover, many people can tell you what I said about the destruction of the army in Sicily.[10] You can hear about past events from those who know the details, but it's still possible to test the sign, to see if it means anything. For when the good-looking Sannio went out on campaign, the sign came to me; and he's now with Thrasyllus on an expedition to Ephesus

9. Accepting a conjectural deletion of *euthu tou daimoniou* in a3.

10. Socrates refers to the ill-fated Sicilian expedition of 415–413 B.C., in which the Athenian invasion force was almost totally lost.

and the rest of Ionia. So I suppose he'll either die or else come close to it, and I'm really afraid about the rest of that business.[11]

I've told you all these things because this spiritual thing has absolute e
power in my dealings with those who associate with me. On the one hand, it opposes many, and it's impossible for them to be helped by associating with me, so I can't associate with them. On the other hand, it does not prevent my associating with many others, but it is of no help to them. Those whose association with me the power of the spiritual thing assists, however—these are the ones you've noticed, for they make rapid progress 130
right away. And of these, again, who make progress, some are helped in a secure and permanent way, whereas many make wonderful progress as long as they're with me, but when they go away from me they're again no different from anyone else.

This is what happened to Aristides (son of Lysimachus, grandson of Aristides). While he was associating with me he made tremendous progress in a short time; but then there was some military expedition and he sailed away. On his return he learned that Thucydides (son of Melesias, grandson of Thucydides)[12] was associating with me. Thucydides had quarrelled with b
me the day before about some arguments that had come up.

When Aristides saw me, after greeting me and talking of other things, he said, "I hear, Socrates, that Thucydides is rather indignant and irritated with you, as if he were someone important."

"Yes, that's right," I said.

"Doesn't he know," he said, "what a slave[13] he was before he began associating with you?"

"Apparently not, by the gods," I said.

"You know, Socrates, he said, "I am also in a ridiculous situation!"

"Why?" I said. c

"Because," he said, "before I sailed away, I was able to discuss things with anyone, and never came off worse than anyone in arguments; I even tried to associate with the cleverest people. But now, on the contrary, whenever I even *see* anybody with any education, I avoid them. That's how ashamed I am of my incompetence."

"Did you lose your ability all of a sudden," I asked, "or little by little?"

"Little by little," he said.

"And when you had your ability," I said, "Did you have it by learning something from me, or some other way?" d

"By the gods, Socrates, you're not going to believe this, but it's true! I've never learned anything from you, as you know. But I made progress whenever I was with you, even if I was only in the same house and not in the same room—but more when I was in the same room. And it seemed,

11. Reading *pragmateias* in d8.

12. On Aristides and Thucydides see *Laches* 178a ff. and *Theaetetus* 150d ff.

13. Accepting the conjectural deletion of *to* in b7.

to me at least, that when I was in the same room and looked at you when you were speaking, I made much more progress than when I looked away.
e And I made by far the most and greatest progress when I sat right beside you, and physically held on to you or touched you. But now," he said, "all that condition has trickled away."

So this is how it is when you associate with me, Theages. If it's favored by the god, you'll make great and rapid progress; if not, you won't. So think about it; wouldn't it be safer for you to become educated in the company of somebody who has control over the way he benefits people rather than taking your chances with me?

131 THEAGES: It seems to me, Socrates, that we should do this: let's test this spiritual thing by associating with one another. If it allows us, then that's what's best; if not, then we'll immediately think about what we should do—whether to go and associate with someone else, or try to appease the divine thing that comes to you with prayers and sacrifices and any other way the diviners might suggest.

DEMODOCUS: Don't oppose the boy any more in these things, Socrates; for Theages is right.

SOCRATES: Well, if it seems that this is what we ought to do, then let's do it.

# CHARMIDES

*Charmides was Plato's uncle, on his mother's side. He is seen here as a teenager in conversation with Socrates in 432 B.C. on the latter's return to Athens from service in the battle at Potidaea, the battle that initiated the Peloponnesian War. Socrates' other interlocutor is an older kinsman, first cousin of both Charmides and Plato's mother—Critias. It was a very distinguished family, tracing its descent from Solon, the great poet and statesman of the beginning of the sixth century, with distinguished forebears even before that. The subject of discussion is the virtue of* 'sōphrosunē'*, here translated 'temperance'—but there is no adequate translation in modern European languages.* Sōphrosunē *means a well-developed consciousness of oneself and one's legitimate duties in relation to others (where it will involve self-restraint and showing due respect) and in relation to one's own ambitions, social standing, and the relevant expectations as regards one's own behavior. It is an aristocrat's virtue* par excellence*, involving a sense of dignity and self-command. At the time Plato was writing, both Charmides and Critias were notorious for involvement with the Thirty Tyrants (Critias was their leader). These were rich antidemocrats appointed by the Spartan king in 404 B.C. to draw up a new constitution after the defeat of Athens in the Peloponnesian War, who however seized power and established a reign of terror against their political and class enemies (Socrates alludes in* Apology *to his own behavior during this sorry episode). They both died in 403 in the fighting that overthrew them and restored the democracy. Their behavior was the antithesis of what could be expected of 'temperate' (*sōphrōn*) gentlemen.*

*For an ancient reader, these historic overtones would have played vividly against the bright surface of the dialogue. Charmides comes on stage here as a beautiful, thoughtful, much-admired youth, very modest and self-possessed—for Critias and the others present, the model of aristocratic excellence in the making. Only at the very end of the dialogue does Plato, very delicately, reveal another side of his character: advised by Critias to attach himself to Socrates so as to learn* sōphrosunē *through repeated discussion with him, Charmides tells Socrates he will do that by force, since his guardian Critias has commanded it, without allowing Socrates to say yea or nay. That ominous sour note aside, we get here a rich and subtle portrait of Socrates in conversation with an adolescent male, beautiful in body, but (infinitely more important) giving signs of beauty of soul and character—just the sort of person he was so constantly attracted to. Equally rich and subtle is the complementary portrayal in* Lysis*, on friendship, with which this dialogue should be compared.*

*Questioned by Socrates, Charmides attempts to say what this virtue of 'temperance' is, of which Critias and others think him a paragon. He offers three successive accounts, the last being something he has gathered from some respected adult (Critias, it turns out), but without being able to explain it satisfactorily either to himself or to Socrates. That by itself should suggest (anyhow to Socrates) that he does not possess the virtue, but out of consideration for his age, Socrates does not press the point. Instead, Critias takes over the defense of this last account—that 'temperance' is (equivalently) 'minding one's own business', or behaving in a way that suits the person who one is, or behaving with self-knowledge. Critias, too, is unable to develop and defend this idea satisfactorily, and the dialogue ends, as usual with Plato's 'Socratic' dialogues, in perplexity. Both Charmides' and Critias' proposals, and some of Socrates' criticisms, may strike us as oddly off base as accounts of whatever it is we mean by temperance; matters may be put to rights if we bear in mind the wider scope of the Greek virtue, as explained above.*

*J.M.C.*

153 We got back the preceding evening from the camp at Potidaea, and since I was arriving after such a long absence I sought out my accustomed haunts with special pleasure. To be more specific, I went straight to the palaestra of Taureas (the one directly opposite the temple of Basile), and there I found a good number of people, most of whom were familiar,
b though there were some, too, whom I didn't know. When they saw me coming in unexpectedly, I was immediately hailed at a distance by people coming up from all directions, and Chaerephon,[1] like the wild man he is, sprang up from the midst of a group of people and ran towards me and, seizing me by the hand, exclaimed, "Socrates! how did you come off in the battle?" (A short time before we came away there had been a battle at Potidaea and the people at home had only just got the news.)

And I said in reply, "Exactly as you see me."

c "The way we heard it here," he said, "the fighting was very heavy and many of our friends were killed."

"The report is pretty accurate," I said.

"Were you actually in the battle?" he said.

"Yes, I was there."

"Well, come sit down and give us a complete account, because we've had very few details so far." And while he was still talking he brought me over to Critias, the son of Callaeschrus, and sat me down there.

Translated by Rosamond Kent Sprague.

1. Socrates' devoted friend, who put the question to the Delphic Oracle reported at *Apology* 21a.

When I took my seat I greeted Critias and the rest and proceeded to d
relate the news from the camp in answer to whatever questions anyone
asked, and they asked plenty of different ones.

When they had had enough of these things, I in my turn began to
question them with respect to affairs at home, about the present state of
philosophy and about the young men, whether there were any who had
become distinguished for wisdom or beauty or both. Whereupon Critias,
glancing towards the door and seeing several young men coming in and 154
laughing with each other, with a crowd of others following behind, said
"As far as beauty goes, Socrates, I think you will be able to make up your
mind straight away, because those coming in are the advance party and
the admirers of the one who is thought to be the handsomest young man
of the day, and I think that he himself cannot be far off."

"But who is he," I said, "and who is his father?"

"You probably know him," he said, "but he was not yet grown up when b
you went away. He is Charmides, the son of my mother's brother Glaucon,
and my cousin."

"Good heavens, of course I know him," I said, "because he was worth noticing even when he was a child. By now I suppose he must be pretty well grown up."

"It won't be long," he said, "before you discover how grown up he is and how he has turned out." And while he was speaking Charmides came in.

You mustn't judge by me, my friend. I'm a broken yardstick as far as
handsome people are concerned, because practically everyone of that age
strikes me as beautiful. But even so, at the moment Charmides came in c
he seemed to me to be amazing in stature and appearance, and everyone
there looked to me to be in love with him, they were so astonished and
confused by his entrance, and many other lovers followed in his train.
That men of my age should have been affected this way was natural
enough, but I noticed that even the small boys fixed their eyes upon him
and no one of them, not even the littlest, looked at anyone else, but all
gazed at him as if he were a statue. And Chaerephon called to me and
said, "Well, Socrates, what do you think of the young man? Hasn't he a d
splendid face?"

"Extraordinary," I said.

"But if he were willing to strip," he said, "you would hardly notice his face, his body is so perfect."

Well, everyone else said the same things as Chaerephon, and I said, "By Heracles, you are describing a man without an equal—if he should happen to have one small thing in addition."

"What's that?" asked Critias.

"If he happens to have a well-formed soul," I said. "It would be appropriate if he did, Critias, since he comes from your family."

"He is very distinguished in that respect, too," he said.

"Then why don't we undress this part of him and have a look at it before we inspect his body? Surely he has already reached the age when he is willing to discuss things."

"Very much so," said Critias, "since he is not only a philosopher but
155 also, both in his own opinion and that of others, quite a poet."

"This is a gift, my dear Critias," I said, "which has been in your family as far back as Solon. But why not call the young man over and put him through his paces? Even though he is still so young, there can be nothing wrong in talking to him when you are here, since you are both his guardian and his cousin."

b "You are right," he said; "we'll call him." And he immediately spoke to his servant and said, "Boy, call Charmides and tell him I want him to meet a doctor for the weakness he told me he was suffering from yesterday." Then Critias said to me, "You see, just lately he's complained of a headache when he gets up in the morning. Why not pretend to him that you know a remedy for it?"

"No reason why not," I said, "if he will only come."

"Oh, he will come," he said.

c Which is just what happened. He did come, and his coming caused a lot of laughter, because every one of us who was already seated began pushing hard at his neighbor so as to make a place for him to sit down. The upshot of it was that we made the man sitting at one end get up, and the man at the other end was toppled off sideways. In the end he came and sat down between me and Critias. And then, my friend, I really was in difficulties, and although I had thought it would be perfectly easy to
talk to him, I found my previous brash confidence quite gone. And when
d Critias said that I was the person who knew the remedy and he turned his full gaze upon me in a manner beyond description and seemed on the point of asking a question, and when everyone in the palaestra surged all around us in a circle, my noble friend, I saw inside his cloak and caught on fire and was quite beside myself. And it occurred to me that Cydias[2] was the wisest love-poet when he gave someone advice on the subject of beautiful boys and said that "the fawn should beware lest, while taking a look at the lion, he should provide part of the lion's dinner," because I felt as if I had been snapped up by such a creature. All the same, when he asked me if I knew the headache remedy, I managed somehow to answer that I did.

"What exactly is it?" he said.

e And I said that it was a certain leaf, and that there was a charm to go with it. If one sang the charm while applying the leaf, the remedy would bring about a complete cure, but without the charm the leaf was useless.
156 And he said, "Well, then I shall write down the charm at your dictation."

"With my permission," I said, "or without it?"

"With it, of course, Socrates," he said, laughing.

2. Cydias: an obscure lyric poet.

"Very well," I said. "And are you quite sure about my name?"

"It would be disgraceful if I were not," he said, "because you are no small topic of conversation among us boys, and besides, I remember you being with Critias here when I was a child."

"Good for you," I said. "Then I shall speak more freely about the nature b
of the charm. Just now I was in difficulties about what method I would
adopt in order to demonstrate its power to you. Its nature, Charmides, is
not such as to be able to cure the head alone. You have probably heard
this about good doctors, that if you go to them with a pain in the eyes,
they are likely to say that they cannot undertake to cure the eyes by
themselves, but that it will be necessary to treat the head at the same time
if things are also to go well with the eyes. And again it would be very c
foolish to suppose that one could ever treat the head by itself without
treating the whole body. In keeping with this principle, they plan a regime
for the whole body with the idea of treating and curing the part along
with the whole. Or haven't you noticed that this is what they say and
what the situation is?"

"Yes, I have," he said.

"Then what I have said appears true, and you accept the principle?"

"Absolutely," he said.

And when I heard his approval, I took heart and, little by little, my d
former confidence revived, and I began to wake up. So I said, "Well
Charmides, it is just the same with this charm. I learned it while I was
with the army, from one of the Thracian doctors of Zalmoxis, who are
also said to make men immortal. And this Thracian said that the Greek
doctors were right to say what I told you just now. 'But our king Zalmoxis,'
he said, 'who is a god, says that just as one should not attempt to cure e
the eyes apart from the head, nor the head apart from the body, so one
should not attempt to cure the body apart from the soul. And this, he
says, is the very reason why most diseases are beyond the Greek doctors,
that they do not pay attention to the whole as they ought to do, since if
the whole is not in good condition, it is impossible that the part should
be. Because,' he said, 'the soul is the source both of bodily health and
bodily disease for the whole man, and these flow from the soul in the
same way that the eyes are affected by the head. So it is necessary first 157
and foremost to cure the soul if the parts of the head and of the rest of
the body are to be healthy. And the soul,' he said, 'my dear friend, is cured
by means of certain charms, and these charms consist of beautiful words.
It is a result of such words that temperance arises in the soul, and when
the soul acquires and possesses temperance, it is easy to provide health
both for the head and for the rest of the body.' So when he taught me the b
remedy and the charms, he also said, 'Don't let anyone persuade you to
treat his head with this remedy who does not first submit his soul to you
for treatment with the charm. Because nowadays,' he said, 'this is the
mistake some doctors make with their patients. They try to produce health
of body apart from health of soul.' And he gave me very strict instructions

c that I should be deaf to the entreaties of wealth, position, and personal beauty. So I (for I have given him my promise and must keep it) shall be obedient, and if you are willing, in accordance with the stranger's instructions, to submit your soul to be charmed with the Thracian's charms first, then I shall apply the remedy to your head. But if not, there is nothing we can do for you, my dear Charmides."

When Critias heard me saying this, he said, "The headache will turn out to have been a lucky thing for the young man, Socrates, if, because of
d his head, he will be forced to improve his wits. Let me tell you, though, that Charmides not only outstrips his contemporaries in beauty of form but also in this very thing for which you say you have the charm; it was temperance, wasn't it?"

"Yes, indeed it was," I said.

"Then you must know that not only does he have the reputation of being the most temperate young man of the day, but that he is second to none in everything else appropriate to his age."

e "And it is quite right, Charmides, that you should be superior to the rest in all such things," I replied, "because I don't suppose that anyone else here could so readily point to two Athenian families whose union would be likely to produce a more aristocratic lineage than that from which you are sprung. Your father's family, that of Critias, the son of
158 Dropides,[3] has been praised for us by Anacreon, Solon, and many other poets for superior beauty, virtue, and everything else called happiness. It's the same on your mother's side. Your maternal uncle Pyrilampes has the reputation of being the finest and most influential man in the country because of his numerous embassies to the Great King and others, so that this whole side of the family is not a bit inferior to the other. As the offspring of such forebears, it is likely that you hold pride of place. In the
b matter of visible beauty, dear son of Glaucon, you appear to me to be in no respect surpassed by those who come before. But if, in addition, you have a sufficient share of temperance and the other attributes mentioned by your friend here, then your mother bore a blessed son in you, my dear Charmides. Now this is the situation: if temperance is already present in you, as Critias here asserts, and if you are sufficiently temperate, you have no need of the charms either of Zalmoxis or of Abaris the Hyperborean,
c and you may have the remedy for the head straightaway. But if you still appear to lack these things, you must be charmed before you are given the remedy. So tell me yourself: do you agree with your friend and assert that you already partake sufficiently of temperance, or would you say that you are lacking in it?"

At first Charmides blushed and looked more beautiful than ever, and his bashfulness was becoming at his age. Then he answered in a way that was quite dignified: he said that it was not easy for him, in the present circumstances, either to agree or to disagree with what had been asked.

3. This Critias is the grandfather of our Critias. (See *Timaeus* 20e.)

"Because," he said, "if I should deny that I am temperate, it would not d
only seem an odd thing to say about oneself, but I would at the same time make Critias here a liar, and so with the many others to whom, by his account, I appear to be temperate. But if, on the other hand, I should agree and should praise myself, perhaps that would appear distasteful. So I do not know what I am to answer."

And I said, "What you say appears to me to be reasonable, Charmides.
And I think," I said, "we ought to investigate together the question whether e
you do or do not possess the thing I am inquiring about, so that you will not be forced to say anything against your will and I, on the other hand, shall not turn to doctoring in an irresponsible way. If this is agreeable to you, I would like to investigate the question with you, but if not, we can give it up."

"Oh, I should like it above all things," he said, "so go ahead and investigate the matter in whatever way you think best."

"Well then," I said, "in these circumstances, I think the following method
would be best. Now it is clear that if temperance is present in you, you 159
have some opinion about it. Because it is necessary, I suppose, that if it really resides in you, it provides a sense of its presence, by means of which you would form an opinion not only that you have it but of what sort it is. Or don't you think so?"

"Yes," he said, "I do think so."

"Well, then, since you know how to speak Greek," I said, "I suppose you could express this impression of yours in just the way it strikes you?"

"Perhaps," he said.

"Well, to help us decide whether it resides in you or not, say what, in your opinion, temperance is," I said.

At first he shied away and was rather unwilling to answer. Finally, b
however, he said that in his opinion temperance was doing everything in an orderly and quiet way—things like walking in the streets, and talking, and doing everything else in a similar fashion. "So I think," he said, "taking it all together, that what you ask about is a sort of quietness."

"Perhaps you are right," I said, "at least they do say, Charmides, that the
quiet are temperate. Let's see if there is anything in it. Tell me, temperance is c
one of the admirable things, isn't it?"

"Yes indeed," he said.

"Now when you are at the writing master's, is it more admirable to copy the letters quickly or quietly?"[4]

"Quickly."

"What about reading? Quickly or quietly?"

"Quickly."

"And certainly to play the lyre quickly and to wrestle in a lively fashion is much more admirable than to do these things quietly and slowly?"

"Yes."

4. The Greek word *hēsuchei* ("quietly") connotes slowness as well.

"Well, isn't the same thing true about boxing and the pancration?"

"Yes indeed."

d "And with running and jumping and all the movements of the body, aren't the ones that are performed briskly and quickly the admirable ones, and those performed with difficulty and quietly the ugly ones?"

"It seems so."

"And it seems to us that, in matters of the body, it is not the quieter movement but the quickest and most lively which is the most admirable. Isn't it so?"

"Yes indeed."

"But temperance was something admirable?"

"Yes."

"Then in the case of the body it would not be quietness but quickness which is the more temperate, since temperance is an admirable thing."

"That seems reasonable," he said.

e "Well then," I said, "is facility in learning more admirable or difficulty in learning?"

"Facility."

"But facility in learning is learning quickly? And difficulty in learning is learning quietly and slowly?"

"Yes."

"And to teach another person quickly—isn't this far more admirable than to teach him quietly and slowly?"

"Yes."

"Well then, to recall and to remember quietly and slowly—is this more admirable, or to do it vehemently and quickly?"

"Vehemently," he said, "and quickly."

160 "And isn't shrewdness a kind of liveliness of soul, and not a kind of quietness?"

"True."

"And again this is also true of understanding what is said, at the writing master's and at the lyre teacher's and everywhere else: to act not as quietly but as quickly as possible is the most admirable."

"Yes."

"And, further, in the operations of thought and in making plans, it is not the quietest man, I think, and the man who plans and finds out things
b with difficulty who appears to be worthy of praise but the one who does these things most easily and quickly."

"Exactly so," he said.

"Therefore, Charmides," I said, "in all these cases, both of soul and body, we think that quickness and speed are more admirable than slowness and quietness?"

"It seems likely," he said.

"We conclude then that temperance would not be a kind of quietness, nor would the temperate life be quiet, as far as this argument is concerned at any rate, since the temperate life is necessarily an admirable thing. There

are two possibilities for us: either no quiet actions in life appear to be more c
admirable than the swift and strong ones, or very few. If then, my friend, even quite a few quiet actions should turn out to be more admirable than the violent and quick ones, not even on this assumption would temperance consist in doing things quietly rather than in doing them violently and quickly, neither in walking nor in speech nor in anything else; nor would the quiet life be more temperate than its opposite, since in the course of d
the argument we placed temperance among the admirable things, and the quick things have turned out to be no less admirable than the quiet ones."

"What you say seems to me quite right, Socrates," he said.

"Then start over again, Charmides," I said, "and look into yourself with greater concentration, and when you have decided what effect the presence of temperance has upon you and what sort of thing it must be to have this effect, then put all this together and tell me clearly and bravely, what e
does it appear to you to be?"

He paused and, looking into himself very manfully, said, "Well, temperance seems to me to make people ashamed and bashful, and so I think modesty must be what temperance really is."

"But," I said, "didn't we agree just now that temperance was an admirable thing?"

"Yes, we did," he said.

"And it would follow that temperate men are good?"

"Yes."

"And could a thing be good that does not produce good men?"

"Of course not."

"Then not only is temperance an admirable thing, but it is a good thing."

"I agree." 161

"Well then," I said, "you don't agree with Homer when he said that 'modesty is not a good mate for a needy man'?"[5]

"Oh, but I do," he said.

"So it seems to be the case that modesty both is and is not a good."

"Yes, it does."

"But temperance must be a good if it makes those good in whom it is present and makes bad those in whom it is not."

"Why yes, it seems to me to be exactly as you say."

"Then temperance would not be modesty if it really is a good and if b
modesty is no more good than bad."

"What you say has quite convinced me, Socrates," he said. "But give me your opinion of the following definition of temperance: I have just remembered having heard someone say that temperance is minding one's own business. Tell me if you think the person who said this was right."

And I said, "You wretch, you've picked this up from Critias or from c
some other wise man."

5. *Odyssey* xvii.347.

"I guess it was from some other," said Critias, "because it was certainly not from me."

"What difference does it make, Socrates," said Charmides, "from whom I heard it?"

"None at all," I answered, "since the question at issue is not who said it, but whether what he said is true or not."

"Now I like what you say," he said.

"Good for you," I replied, "but if we succeed in finding out what it means, I should be surprised, because it seems to be a sort of riddle."

"In what way?" he asked.

d "I mean," I said, "that when he uttered the words, I don't suppose the person speaking really meant that temperance was minding your own business. Or do you consider that the writing master does nothing when he writes or reads?"

"On the contrary, I do think he does something."

"And do you think the writing master teaches you to read and write your own name only or those of the other boys as well? And do you write the names of your enemies just as much as your own names and those of your friends?"

"Just as much," he said.

e "And are you a busybody and intemperate when you do this?"

"Not at all."

"But aren't you doing other people's business if to read and write are to do something?"

"I suppose I am."

"And then healing, my friend, is doing something, I suppose, and so is housebuilding and weaving and engaging in any one of the arts."

"Yes indeed."

"Well then," I said, "do you think a city would be well governed by a
law commanding each man to weave and wash his own cloak, make his
162 own shoes and oil flask and scraper, and perform everything else by this
same principle of keeping his hands off of other people's things and making
and doing his own?"

"No, I don't think it would," he said.

"But," said I, "if a city is going to be temperately governed, it must be governed well."

"Of course," he said.

"Then if temperance is 'minding your own business', it can't be minding things of this sort and in this fashion."

"Apparently not."

"Then the person who said that temperance was 'minding your own
business' must, apparently, have been riddling, as I pointed out just now,
b because I don't suppose he was quite so simpleminded. Or was it some
silly fellow you heard saying this, Charmides?"

"Far from it," he said, "he seemed very wise indeed."

"Then I think he must certainly have tossed off a riddle, since it is difficult to know what in the world this 'minding your own business' can be."

"Perhaps it is," he said.

"Then what in the world is 'minding your own business'? Are you able to say?"

"I'm at a total loss," he said. "But perhaps the one who said it didn't know what he meant either." And when he said this he smiled and looked at Critias.

It was clear that Critias had been agitated for some time and also that c
he was eager to impress Charmides and the rest who were there. He had
held himself in with difficulty earlier, but now he could do so no longer.
In my opinion, what I suspected earlier was certainly true, that Charmides
had picked up this saying about temperance from Critias. And then
Charmides, who wanted the author of the definition to take over the
argument rather than himself, tried to provoke him to it by going on d
pointing out that the cause was lost. Critias couldn't put up with this but
seemed to me to be angry with Charmides just the way a poet is when
his verse is mangled by the actors. So he gave him a look and said, "Do
you suppose, Charmides, that just because *you* don't understand what in
the world the man meant who said that temperance was 'minding your
own business', the man himself doesn't understand either?"

"Well, my dear Critias," said I, "there would be nothing remarkable in e
his being ignorant of the matter at his age, but you, because of your age
and experience, are very likely to understand it. So if you agree that
temperance is what the man said it was and take over the argument, I
would be very happy to investigate with you the question whether what
was said is true or not."

"I am quite ready to agree," he said, "and to take over the argument."

"I admire you for it," I said. "Now tell me: do you also agree with what I was just saying, that all craftsmen make something?"

"Yes I do."

"And do they seem to you to make their own things only, or those of 163
other people as well?"

"Those of others as well."

"And are they temperate in not making their own things only?"

"Is there any objection?" he asked.

"None for me," I said, "but see whether there may not be one for the man who defines temperance as 'minding your own business' and then says there is no objection if those who do other people's business are temperate too."

"But," said he, "have I agreed that those who *do* other people's business are temperate by admitting that those *making* other people's things are temperate?"

"Tell me," I said, "don't you call making and doing the same thing?" b

"Not at all," he said, "nor do I call working and making the same. I have learned this from Hesiod, who said 'work is no disgrace'.[6] Do you suppose that Hesiod, if he referred to the sort of things you mentioned just now by both the term 'work' and the term 'do', would have said there was no disgrace in cobbling or selling salt fish or prostitution? One ought not to think this, Socrates, but rather believe, as I do, that he supposed
c making to be something other than doing and working, and that a 'made' or created thing became a disgrace on those occasions when it was not accompanied by the admirable, but that work is never any sort of disgrace. Because he gave the name 'works' to things done admirably and usefully, and it is creations of this sort which are 'works' and 'actions'. We ought to represent him as thinking that only things of this sort are 'one's own' and that all the harmful ones belong to other people. The result is that we must suppose that Hesiod and any other man of sense calls the man who minds his own business temperate."

d "Critias," I said, "I understood the beginning of your speech pretty well, when you said that you called things that were 'one's own' and 'of oneself' good and called the doing of good things actions, because I have heard Prodicus discourse upon the distinction in words a hundred times. Well, I give you permission to define each word the way you like just so long as you make clear the application of whatever word you use. Now start
e at the beginning and define more clearly: the doing of good things or the making of them or whatever you want to call it—is this what you say temperance is?"

"Yes, it is," he said.

"And the man who performs evil actions is not temperate, but the man who performs good ones?"

"Doesn't it seem so to you, my friend?"

"Never mind that," I said; "we are not investigating what I think but rather what you now say."

"Well then, I," he said, "deny that the man who does things that are not good but bad is temperate, and assert that the man who does things that are good but not bad *is* temperate. So I give you a clear definition of temperance as the doing of good things."

164 "And there is no reason why you should not be speaking the truth. But it certainly does surprise me," I said, "if you believe that temperate men are ignorant of their temperance."

"I don't think so at all," he said.

"But didn't you say just a moment ago," said I, "that there was nothing to prevent craftsmen, even while they do other people's business, from being temperate?"

"Yes, I did say that," he said. "But what about it?"

6. *Works and Days* 311.

"Nothing, but tell me if you think that a doctor, when he makes someone
healthy, does something useful both for himself and for the person he b
cures."

"Yes, I agree."

"And the man who does these things does what he ought?"

"Yes."

"And the man who does what he ought is temperate, isn't he?"

"Of course he is temperate."

"And does a doctor have to know when he cures in a useful way and when he does not? And so with each of the craftsmen: does he have to know when he is going to benefit from the work he performs and when he is not?"

"Perhaps not."

"Then sometimes," I said, "the doctor doesn't know himself whether he c
has acted beneficially or harmfully. Now if he has acted beneficially, then,
according to your argument, he has acted temperately. Or isn't this what
you said?"

"Yes, it is."

"Then it seems that on some occasions he acts beneficially and, in so doing, acts temperately and is temperate, but is ignorant of his own temperance?"

"But this," he said, "Socrates, would never happen. And if you think it
necessary to draw this conclusion from what I admitted before, then I d
would rather withdraw some of my statements, and would not be ashamed
to admit I had made a mistake, in preference to conceding that a man
ignorant of himself could be temperate. As a matter of fact, this is pretty
much what I say temperance is, to know oneself, and I agree with the
inscription to this effect set up at Delphi. Because this inscription appears
to me to have been dedicated for the following purpose, as though it were
a greeting from the god to those coming in in place of the usual 'Hail', as
though to say 'hail' were an incorrect greeting, but we should rather urge e
one another to 'be temperate'. It is in this fashion, then, that the god greets
those who enter his temple, not after the manner of man—or so I suppose
the man thought who dedicated the inscription. What he says to the person
entering is nothing else than 'be temperate'; this is what he says. Now in
saying this he speaks very darkly, as a seer would do. That 'know thyself' 165
and 'be temperate' are the same (as the inscription claims, and so do I)
might be doubted by some, and this I think to be the case with those who
dedicated the later inscriptions 'Nothing too much' and 'Pledges lead to
perdition'. Because these people thought that 'Know thyself' was a piece
of advice and not the god's greeting to those who enter, so, with the idea
of dedicating some admonitions which were no less useful, they wrote
these things and put them up. But here's the reason why I say all this,
Socrates: I concede to you everything that was said before—perhaps you b
said something more nearly right on the subject and perhaps I did, but
nothing of what we said was really clear—but now I wish to give you an

explanation of this definition, unless of course you already agree that temperance is to know oneself."

"But Critias," I replied, "you are talking to me as though I professed to know the answers to my own questions and as though I could agree with you if I really wished. This is not the case—rather, because of my own
c ignorance, I am continually investigating in your company whatever is put forward. However, if I think it over, I am willing to say whether I agree or not. Just wait while I consider."

"Well, think it over," he said.

"Yes, I'm thinking," said I. "Well, if knowing is what temperance is, then it clearly must be some sort of science and must be of something, isn't that so?"

"Yes—of oneself," he said.

"Then medicine, too," I said, "is a science and is of health?"

"Certainly."

"Now," I said, "if you should ask me, 'If medicine is a science of health,
d what benefit does it confer upon us and what does it produce?' I would answer that it conferred no small benefit. Because health is a fine result for us, if you agree that this is what it produces."

"I agree."

"And if you should ask me about housebuilding, which is a science of building houses, and ask what I say that it produces, I would say that it produces houses, and so on with the other arts. So you ought to give an answer on behalf of temperance, since you say it is a science of self, in case
e you should be asked, 'Critias, since temperance is a science of self, what fine result does it produce which is worthy of the name?' Come along, tell me."

"But, Socrates," he said, "you are not conducting the investigation in the right way. This science does not have the same nature as the rest, any more than they have the same nature as each other, but you are carrying on the investigation as though they were all the same. For instance," he said, "in the arts of calculation and geometry, tell me what is the product corresponding to the house in the case of housebuilding and the cloak in
166 the case of weaving and so on—one could give many instances from many arts. You ought to point out to me a similar product in these cases, but you won't be able to do it."

And I said, "You are right. But I can point out to you in the case of each one of these sciences what it is a science *of*, this being distinct from the science itself. For instance, the art of calculation, of course, is of the odd and even—how many they are in themselves and with respect to other numbers—isn't that so?"

"Yes indeed," he said.

"Now aren't the odd and even distinct from the art of calculation itself?"

"Of course."

b "And again, the art of weighing is an art concerned with the heavier and lighter; and the heavy and light are distinct from the art of weighing. Do you agree?"

"Yes, I do."

"Then, since temperance is also a science of something, state what that something is which is distinct from temperance itself."

"This is just what I mean, Socrates," he said. "You arrive at the point of investigating the respect in which temperance differs from all the other sciences, and then you start looking for some way in which it resembles c
all the others. It's not like this; but rather, all the others are sciences of something else, not of themselves, whereas this is the only science which is both of other sciences *and* of itself. And I think you are quite consciously doing what you denied doing a moment ago—you are trying to refute me and ignoring the real question at issue."

"Oh come," I said, "how could you possibly think that even if I were to refute everything you say, I would be doing it for any other reasons than the one I would give for a thorough investigation of my own state- d
ments—the fear of unconsciously thinking I know something when I do not. And this is what I claim to be doing now, examining the argument for my own sake primarily, but perhaps also for the sake of my friends. Or don't you believe it to be for the common good, or for that of most men, that the state of each existing thing should become clear?"

"Very much so, Socrates," he said.

"Pluck up courage then, my friend, and answer the question as seems best to you, paying no attention to whether it is Critias or Socrates who e
is being refuted. Instead, give your attention to the argument itself to see what the result of its refutation will be."

"All right, I will do as you say, because you seem to me to be talking sense."

"Then remind me," I asked, "what it is you say about temperance."

"I say," he replied, "that it is the only science that is both a science of itself and of the other sciences."

"Would it then," I said, "also be a science of the absence of science, if it is a science of science?"

"Of course," he said.

"Then only the temperate man will know himself and will be able to 167
examine what he knows and does not know, and in the same way he will be able to inspect other people to see when a man does in fact know what he knows and thinks he knows, and when again he does not know what he thinks he knows, and no one else will be able to do this. And being temperate and temperance and knowing oneself amount to this, to knowing what one knows and does not know. Or isn't this what you say?"

"Yes, it is," he said.

"Then for our third libation, the lucky one,[7] let us investigate, as though b
from the beginning, two points: first, whether it is possible or not to know that one knows and does not know what he knows and does not know

7. Literally, "the third [cup] to [Zeus] the Savior." The third cup was regularly drunk thus, especially at the start of a voyage, and became thought of as lucky.

and second, should this be perfectly possible, what benefit there would be for those who know this."

"Yes, we ought to look into this," he said.

"Then, come on, Critias," said I, "and consider whether you appear better off than I in these matters, because I am in difficulties. Shall I tell you where my difficulty lies?"

"Yes, do."

"Well," I said, "wouldn't the whole thing amount to this, if what you
c said just now is true, that there is one science which is not of anything except itself and the other sciences and that this same science is also a science of the absence of science?"

"Yes indeed."

"Then see what an odd thing we are attempting to say, my friend—because if you look for this same thing in other cases, you will find, I think, that it is impossible."

"How is that, and what cases do you mean?"

"Cases like the following: consider, for instance, if you think there could be a kind of vision that is not the vision of the thing that other visions are of but is the vision of itself and the other visions and also of the lack of
d visions, and, although it is a type of vision, it sees no color, only itself and the other visions. Do you think there is something of this kind?"

"Good heavens, no, not I."

"And what about a kind of hearing that hears no sound but hears itself and the other hearings and nonhearings?"

"Not this either."

"Then take all the senses together and see if there is any one of them that is a sense of the senses and of itself but that senses nothing which the other senses sense."

"I can't see that there is."

e "And do you think there is any desire that is a desire for no pleasure but for itself and the other desires?"

"Certainly not."

"Nor indeed any wish, I think, that wishes for no good but only for itself and the other wishes."

"No, that would follow."

"And would you say there was a love of such a sort as to be a love of no fine thing but of itself and the other loves?"

"No," he said, "I would not."

168 "And have you ever observed a fear that fears itself and the other fears, but of frightful things fears not a one?"

"I have never observed such a thing," he said.

"Or an opinion that is of itself and other opinions but opines nothing that other opinions do?"

"Never."

"But we are saying, it seems, that there is a science of this sort, which is a science of no branch of learning but is a science of itself and the other sciences."

"Yes, we are saying that."

"But isn't it strange if there really is such a thing? However, we ought not yet to state categorically that there is not, but still go on investigating whether there is."

"You are right." b

"Come on then: is this science a science of something and does it have a certain faculty of being 'of something'? What about it?"

"Yes, it does."

"And do we say the greater has a certain faculty of being greater than something?"

"Yes, it has."

"Presumably than something less, if it is going to be greater."

"Necessarily."

"Then if we should discover something greater that is greater than the greater things and than itself, but greater than nothing than which the other greater things are greater, surely what would happen to it is that, c
if it were actually greater than itself, it would also be less than itself, wouldn't it?"

"That would certainly have to be the case, Socrates," he said.

"It would follow, too, that anything that was the double of the other doubles and of itself would, I suppose, be half of itself and of the other doubles—because I don't suppose there is a double of anything else except a half."

"That's true."

"And something that is more than itself will also be less, and the heavier, lighter and the older, younger, and so with all the other cases—the very d
thing which has its own faculty applied to itself will have to have that nature towards which the faculty was directed, won't it? I mean something like this: in the case of hearing don't we say that hearing is of nothing else than sound?"

"Yes."

"Then if it actually hears itself, it will hear itself possessing sound? Because otherwise it would not do any hearing."

"Necessarily so."

"And vision, I take it, O best of men, if it actually sees itself, will have to have some color? Because vision could certainly never see anything that e
has no color."

"No, that would follow."

"You observe then, Critias, that of the cases we have gone through, some appear to us to be absolutely impossible, whereas in others it is very doubtful if they could ever apply their own faculties to themselves? And that magnitude and number and similar things belong to the absolutely impossible group, isn't that so?"

"Certainly."

"Again, that hearing or vision or, in fact, any sort of motion should move itself, or heat burn itself—all cases like this also produce disbelief in some, though perhaps there are some in whom it does not. What 169

we need, my friend, is some great man to give an adequate interpretation of this point in every detail, whether no existing thing can by nature apply its own faculty to itself but only towards something else, or whether some can, but others cannot. We also need him to determine whether, if there are things that apply to themselves, the science which we call temperance is among them. I do not regard myself as competent
b to deal with these matters, and this is why I am neither able to state categorically whether there might possibly be a science of science nor, if it definitely were possible, able to accept temperance as such a science before I investigate whether such a thing would benefit us or not. Now I divine that temperance is something beneficial and good. Do you then, O son of Callaeschrus, since the definition of temperance as the science of science and, more especially, of the absence of science belongs to you, first clear up this point, that what I just mentioned is possible
c and then, after having shown its possibility, go on to show that it is useful. And so, perhaps, you will satisfy me that you are right about what temperance is."

When Critias heard this and saw that I was in difficulties, then, just as in the case of people who start yawning when they see other people doing it, he seemed to be affected by my troubles and to be seized by difficulties himself. But since his consistently high reputation made him feel ashamed in the eyes of the company and he did not wish to admit to me that he
d was incapable of dealing with the question I had asked him, he said nothing clear but concealed his predicament. So I, in order that our argument should go forward, said, "But if it seems right, Critias, let us now grant this point, that the existence of a science of science is possible—we can investigate on some other occasion whether this is really the case or not. Come then, if this is perfectly possible, is it any more possible to know what one knows and does not know? We did say, I think, that knowing oneself and being temperate consisted in this?"

e "Yes indeed," he said, "and your conclusion seems to me to follow, Socrates, because if a man has a science which knows itself, he would be the very same sort of man as the science which he has. For instance, whenever a person has speed he is swift, and when he has beauty he is beautiful, and when he has knowledge he is knowing. So when a person has a knowledge which knows itself, then I imagine he will be a person who knows himself."

"It is not this point," I said, "on which I am confused, that whenever someone possesses this thing which knows itself he will know himself, but how the person possessing it will necessarily know what he knows and what he does not know."

170 "But this is the same thing as the other, Socrates."

"Perhaps," I said, "but I'm in danger of being as confused as ever, because I still don't understand how knowing what one knows and does not know is the same thing as knowledge of self."

"How do you mean?" he said.

"It's like this," I said. "Supposing that there is a science of science, will it be anything more than the ability to divide things and say that one is science and the other not?"

"No, it amounts to this."

"And is it the same thing as the science and absence of science of health, b
and as the science and absence of science of justice?"

"Not at all."

"One is medicine, I think, and the other politics, but we are concerned with science pure and simple."

"What else?"

"Therefore, when a person lacks this additional science of health and justice but knows science only, seeing that this is the only knowledge he has, then he will be likely, both in his own case and in that of others, to know that he knows something and has a certain science, won't he?"

"Yes."

"And how will he know whatever he knows by means of this science? c
Because he will know the healthy by medicine, but not by temperance, and the harmonious by music, but not by temperance, and housebuilding by that art, but not by temperance, and so on—isn't it so?"

"It seems so."

"But by temperance, if it is merely a science of science, how will a person know that he knows the healthy or that he knows housebuilding?"

"He won't at all."

"Then the man ignorant of this won't know *what* he knows, but only *that* he knows."

"Very likely."

"Then this would not be being temperate and would not be temperance: d
to know what one knows and does not know, but only *that* one knows and does not know—or so it seems."

"Probably."

"Nor, when another person claims to know something, will our friend be able to find out whether he knows what he says he knows or does not know it. But he will only know this much, it seems, that the man has some science; yes, but of what, temperance will fail to inform him."

"Apparently so."

"So neither will he be able to distinguish the man who pretends to be e
a doctor, but is not, from the man who really is one, nor will he be able to make this distinction for any of the other experts. And let's see what follows: if the temperate man or anyone else whatsoever is going to tell the real doctor from the false, how will he go about it? He won't, I suppose, engage him in conversation on the subject of medicine, because what the doctor knows, we say, is nothing but health and disease, isn't that so?"

"Yes, that is the case."

"But about science the doctor knows nothing, because we have allotted precisely this function to temperance alone."

"Yes."

171 "Neither will the doctor know anything about medicine since medicine is a science."

"True."

"However, the temperate man will know that the doctor has some science, but in order to try and grasp what sort it is, won't he have to examine what it is of? Because hasn't each science been defined, not just as science, but also by that which it is of?"

"By that, certainly."

"Now medicine is distinguished from the other sciences by virtue of its definition as science of health and disease."

"Yes."

b "It follows that the man who wants to examine medicine should look for it where it is to be found, because I don't suppose he will discover it where it is *not* to be found, do you?"

"Certainly not."

"Then the man who conducts the examination correctly will examine the doctor in those matters in which he is a medical man, namely health and disease."

"So it seems."

"And he will look into the manner of his words and actions to see if what he says is truly spoken and what he does is correctly done?"

"Necessarily."

"But, without the medical art, would anyone be able to follow up either of these things?"

"Certainly not."

c "No one, in fact, could do this, it seems, except the doctor—not even the temperate man himself. If he could, he would be a doctor in addition to his temperance."

"That is the case."

"The upshot of the matter is, then, that if temperance is only the science of science and absence of science, it will not be able to distinguish the doctor who knows the particulars of his art from the one who does not know them but pretends or supposes he does, nor will it recognize any other genuine practitioner whatsoever, except the man in its own field, the way other craftsmen do."

"It seems so," he said.

d "Then, Critias," I replied, "what benefit would we get from temperance if it is of this nature? Because if, as we assumed in the beginning[8] the temperate man knew what he knew and what he did not know (and that he knows the former but not the latter) and were able to investigate another man who was in the same situation, then it would be of the greatest benefit to us to be temperate. Because those of us who had temperance would
e live lives free from error and so would all those who were under our rule. Neither would we ourselves be attempting to do things we did not

8. See 167a.

understand—rather we would find those who did understand and turn the matter over to them—nor would we trust those over whom we ruled to do anything except what they would do correctly, and this would be that of which they possessed the science. And thus, by means of temperance, every household would be well-run, and every city well-governed, and so in every case where temperance reigned. And with error rooted 172
out and rightness in control, men so circumstanced would necessarily fare admirably and well in all their doings and, faring well, they would be happy. Isn't this what we mean about temperance, Critias," I said, "when we say what a good thing it would be to know what one knows and what one does not know?"

"This is certainly what we mean," he said.

"But now you see," I replied, "that no science of this sort has put in an appearance."

"I see that," he said.

"Well then," I said, "is this the advantage of the knowledge of science b
and absence of science, which we are now finding out to be temperance—that the man who has this science will learn whatever he learns more easily, and everything will appear to him in a clearer light since, in addition to what he learns, he will perceive the science? And he will examine others on the subjects he himself knows in a more effective fashion, whereas those without the science will conduct their examinations in a weaker and less fruitful way. And are not these, my friend, the kind of benefits we c
shall reap from temperance? Or are we regarding it as something greater, and demanding that it be greater than it really is?"

"Perhaps that may be so," he said.

"Perhaps," I said, "and perhaps we have been demanding something useless. I say this because certain odd things become clear about temperance if it has this nature. If you are willing, let us investigate the matter by admitting both that it is possible to know a science and also what we assumed temperance to be in the beginning: to know what one knows and d
does not know—let us grant this and not deny it. And, having granted all these things, let us investigate more thoroughly whether, if it is like this, it will benefit us in any way. Because what we were saying just now, about temperance being regarded as of great benefit (if it were like this) in the governing of households and cities, does not seem to me, Critias, to have been well said."

"In what way?" he asked.

"Because," I said, "we carelessly agreed that it would be a great good for men if each of us should perform the things he knows and should hand over what he does not know to those others who do."

"And weren't we right in agreeing on this?" he said. e

"I don't think we were," I replied.

"You certainly say some queer things, Socrates," he said.

"By the dog," I said, "they seem queer to me too, and that is why, when I became aware of this a moment ago, I said that some strange things

would come to light and that I was afraid we were not conducting the
examination correctly. Because truly, even if there were no doubt that
173 temperance is like this, it appears in no way clear to me that it does us
any good."

"How so?" he said. "Tell me, so that we can both understand what you are saying."

"I think I am making a fool of myself," I said, "but all the same it is necessary to investigate what occurs to us and not to proceed at random, if we are going to have the least care for ourselves."

"You are right," he said.

"Listen then," I said, "to my dream, to see whether it comes through
horn or through ivory.[9] If temperance really ruled over us and were as
b we now define it, surely everything would be done according to science:
neither would anyone who says he is a pilot (but is not) deceive us, nor
would any doctor or general or anyone else pretending to know what he
does not know escape our notice. This being the situation, wouldn't we
have greater bodily health than we do now, and safety when we are in
danger at sea or in battle, and wouldn't we have dishes and all our clothes
c and shoes and things skillfully made for us, and many other things as
well, because we would be employing true craftsmen? And, if you will,
let us even agree that the mantic art is knowledge of what is to be and
that temperance, directing her, keeps away deceivers and sets up the true
d seers as prophets of the future. I grant that the human race, if thus equipped,
would act and live in a scientific way—because temperance, watching over
it, would not allow the absence of science to creep in and become our
accomplice. But whether acting scientifically would make us fare well and
be happy, this we have yet to learn, my dear Critias."

"But on the other hand," he said, "you will not readily gain the prize of faring well by any other means if you eliminate scientific action."

"Instruct me on just one more small point," I said. "When you say that
e something is scientifically done, are you talking about the science of cutting
out shoes?"

"Good heavens no!"

"Of bronze working, then?"

"Certainly not."

"Then of wool or wood or some similar thing?"

"Of course not."

"Then," I said, "we no longer keep to the statement that the man who lives scientifically is happy. Because those who live in the ways we mentioned are not admitted by you to be happy, but rather you seem to me to define the happy man as one who lives scientifically concerning certain specific things. And perhaps you mean the person I mentioned a moment

9. The reference is to *Odyssey* xix.564–67. True dreams come through the horn gate, deceitful ones through the gate of ivory.

ago, the man who knows what all future events will be, namely the seer. 174
Are you referring to this man or some other?"

"Both to this one," he said, "and another."

"Which one?" I said. "Isn't it the sort of man who, in addition to the future, knows everything that has been and is now and is ignorant of nothing? Let us postulate the existence of such a man. Of this man I think you would say that there was no one living who was more scientific."

"Certainly not."

"There is one additional thing I want to know: which one of the sciences makes him happy? Do all of them do this equally?"

"No, very unequally," he said.

"Well, which one in particular makes him happy? The one by which he b
knows which one of the things are and have been and are to come? Will it be the one by which he knows checker playing?"

"Oh for heaven's sake," he said.

"Well, the one by which he knows calculation?"

"Of course not."

"Well, will it be that by which he knows health?"

"That's better," he said.

"But the most likely case," I said, "is that by which he knows what?"

"By which he knows good," he said, "and evil."

"You wretch," said I, "all this time you've been leading me right round
in a circle and concealing from me that it was not living scientifically that c
was making us fare well and be happy, even if we possessed all the sciences put together, but that we have to have this one science of good and evil. Because, Critias, if you consent to take away this science from the other sciences, will medicine any the less produce health, or cobbling produce shoes, or the art of weaving produce clothes, or will the pilot's art any the less prevent us from dying at sea or the general's art in war?"

"They will do it just the same," he said.

"But my dear Critias, our chance of getting any of these things well and d
beneficially done will have vanished if this is lacking."

"You are right."

"Then this science, at any rate, is not temperance, as it seems, but that one of which the function is to benefit us. For it is not a science of science and absence of science but of good and evil. So that, if this latter one is beneficial, temperance would be something else for us."

"But why should not temperance be beneficial?" he said. "Because if
temperance really is a science of sciences and rules over the other sciences, e
then I suppose it would rule over this science of the good and would benefit us."

"And would this science make us healthy," I said, "and not the art of medicine? And would it perform the tasks of the other arts rather than each of them performing its own task? Didn't we protest solemnly just a moment ago that it is a science of science and absence of science only and of nothing else? We did, didn't we?"

"It seems so, at any rate."

"Then it will not be the craftsman of health?"

"Certainly not."

175 "Because health belonged to some other art, didn't it?"

"Yes, to another."

"Then it will be of no benefit, my friend. Because we have just awarded this work to another art, isn't that so?"

"Yes indeed."

"Then how will temperance be beneficial when it is the craftsman of no beneficial thing?"

"Apparently it won't be any benefit at all, Socrates."

"You see then, Critias, that my earlier fears were reasonable and that I was right to blame myself for discerning nothing useful in temperance?
b Because I don't suppose that the thing we have agreed to be the finest of all would have turned out to be of no benefit if I had been of any use in making a good search. But now we have got the worst of it in every way and are unable to discover to which one of existing things the lawgiver gave this name, temperance. Furthermore, we gave our joint assent to many things which did not follow from our argument.[10] For instance, we conceded that there was a science of science when the argument did not allow us to make this statement. Again, we conceded that this science knew the tasks of the other sciences, when the argument did not allow us to say this either, so that our temperate man should turn out to be knowing,
c both that he knows things he knows and does not know things he does not know. And we made this concession in the most prodigal manner, quite overlooking the impossibility that a person should in some fashion know what he does not know at all—because our agreement amounts to saying he knows things he does not know. And yet, I think, there could
d be nothing more irrational than this. But in spite of the fact that the inquiry has shown us to be both complacent and easy, it is not a whit more capable of discovering the truth. It has, in fact, made fun of the truth to this extent, that it has very insolently exposed as useless the definition of temperance which we agreed upon and invented earlier. I am not so much vexed on my own account, but on yours, Charmides," I said, "I am very vexed
e indeed, if, with such a body and, in addition, a most temperate soul, you should derive no benefit from this temperance nor should it be of any use to you in this present life. And I am still more vexed on behalf of the charm I took so much trouble to learn from the Thracian, if it should turn out to be worthless. I really do not believe this to be the case; rather I
176 think that I am a worthless inquirer. Because I think that temperance is a great good, and if you truly have it, that you are blessed. So see whether you do have it and are in no need of the charm—because if you do have it, my advice to you would rather be to regard me as a babbler, incapable

10. Socrates recalls the assumptions granted hypothetically at 169d and 173a–d.

of finding out anything whatsoever by means of argument, and yourself as being exactly as happy as you are temperate."

And Charmides said, "But good heavens, Socrates, I don't know whether I have it or whether I don't—because how would I know the nature of a thing when neither you nor Critias is able to discover it, as you say? b
However, I don't really believe you, Socrates, but I think I am very much in need of the charm, and as far as I am concerned I am willing to be charmed by you every day until you say I have had enough."

"Very well, Charmides," said Critias, "if you do this, it will convince me of your temperance—if you submit yourself to be charmed by Socrates and let nothing great or small dissuade you from it."

"This is the course I shall follow," he said, "and I shall not give it up. c
I would be acting badly if I failed to obey my guardian and did not carry out your commands."

"Well then," said Critias, "these are my instructions."

"And I shall execute them," he said, "from this day forward."

"Look here," I said, "what are you two plotting?"

"Nothing," said Charmides—"our plotting is all done."

"Are you going to use force," I asked, "and don't I get a preliminary hearing?"

"We shall have to use force," said Charmides, "seeing that this fellow here has given me my orders. So you had better take counsel as to your own procedure."

"What use is counsel?" said I. "Because when you undertake to do d
anything by force, no man living can oppose you."

"Well then," he said, "don't oppose me."

"Very well, I shan't," said I.

# LACHES

*In Greek, the subject of this dialogue is* andreia*, literally 'manliness', a personal quality of wide scope, covering all the sorts of unwavering, active leadership in and on behalf of the community that were traditionally expected in Greek cities of true men. Its special connotation of military prowess makes 'courage' a suitable, even inevitable, translation, but its broader scope should be borne in mind. Here Socrates probes the traditional conception of such courage as the primary quality a young man should be brought up to possess. His fellow discussants include two distinguished Athenian generals, Laches and Nicias, active in the Peloponnesian War (Nicias was captured and put to death in the disastrous Athenian withdrawal from Sicily in 413). The other two parties to the discussion are elderly and undistinguished sons of distinguished statesmen and generals of earlier times—Lysimachus, son of Aristides 'the Just', a famous leader during the Persian War, and Melesias, son of Thucydides, son of Melesias, a principal early opponent of Pericles in his policy of imperial expansion.* Laches *has an unusually full and extensive 'prologue' before Socrates takes over the reins of the discussion and seeks and refutes first Laches' and then Nicias' ideas about the nature of courage. Its function is at least in part to provide opportunities for these four representatives of the traditional conception to give it some preliminary articulation, thus bringing out some of the tensions and divergent ways of thinking about courage and related matters that the tradition harbors and that Socrates exploits in his own questioning later on.*

*As always in Plato's 'Socratic' dialogues, neither general's answers to Socrates' question 'What is courage?' prove satisfactory. Much of the discussion focuses upon the element of knowledge—of reasoned, nuanced responsiveness to the detailed circumstances for action—that on reflection Laches and Nicias both agree is an essential, though perhaps somewhat submerged, part of the traditional conception to which they themselves are committed. It is because of this that Nicias and Socrates agree (Laches is slow to accept the point, but it is clearly implied in what he has already said about courage's involving 'wisdom') that no dumb animal, and not even children, can correctly be called courageous—however much people may ordinarily speak that way. Nicias, indeed, wants to define courage simply as a kind of wisdom—wisdom about what is to be feared and what, on the contrary, to be buoyed up by and made hopeful as one pursues one's objectives. He intimates that this fits well with things he has heard Socrates say on other occasions, and in fact toward the end of* Protagoras *Socrates does adopt just this formulation of courage. Here, however,*

*whether this was a genuinely 'Socratic' idea or not, he and the two generals find difficulties in it that they seem to see no immediate way to resolve, and the discussion breaks off.*

*J.M.C.*

LYSIMACHUS: You have seen the man fighting in armor, Nicias and Laches. 178
When Melesias and I invited you to see him with us, we neglected to give
the reason why, but now we shall explain, because we think it especially
right to be frank with you. Now there are some people who make fun of
frankness and if anyone asks their advice, they don't say what they think, b
but they make a shot at what the other man would like to hear and say
something different from their own opinion. But you we considered capa-
ble not only of forming a judgment but also, having formed one, of saying
exactly what you think, and this is why we have taken you into our
confidence about what we are going to communicate to you. Now the 179
matter about which I have been making such a long preamble is this: we
have these two sons here—this one is the son of my friend Melesias here,
and he is called Thucydides after his grandfather, and this one is my son,
who also goes by his grandfather's name—we call him Aristides after my
father. We have made up our minds to take as good care of them as we
possibly can and not to behave like most parents, who, when their children
start to grow up, permit them to do whatever they wish. No, we think
that now is the time to make a real beginning, so far as we can. Since we b
knew that both of you had sons too, we thought that you, if anyone, would
have been concerned about the sort of training that would make the best
men of them. And if by any chance you have not turned your attention
to this kind of thing very often, let us remind you that you ought not to
neglect it, and let us invite you to care for your sons along with ours. How
we reached this conclusion, Nicias and Laches, you must hear, even if it
means my talking a bit longer. Now you must know that Melesias and I c
take our meals together, and the boys eat with us. We shall be frank with
you, exactly as I said in the beginning: each of us has a great many fine
things to say to the young men about his own father, things they achieved
both in war and in peace in their management of the affairs both of their
allies and of the city here. But neither of us has a word to say about his
own accomplishments. This is what shames us in front of them, and we d
blame our fathers for allowing us to take things easy when we were
growing up, while they were busy with other people's affairs. And we
point these same things out to the young people here, saying that if they
are careless of themselves and disobedient to us, they will turn out to be
nobodies, but if they take pains, perhaps they may become worthy of the

Translated by Rosamond Kent Sprague.

names they bear.[1] Now the boys promise to be obedient, so we are looking into the question what form of instruction or practice would make them
e turn out best. Somebody suggested this form of instruction to us, saying that it would be a fine thing for a young man to learn fighting in armor. And he praised this particular man whom you have just seen giving a display and proceeded to encourage us to see him. So we thought we ought to go to see the man and to take you with us, not only as fellow spectators but also as fellow counsellors and partners, if you should be
180 willing, in the care of our sons. This is what we wanted to share with you. So now is the time for you to give us your advice, not only about this form of instruction—whether you think it should be learned or not—but also about any other sort of study or pursuit for a young man which you admire. Tell us too, what part you will take in our joint enterprise.

NICIAS: I, for one, Lysimachus and Melesias, applaud your plan and am ready to take part in it. And I think Laches here is ready too.

b LACHES: You are quite right, Nicias. As for what Lysimachus said just now about his father and Melesias' father, I think that what he said applied very well to them and to us and to everyone engaged in public affairs, because this is pretty generally what happens to them—that they neglect their private affairs, children as well as everything else, and manage them
c carelessly. So you were right on this point, Lysimachus. But I am astonished that you are inviting us to be your fellow counsellors in the education of the young men and are not inviting Socrates here! In the first place, he comes from your own deme, and in the second, he is always spending his time in places where the young men engage in any study or noble pursuit of the sort you are looking for.

LYSIMACHUS: What do you mean, Laches? Has our friend Socrates concerned himself with any things of this kind?

LACHES: Certainly, Lysimachus.

NICIAS: This is a point I can vouch for no less than Laches, since he only
d recently recommended a man to me as music teacher for my son. The man's name is Damon, a pupil of Agathocles, and he is the most accomplished of men, not only in music, but in all the other pursuits in which you would think it worthwhile for boys of his age to spend their time.

LYSIMACHUS: People at my time of life, Socrates, Nicias, and Laches, are no longer familiar with the young because our advancing years keep us
e at home so much of the time. But if you, son of Sophroniscus, have any good advice to give your fellow demesman, you ought to give it. And you have a duty to do so, because you are my friend through your father. He and I were always comrades and friends, and he died without our ever having had a single difference. And this present conversation reminds me of something—when the boys here are talking to each other at home, they

1. On the boys' future see *Theaetetus* 150e ff., where we are told that Aristides became an associate of Socrates but left his company too soon. Both Aristides and the young Thucydides are mentioned in *Theages* 130a ff.

often mention Socrates and praise him highly, but I've never thought to
ask if they were speaking of the son of Sophroniscus. Tell me, boys, is this 181
the Socrates you spoke of on those occasions?

BOYS: Certainly, father, this is the one.

LYSIMACHUS: I am delighted, Socrates, that you keep up your father's good reputation, for he was the best of men, and I am especially pleased at the idea that the close ties between your family and mine will be renewed.

LACHES: Don't under any circumstances let the man get away, Lysima-
chus—because I have seen him elsewhere keeping up not only his father's b
reputation but that of his country. He marched with me in the retreat from Delium,[2] and I can tell you that if the rest had been willing to behave in the same manner, our city would be safe and we would not then have suffered a disaster of that kind.

LYSIMACHUS: Socrates, the praise you are receiving is certainly of a high order, both because it comes from men who are to be trusted and because of the qualities for which they praise you. Be assured that I am delighted to hear that you are held in such esteem, and please consider me among
those most kindly disposed towards you. You yourself ought to have c
visited us long before and considered us your friends—that would have been the right thing to do. Well, since we have recognized each other, resolve now, starting today, to associate both with us and the young men here and to make our acquaintance, so that you may preserve the family friendship. So do what I ask, and we in turn shall keep you in mind of your promise. But what have you all to say about our original question? What is your opinion? Is fighting in armor a useful subject for young men to learn or not?

SOCRATES: Well, I shall try to advise you about these things as best I can, d
Lysimachus, in addition to performing all the things to which you call my attention. However, it seems to me to be more suitable, since I am younger than the others and more inexperienced in these matters, for me to listen first to what they have to say and to learn from them. But if I should have something to add to what they say, then will be the time for me to teach and persuade both you and the others. Come, Nicias, why doesn't one of you two begin?

NICIAS: Well, there is no reason why not, Socrates. I think that knowledge e
of this branch of study is beneficial for the young in all sorts of ways. For one thing, it is a good idea for the young not to spend their time in the pursuits in which they normally do like to spend it when they are at
leisure, but rather in this one, which necessarily improves their bodies, 182
since it is in no way inferior to gymnastics exercises and no less strenuous, and, at the same time, this and horsemanship are forms of exercise especially suited to a free citizen. For in the contest in which we are the

2. The Athenians were defeated by the Boeotians at Delium in November of 424, the eighth year of the Peloponnesian War. Alcibiades refers to the conduct of Socrates in the retreat (to the detriment of Laches) at *Symposium* 220e ff.

contestants and in the matters on which our struggle depends, only those
are practiced who know how to use the instruments of war. And again,
there is a certain advantage in this form of instruction even in an actual
battle, whenever one has to fight in line with a number of others. But the
greatest advantage of it comes when the ranks are broken and it then
b becomes necessary for a man to fight in single combat, either in pursuit
when he has to attack a man who is defending himself, or in flight, when
he has to defend himself against another person who is attacking him. A
man who has this skill would suffer no harm at the hands of a single
opponent, nor even perhaps at the hands of a larger number, but he would
have the advantage in every way. Then again, such a study arouses in us
the desire for another fine form of instruction, since every man who learns
to fight in armor will want to learn the subject that comes next, that is,
c the science of tactics; and when he has mastered this and taken pride in
it, he will press on to the whole art of the general. So it has already become
clear that what is connected with this latter art, all the studies and pursuits
which are fine and of great value for a man to learn and to practice, have
this study as a starting point. And we shall add to this an advantage which
is not at all negligible, that this knowledge will make every man much
bolder and braver in war than he was before. And let us not omit to
mention, even if to some it might seem a point not worth making, that
d this art will give a man a finer-looking appearance at the very moment
when he needs to have it, and when he will appear more frightening to
the enemy because of the way he looks. So my opinion, Lysimachus, is
just as I say, that young men should be taught these things, and I have
given the reasons why I think so. But if Laches has anything to say on the
other side, I would be glad to hear it.

LACHES: But the fact is, Nicias, that it is difficult to maintain of any study
whatsoever that it ought not to be learned, because it seems to be a good
e idea to learn everything. So as far as this fighting in armor is concerned,
if it is a genuine branch of study, as those who teach it claim, and as Nicias
says, then it ought to be learned, but if it is not a real subject and the
people who propose to teach it are deceiving us, or if it is a real subject
but not a very important one, what need is there to learn it? The reason
I say these things about it is that I consider that, if there were anything
in it, it would not have escaped the attention of the Lacedaemonians, who
183 have no other concern in life than to look for and engage in whatever
studies and pursuits will increase their superiority in war. And if the
Lacedaemonians had overlooked the art, the teachers of it would certainly
not have overlooked this fact, that the Lacedaemonians are the most con-
cerned with such matters of any of the Greeks and that anyone who was
honored among them in these matters would make a great deal of money
just as is the case when a tragic poet is honored among us. The result is
b that whenever anyone fancies himself as a good writer of tragedy, he does
not go about exhibiting his plays in the other cities round about Athens
but comes straight here and shows his work to our people, as is the natural

thing to do. But I observe that those who fight in armor regard Lacedaemon
as forbidden ground and keep from setting foot in it. They give it a wide
berth and prefer to exhibit to anyone rather than the Spartans—in fact
they take pains to select people who themselves admit that plenty of others
surpass them in warfare. Then again, Lysimachus, I have encountered c
quite a few of these gentlemen on the actual field of battle and I have seen
what they are like. This makes it possible for us to consider the matter at
first hand. In a manner which seems almost deliberate, not a single prac-
titioner of the art of fighting in armor has ever become renowned in war.
And yet in all the other arts, those who are well-known in each are those
who have practiced the various ones. But the men who practice this art
seem to be those who have the worst luck at it. For instance, this very
man Stesilaus, whom you and I have witnessed giving a display before d
such a large crowd and praising himself the way he did, I once saw in
the quite different circumstances of actual warfare giving a much finer
demonstration against his will. On an occasion when a ship on which he
was serving as a marine rammed a transport-vessel, he was armed with
a combination scythe and spear, as singular a weapon as he was singular
a man. His other peculiarities are not worth relating, but let me tell you
how his invention of a scythe plus a spear turned out. In the course of e
the fight it somehow got entangled in the rigging of the other ship and
there it stuck. So Stesilaus dragged at the weapon in an attempt to free it,
but he could not, and meanwhile his ship was going by the other ship.
For a time he kept running along the deck holding fast to the spear. But
when the other ship was actually passing his and was dragging him after
it while he still held onto the weapon, he let it slide through his hand 184
until he just had hold of the ferule at the end. There was laughter and
applause from the men on the transport at the sight of him, and when
somebody hit the deck at his feet with a stone and he let go the shaft, then
even the men on the trireme could no longer keep from laughing when
they saw that remarkable scythe-spear dangling from the transport. Now
perhaps these things may be of value, as Nicias maintains, but my own
experience has been of the sort I describe. So, as I said in the beginning, b
either it is an art but has little value, or it is not an art but people say and
pretend that it is, but in any case it is not worth trying to learn. And then
it seems to me that if a cowardly man should imagine he had mastered
the art, he would, because of his increasing rashness, show up more clearly
the sort of man he was, whereas in the case of a brave man, everyone
would be watching him and if he made the smallest mistake, he would c
incur a great deal of criticism. The reason for this is that a man who
pretends to knowledge of this sort is the object of envy, so that unless he
is outstandingly superior to the rest, there is no way in which he can
possibly avoid becoming a laughingstock when he claims to have this
knowledge. So the study of this art seems to me to be of this sort, Lysima-
chus. But, as I said before, we ought not to let Socrates here escape, but
we ought to consult him as to his opinion on the matter in hand.

Lysimachus: Well, I do ask your opinion, Socrates, since what might be
d called our council seems to me to be still in need of someone to cast the deciding vote. If these two had agreed, there would be less necessity of such a procedure, but as it is, you perceive that Laches has voted in opposition to Nicias. So we would do well to hear from you too, and find out with which of them you plan to vote.

Socrates: What's that, Lysimachus? Do you intend to cast your vote for whatever position is approved by the majority of us?

Lysimachus: Why, what else could a person do, Socrates?

e Socrates: And do you, Melesias, plan to act in the same way? Suppose there should be a council to decide whether your son ought to practice a particular kind of gymnastic exercise, would you be persuaded by the greater number or by whoever has been educated and exercised under a good trainer?

Melesias: Probably by the latter, Socrates.

Socrates: And you would be persuaded by him rather than by the four of us?

Melesias: Probably.

Socrates: So I think it is by knowledge that one ought to make decisions, if one is to make them well, and not by majority rule.

Melesias: Certainly.

Socrates: So in this present case it is also necessary to investigate first
185 of all whether any one of us is an expert in the subject we are debating, or not. And if one of us is, then we should listen to him even if he is only one, and disregard the others. But if no one of us is an expert, then we must look for someone who is. Or do you and Lysimachus suppose that the subject in question is some small thing and not the greatest of all our possessions? The question is really, I suppose, that of whether your sons turn out to be worthwhile persons or the opposite—and the father's whole estate will be managed in accordance with the way the sons turn out.

Melesias: You are right.

Socrates: So we ought to exercise great forethought in the matter.

Melesias: Yes, we should.

b Socrates: Then, in keeping with what I said just now, how would we investigate if we wanted to find out which of us was the most expert with regard to gymnastics? Wouldn't it be the man who had studied and practiced the art and who had had good teachers in that particular subject?

Melesias: I should think so.

Socrates: And even before that, oughtn't we to investigate what art it is of which we are looking for the teachers?

Melesias: What do you mean?

Socrates: Perhaps it will be more clear if I put it this way: I do not think we have reached any preliminary agreement as to what in the world we are consulting about and investigating when we ask which of us is expert
c in it and has acquired teachers for this purpose, and which of us is not.

NICIAS: But, Socrates, aren't we investigating the art of fighting in armor and discussing whether young men ought to learn it or not?

SOCRATES: Quite so, Nicias. But when a man considers whether or not he should use a certain medicine to anoint his eyes, do you think he is at that moment taking counsel about the medicine or about the eyes?

NICIAS: About the eyes.

SOCRATES: Then too, whenever a man considers whether or not and when d
he should put a bridle on a horse, I suppose he is at that moment taking counsel about the horse and not about the bridle?

NICIAS: That is true.

SOCRATES: So, in a word, whenever a man considers a thing for the sake of another thing, he is taking counsel about that thing for the sake of which he was considering, and not about what he was investigating for the sake of something else.

NICIAS: Necessarily so.

SOCRATES: Then the question we ought to ask with respect to the man who gives us advice, is whether he is expert in the care of that thing for the sake of which we are considering when we consider.

NICIAS: Certainly.

SOCRATES: So do we now declare that we are considering a form of study e
for the sake of the souls of young men?

NICIAS: Yes.

SOCRATES: Then the question whether any one of us is expert in the care of the soul and is capable of caring for it well, and has had good teachers, is the one we ought to investigate.

LACHES: What's that, Socrates? Haven't you ever noticed that in some matters people become more expert without teachers than with them?

SOCRATES: Yes, I have, Laches, but you would not want to trust them when they said they were good craftsmen unless they should have some
well-executed product of their art to show you—and not just one but more 186
than one.

LACHES: What you say is true.

SOCRATES: Then what we ought to do, Laches and Nicias, since Lysimachus and Melesias called us in to give them advice about their two sons out of a desire that the boys' souls should become as good as possible—if we say we have teachers to show, is to point out to them the ones who in the first place are good themselves and have tended the souls of many
young men, and in the second place have manifestly taught us. Or, if any b
one of us says that he himself has had no teacher but has works of his own to tell of, then he ought to show which of the Athenians or foreigners, whether slave or free, is recognized to have become good through his influence. But if this is not the case with any of us, we should give orders that a search be made for others and should not run the risk of ruining the sons of our friends and thus incurring the greatest reproach from their nearest relatives. Now I, Lysimachus and Melesias, am the first to say,

c concerning myself, that I have had no teacher in this subject. And yet I
have longed after it from my youth up. But I did not have any money to
give the sophists, who were the only ones who professed to be able to
make a cultivated man of me, and I myself, on the other hand, am unable
to discover the art even now. If Nicias or Laches had discovered it or
learned it, I would not be surprised, because they are richer than I and so
may have learned it from others, and also older, so they may have discov-
d ered it already. Thus they seem to me to be capable of educating a man,
because they would never have given their opinions so fearlessly on the
subject of pursuits which are beneficial and harmful for the young if they
had not believed themselves to be sufficiently informed on the subject. In
other matters I have confidence in them, but that they should differ with
each other surprises me. So I make this counter-request of you, Lysimachus:
just as Laches was urging you just now not to let me go but to ask me
questions, so I now call on you not to let Laches go, or Nicias, but to
e question them, saying that Socrates denies having any knowledge of the
matter or being competent to decide which of you speaks the truth, because
he denies having been a discoverer of such things or having been anyone's
pupil in them. So, Laches and Nicias, each of you tell us who is the cleverest
person with whom you have associated in this matter of educating young
men, and whether you acquired your knowledge of the art from another
person or found it out for yourselves, and, if you learned it from some
187 one, who were your respective teachers, and what other persons share the
same art with them. My reason for saying all this is that, if you are too
busy because of your civic responsibilities, we can go to these men and
persuade them, either by means of gifts or favors or both, to look after
both our boys and yours too so that they won't put their ancestors to
shame by turning out to be worthless. But if you yourselves have been
the discoverers of such an art, give us an example of what other persons you
have already made into fine men by your care when they were originally
b worthless. Because if you are about to begin educating people now for the
first time, you ought to watch out in case the risk is being run, not by a
guinea-pig, but by your own sons and the children of your friends, and
you should keep from doing just what the proverb says not to do—to
begin pottery on a wine jar.[3] So state which of these alternatives you would
select as being appropriate and fitting for you and which you would reject.
Find out these things from them, Lysimachus, and don't let the men escape.

c LYSIMACHUS: I like what Socrates has said, gentlemen. But whether you
are willing to be questioned about such matters and to give account of
them, you must decide for yourselves, Nicias and Laches. As far as Melesias
here and I are concerned, we would certainly be pleased if the two of you
were willing to give complete answers to all of Socrates' questions. Because,
as I started to say right at the beginning, the reason we invited you to

3. The same proverb appears at *Gorgias* 514e. A wine jar is the largest pot; one ought to learn pottery on something smaller.

advise us on these matters was that we supposed that you would naturally
have given some thought to such things—especially so since your sons,
like ours, are very nearly of an age to be educated. So, if you have no d
objection, speak up and look into the subject along with Socrates, exchang-
ing arguments with each other. Because he is right in saying that it is
about the most important of our affairs that we are consulting. So decide
if you think this is what ought to be done.

NICIAS: It is quite clear to me, Lysimachus, that your knowledge of
Socrates is limited to your acquaintance with his father and that you have
had no contact with the man himself, except when he was a child—I e
suppose he may have mingled with you and your fellow demesmen,
following along with his father at the temple or at some other public
gathering. But you are obviously still unacquainted with the man as he is
now he has grown up.

LYSIMACHUS: What exactly do you mean, Nicias?

NICIAS: You don't appear to me to know that whoever comes into close
contact with Socrates and associates with him in conversation must neces-
sarily, even if he began by conversing about something quite different in
the first place, keep on being led about by the man's arguments until he
submits to answering questions about himself concerning both his present
manner of life and the life he has lived hitherto. And when he does submit 188
to this questioning, you don't realize that Socrates will not let him go
before he has well and truly tested every last detail. I personally am
accustomed to the man and know that one has to put up with this kind
of treatment from him, and further, I know perfectly well that I myself
will have to submit to it. I take pleasure in the man's company, Lysimachus,
and don't regard it as at all a bad thing to have it brought to our attention b
that we have done or are doing wrong. Rather I think that a man who
does not run away from such treatment but is willing, according to the
saying of Solon, to value learning as long as he lives,[4] not supposing that
old age brings him wisdom of itself, will necessarily pay more attention
to the rest of his life. For me there is nothing unusual or unpleasant in
being examined by Socrates, but I realized some time ago that the conversa- c
tion would not be about the boys but about ourselves, if Socrates were
present. As I say, I don't myself mind talking with Socrates in whatever
way he likes—but find out how Laches here feels about such things.

LACHES: I have just one feeling about discussions, Nicias, or, if you like,
not one but two, because to some I might seem to be a discussion-lover
and to others a discussion-hater. Whenever I hear a man discussing virtue
or some kind of wisdom, then, if he really is a man and worthy of the
words he utters, I am completely delighted to see the appropriateness and d
harmony existing between the speaker and his words. And such a man
seems to me to be genuinely musical, producing the most beautiful

4. Here (see also *Republic* 536d) Plato refers to a verse of Solon (Athenian poet and lawgiver of the early sixth century): "I grow old ever learning many things" (frg. 18 Bergk).

harmony, not on the lyre or some other pleasurable instrument, but actually
rendering his own life harmonious by fitting his deeds to his words in a
truly Dorian mode, not in the Ionian, nor even, I think, in the Phrygian
or Lydian, but in the only harmony that is genuinely Greek. The discourse
e of such a man gladdens my heart and makes everyone think that I am a
discussion-lover because of the enthusiastic way in which I welcome what
is said; but the man who acts in the opposite way distresses me, and the
better he speaks, the worse I feel, so that his discourse makes me look like
a discussion-hater. Now I have no acquaintance with the words of Socrates,
but before now, I believe, I have had experience of his deeds, and there I
found him a person privileged to speak fair words and to indulge in every
189 kind of frankness. So if he possesses this ability too, I am in sympathy
with the man, and I would submit to being examined by such a person
with the greatest pleasure, nor would I find learning burdensome, because
I too agree with Solon, though with one reservation—I wish to grow old
learning many things, but from good men only. Let Solon grant me this
point, that the teacher should himself be good, so that I may not show
myself a stupid pupil taking no delight in learning. Whether my teacher
b is to be younger than I am or not yet famous or has any other such
peculiarity troubles me not at all. To you then, Socrates, I present myself
as someone for you to teach and to refute in whatever manner you please,
and, on the other hand, you are welcome to any knowledge I have myself.
Because this has been my opinion of your character since that day on
which we shared a common danger and you gave me a sample of your
valor—the sort a man must give if he is to render a good account of
himself. So say whatever you like and don't let the difference in our ages
concern you at all.

c Socrates: We certainly can't find fault with you for not being ready
both to give advice and to join in the common search.

Lysimachus: But the task is clearly ours, Socrates (for I count you as one
of ourselves), so take my place and find out on behalf of the young men
what we need to learn from these people, and then, by talking to the boys,
join us in giving them advice. Because, on account of my age, I very often
forget what questions I was going to ask, and I forget the answers as well.
d Then, if fresh arguments start up in the middle, my memory is not exactly
good. So you do the talking and examine among yourselves the topics we
proposed. And I will listen, and when I have heard your conversation, I
will do whatever you people think best and so will Melesias here.

Socrates: Let us do what Lysimachus and Melesias suggest, Nicias and
Laches. Perhaps it won't be a bad idea to ask ourselves the sort of question
which we proposed to investigate just now: what teachers have we had
e in this sort of instruction, and what other persons have we made better?
However, I think there is another sort of inquiry that will bring us to the
same point and is perhaps one that begins somewhat more nearly from
the beginning. Suppose we know, about anything whatsoever, that if it is

added to another thing, it makes that thing better, and furthermore, we
are able to make the addition, then clearly we know the very thing about
which we should be consulting as to how one might obtain it most easily
and best. Perhaps you don't understand what I mean, but will do so more 190
easily this way: suppose we know that sight, when added to the eyes,
makes better those eyes to which it is added, and furthermore, we are able
to add it to the eyes, then clearly we know what this very thing sight is,
about which we should be consulting as to how one might obtain it most
easily and best. Because if we didn't know what sight in itself was, nor
hearing, we would hardly be worthy counsellors and doctors about either
the eyes or the ears as to the manner in which either sight or hearing b
might best be obtained.

Laches: You are right, Socrates.

Socrates: Well then, Laches, aren't these two now asking our advice as to the manner in which virtue might be added to the souls of their sons to make them better?

Laches: Yes, indeed.

Socrates: Then isn't it necessary for us to start out knowing what virtue
is? Because if we are not absolutely certain what it is, how are we going c
to advise anyone as to the best method of obtaining it?

Laches: I do not think that there is any way in which we can do this, Socrates.

Socrates: We say then, Laches, that we know what it is.

Laches: Yes, we do say so.

Socrates: And what we know, we must, I suppose, be able to state?

Laches: Of course.

Socrates: Let us not, O best of men, begin straightaway with an investiga-
tion of the whole of virtue—that would perhaps be too great a task—but
let us first see if we have a sufficient knowledge of a part. Then it is likely d
that the investigation will be easier for us.

Laches: Yes, let's do it the way you want, Socrates.

Socrates: Well, which one of the parts of virtue should we choose? Or isn't it obvious that we ought to take the one to which the technique of fighting in armor appears to lead? I suppose everyone would think it leads to courage, wouldn't they?

Laches: I think they certainly would.

Socrates: Then let us undertake first of all, Laches, to state what courage
is. Then after this we will go on to investigate in what way it could be e
added to the young, to the extent that the addition can be made through
occupations and studies. But try to state what I ask, namely, what cour-
age is.

Laches: Good heavens, Socrates, there is no difficulty about that: if a man is willing to remain at his post and to defend himself against the enemy without running away, then you may rest assured that he is a man of courage.

Socrates: Well spoken, Laches. But perhaps I am to blame for not making myself clear; the result is that you did not answer the question I had in mind but a different one.

Laches: What do you mean, Socrates?

191 Socrates: I will tell you if I can. That man, I suppose, is courageous
whom you yourself mention, that is, the man who fights the enemy while
remaining at his post?

Laches: Yes, that is my view.

Socrates: And I agree. But what about this man, the one who fights with the enemy, not holding his ground, but in retreat?

Laches: What did you mean, in retreat?

Socrates: Why, I mean the way the Scythians are said to fight, as much
retreating as pursuing; and then I imagine that Homer is praising the
b horses of Aeneas when he says they know how "to pursue and fly quickly
this way and that," and he praises Aeneas himself for his knowledge of
fear and he calls him "counsellor of fright."

Laches: And Homer is right, Socrates, because he was speaking of chariots, and it was the Scythian horsemen to which you referred. Now cavalry do fight in this fashion, but the hoplites in the manner I describe.

c Socrates: Except perhaps the Spartan hoplites, Laches. Because they say
that at Plataea the Spartans, when they were up against the soldiers carrying
wicker shields, were not willing to stand their ground and fight against
them but ran away. Then when the ranks of the Persians were broken, they
turned and fought, just like cavalrymen, and so won that particular battle.

Laches: You are right.

Socrates: So as I said just now, my poor questioning is to blame for
d your poor answer, because I wanted to learn from you not only what
constitutes courage for a hoplite but for a horseman as well and for every
sort of warrior. And I wanted to include not only those who are courageous
in warfare but also those who are brave in dangers at sea, and the ones
who show courage in illness and poverty and affairs of state; and then
again I wanted to include not only those who are brave in the face of pain
e and fear but also those who are clever at fighting desire and pleasure,
whether by standing their ground or running away—because there are
some men, aren't there, Laches, who are brave in matters like these?

Laches: Very much so, Socrates.

Socrates: So all these men are brave, but some possess courage in pleasures, some in pains, some in desires, and some in fears. And others, I think, show cowardice in the same respects.

Laches: Yes, they do.

Socrates: Then what are courage and cowardice? This is what I wanted to find out. So try again to state first what is the courage that is the same in all these cases. Or don't you yet have a clear understanding of what I mean?

Laches: Not exactly.

Socrates: Well, I mean something like this: suppose I asked what speed 192
was, which we find in running and in playing the lyre and in speaking and in learning and in many other instances—in fact we may say we display the quality, so far as it is worth mentioning, in movements of the arms or legs or tongue or voice or thought? Or isn't this the way you too would express it?

Laches: Yes, indeed.

Socrates: Then if anyone should ask me, "Socrates, what do you say it
is which you call swiftness in all these cases," I would answer him that b
what I call swiftness is the power of accomplishing a great deal in a short time, whether in speech or in running or all the other cases.

Laches: And you would be right.

Socrates: Then make an effort yourself, Laches, to speak in the same way about courage. What power is it which, because it is the same in pleasure and in pain and in all the other cases in which we were just saying it occurred, is therefore called courage?

Laches: Well then, I think it is a sort of endurance of the soul, if it is c
necessary to say what its nature is in all these cases.

Socrates: But it is necessary, at any rate if we are to give an answer to our question. Now this is what appears to me: I think that you don't regard every kind of endurance as courage. The reason I think so is this: I am fairly sure, Laches, that you regard courage as a very fine thing.

Laches: One of the finest, you may be sure.

Socrates: And you would say that endurance accompanied by wisdom is a fine and noble thing?

Laches: Very much so.

Socrates: Suppose it is accompanied by folly? Isn't it just the opposite, d
harmful and injurious?

Laches: Yes.

Socrates: And you are going to call a thing fine which is of the injurious and harmful sort?

Laches: No, that wouldn't be right, Socrates.

Socrates: Then you won't allow this kind of endurance to be courage, since it is not fine, whereas courage *is* fine.

Laches: You are right.

Socrates: Then, according to your view, it would be wise endurance which would be courage.

Laches: So it seems.

Socrates: Let us see then in what respect it is wise—is it so with respect e
to everything both great and small? For instance, if a man were to show endurance in spending his money wisely, knowing that by spending it he would get more, would you call this man courageous?

Laches: Heavens no, not I.

Socrates: Well, suppose a man is a doctor, and his son or some other patient is ill with inflammation of the lungs and begs him for something
to eat or drink, and the man doesn't give in but perseveres in refusing? 193

LACHES: No, this would certainly not be courage either, not at all.

SOCRATES: Well, suppose a man endures in battle, and his willingness to fight is based on wise calculation because he knows that others are coming to his aid and that he will be fighting men who are fewer than those on his side, and inferior to them, and in addition his position is stronger: would you say that this man, with his kind of wisdom and preparation, endures more courageously or a man in the opposite camp who is willing to remain and hold out?

b LACHES: The one in the opposite camp, Socrates, I should say.

SOCRATES: But surely the endurance of this man is more foolish than that of the other.

LACHES: You are right.

SOCRATES: And you would say that the man who shows endurance in a cavalry attack and has knowledge of horsemanship is less courageous than the man who lacks this knowledge.

LACHES: Yes, I would.

SOCRATES: And the one who endures with knowledge of slinging or archery or some other art is the less courageous.

c LACHES: Yes indeed.

SOCRATES: And as many as would be willing to endure in diving down into wells without being skilled, or to endure in any other similar situation, you say are braver than those who are skilled in these things.

LACHES: Why, what else would anyone say, Socrates?

SOCRATES: Nothing, if that is what he thought.

LACHES: Well, this is what I think at any rate.

SOCRATES: And certainly, Laches, such people run risks and endure more foolishly than those who do a thing with art.

LACHES: They clearly do.

d SOCRATES: Now foolish daring and endurance was found by us to be not only disgraceful but harmful, in what we said earlier.

LACHES: Quite so.

SOCRATES: But courage was agreed to be a noble thing.

LACHES: Yes, it was.

SOCRATES: But now, on the contrary, we are saying that a disgraceful thing, foolish endurance, is courage.

LACHES: Yes, we seem to be.

SOCRATES: And do you think we are talking sense?

LACHES: Heavens no, Socrates, I certainly don't.

e SOCRATES: Then I don't suppose, Laches, that according to your statement you and I are tuned to the Dorian mode, because our deeds are not harmonizing with our words. In deeds I think anyone would say that we partook of courage, but in words I don't suppose he would, if he were to listen to our present discussion.

LACHES: You are absolutely right.

SOCRATES: Well then: is it good for us to be in such a state?

LACHES: Certainly not, in no way whatsoever.

Socrates: But are you willing that we should agree with our statement to a certain extent?

Laches: To what extent and with what statement?

Socrates: With the one that commands us to endure. If you are willing, 194
let us hold our ground in the search and let us endure, so that courage itself won't make fun of us for not searching for it courageously—if endurance should perhaps be courage after all.

Laches: I am ready not to give up, Socrates, although I am not really accustomed to arguments of this kind. But an absolute desire for victory
has seized me with respect to our conversation, and I am really getting b
annoyed at being unable to express what I think in this fashion. I still think I know what courage is, but I can't understand how it has escaped me just now so that I can't pin it down in words and say what it is.

Socrates: Well, my friend, a good hunter ought to pursue the trail and not give up.

Laches: Absolutely.

Socrates: Then, if you agree, let's also summon Nicias here to the hunt—he might get on much better.

Laches: I am willing—why not? c

Socrates: Come along then, Nicias, and, if you can, rescue your friends who are storm-tossed by the argument and find themselves in trouble. You see, of course, that our affairs are in a bad way, so state what you think courage is and get us out of our difficulties as well as confirming your own view by putting it into words.

Nicias: I have been thinking for some time that you are not defining courage in the right way, Socrates. And you are not employing the excellent observation I have heard you make before now.

Socrates: What one was that, Nicias?

Nicias: I have often heard you say that every one of us is good with d
respect to that in which he is wise and bad in respect to that in which he is ignorant.

Socrates: By heaven, you are right, Nicias.

Nicias: Therefore, if a man is really courageous, it is clear that he is wise.

Socrates: You hear that, Laches?

Laches: I do, but I don't understand exactly what he means.

Socrates: Well, I think I understand him, and the man seems to me to be saying that courage is some kind of wisdom.

Laches: Why, what sort of wisdom is he talking about, Socrates?

Socrates: Why don't you ask him? e

Laches: All right.

Socrates: Come, Nicias, tell him what sort of wisdom courage would be according to your view. I don't suppose it is skill in flute playing.

Nicias: Of course not.

Socrates: And not in lyre playing either.

Nicias: Far from it.

Socrates: But what is this knowledge and of what?

Laches: You are questioning him in just the right way.

Socrates: Let him state what kind of knowledge it is.

195 Nicias: What I say, Laches, is that it is the knowledge of the fearful and
the hopeful in war and in every other situation.

Laches: How strangely he talks, Socrates.

Socrates: What do you have in mind when you say this, Laches?

Laches: What do I have in mind? Why, I take wisdom to be quite a different thing from courage.

Socrates: Well, Nicias, at any rate, says it isn't.

Laches: He certainly does—that's the nonsense he talks.

Socrates: Well, let's instruct him instead of making fun of him.

Nicias: Very well, but it strikes me, Socrates, that Laches wants to prove
b that I am talking nonsense simply because he was shown to be that sort
of person himself a moment ago.

Laches: Quite so, Nicias, and I shall try to demonstrate that very thing, because you *are* talking nonsense. Take an immediate example: in cases of illness, aren't the doctors the ones who know what is to be feared? Or do you think the courageous are the people who know? Perhaps you call the doctors the courageous?

Nicias: No, of course not.

Laches: And I don't imagine you mean the farmers either, even though
I do suppose they are the ones who know what is to be feared in farming.
And all the other craftsmen know what is to be feared and hoped for in
c their particular arts. But these people are in no way courageous all the
same.

Socrates: What does Laches mean, Nicias? Because he does seem to be saying something.

Nicias: Yes, he is saying something, but what he says is not true.

Socrates: How so?

Nicias: He thinks a doctor's knowledge of the sick amounts to something
more than being able to describe health and disease whereas I think their
knowledge is restricted to just this. Do you suppose, Laches, that when a
man's recovery is more to be feared than his illness, the doctors know
this? Or don't you think there are many cases in which it would be better
d not to get up from an illness? Tell me this: do you maintain that in all
cases to live is preferable? In many cases, is it not better to die?

Laches: Well, I agree with you on this point at least.

Nicias: And do you suppose that the same things are to be feared by those for whom it is an advantage to die as by those for whom it is an advantage to live?

Laches: No, I don't.

Nicias: But do you grant this knowledge to the doctors or to any other craftsmen except the one who knows what is and what is not to be feared, who is the one I call courageous?

Socrates: Do you understand what he is saying, Laches?

e Laches: Yes I do—he is calling the seers the courageous. Because who
else will know for whom it is better to live than to die? What about you,

Nicias—do you admit to being a seer, or, if you are not a seer, to not being courageous?

NICIAS: Well, what of it? Don't you, for your part, think it is appropriate for a seer to know what is to be feared and what is to be hoped?

LACHES: Yes, I do, because I don't see for what other person it would be.

NICIAS: Much more for the man I am talking about, my friend, because the seer needs to know only the signs of what is to be, whether a man will experience death or illness or loss of property, or will experience 196
victory or defeat, in battle or in any other sort of contest. But why is it more suitable for the seer than for anyone else to judge for whom it is better to suffer or not to suffer these things?

LACHES: It isn't clear to me from this, Socrates, what he is trying to say. Because he doesn't select either the seer or the doctor or anyone else as the man he calls courageous, unless some god is the person he means. Nicias appears to me unwilling to make a gentlemanly admission that he b
is talking nonsense, but he twists this way and that in an attempt to cover up his difficulty. Even you and I could have executed a similar twist just now if we had wanted to avoid the appearance of contradicting ourselves. If we were making speeches in a court of law, there might be some point in doing this, but as things are, why should anyone adorn himself senselessly with empty words in a gathering like this?

SOCRATES: I see no reason why he should, Laches. But let us see if Nicias c
thinks he is saying something and is not just talking for the sake of talking. Let us find out from him more clearly what it is he means, and if he is really saying something, we will agree with him, but if not, we will instruct him.

LACHES: You go ahead and question him, Socrates, if you want to find out. I think perhaps I have asked enough.

SOCRATES: I have no objection, since the inquiry will be a joint effort on behalf of us both.

LACHES: Very well.

SOCRATES: Then tell me, Nicias, or rather tell us, because Laches and I d
are sharing the argument: you say that courage is knowledge of the grounds of fear and hope?

NICIAS: Yes, I do.

SOCRATES: Then this knowledge is something possessed by very few indeed if, as you say, neither the doctor nor the seer will have it and won't be courageous without acquiring this particular knowledge. Isn't that what you're saying?

NICIAS: Just so.

SOCRATES: Then, as the proverb says, it is true that this is not something "every sow would know," and she would not be courageous?

NICIAS: I don't think so.

SOCRATES: Then it is obvious, Nicias, that you do not regard the Crom- e
myon sow[5] as having been courageous. I say this not as a joke, but because

5. The famous sow of Crommyon (near Corinth) was killed by Theseus. See Plutarch *Theseus* 9.

I think that anyone taking this position must necessarily deny courage to any wild beast or else admit that some wild beast, a lion or a leopard or some sort of wild boar, is wise enough to know what is so difficult that very few men understand it. And the man who defines courage as you define it would have to assert that a lion and a stag, a bull and a monkey are all equally courageous by nature.

197 LACHES: By heaven, you talk well, Socrates. Give us an honest answer to this, Nicias—whether you say that these wild beasts, whom we all admit to be courageous, are wiser than we in these respects, or whether you dare to oppose the general view and say that they are not courageous.

NICIAS: By no means, Laches, do I call courageous wild beasts or anything else that, for lack of understanding, does not fear what should be feared. Rather, I would call them rash and mad. Or do you really suppose I call
b all children courageous, who fear nothing because they have no sense? On the contrary, I think that rashness and courage are not the same thing. My view is that very few have a share of courage and foresight, but that a great many, men and women and children and wild animals, partake in boldness and audacity and rashness and lack of foresight. These cases,
c which you and the man in the street call courageous, I call rash, whereas the courageous ones are the sensible people I was talking about.

LACHES: You see, Socrates, how the man decks himself out in words and does it well in his own opinion. Those whom everyone agrees to be courageous he attempts to deprive of that distinction.

NICIAS: I'm not depriving you of it, Laches, so cheer up. I declare that you are wise, and Lamachus[6] too, so long as you are courageous, and I say the same of a great many other Athenians.

LACHES: I shan't say anything about that—though I could—in case you should call me a typical Aexonian.[7]

d SOCRATES: Never mind him, Laches, I don't think you realize that he has procured this wisdom from our friend Damon, and Damon spends most of his time with Prodicus, who has the reputation of being best among the sophists at making such verbal distinctions.

LACHES: Well, Socrates, it is certainly more fitting for a sophist to make such clever distinctions than for a man the city thinks worthy to be its leader.

e SOCRATES: Well, I suppose it would be fitting, my good friend, for the man in charge of the greatest affairs to have the greatest share of wisdom. But I think it worthwhile to ask Nicias what he has in mind when he defines courage in this way.

LACHES: Well then, you ask him, Socrates.

SOCRATES: This is just what I intend to do, my good friend. But don't therefore suppose that I shall let you out of your share of the argument. Pay attention and join me in examining what is being said.

6. Lamachus shared the command of the Sicilian expedition with Nicias and Alcibiades; he died at Syracuse.

7. The people of the deme Aexone were regarded as abusive speakers.

Laches: Very well, if that seems necessary.

Socrates: Yes, it does. And you, Nicias, tell me again from the begin- 198
ning—you know that when we were investigating courage at the beginning
of the argument, we were investigating it as a part of virtue?

Nicias: Yes, we were.

Socrates: And didn't you give your answer supposing that it was a part, and, as such, one among a number of other parts, all of which taken together were called virtue?

Nicias: Yes, why not?

Socrates: And do you also speak of the same parts that I do? In addition to courage, I call temperance and justice and everything else of this kind parts of virtue. Don't you?

Nicias: Yes, indeed. b

Socrates: Stop there. We are in agreement on these points, but let us investigate the grounds of fear and confidence to make sure that you don't regard them in one way and we in another. We will tell you what we think about them, and if you do not agree, you shall instruct us. We regard as fearful things those that produce fear, and as hopeful things those that do not produce fear; and fear is produced not by evils which have happened or are happening but by those which are anticipated. Because fear is the expectation of a future evil—or isn't this your opinion too, Laches?

Laches: Very much so, Socrates. c

Socrates: You hear what we have to say, Nicias: that fearful things are future evils, and the ones inspiring hope are either future non-evils or future goods. Do you agree with this or have you some other view on the subject?

Nicias: I agree with this one.

Socrates: And you declare that knowledge of just these things is courage?

Nicias: Exactly so.

Socrates: Let us find out if we all agree on still a third point.

Nicias: What one is that?

Socrates: I will explain. It seems to me and my friend here that of the d
various things with which knowledge is concerned, there is not one kind
of knowledge by which we know how things have happened in the past,
and another by which we know how they are happening at the present
time, and still another by which we know how what has not yet happened
might best come to be in the future, but that the knowledge is the same
in each case. For instance, in the case of health, there is no other art related
to the past, the present, and the future except that of medicine, which,
although it is a single art, surveys what is, what was, and what is likely
to be in the future. Again, in the case of the fruits of the earth, the art of e
farming conforms to the same pattern. And I suppose that both of you could
bear witness that, in the case of the affairs of war, the art of generalship is
that which best foresees the future and the other times—nor does this art
consider it necessary to be ruled by the art of the seer, but to rule *it*, as 199
being better acquainted with both present and future in the affairs of war.

In fact, the law decrees, not that the seer should command the general, but that the general should command the seer. Is this what we shall say, Laches?

Laches: Yes, it is.

Socrates: Well then, do you agree with us, Nicias, that the same knowledge has understanding of the same things, whether future, present, or past?

Nicias: Yes, that is how it seems to me, Socrates.

b Socrates: Now, my good friend, you say that courage is the knowledge of the fearful and the hopeful, isn't that so?

Nicias: Yes, it is.

Socrates: And it was agreed that fearful and hopeful things were future goods and future evils.

Nicias: Yes, it was.

Socrates: And that the same knowledge is of the same things—future ones and all other kinds.

Nicias: Yes, that is the case.

Socrates: Then courage is not knowledge of the fearful and the hopeful
c only, because it understands not simply future goods and evils, but those of the present and the past and all times, just as is the case with the other kinds of knowledge.

Nicias: So it seems, at any rate.

Socrates: Then you have told us about what amounts to a third part of courage, Nicias, whereas we asked you what the whole of courage was. And now it appears, according to your view, that courage is the knowledge not just of the fearful and the hopeful, but in your own opinion, it would
d be the knowledge of practically all goods and evils put together. Do you agree to this new change, Nicias, or what do you say?

Nicias: That seems right to me, Socrates.

Socrates: Then does a man with this kind of knowledge seem to depart from virtue in any respect if he really knows, in the case of all goods whatsoever, what they are and will be and have been, and similarly in the case of evils? And do you regard that man as lacking in temperance or justice and holiness to whom alone belongs the ability to deal circum-
e spectly with both gods and men with respect to both the fearful and its opposite, and to provide himself with good things through his knowledge of how to associate with them correctly?

Nicias: I think you have a point, Socrates.

Socrates: Then the thing you are now talking about, Nicias, would not be a part of virtue but rather virtue entire.

Nicias: So it seems.

Socrates: And we have certainly stated that courage is one of the parts of virtue.

Nicias: Yes, we have.

Socrates: Then what we are saying now does not appear to hold good.

Nicias: Apparently not.

Socrates: Then we have not discovered, Nicias, what courage is.

Nicias: We don't appear to.

Laches: But I, my dear Nicias, felt sure you would make the discovery 200
after you were so scornful of me while I was answering Socrates. In fact,
I had great hopes that with the help of Damon's wisdom you would solve
the whole problem.

Nicias: That's a fine attitude of yours, Laches, to think it no longer to
be of any importance that you yourself were just now shown to be a person
who knows nothing about courage. What interests you is whether I will
turn out to be a person of the same kind. Apparently it will make no
difference to you to be ignorant of those things which a man of any
pretensions ought to know, so long as you include me in your ignorance. b
Well, you seem to me to be acting in a thoroughly human fashion by
noticing everybody except yourself. As far as I am concerned I think
enough has been said on the topic for the present, and if any point has
not been covered sufficiently, then later on I think we can correct it both
with the help of Damon—whom you think it right to laugh at, though
you have never seen the man—and with that of others. And when I feel
secure on these points, I will instruct you too and won't begrudge the c
effort—because you seem to me to be sadly in need of learning.

Laches: You are a clever man, Nicias, I know. All the same, I advise
Lysimachus here and Melesias to say good-bye to you and me as teachers
of the young men and to retain the services of this man Socrates, as I said
in the beginning. If my boys were the same age, this is what I would do.

Nicias: And I agree: if Socrates is really willing to undertake the supervi-
sion of the boys, then don't look for anyone else. In fact I would gladly d
entrust Niceratus to him, if he is willing. But whenever I bring up the
subject in any way, he always recommends other people to me but is
unwilling to take on the job himself. But see if Socrates might be more
willing to listen to you, Lysimachus.

Lysimachus: Well, he should, Nicias, since I myself would be willing to
do a great many things for him which I would not be willing to do for
practically anyone else. What do you say, Socrates? Will you comply with
our request and take an active part with us in helping the young men to
become as good as possible?

Socrates: Well, it would be a terrible thing, Lysimachus, to be unwilling e
to join in assisting any man to become as good as possible. If in the
conversations we have just had I had seemed to be knowing and the other
two had not, then it would be right to issue a special invitation to me to
perform this task; but as the matter stands, we were all in the same diffi-
culty. Why then should anybody choose one of us in preference to another? 201
What I think is that he ought to choose none of us. But as things are, see
whether the suggestion I am about to make may not be a good one: what
I say we ought to do, my friends—since this is just between ourselves—
is to join in searching for the best possible teacher, first for ourselves—we
really need one—and then for the young men, sparing neither money nor

anything else. What I don't advise is that we remain as we are. And if
201b anyone laughs at us because we think it worthwhile to spend our time in school at our age, then I think we should confront him with the saying of Homer, "Modesty is not a good mate for a needy man."[8] And, not paying any attention to what anyone may say, let us join together in looking after both our own interests and those of the boys.

LYSIMACHUS: I like what you say, Socrates, and the fact that I am the oldest makes me the most eager to go to school along with the boys. Just
c do this for me: come to my house early tomorrow—don't refuse—so that we may make plans about these matters, but let us make an end of our present conversation.

SOCRATES: I shall do what you say, Lysimachus, and come to you tomorrow, God willing.

8. *Odyssey* xvii.347.

# LYSIS

Lysis*, together with* Charmides*, gives a rich and subtle portrayal of Socrates in one of his favorite pursuits—engaging in conversation with bright, cultivated, good-looking teenage boys from distinguished Athenian families. Lysis and Menexenus are best friends, in their early teens, still overseen by family servants (slaves) as 'tutors'. (Menexenus later became one of Socrates' close associates: there is a dialogue named after him, and he was present at the conversation in* Phaedo*.) Hippothales is an older teenage boy, infatuated with Lysis to the point of boring to death Ctesippus (another close associate of Socrates later on, also with him on his last day) and the other boys of his own age, with his poems and prose discourses on Lysis' and his ancestors' excellences. For Socrates, however, this is the wrong way to draw such a young person to you. Poetry and rhetorical praises will play to their pride and encourage arrogance. The right way is by engaging them in philosophical discussion. If they are worth attention at all, it is by turning them toward the improvement of their souls, that is, their minds, that you will attract their sober interest and grateful affection. Readers should compare what Alcibiades says about his own love for Socrates in the* Symposium*, and Socrates' dithyramb to love for boys in his second speech in* Phaedrus.

*Socrates exhibits this right approach by engaging Lysis, and then also his friend Menexenus, in an extended discussion about the nature of friendship: who are friends to whom (or what), and on what ground? His first question to Lysis fixes the theme, before it is clearly announced: 'Am I right in assuming that your father and mother love you very much?' The Greek word for love here is* philein*, cognate to the word for 'friendship',* philia*: 'friendship' in this discussion includes the love of parents and children and other relatives, as well as the close elective attachments of what we understand as personal friendship. It also covers impassioned, erotic fixations like Hippothales' for Lysis. What is friendship, so understood, and under what conditions does it actually exist?*

*Socrates does not really seek and examine the boys' opinions on this topic (as he does with other interlocutors, including Charmides, in Plato's 'Socratic' dialogues). Rather, he confronts them with a carefully constructed series of conceptual problems that arise when one tries to think seriously about friends and friendships. Is the friend the one who loves or the one loved? Or are there friends only where each loves the other? Difficulties arise for each solution. Or is it rather that good people are friends of other good people? But wait: since good people are so much like one another, can they do each other any good at all, as friends must do (if friendship is a good thing)? Poets such as Hesiod*

*have pointed to an inherent enmity between people of the same kind (people of the same profession, for example): what is one to make of that idea? Finally, what is the basis of a friendship: what does the friend ultimately love in loving his friend, and how does the love of that relate to the love of the friend? These philosophical ('logical') problems, Socrates seems to be saying, must be worked through in a systematic way before one can claim to understand what friendship is. But he only poses the problems, bringing the boys to see the difficulty they face in understanding the relationship they have entered into in being best friends.*

*Some of these issues recur in the* Symposium, *in Socrates' questions to Agathon and in Diotima's remarks. Aristotle's celebrated theory of friendship in* Eudemian *and* Nicomachean Ethics *is visibly constructed in part out of solutions proposed on these issues.*

*J.M.C.*

203 I was on my way from the Academy straight to the Lyceum, following the road just outside and beneath the wall; and when I got to the little gate by Panops spring, I happened to meet Hippothales, Hieronymus' son, and Ctesippus of Paeania, and with them some other young men standing together in a group. Seeing me coming, Hippothales said,

"Hey, Socrates, where are you coming from and where are you going?"

"From the Academy," I said, "straight to the Lyceum."

"Well, come straight over here to us, why don't you? You won't come? It's worth your while, I assure you."

"Where do you mean, and who all are you?"

"Over here," he said, showing me an open door and an enclosed area just facing the wall. "A lot of us spend our time here. There are quite a
204 few besides ourselves—and they're all good-looking."

"What is this, and what do you do here?"

"This is a new wrestling-school," he said, "just built. But we spend most of our time discussing things, and we'd be glad to have you join in."

"How very nice," I said. "And who is the teacher here?"

"Your old friend and admirer, Mikkos."

"Well, God knows, he's a serious person and a competent instructor."

"Well, then, won't you please come in and see who's here?"

b "First I'd like to hear what I'm coming in for—and the name of the best-looking member."

"Each of us has a different opinion on who that is, Socrates."

"So tell me, Hippothales, who do you think it is?"

He blushed at the question, so I said, "Aha! You don't have to answer that, Hippothales, for me to tell whether you're in love with any of these boys or not—I can see that you are not only in love but pretty far gone too. I may not

Translated by Stanley Lombardo.

be much good at anything else, but I have this god-given ability to tell pretty c
quickly when someone is in love, and who he's in love with."

When he heard this he really blushed, which made Ctesippus say, "O very cute, Hippothales, blushing and too embarrassed to tell Socrates the name. But if he spends any time at all with you he'll be driven to distraction hearing you say it so often. We're all just about deaf, Socrates, from all d
the 'Lysis' he's poured into our ears. And if he's been drinking, odds are we'll wake up in the middle of the night thinking we hear Lysis' name. As bad as all this is in normal conversation, it's nothing compared to when he drowns us with his poems and prose pieces. And worst of all, he actually sings odes to his beloved in a weird voice, which we have to put up with listening to. And now when you ask him the name he blushes!"

"Lysis must be pretty young," I said. "I say that because the name e
doesn't register with me."

"That's because they don't call him by his own name much. He still goes by his father's name, because his father is so famous. I'm sure you know what the boy looks like; his looks are enough to know him by."

"Tell me whose son he is," I said.

"He's the oldest son of Democrates of Aexone."

"Well, congratulations, Hippothales, on finding someone so spirited and noble to love! Now come on and perform for me what you've performed 205
for your friends here, so that I can see if you know what a lover ought to say about his boyfriend to his face, or to others."

"Do you think what *he* says really counts for anything, Socrates?"

"Are you denying that you are in love with the one he says you are?"

"No, but I am denying that I write love poems about him and all."

"The man's not well, he's raving," Ctesippus hooted.

"O.K., Hippothales," I said. "I don't need to hear any poems or songs b
you may or may not have composed about the boy. Just give me the general sense, so I'll know how you deal with him."

"Well why don't you ask Ctesippus? He must have total recall of it all, from what he says about it being drummed into his head from listening to me."

"You bet I do," Ctesippus said, "and it's pretty ridiculous too, Socrates. I mean, here he is, completely fixated on this boy and totally unable to say anything more original to him than any child could say. How ridiculous c
can you get? All he can think of to say or write is stuff the whole city goes around singing—poems about Democrates and the boy's grandfather Lysis and all his ancestors, their wealth and their stables and their victories at the Pythian, Isthmian, and Nemean Games in the chariot races and the horseback races. And then he gets into the really ancient history. Just the day before yesterday he was reciting some poem to us about Heracles d
being entertained by one of their ancestors because he was related to the hero—something about him being a son of Zeus and the daughter of their deme's founding father—old women's spinning-songs, really. This is the sort of thing he recites and sings, Socrates, and forces us to listen to."

When I heard that I said, "Hippothales, you deserve to be ridiculed. Do you really compose and sing your own victory-ode before you've won?"

"I don't compose or sing victory-odes for myself, Socrates."

"You only think you don't."

"How is that?" he asked.

e "You are really what these songs are all about," I said. "If you make a
conquest of a boy like this, then everything you've said and sung turns
out to eulogize yourself as victor in having won such a boyfriend. But if
he gets away, then the greater your praise of his beauty and goodness,
206 the more you will seem to have lost and the more you will be ridiculed.
This is why the skilled lover doesn't praise his beloved until he has him:
he fears how the future may turn out. And besides, these good-looking
boys, if anybody praises them, get swelled heads and start to think they're
really somebody. Doesn't it seem that way to you?"

"It certainly does," he said.

"And the more swell-headed they get, the harder they are to catch."

"So it seems."

"Well, what do you think of a hunter who scares off his game and makes it harder to catch?"

"He's pretty poor."

b "And isn't it a gross misuse of language and music to drive things wild rather than to soothe and charm?"

"Well, yes."

"Then be careful, Hippothales, that you don't make yourself guilty of all these things through your poetry. I don't imagine you would say that a man who hurts himself, by his poetry, is at all a good poet—after all, he does hurt himself."

c "No, of course not," he said. "That wouldn't make any sense at all. But that's just why I'm telling you all this, Socrates. What different advice can you give me about what one should say or do so his prospective boyfriend will like him?"

"That's not easy to say. But if you're willing to have him talk with me, I might be able to give you a demonstration of how to carry on a conversation with him instead of talking and singing the way your friends here say you've been doing."

"That's easy enough," he said. "If you go in with Ctesippus here and
d sit down and start a conversation, I think he will come up to you by
himself. He really likes to listen, Socrates. And besides, they're celebrating
the festival of Hermes, so the younger and older boys are mingled together.
Anyway, he'll probably come up to you; but if he doesn't, he and Ctesippus
know one another because Ctesippus' cousin is Menexenus, and Menexenus is Lysis' closest companion. So have Ctesippus call him if he doesn't
come by himself."

e "That's what I'll have to do," I said, and, taking Ctesippus with me, I went into the wrestling-school, followed by the others. When we got inside we found that the boys had finished the sacrifice and the ritual and, still

all dressed up, were starting to play knucklebones. Most of them were playing in the courtyard outside, but some of them were over in a corner of the dressing-room playing with a great many knucklebones, which they drew from little baskets. Still others were standing around watching this 207
group, and among them was Lysis. He stood out among the boys and older youths, a garland on his head, and deserved to be called not only a beautiful boy but a well-bred young gentleman. We went over to the other side of the room, where it was quiet, sat down, and started up a conversation among ourselves. Lysis kept turning around and looking at us, obviously wanting to come over, but too shy to do so alone. After a while Menexenus, taking a break from his game in the court, came in, b
and, when he saw Ctesippus and me, he came to take a seat beside us. Lysis saw him and followed over, sitting down together with Menexenus next to him, and then all the others came too. When Hippothales (let's not forget about him) saw that a small crowd had gathered, he took up a position in the rear where he thought Lysis wouldn't see him—afraid he might annoy him—and listened from his outpost.

Then I looked at Menexenus and asked him, "Son of Demophon, which of you two is older?"

"We argue about that," he said.

"Then you probably disagree about which one has the nobler family c
too," I said.

"Very much so," he said.

"And likewise about which one is better looking." They both laughed.

"Naturally, I won't ask which of you two is richer. For you two are friends, isn't that so?"

"Definitely," they said.

"And friends have everything in common, as the saying goes; so in this respect the two of you won't differ, that is, if what you said about being friends is true."

They agreed.

I was about to ask them next which of them was juster and wiser when d
somebody came in to get Menexenus, saying that the trainer was calling him. It seemed he still had some part to play in the ceremony, and so off he went. I asked Lysis then, "Am I right in assuming, Lysis, that your father and mother love you very much?"

"Oh, yes," he said.

"Then they would like you to be as happy as possible, right?"

"Naturally."

"Well, do you think a man is happy if he's a slave and is not permitted e
to do whatever he likes?"

"No, by Zeus, *I* don't think so."

"Well, then, if your father and mother love you and want you to be happy, it's clear that they must be extremely concerned to make sure that you *are* happy."

"Well, of course," he said.

"So they allow you to do as you please, and they never scold you or stop you from doing whatever you want to do."

"Not true, Socrates. There are a whole lot of things they don't let me do."

208 "What do you mean?" I said. "They want you to be happy but they stop you from doing what you want? Well, tell me this. Suppose you have your heart set on driving one of your father's chariots and holding the reins in a race. You mean they won't let you?"

"That's right," he said. "They won't let me."

"Well, whom do they let drive it?"

"There's a charioteer who gets a salary from my father."

"What? They trust a hired hand instead of you to do whatever he likes with the horses, and they actually pay him for doing that?"

b "Well, yes."

"But I suppose they trust you to drive the mule-team, and if you wanted to take the whip and lash them, they would let you?"

"Why ever would they?" he said.

"Is anyone allowed to whip them?"

"Sure," he said, "the muleteer."

"A slave or free?"

"A slave."

"It seems, then, that your parents think more even of a slave than their own son and trust him rather than you with their property and let him
c do what he wants, but prevent you. But tell me one more thing. Do they allow you to be in charge of your own life, or do they not trust you even that far?"

"Are you kidding?"

"Who is in charge of you, then?"

"My guardian here."

"He's a slave, isn't he?"

"What else? He's ours, anyway."

"Pretty strange, a free man directed by a slave. How does this guardian direct you; I mean, what does he do?"

"Mostly he takes me to school."

"And your schoolteachers, they're not in charge of you too, are they?"

"They sure are!"

d "It looks like your father has decided to put quite a few masters and dictators over you. But what about when you come home to your mother, does she let you do whatever it takes to make you happy, like playing with her wool or her loom when she's weaving? She doesn't stop you from touching the blade or the comb or any of her other wool-working tools, does she?"

e "Stop me?" he laughed. "She would beat me if I laid a finger on them."

"Good gracious!" I said. "You must have committed some kind of terrible offense against your father or mother."

"No, I swear!"

"Then why in the world do they so strangely prevent you from being
happy and doing what you like? And why are they raising you in a
perpetual condition of servitude to someone or other, day in and day out?
Why do you hardly ever get to do what you want to do? The upshot is, 209
it seems, that your many and varied possessions do you no good at all.
Everybody but you has charge of them, and this extends to your own
person, which, well-born though it is, somebody else tends and takes care
of—while you, Lysis, control nothing, and get to do nothing you want
to do."

"Well, Socrates, that's because I haven't come of age yet."

"That can't be it, son of Democrates, since there are *some* things, I imagine,
that your father and mother trust you with without waiting for you to
come of age. For instance, when they want someone to read or write for b
them, I'll bet that you, of everyone in the household, are their first choice
for the job. Right?"

"Right."

"And nobody tells you which letter to write first and which second, and
the same goes for reading. And when you take up your lyre, I'll bet neither
your father nor mother stop you from tightening or loosening whatever
string you wish, or from using a plectrum or just your fingers to play."

"No, they don't."

"Then what's going on? What's the reason they let you have your way c
here, but not in all the cases we've been talking about?"

"I suppose it's because I understand these things but not those."

"Aha!" I said. "So your father isn't waiting for you to come of age before
he trusts you with everything; but come the day when he thinks that you
know more than he does, he'll trust you with himself and everything that
belongs to him."

"I guess so," he said.

"Well, then," I said, "what about your neighbor? Would he use the same
rule of thumb as your father about you? When he thinks you know more d
about managing his estate than he does, will he trust you to do it, or will
he manage it himself?"

"I suppose he will trust me to do it."

"And how about the Athenians? Do you think they will trust you with
their affairs when they perceive that you know enough?"

"I sure do."

"Well, by Zeus, let's not stop here," I said. "What about the Great King?
Would he trust his eldest son, crown prince of Asia, to add whatever he e
likes to the royal stew, or would he trust us, provided we went before
him and gave him a convincing demonstration of our superior culinary
acumen?"

"Why, us, of course."

"And he wouldn't let his son put the least little bit into the pot, but we
could throw in fistfuls of salt if we wanted to."

"Right."

210 "What about if his son had something wrong with his eyes, would he let him treat his own eyes, knowing he wasn't a doctor, or would he prevent him?"

"Prevent him."

"But, if he thought we were doctors, he wouldn't stop us even if we pried his eyes open and smeared ashes in them, because he would think we knew what we were doing."

"True."

"So . . . he would trust us, rather than himself or his son, with all his business, as long as we seemed to him more skilled than either of them."

"He would have to, Socrates," he said.

"Then this is the way it is, my dear Lysis: in those areas where we
b really understand something everybody—Greeks and barbarians, men and
women—will trust us, and there we will act just as we choose, and nobody
will want to get in our way. There we will be free ourselves, and in control
of others. There things will belong to us, because we will derive some
advantage from them. But in areas where we haven't got any understand-
ing, no one will trust us to act as we judge best, but everybody will do
c their best to stop us, and not only strangers, but also our mother and
father and anyone else even more intimate. And there we are going to be
subject to the orders of others; there things are not going to be ours because
we are not going to derive any advantage from them. Do you agree this
is how it is?"

"I agree."

"Well, then, are we going to be anyone's friend, or is anyone going to love us as a friend in those areas in which we are good for nothing?"

"Not at all," he said.

"So it turns out that your father does not love you, nor does anyone love anyone else, so far as that person is useless."

"It doesn't look like it."

d "But if you become wise, my boy, then everybody will be your friend, everybody will feel close to you, because you will be useful and good. If you don't become wise, though, nobody will be your friend, not even your father or mother or your close relatives."

"Now, tell me, Lysis, is it possible to be high-minded in areas where one hasn't yet had one's mind trained?"

"How could anyone?" he said.

"And if *you* need a teacher, *your* mind is not yet trained."

"True."

"Then you're not high-minded either—since you don't have a mind of your own."

"You've got me there, Socrates!"

e Hearing his last answer I glanced over at Hippothales and almost made the mistake of saying: "This is how you should talk with your boyfriends, Hippothales, cutting them down to size and putting them in their place,

instead of swelling them up and spoiling them, as you do." But when I
saw how anxious and upset he was over what we were saying, I remem-
bered how he had positioned himself so as to escape Lysis' notice, so I bit
my tongue. In the middle of all this, Menexenus came back and sat down 211
next to Lysis, where he had been before. Then Lysis turned to me with a
good deal of boyish friendliness and, unnoticed by Menexenus, whispered
in my ear: "Socrates, tell Menexenus what you've been saying to me."

I said to him: "Why don't you tell him yourself, Lysis? You gave it your
complete attention."

"I certainly did," he said.

"Then try as hard as you can to remember it, so that you can tell it all b
to him clearly. But if you forget any of it, ask me about it again the next
time you run into me."

"I will, Socrates; you can count on it. But talk to him about something
else, so I can listen too until it's time to go home."

"Well, I guess I'll have to, since it's you who ask. But you've got to
come to my rescue if he tries to refute me. Or don't you know what a
debater he is?"

"Sure I do—he's very much one. That's why I want you to have a
discussion with him."

"So that I can make a fool of myself?" c

"No, so you can teach him a lesson!"

"What are you talking about? He's very clever, and Ctesippus' student
at that. And look, Ctesippus himself is here!"

"Never mind about anybody else, Socrates. Just go on and start discuss-
ing with him."

"Discuss we shall," I said.

Our little tête-à-tête was interrupted by Ctesippus' asking: "Is this a
private party between you two, or do we get a share of the conversation?"

"Of course you get a share!" I said. "Lysis here doesn't quite understand d
something I've been saying, but he says he thinks Menexenus knows and
wants me to ask him."

"Why don't you ask him then?"

"That's just what I'm going to do," I said. "So, Menexenus, tell me
something. Ever since I was a boy there's a certain thing I've always wanted
to possess. You know how it is, everybody is different: one person wants
to own horses, another dogs, another wants money, and another fame. e
Well, I'm pretty lukewarm about those things, but when it comes to having
friends I'm absolutely passionate, and I would rather have a good friend
than the best quail or gamecock known to man, and, I swear by Zeus
above, more than any horse or dog. There's no doubt in my mind, by the
Dog, that I would rather possess a friend than all Darius' gold, or even
than Darius himself. That's how much I value friends and companions. 212
And that's why, when I see you and Lysis together, I'm really amazed; I
think it's wonderful that you two have been able to acquire this possession
so quickly and easily while you're still so young. Because you have in

fact, each of you, gotten the other as a true friend—and quickly too. And here I am, so far from having this possession that I don't even know how one person becomes the friend of another, which is exactly what I want to question you about, since you have experience of it.

b "So tell me: when someone loves someone else, which of the two becomes the friend of the other, the one who loves or the one who is loved? Or is there no difference?"

"I don't see any difference," he said.

"Do you mean," I said, "that they both become each other's friend when only one of them loves the other?"

"It seems so to me," he said.

"Well, what about this: Isn't it possible for someone who loves somebody not to be loved by him in return?"

"Yes, it's possible."

"And isn't it possible for him even to be hated? Isn't this how men are
c often treated by the young boys they are in love with? They are deeply in love, but they feel that they are not loved back, or even that they are hated. Don't you think this is true?"

"Very true," he said.

"In a case like this, one person loves and the other is loved. Right?"

"Yes."

"Then which is the friend of the other? Is the lover the friend of the loved, whether he is loved in return or not, or is even hated? Or is the loved the friend of the lover? Or in a case like this, when the two do not both love each other, is neither the friend of the other?"

d "That's what it looks like anyway," he said.

"So our opinion now is different from what it was before. First we thought that if one person loved another, they were both friends. But now, unless they both love each other, neither is a friend."

"Perhaps."

"So nothing is a friend of the lover unless it loves him in return."

"It doesn't look like it."

"So there are no horse-lovers unless the horses love them back, and no quail-lovers, dog-lovers, wine-lovers, or exercise-lovers. And no lovers of
e wisdom, unless wisdom loves them in return. But do people really love them even though these things are not their friends, making a liar of the poet who said,

> *Happy the man who has as friends his children and*
> *solid-hoofed horses,*
> *his hunting hounds and a host abroad?"*[1]

"I don't think so," he said.

"Then you think he spoke the truth?"

1. Solon frg. 23 Edmonds.

"Yes."

"So what is loved is a friend to the person who loves it, or so it seems,
Menexenus, whether it loves him or hates him. Babies, for example, who 213
are too young to show love but not too young to hate, when they are disciplined by their mother or father, are at that moment, even though they hate their parents then, their very dearest friends."

"It seems so to me."

"So by this line of reasoning it is not the lover who is a friend, but the loved."

"It looks like it."

"And so the hated is the enemy, not the hater."

"Apparently so."

"Then many people are loved by their enemies and hated by their friends,
and are friends to their enemies and enemies to their friends—if the object b
of love rather than the lover is a friend. But this doesn't make any sense at all, my dear friend, in fact I think it is simply impossible to be an enemy to one's friend and a friend to one's enemy."

"True, Socrates, I think you're right."

"Then if this is impossible, that would make the lover the friend of the loved."

"Apparently so."

"And the hater the enemy of the hated."

"That must be."

"Then we are going to be forced to agree to our previous statement, c
that one is frequently a friend of a nonfriend, and even of an enemy. This is the case when you love someone who does not love you, or even hates you. And frequently one is an enemy to a nonenemy, or even to a friend, as happens when you hate someone who does not hate you, or even loves you."

"Perhaps," he said.

"Then what are we going to do," I said, "if friends are not those who love, nor those who are loved, nor those who love and are loved? Are there any other besides these of whom we can say that they become each other's friends?"

"By Zeus," he said, "I certainly can't think of any, Socrates."

"Do you think, Menexenus," I said, "that we may have been going about d
our inquiry in entirely the wrong way?"

"I certainly think so, Socrates," said Lysis. And as he said it, he blushed. I had the impression that the words just slipped out unintentionally because he was paying such close attention to what was being said, which he clearly had been all along.

Well, I wanted to give Menexenus a break anyway, and I was pleased
with the other's fondness for philosophy, so I turned the conversation e
towards Lysis, and said: "I think you're right, Lysis, to say that if we were looking at things in the right way, we wouldn't be so far off course. Let's not go in that direction any longer. That line of inquiry looks like a rough

road to me. I think we'd better go back to where we turned off, and look
214 for guidance to the poets, the ancestral voices of human wisdom. What they say about who friends are is by no means trivial: that God himself makes people friends, by drawing them together. What they say goes something like this:

*God always draws the like unto the like*[2]

b and makes them acquainted. Or haven't you come across these lines?"

He said he had.

"And haven't you also come across writings of very wise men saying the same thing, that the like must always be friend to the like? You know, the authors who reason and write about Nature and the Universe?"

"Yes, I have," he said.

"And do you think what they say is right?" I asked.

"Maybe," he said.

"Maybe half of it," I said, "maybe even all of it, but we don't understand
c it. To our way of thinking, the closer a wicked man comes to a wicked man and the more he associates with him, the more he becomes his enemy. Because he does him an injustice. And it's impossible for those who do an injustice and those who suffer it to be friends. Isn't that so?"

"Yes," he said.

"Then that would make half the saying untrue, if we assume the wicked are like each other."

"You're right," he said.

"But what I think they're saying is that the good are like each other and
d are friends, while the bad—as another saying goes—are never alike, not even to themselves. They are out of kilter and unstable. And when something is not even like itself and is inconsistent with itself, it can hardly be like something else and be a friend to it. Don't you agree?"

"Oh, I do," he said.

"Well, my friend, it seems to me that the hidden meaning of those who say 'like is a friend to like' is that only the good is a friend, and only to the good, while the bad never enters into true friendship with either the good or the bad. Do you agree?"

He nodded yes.

e "So now we've got it. We know what friends are. Our discussion indicates to us that whoever are good are friends."

"That seems altogether true to me."

"To me also," I said. "But I'm still a little uneasy with it. By Zeus, let's see why I'm still suspicious. Is like friend to like insofar as he is like, and as such is he useful to his counterpart? I can put it better this way: When something, anything at all, is like something else, how can it benefit or

2. *Odyssey* xvii.218.

harm its like in a way that it could not benefit or harm itself? Or what
could be done to it by its like that could not be done to it by itself? Can 215
such things be prized by each other when they cannot give each other assistance? Is there any way?"

"No, there isn't."

"And how can anything be a friend if it is not prized?"

"It can't."

"All right, then, like is not friend to like. But couldn't the good still be friend to the good insofar as he is good, not insofar as he is like?"

"Maybe."

"What about this, though? Isn't a good person, insofar as he is good, sufficient to himself?"

"Yes."

"And a self-sufficient person has no need of anything, just because of b
his self-sufficiency?"

"How could he?"

"And the person who needs nothing wouldn't prize anything."

"No, he wouldn't."

"What he didn't prize he wouldn't love."

"Definitely not."

"And whoever doesn't love is not a friend."

"It appears not."

"Then how in the world are the good going to be friends to the good? They don't yearn for one another when apart, because even then they are sufficient to themselves, and when together they have no need of one another. Is there any way people like that can possibly value each other?"

"No."

"But people who don't place much value on each other couldn't be friends."

"True."

"Now, Lysis, consider how we have been knocked off course. Are we c
somehow completely mistaken here?"

"How?" he asked.

"Once I heard someone say—I just now remembered this—that like is most hostile to like, and good men to good men. And he cited Hesiod as evidence:

> *Potter is angry with potter, poet with poet*
> *And beggar with beggar.*[3]

And he said that it had to be the same with everything else: things that d
are most like are filled with envy, contentiousness, and hatred for each other, and things most unlike with friendship. The poor man is forced to

3. Hesiod, *Works and Days* 25–26.

be friends with the rich, and the weak with the strong—for the sake of assistance—and the sick man with the doctor, and in general every ignorant person has to prize the man who knows and love him. Then he went on
e to make a very impressive point indeed, saying that the like is totally unqualified to be friend to the like; that just the opposite is true; that things that are completely in opposition to each other are friends in the highest degree, since everything desires its opposite and not its like. Dry desires wet, cold hot, bitter sweet, sharp blunt, empty full, full empty, and so forth on the same principle. For the opposite, he said, is food for its opposite, whereas the like has no enjoyment of its like. Well, my friend,
216 I thought he was quite clever as he said this, for he put it all so well. But you two, what do you think of what he said?"

"It sounds fine," said Menexenus, "at least when you hear it put like that."

"Then should we say that the opposite is its opposite's best friend?"

"Absolutely."

"But Menexenus," I said, "this is absurd. In no time at all those virtuosos,
b the contradiction mongers, are going to jump on us gleefully and ask us whether enmity is not the thing most opposite to friendship. How are we going to answer them? Won't we have to admit that what they say is true?"

"Yes, we will."

"So then, they will continue, is the enemy a friend to the friend, or the friend a friend to the enemy?"

"Neither," he answered.

"Is the just a friend to the unjust, or the temperate to the licentious, or the good to the bad?"

"I don't think so."

"But if," I said, "something is a friend to something because it is its opposite, then these things must be friends."

"You're right, they must."

"So like is not friend to like, nor is opposite friend to opposite."

"Apparently not."

c "But there's this too we still ought to consider. We may have overlooked something else, the possibility that the friend is none of these things, but something that is neither bad nor good but becomes the friend of the good just for that reason."

"What do you mean?" he asked.

"By Zeus," I said, "I hardly know myself. I'm getting downright dizzy with the perplexities of our argument. Maybe the old proverb is right, and the beautiful is a friend. It bears a resemblance, at any rate, to something
d soft and smooth and sleek, and maybe that's why it slides and sinks into us so easily, because it's something like that. Now I maintain that the good is beautiful. What do you think?"

"I agree."

"All right, now, I'm going to wax prophetic and say that what is neither good nor bad is a friend of the beautiful and the good. Listen to the motive

for my mantic utterance. It seems to me that there are three kinds of things: the good, the bad, and the neither good nor bad. What about you?"

"It seems so to me too," he said.

"And the good is not a friend to the good, nor the bad to the bad, e
nor the good to the bad. Our previous argument disallows it. Only one possibility remains. If anything is a friend to anything, what is neither good nor bad is a friend either to the good or to something like itself. For I don't suppose anything could be a friend to the bad."

"True."

"But we just said that like is not friend to like."

"Yes."

"So what is neither good nor bad cannot be a friend to something like itself."

"Apparently not."

"So it turns out that only what is neither good nor bad is friend to the 217
good, and only to the good."

"It seems it must be so."

"Well, then, boys, are we on the right track with our present statement? Suppose we consider a healthy body. It has no need of a doctor's help. It's fine just as it is. So no one in good health is friend to a doctor, on account of his good health. Right?"

"Right."

"But a sick man is, I imagine, on account of his disease."

"Naturally."

"Now, disease is a bad thing, and medicine is beneficial and good."

"Yes."

"And the body, as body, is neither good nor bad."

"True." b

"And because of disease, a body is forced to welcome and love medicine."

"I think so."

"So what is neither good nor bad becomes a friend of the good because of the presence of something bad."

"It looks like it."

"But clearly this is before it becomes bad itself by the bad it is in contact with. Because once it has become bad, it can no longer desire the good or be its friend. Remember we said it was impossible for the bad to befriend c
the good."

"It *is* impossible."

"Now consider what I'm going to say. I say that some things are of the same sort as what is present with them, and some are not. For example, if you paint something a certain color, the paint is somehow present with the thing painted."

"Definitely."

"Then is the thing painted of the same sort, as far as color goes, as the applied paint?"

"I don't understand," he said.

d "Look at it this way," I said. "If someone smeared your blond hair with white lead, would your hair then *be* white or *appear* white?"

"Appear white," he said.

"And yet whiteness would surely be present with it."

"Yes."

"But all the same your hair would not yet be white. Though whiteness would be present, your hair would not be white any more than it is black."

"True."

e "But when, my friend, old age introduces this same color to your hair, then it will become of the same sort as what is present, white by the presence of white."

"Naturally."

"Here at last is my question, then. When a thing has something present with it, will it be of the same sort as what is present? Or only when that thing is present in a certain way?"

"Only then," he said.

"And what is neither good nor bad sometimes has not yet become bad by the presence with it of bad, but sometimes it has."

"Certainly."

"And when it is not yet bad although bad is present, that presence makes it desire the good. But the presence that makes it be bad deprives
218 it of its desire as well as its love for the good. For it is no longer neither good nor bad, but bad. And the bad can't be friend to the good."

"No, it can't."

"From this we may infer that those who are already wise no longer love wisdom,[4] whether they are gods or men. Nor do those love it who are so ignorant that they are bad, for no bad and stupid man loves wisdom. There remain only those who have this bad thing, ignorance, but have not yet been made ignorant and stupid by it. They are conscious of not knowing
b what they don't know. The upshot is that those who are as yet neither good nor bad love wisdom, while all those who are bad do not, and neither do those who are good. For our earlier discussion made it clear that the opposite is not friend to the opposite, nor is like friend to like. Remember?"

"Of course," they both answered.

"So now, Lysis and Menexenus, we have discovered for sure what is a
c friend and what it is friend to. For we maintain that in the soul and in the body and everywhere, that which is neither good nor bad itself is, by the presence of evil, a friend of the good."

The two of them heartily agreed that this was the case, and I was pretty happy myself. I had the satisfied feeling of a successful hunter and was basking in it, when a very strange suspicion, from where I don't know, came over me. Maybe what we had all agreed to wasn't true after all. What an awful thought. "Oh, no!" I screamed out. "Lysis and Menexenus, our wealth has all been a dream!"

4. I.e., "philosophize," "engage in philosophy."

"But why?" said Menexenus. d

"I'm afraid we've fallen in with arguments about friendship that are no better than con artists."

"How?" he asked.

"Let's look at it this way," I said. "Whoever is a friend, is he a friend to someone or not?"

"He has to be a friend to someone," he said.

"For the sake of nothing and on account of nothing, or for the sake of something and on account of something?"

"For the sake of something and on account of something."

"And that something for the sake of which he is a friend, is it a friend, or is it neither friend nor foe?"

"I don't get it," he said.

"Naturally enough," I said. "But perhaps you will if we try it this way— e
and I think I might better understand what I am saying myself. A sick man, we were just now saying, is a friend to the doctor. Right?"

"Yes."

"And isn't he a friend on account of disease and for the sake of health?"

"Yes."

"And disease is a bad thing?"

"Of course."

"And what about health?" I asked. "Is it a good thing or a bad thing or neither?"

"A good thing," he said.

"I believe we also said that the body, which is neither good nor bad, is 219
a friend of medicine on account of disease, that is, on account of something bad. And medicine is a good thing. It is for the sake of health that medicine has received the friendship. And health is a good thing. All right so far?"

"Yes."

"Is health a friend or not a friend?"

"A friend."

"And disease is an enemy?"

"Certainly."

"So what is neither good nor bad is friend of the good on account of b
what is bad and an enemy, for the sake of what is good and a friend."

"It appears so."

"So the friend is friend of its friend for the sake of a friend, on account of its enemy."

"It looks like it."

"Well, then," I said, "since we have come this far, boys, let's pay close attention so that we won't be deceived. The fact that the friend has become friend of the friend, and so like has become friend of like, which we said was impossible—I'm going to let that pass by. But there is another point that we must examine, so that what is now being said won't deceive us. c
Medicine, we say, is a friend for the sake of health."

"Yes."

"Health, then, is also a friend?"

"Very much a friend."

"If, therefore, it is a friend, it is for the sake of something."

"Yes."

"And that something is a friend, if it is going to accord with our previous agreement."

"Very much so."

"Will that too, then, also be a friend for the sake of a friend?"

"Yes."

"Aren't we going to have to give up going on like this? Don't we have
d to arrive at some first principle which will no longer bring us back to
another friend, something that goes back to the first friend, something for
the sake of which we say that all the rest are friends too?"

"We have to."

"This is what I am talking about, the possibility that all the other things
that we have called friends for the sake of that thing may be deceiving
us, like so many phantoms of it, and that it is that first thing which is
truly a friend. Let's think of it in this way. Suppose a man places great
value on something, say, a father who values his son more highly than
all his other possessions. Would such a man, for the sake of his supreme
e regard for his son, also value something else? If, for example, he learned
that his son had drunk hemlock, would he value wine if he thought it
could save his son?"

"Why, certainly," he said.

"And also the container the wine was in?"

"Very much."

"At that time would he place the same value on the ceramic cup or the
three pints of wine as on his son? Or is it the case that all such concern
is expended not for things that are provided for the sake of something
220 else, but for that something else for whose sake all the other things are
provided? Not that we don't often talk about how much we value gold
and silver. But that's not so and gets us no closer to the truth, which is
that we value above all else that for which gold and all other provisions
are provided, whatever it may turn out to be. Shall we put it like
that?"

"Most certainly."

"And isn't the same account true of the friend? When we talk about all
b the things that are our friends for the sake of another friend, it is clear
that we are merely using the word 'friend'. The real friend is surely that
in which all these so-called friendships terminate."

"Yes, surely," he said.

"Then the real friend is not a friend for the sake of a friend."

"True."

"So much, then, for the notion that it is for the sake of some friend that the friend is a friend. But then is the good a friend?"

"It seems so to me," he said.

"And it is on account of the bad that the good is loved. Look, this is c
how it stands. There are three things of which we have just been speaking—
good, bad, and what is neither good nor bad. Suppose there remained
only two, and bad were eliminated and could affect no one in body or
soul or anything else that we say is neither good nor bad in and of itself.
Would the good then be of any use to us, or would it have become useless?
For if nothing could still harm us, we would have no need of any assistance, d
and it would be perfectly clear to us that it was on account of the bad that
we prized and loved the good—as if the good is a drug against the bad,
and the bad is a disease, so that without the disease there is no need for
the drug. Isn't the good by nature loved on account of the bad by those
of us who are midway between good and bad, but by itself and for its
own sake it has no use at all?"

"It looks like that's how it is," he said.

"Then that friend of ours, the one which was the terminal point for all e
the other things that we called 'friends for the sake of another friend,'
does not resemble them at all. For they are called friends for the sake of
a friend, but the real friend appears to have a nature completely the
opposite of this. It has become clear to us that it was a friend for the sake
of an enemy. Take away the enemy and it seems it is no longer a friend."

"It seems it isn't," he said, "not, at least, by what we are saying now."

"By Zeus," I said, "I wonder, if the bad is eliminated, whether it will 221
be possible to be hungry or thirsty or anything like that. Or if there will
be hunger as long as human beings and other animals exist, but it won't
do harm. Thirst, too, and all the other desires, but they won't be bad,
because the bad will have been abolished. Or is it ridiculous to ask what
will be then and what will not? Who knows? But we do know this: that
it is possible for hunger to do harm, and also possible for it to help. Right?"

"Certainly."

"And isn't it true that thirst or any other such desires can be felt some- b
times to one's benefit, sometimes to one's harm, and sometimes to neither?"

"Absolutely."

"And if bad things are abolished, does this have anything to do with things that aren't bad being abolished along with them?"

"No."

"So the desires that are neither good nor bad will continue to exist, even if bad things are abolished."

"It appears so."

"And is it possible to desire and love something passionately without feeling friendly towards it?

"It doesn't seem so to me."

"So there will still be some friendly things even if the bad is abolished."

"Yes."

"It is impossible, if bad were the cause of something's being a friend, c
that with the bad abolished one thing could be another's friend. When a
cause is abolished, the thing that it was the cause of can no longer exist."

"That makes sense."

"Haven't we agreed that the friend loves something, and loves it on account of something, and didn't we think then that it was on account of bad that what was neither good nor bad loved the good?"

"True."

d "But now it looks like some other cause of loving and being loved has appeared."

"It does look like it."

"Then can it really be, as we were just saying, that desire is the cause of friendship, and that what desires is a friend to that which it desires, and is so whenever it does so? And that what we were saying earlier about being a friend was all just chatter, like a poem that trails on too long?"

"There's a good chance," he said.

e "But still," I said, "a thing desires what it is deficient in. Right?"

"Yes."

"And the deficient is a friend to that in which it is deficient."

"I think so."

"And it becomes deficient where something is taken away from it."

"How couldn't it?"

"Then it is what belongs to oneself, it seems, that passionate love and friendship and desire are directed towards, Menexenus and Lysis."

They both agreed.

"And if you two are friends with each other, then in some way you naturally belong to each other."

"Absolutely," they said together.

222 "And if one person desires another, my boys, or loves him passionately, he would not desire him or love him passionately or as a friend unless he somehow belonged to his beloved either in his soul or in some characteristic, habit, or aspect of his soul."

"Certainly," said Menexenus, but Lysis was silent.

"All right," I said, "what belongs to us by nature has shown itself to us as something we must love."

"It looks like it," he said.

b "Then the genuine and not the pretended lover must be befriended by his boy."

Lysis and Menexenus just managed a nod of assent, but Hippothales beamed every color in the rainbow in his delight.

Wanting to review the argument, I said, "It seems to me, Lysis and Menexenus, that if there is some difference between belonging and being like, then we might have something to say about what a friend is. But if belonging and being like turn out to be the same thing, it won't be easy to toss out our former argument that like is useless to like insofar as they
c are alike. And to admit that the useless is a friend would strike a sour note. So if it's all right with you, I said, since we are a little groggy from this discussion, why don't we agree to say that what belongs is something different from what is like?"

"Certainly."

"And shall we suppose that the good belongs to everyone, while the bad is alien? Or does the bad belong to the bad, the good to the good, and what is neither good nor bad to what is neither good nor bad?"

They both said they liked this latter correlation.

"Well, here we are again, boys," I said. "We have fallen into the same d
arguments about friendship that we rejected at first. For the unjust will be no less a friend to the unjust, and the bad to the bad, as the good will be to the good."

"So it seems," he said.

"Then what? If we say that the good is the same as belonging, is there any alternative to the good being a friend only to the good?"

"No."

"But we thought we had refuted ourselves on this point. Or don't you remember?"

"We remember."

"So what can we still do with our argument? Or is it clear that there is e
nothing left? I do ask, like the able speakers in the law courts, that you think over everything that has been said. If neither the loved nor the loving, nor the like nor the unlike, nor the good, nor the belonging, nor any of the others we have gone through—well, there have been so many *I* certainly don't remember them all any more, but if none of these is a friend, then I have nothing left to say."

Having said that, I had a mind to get something going with one of the 223
older men there. But just then, like some kind of divine intermediaries, the guardians of Menexenus and Lysis were on the scene. They had the boys' brothers with them and called out to them that it was time to go home. It actually was late by now. At first our group tried to drive them off, but they didn't pay any attention to us and just got riled up and went
on calling in their foreign accents. We thought they had been drinking too b
much at the Hermaea and might be difficult to handle, so we capitulated and broke up our party. But just as they were leaving I said, "Now we've done it, Lysis and Menexenus—made fools of ourselves, I, an old man, and you as well. These people here will go away saying that we are friends of one another—for I count myself in with you—but what a friend is we have not yet been able to find out."

# EUTHYDEMUS

*Socrates meets his good friend Crito, recounts and discusses with him a public encounter he had the previous day with a pair of sophists, and urges him to join him in enrolling—old men though they are!—as the sophists' pupils. That is a bare summary of this exquisitely accomplished dialogue. Euthydemus and his older brother Dionysodorus (real people, though hardly known except here) have been in Athens previously. But now they have abandoned their former teaching of lawyer's oratory and military science for instruction in a different sort of combat: the combat of words in question-and-answer discussion of the basic type to which Socrates himself is devoted, and of which we get especially well defined instances in* Protagoras. *They promise to 'refute whatever may be said, no matter whether it is true or false'; by teaching the same 'eristic' wisdom to their pupils (it doesn't take long, they say), they will make them paragons of human virtue. Socrates forestalls the formal sophistic 'exhibition' of their skill that they have brought with them (as he similarly avoids or silently endures Gorgias' and Hippias' exhibitions in the dialogues named after them), and gets them instead to converse with the young boy Clinias, to persuade him to devote himself to 'philosophy and the practice of virtue'—under their tutelage, it goes without saying. Though it is not their prepared exhibition, their questioning of Clinias (and, later on, Ctesippus and Socrates himself) does give a clear demonstration of their methods. Thus readers, together with Crito, can form their own opinion of the value of this new brand of the sophist's art, so different from that of Protagoras, or Prodicus, or Hippias. Socrates twice interposes extended question-and-answer conversations of his own with Clinias, offering a very different picture of how one might draw a young boy on to devote himself to philosophy and the practice of virtue.*

*Crito is not nearly so enthusiastic as Socrates himself claims to be about these new sophists' 'wisdom', and hesitates to accept his invitation to join him in enrolling as their students. As emerges at the very end of the dialogue, he had got an earlier report on yesterday's proceedings from an unnamed acquaintance, which was much less laudatory than Socrates'. Plato makes it plain to his contemporary readers that this person is the orator and teacher of 'philosophy' Isocrates, head of a very successful school at Athens in the decades after Socrates' death, rival to Plato's own Academy. (Plato has Socrates compliment him by name in carefully qualified ways toward the end of* Phaedrus.*) Accepting Crito's description of the sophists' activities as 'philosophy', this person denounces it as 'of no value whatsoever', as 'worthless' and 'ridiculous'. Do Socrates, and Plato, agree? It seems not—that at least is the implication of*

*Socrates' praise, no doubt ironically overdrawn, and of his refusal to join in the denunciation. True philosophy, and real devotion to it, require an interest in logic and argument for its own sake, whether or not it is used correctly or yields valid support for true conclusions. Even the misuse of reason has its gripping appeal to one who would model his life on the proper use of it. Socrates is himself no 'eristic'—his approach to Clinias is fostering, not refutatory, and his firm interest throughout is in the truth, not mere verbal victory. But he (or Plato) refuses to reject, dismiss, and denounce the arguments of the eristics, Euthydemus and Dionysodorus, as 'of no value whatsoever', as 'worthless' and 'ridiculous'. They have their own power, as all uses of reason do, and must be respectfully examined and analyzed—even while one does not accept their conclusions.*

*J.M.C.*

CRITO: Who was it, Socrates, you were talking to in the Lyceum yester- 271
day? There was such a crowd standing around you that when I came up and wanted to listen, I couldn't hear anything distinctly. But by craning my neck I did get a look, and I thought it was some stranger you were talking to. Who was it?

SOCRATES: Which one are you asking about, Crito? There was not just one, but two.

CRITO: The person I mean was sitting next but one to you on your right— b
between you was Axiochus' young son.[1] He seemed to me, Socrates, to have grown tremendously, and to be almost of a size with our Critobulus. But Critobulus is thin, whereas this boy has come on splendidly and is extremely good-looking.

SOCRATES: Euthydemus is the man you mean, Crito, and the one sitting next to me on my left was his brother, Dionysodorus—he, too, takes part in the discussions.

CRITO: I don't know either of them, Socrates. They are another new
kind of sophist, I suppose. Where do they come from, and what is their c
particular wisdom?

SOCRATES: By birth, I think, they are from this side, from Chios. They went out as colonists to Thurii but were exiled from there and have already spent a good many years in this region. As to your question about the wisdom of the pair, it is marvelous, Crito! The two are absolutely omniscient, so much so that I never knew before what pancratiasts really were. They are both absolutely all-round fighters, not like the two battling broth-
ers from Acarnania who could only fight with their bodies.[2] These two d

Translated by Rosamond Kent Sprague.

1. Clinias: see below, 273a–b.
2. The pancration (lit., "all-round fighting") was a combination of wrestling and boxing.

are first of all completely skilled in body, being highly adept at fighting
272 in armor and able to teach this skill to anyone else who pays them a fee;
and then they are the ones best able to fight the battle of the law court
and to teach other people both how to deliver and how to compose the
sort of speeches suitable for the courts. Previously these were their only
skills, but now they have put the finishing touch to pancratistic art. They
have now mastered the one form of fighting they had previously left
untried; as a result, not a single man can stand up to them, they have
b become so skilled in fighting in arguments and in refuting whatever may
be said, no matter whether it is true or false. So that I, Crito, have a mind
to hand myself over to these men, since they say that they can make any
other person clever at the same things in a short time.

CRITO: What's that, Socrates? Aren't you afraid that, at your age, you
are already too old?

SOCRATES: Far from it, Crito—I have enough example and encouragement
to keep me from being afraid. The two men themselves were pretty well
advanced in years when they made a start on this wisdom I want to get;
I mean the eristic sort. Last year or the year before they were not yet wise.
c My only anxiety is that I may disgrace the two strangers just as I have
already disgraced Connus the harpist, Metrobius' son, who is still trying
to teach me to play. The boys who take lessons with me laugh at the sight
and call Connus the "Old Man's Master." So I am afraid that someone may
reproach the strangers on the same score; perhaps they may be unwilling to
take me as a pupil for fear that this should happen. So, Crito, I have
persuaded some other old men to go along with me as fellow pupils to
d the harp lessons, and I shall attempt to persuade some others for this
project. Why don't you come along yourself? We will take your sons as
bait to catch them—I feel sure that their desire to get the boys will make
them give us lessons too.
